In a recent report the American Vice-Consul at Aden, Mr. Cloyce K. Huston, draws attention to the increasing importance of Aden as an entrepot and distributing centre for the surrounding region. He continues:—Into the port of Aden and into the Aden bazaar come hides and skins, coffee, and other raw materials from the whole of Southern Arabia, Abyssinia, and the African Somaliland coast; from Aden they go to the tanneries and factories and mills of Europe and America. From the manufacturing centres come textiles, oil products, automobiles, and innumerable other articles, which then are carried by small coastal steamers and "dhows" to Jibouti, Berbera, Massowah, Hodaïdah, and other ports in the district. The same is true of passengers, to a certain extent Government officials, commercial representatives, and other travellers more often than not come to Aden and then proceed by small steamers to their various destinations in the surrounding districts.

The remark is made frequently, especially by local shippers, that Aden is rapidly losing its position among the ports of this part of the world. It is claimed that more and more direct shipments are being made to and from neighbouring ports and that Aden is functioning less and less as a distributing and transshipment port. It is true that direct shipments to and from the various ports of the district are increasing. Skins that formerly came to Aden for transshipment to Italy are now taken direct from Massowah in Italian ships. Russian ships bring sugar direct to Hodaïdah and carry away skins and coffee. Scandinavian ships lie in the Jibouti harbour loading cargo for Europe that formerly would have entered into the Aden foreign trade records. When this point is mentioned to Aden Port Trust officials they deny the truth of such pessimistic reports; they point contentedly to the port records, which manifest substantial increases in the traffic of the port over recent years. The number of ships entering the harbour has increased from 1,204 of 3,058,000 tons in 1912-13 to 1,575 of 5,707,000 tons in 1927-28. It is probable that the truth lies somewhere between the two points of view. Direct shipments are increasing and shipping at the port of Aden is increasing. These two statements can be reconciled only by concluding that the total

amount of traffic for the entire area is increasing, part of it being accounted for in direct shipments and part of it entering into the stream of Aden traffic.

There are no docks or docking facilities for seagoing vessels in the Aden harbour. All cargo is handled with the aid of barges or lighters towed alongside by small tugs; from these it is discharged on the Port Trust wharves or those of the shipping companies concerned. Three or four local companies handle practically all the cargo loaded or discharged in the port of Aden; their charges include lighterage, wages for coolies, and all other expenses. There are 35 warehouses on the Maala Wharf belonging to the Port Trust, each capable of holding about 2,000 bags of rice or grain, or corresponding quantities of other merchandise. In addition, there are five private warehouses.

Water can be supplied to ships at the rate of about 100 tons per hour, but usually there are no more than 200 or 300 tons available at one time. Fuel oil is supplied by the agents of a large oil concern which maintains storage tanks at Aden, a stock of 8,000 or 10,000 tons normally being on hand. The oil is supplied through a pipe line running direct from the tank to the ships. Two steamship companies operating in and out of Aden keep their stocks of coal in the port, but two local agents maintain large stocks from which they supply the coal burners of other lines. About 20,000 tons ordinarily are available, and can be delivered at the rate of 150 tons per hour. There is a fleet of about 80 lighters available, each having a capacity of approximately 150 tons.

Extensive dredging operations are being carried out. The approach channel, which is 8,000 feet long by 600 feet wide, will be extended to 9,450 feet, and the mooring basin will be extended 800 feet toward the east and widened slightly toward the north. The whole of the original approach channel, mooring basin, and extension will be dredged to a depth of 32 feet 6 inches at Indian spring low water. In addition, four 35-foot berths will be provided.

CROP PROSPECTS IN TURKEY.

(From Our Own Correspondent.)

Constantinople, September 3.

Owing mainly to unfavourable atmospheric conditions this year's Anatolian harvest does not by any means promise to be a bumper one. In certain regions, in fact, the drought has once more been so severe that there is a great shortage of cereals. The more favoured and well-watered Cilician Plain has done well, both the cotton and grain crops being well above average. As against this, however, the plateau-lands to the north of the Taurus are in almost desperate straits, man and beast alike suffering from want of cereals and fodder.

The coastal area of the Black Sea, owing to a series of devastating cloud-bursts and floods, which have taken heavy toll of human life, has lost practically the whole of its hazel-nut crop.

AIRCRAFT'S ASSISTANCE TO SHIPPING.

The flying-boat, City of Athens, on the England-Egypt-India service recently had a somewhat unusual experience which provides another instance of aircraft assisting shipping (says the "Imperial Airways Gazette"). Flying south from Athens she passed, when ten miles south-west of St. Georgia, a sailing ship which was completely water logged, the hull being below the water whilst the sails and masts remained standing. The flying-boat flew low down around the ship to make certain that no survivors remained and immediately wirelessed to Athens the position of the wreck. Within twenty minutes Athens broadcast a warning to all shipping in the vicinity of the danger reported.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Surgical Instruments, Etc.—The Prisons Administration, Ministry of the Interior, Cairo, invites tenders for the supply and delivery of surgical instruments and medical supplies. November 9. (D.O.T.)

Scientific Instruments and Clocks.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply and delivery of scientific instruments and clocks. September 30. (D.O.T.)

Steel Furniture.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of steel furniture required for the year 1929-1930. October 7.

Two Steel Water Tanks.—The Commercial Secretary at Cairo reports that the Egyptian Ministry of the Interior is calling for tenders, to be presented in Egypt by October 15, 1929, for the supply and erection of two steel water tanks on steel framework tower, complete with necessary piping and fittings, as well as an electric water-level indicator.

Electric Motors, Pumps, etc.—The Commercial Secretary at Cairo reports that the Egyptian Ministry of the Interior is calling for tenders, to be presented in Cairo by October 15, 1929, for the supply and installation of electric motors, pumps, mechanical filters and the sinking of an artesian well of 80 metres depth.

Electric Powers Stations.—The Commercial Secretary at Ramleh reports that the Ministry of the Interior, Municipalities and Local Commissions Section, is calling for tenders for the supply and erection of electrical power stations for the towns of Samannoud and Dessouk (Gharbiyah Province); also for the supply and erection of an electric power station with underground and overhead networks for the town of Deirout (Assiut Province). Tenders for the three undertakings to be presented by September 28, October 2 and September 30 respectively. (D.O.T.)

The Commercial Secretary at Cairo reports that the Ministry of the Interior, Municipalities and Local Commissions Section, is calling for tenders to be presented by October 10 for the supply and erection of an electric generating station for Tala. (D.O.T.)

Steel Furniture (Desks, Tables, etc.).—The Commercial Secretary at Cairo reports that the Department of Public Health, Cairo, are calling for tenders for the above. October 7. (D.O.T.)

TURKEY.

Electric Bakehouse.—The Municipality of Smyrna invites tenders for the construction and equipment of a modern electric bakehouse. According to statements in articles which have appeared on the subject in the local Press the municipal authorities anticipate that the total cost of the building and installation will be between £150,000 and £160,000. The latest date for the receipt of tenders has not yet been announced officially, but the Acting British Consul-General at Smyrna is informed that an announcement on this point will be made shortly, and that closing date will, in all probability, be about the middle of September. (D.O.T.)

YUGOSLAVIA.

Leather Belting.—The Acting British Vice-Consul at Skoplye (Uskub), Yugoslavia, reports that a local dealer in motor car accessories desires to be placed in touch with United Kingdom exporters of leather belting for motors and mills. Firms desirous of offering belting of British manufacture can obtain further particulars of this call for tenders upon application to the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1. Reference number B.X. 5939 should be quoted.

The Ellerman liner City of Nagpur has been fitted with a box rudder, which, it will be recalled, is one of the features of the German steamer Bremen, the holder of the Atlantic record. The change in the City of Nagpur was effected while the vessel was lying in its Glasgow dock, without its being dry-docked.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Glasgow, September 17; Manchester, September 23; Birkenhead, September 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Stockwell for Calcutta (Birkenhead, September 12); s.s. Mahseer for Calcutta (Glasgow, September 12; Birkenhead, September 19); s.s. Malakuta for Calcutta (Birkenhead, September 30).

Bibby Line.—S.s. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 18); s.s. Staffordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 2).

British India Line.—S.s. Mulbera for Colombo, Madras, and Calcutta (London, September 21); s.s. Warfield for Bombay (London, September 21).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 5); s.s. Jessmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 19).

P. and O. Line.—S.s. Novara for Calcutta (London, September 13); s.s. Kaisar-i-Hind for Bombay (London, September 13); s.s. Ranpura for Bombay (London, September 27).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 14); s.s. Cyprian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, September 28).

Ellerman and Papayanni Lines.—S.s. Roumelian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 14; Swansea, September 14); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, September 14; Swansea, September 19); s.s. Detrol for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Swansea, September 14; Liverpool, September 19); s.s. Egyptian for Gibraltar*, Algiers*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 28; Swansea, September 28). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port.

BANK DIVIDENDS.

CHARTERED BANK OF INDIA.

At a meeting of the Court of Directors of the Chartered Bank of India, Australia and China, held on September 4, it was decided to declare an interim dividend for the half-year ended June 30 last at the rate of 14 per cent. per annum, free of income tax, payable on and after September 11. This rate has been maintained for interim dividends since 1920, when the capital was increased to the present amount of £3,000,000.

EASTERN BANK.

The Eastern Bank announces an interim dividend of 4s. a share, payable October 1, less tax, at 3s. 9d. in the £, after allowing for relief in respect of Indian taxation. This is the usual interim rate. The final payment has been of late years 5s. per share, making 9 per cent. on the paid-up capital of £1,000,000.

AN ANGLO-POLISH AMALGAMATION.

Arrangements have been made between Messrs. Babcock and Wilcox, Ltd., and a Polish firm, L. Zieleniewski and Fitzner-Gamper, of Cracow, for the formation of a joint company, to be known as the Babcock-Zieleniewski Polish Works. The new company will take over the Polish firm's boiler manufactory at Sosnowitz with a view to equipping it on a scale to enable it to manufacture the Babcock-Wilcox Water-tube Boiler. By this means it is expected that the Zieleniewski factory will be in a position to meet all the requirements, present and future, of the Polish market.

It is announced that the Presidente Wilson will shortly be transferred from the Cosulich Line to the Lloyd Triestino for the Bombay service. The Presidente Wilson, originally the Kaiser Franz Joseph I. of the Austrian Lloyd, has hitherto been used on Atlantic services, and, since her conversion to oil fuel, as a cruising ship. She has a speed of 19 knots.

"Fort" and standard Dunlop tyres will be the main features of the Dunlop Company's stand (No. 504) at Olympia this year. For the motorist who wants a durable cover at a low price, the new Dunlop Clipper tyre will be shown. There will also be examples of Dunlop wheels, such as the patent detachable and bolt detachable wire tyres, the usual steel artillery wheels and discs. An attractive display of Dunlop accessories, including pumps, repair outfits and jacks, will be staged.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

1 ASSYRIA ...	Sept. 27	1 CALIFORNIA ...	Oct. 22
1 BRITANNIA ...	Oct. 11	1 ELYSIA ...	Nov. 12

*First class passengers only. Specially low fares. 1 Calls Port Sudan.

† First and Third class passengers.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, Tuesday.

Business on the Stock Exchange has again been on a restricted scale during the past week. Uncertainty in regard to the monetary situation has been mainly responsible, and, although no change in Bank rate was made on Thursday, this uncertainty still persists, for it is clear that in the absence of a sudden change for the better in the gold and exchange position, Bank rate must be raised before very long, and until such an increase is made both the money and stock markets must continue to live in a state of suspense. Price changes on balance have been small, except in the case of one or two sections. Home rails rallied on the better showing of the traffic returns, and in the industrial section the announcement of a fusion between Lever Bros. and the Margarine Union served to maintain speculative interest in margarine issues. So far there is little sign of a return of public interest in the stock markets generally.

Margarine-Soap Merger.

The persistent rumours of negotiations between Lever Brothers, the outstanding soap concern, and the margarine combine had their basis in fact, and it was announced on Tuesday that a provisional agreement for securing complete co-operation between Levers and the Margarine Union had been signed. The details of the scheme will naturally take time to work out, and no further announcements will be expected for some months. The fusion should be beneficial to both parties. Although their main interests are different, Levers, through some of their 200 associates, trade in products which are also handled by the margarine concern, which in addition to its main product makes butter, condensed milk, soap, candles and bacon. An even greater community of interests is seen on the buying side, for both companies are large consumers

of vegetable oils and fats. In order to secure adequate supplies of these essential raw materials, Levers have for a long time owned or controlled very large sources of supply. Since the Margarine Union have interests in or agreements with several important retail distributing organisations, such as the Home and Colonial Stores, the new combine will embrace the whole trade from the primary raw materials to the ultimate consumer. The prospects for its shareholders should, therefore, be greatly improved by the fusion now announced.

Gas Companies.

To judge by several recent announcements of increased interim dividends, the gas industry in this country appears to be doing well. Among the companies whose shareholders have benefited in this way are the Liverpool Gas Company and the Southern and District Gas Company. Some pessimistic critics have held that the gas industry is moribund, and must inevitably decline in face of the progress of electrical supply concerns. Actually the two appear to be expanding together, and it is noteworthy that the consumption of gas has more than doubled this century. While, as an illuminant, electricity is probably the more popular—at any rate where it can be produced cheaply—there is still a big field for gas as fuel, both for heating and for power purposes. At present some 80 per cent. of the sales of gas is for fuel for one purpose or another. There is no reason to suppose that the use of gas will not increase side by side with that of electricity, and the prospects for shareholders in gas concerns will be sensibly improved, if the projected legislation for removing some of the obsolete regulations that hamper the industry is carried through. Among British gas companies' ordinary stocks, Gas Light and Coke yield £6 2s. per cent., Liverpool Gas 5 per cent. ordinary £6 8s. per cent., and Newcastle-on-Tyne and Gateshead £6 3s. per cent. As regards prior charge stocks, Liverpool Gas 4 per cent. perpetual debentures return £5 13s. per cent.

The Rayon Industry.

The British rayon industry has made a substantial recovery from the depressed conditions of the later months of 1928 and the beginning of this year, and may now be said to be in a fairly healthy condition. A noticeable feature is the narrower margin between production and consumption. In the first six months of 1929, according to the Board of Trade returns, sales amounted to 25,811,000 lb., and production to 25,840,000 lb. This compares very favourably with the returns for the corresponding period of 1928, when sales were only 26,203,533 lb., against a total production of 27,060,000 lb. Moreover, a large proportion of last year's production was of very low grade yarn. Another feature which our present statistics do not adequately reveal is the increasing popularity of fabrics containing a high proportion of rayon, both in the home trade and in several important export markets. Exports of 100 per cent. rayon fabrics, in fact, reached a high record in July. On the other hand, as a result of the large stocks many firms are still carrying, prices have been lower this year, and profits will also show a reduction. Nevertheless, the outlook is promising, for the public's appreciation of rayon products is constantly growing. Few of the British rayon companies are, however, sufficiently well established to have an assured future, and the ordinary investor would be well advised to confine his attention in this industry to Courtaulds, Ltd. The ordinaries can now be bought to yield £5 3s. per cent., while the 5 per cent. cumulative preference shares return £5 6s. per cent.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms.
 The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on a its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Forms of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

THE ECONOMIC SITUATION IN BULGARIA.

The National Income.

The total national income of Bulgaria has been estimated by the Section of Economic Studies at the National Bank at 40 milliard leva, writes the British Consul-General at Sofia, in the course of a memorandum on the economic situation in Bulgaria, 1928-29, quoted by *The Board of Trade Journal*. Of this, about 21 per cent, reverts to the State in the form of taxes, etc., and from 1934 onwards the proportion will advance *pro rata* with the increased Reparation payments. The Ministry of Agriculture estimates the minimum annual revenue of an agriculturist (this class forming about 80 per cent. of the population) at 500 leva per head, a figure which speaks for itself and explains the low purchasing power of the country generally.

Agriculture in 1928.

For agriculture, 1928 was an unfortunate year. After exceptionally severe storms and floods, and an earthquake which wholly or partially destroyed or damaged many towns and villages in the Plovdiv region of Southern Bulgaria, it was finally crowned by an unprecedented drought. Apart from material losses sustained, human suffering has been considerable. But for the improvement in the yield per hectare of wheat, rye and barley the position would have been serious indeed. It can be ascribed in a very large measure to the more extensive use of modern implements, the imports of which in 1928 totalled 11,263 tons, as compared with 5,591 tons in 1927 and 4,123 tons in 1926. This year perhaps no less than 30 per cent. of the winter sowings were ruined by the frosts of last winter, and the lands have, in most cases, been re-sown with spring varieties, particularly barley. It is hoped that the maize crop will assist towards balancing the losses on other cereals.

The Ministry of Agriculture continues to display conspicuous energy towards the improvement of agricultural methods, since it is universally realised that increased production is the one and only solution of the economic problem confronting the country. Import duties on many items used in agriculture have been waived, and large quantities of ploughs, harrows, seeders, cultivators, etc., have been imported on the Ministry's behalf. During 1928 implements to the value of 100,000,000 leva were purchased, and further purchases to a similar amount are contemplated this year. These implements are distributed to the agriculturists, if necessary on credit terms, at a rebate of 15 per cent. on their cost price. If distributed through a co-operative organisation the rebate is 20 per cent.

Encouraged by the Local Industry Encouragement Law and strengthened by tariff protection, local industry is making progress. At the end of 1927 there were 1,031 "privileged" undertakings (mining 5, metallurgical 122, ceramic 118, chemical 92, foodstuffs and beverages 383, textiles 132, timber and woodworking 50, tanning 54, paper-making 33, electrical 42) employing about 23,000 workpeople and 83,000 horse-power, the capital aggregating 4,545,000,000 leva. There was a considerable increase in the number of undertakings, but actual figures are not yet available. As an indication of this, the number of workpeople employed during March, April and May of this year averaged 73,590, as compared with a monthly average of 58,540 during a similar period last year. In the textile industries alone the monthly average during the first three

months of the year was 13,280 workpeople, or 1,700 over the 1928 figures.

Foreign Trade.

The value of exports in 1928 was 6,233,000,000 leva, and of imports 7,041 million leva, as compared with 6,628 million leva and 6,129 million leva respectively in 1927. The deficit was, therefore, 808 million leva, as against a surplus of 499 million leva in the previous year. For the first four months of 1929 an adverse balance of 378 million leva was shown, as compared with a deficit of 375 millions for the corresponding period of last year.

Among the imports which showed a notable increase over the previous year are: metals and metal products (12.7 per cent. of the total), 134 million leva, including raw iron, 60 million leva; timber and its products, 60 million leva; textiles (37.5 per cent. of the total), 180 million leva, chiefly composed of cotton and woollen yarns, 137 million leva, and raw cotton, 44 million leva; rolling stock and motor-cars, 93 million leva, motor-cars accounting for about 60 million leva; machinery and implements (15 per cent. of the total), 310 million leva, the bulk consisting of agricultural machinery and implements, but also engines, 54 million leva, and textile machinery, 44 million leva, while there was an increase in the value of sewing machines.

The following table illustrates the positions occupied by the various competing countries:—

Source of Imports.	1928.		1927.	
	Mill. leva.	Per cent.	Mill. leva.	Per cent.
Germany...	1,493.6	21.2	1,289.5	21.0
Italy ...	1,070.5	15.2	893.8	14.5
Czechoslovakia ...	756.9	10.7	600.1	9.8
Great Britain ...	732.5	10.4	736.4	12.0
Austria ...	567.1	8.0	502.4	8.2
France ...	540.2	7.7	557.0	6.6

The increase in the Customs duties in March, 1926, and then the raising of the co-efficient from 15 to 20 paper leva for one gold leva in July last, which was equivalent to an increase of 33½ per cent. on practically all imported commodities, naturally brought down the volume of manufactured goods and sent up the volume of raw and auxiliary materials for local industrial needs. The object underlying these increases was undoubtedly a desire to give fresh impetus to home production.

Bulgaria's principal customers for her exports were:—Germany, who took 28 per cent. of the total in 1928, as against 23 per cent. in 1927; Austria, who took 14.5 per cent., against 16.5 per cent.; Italy, 11.0 per cent., against 7.3 per cent.; Greece, 8.1 per cent., against 14.8 per cent.; France, 5 per cent., against 5.8 per cent.; Belgium, 4.2 per cent., against 4.8 per cent.; Poland, 4.6 per cent.; and Turkey, 4.7 per cent., against 2.6 per cent.

Trade with Great Britain.

Great Britain, exporting to Bulgaria goods to the value of 732.5 million leva (say, £1,000,000) in 1928, imported Bulgarian produce to the value of 21 million leva (say, £180,000). A greater measure of reciprocity would be gratifying and helpful, but, apparently, since the War, Bulgaria has been able to find better prices on the Continent. The major portion of British trade with Bulgaria (say, 67 per cent.) is in textiles, including raw and semi-finished materials for local industries. The development of these has completely excluded many items and considerably reduced the volume of others.

Great Britain should endeavour as far as possible to

replace its lost trade in piece-goods by cotton and woollen yarns required by local industries. We are far behind Belgium, Italy, France, and Czechoslovakia as regards the supply of woollen yarns, mainly for the reason that prices of British-made yarns are higher, although of better grade. There is little doubt but that Bulgarian industries will be employing higher grade yarns as time advances. One of two British firms, in order to keep in touch with the market, are supplying Belgian and other yarns.

Cotton and Woollen Piece-Goods.—There is room for competition in cotton prints, calicos, poplins, etc., and also in the higher grades of woollen piece-goods. In the latter home production has excluded cloths weighing over 500 grammes to the square metre. In cloths, 250 to 500 gr., Great Britain has about 24 per cent. of the trade, as against Germany's 27 per cent. and Czechoslovakia's 25 per cent. Great Britain's share in woollen piece-goods of up to 250 gr. is only 1.1 per cent., Germany and France taking 77 per cent. between them.

Industrial Machinery.—In spite of the increased demand the United Kingdom's share in this trade is relatively small. Great Britain has about 10 per cent. in internal-combustion engines, about 15 per cent. in textile machinery, as against Germany's 60 per cent., and a very small share indeed in other classes.

Agricultural Machinery and Implements.—Britain's share in threshing machines is about 16 per cent., as against Hungary's 48 per cent. and Germany's 15 per cent. The British share in other classes of machinery and implements is practically nil, with the exception of oil tractor ploughs, of which it has 3 per cent. There is good trade to be done in ploughs, but of the types already established.

Chemicals, particularly heavy, could find a market. In tanning materials there is room for improvement, the United Kingdom's share in extracts being under 7 per cent. For iron and steel there will be a good and growing market, as soon as British prices are competitive.

Trade in the following lines could be secured:—Linseed oil; nut edible oils; palm and coconut and castor oils; essential oils and essences; cutlery of the cheaper grades and razors; horseshoe nails; lead in ingots, pipes and sheets; zinc in sheets; copper in ingots, sheets, bottoms, bars, etc.; hides; bicycles, motor cycles and gramophones.

The need is keenly felt for a British bank. Until this is established, or until some British bank acquires a controlling interest in a completely neutral (Bulgarian, for instance) bank, British trade must continue to labour under a distinct disadvantage. The trade interests of our competitors are adequately cared for by banks of their own nationality.

CYPRUS CROP REPORT.

An official report on Cyprus crops for the month of August gives the following details:—

Wheat.—Threshing is nearing completion and most of the grain is stored. On the whole the crop has proved satisfactory. During last month prices have fluctuated. Adverse crop reports from certain wheat-producing countries have affected the prices of imported flour, which have been reflected in the local price of wheat, which has advanced over 1s. per bushel. Latest prices, 6s. to 7s. per bushel. There are demands from Turkey and Greece for seed wheat, which will tend to raise local prices.

Barley.—Threshing is practically completed. The crop has been very satisfactory throughout the Island. Export demand is poor and prices are most controlled by local demand. Prices from 2s. 3d. to 2s. 7d. per bushel, a slight improvement on last month.

Oats.—Crop poor; price 2s. 7d. per bushel.

Potatoes.—Exports to Greece continue. Planting of winter crop is in progress, and it is anticipated that the area devoted to winter potatoes will not be less than last year. Price £6 10s. per ton.

Cotton.—Crop prospects are good for irrigated and

early sown unirrigated cotton. Late sown cotton has been adversely affected by hot dry weather.

Oranges.—The prospects of the coming season for citrus fruits are not very favourable owing to "June drop" continuing later than usual.

Pomegranates.—The crop is not expected to be prolific. Trees have again suffered from the *acarid* pest.

Carobs.—Harvesting has been completed; the crop is below that of last year. Price £5 10s. per ton.

Tobacco.—Harvesting of leaf is still in progress, and the crop is good. Price of cigarette leaf between 7d. and 8½d. per lb., fumigated leaf 4d. per lb. Fumigation is now in progress.

Hazel Nuts.—Harvesting is now completed, and the crop is stated to be considerably below the average production.

Almonds.—Collection is now in full swing, and according to reports the crop is a heavy one and the quality of nuts above the average.

Walnuts.—Collection has begun, and the crop is expected to be exceptionally good.

Melons.—Both sweet and water melons have suffered badly from aphid, which attacked the plants towards the end of the season and caused considerable losses in fruit.

Cumin.—Good demand; price £60 per ton, upward tendency.

Aniseed.—Good demand; price £18 per ton, unsteady.

Olives.—General prospects fair. Considerable damage reported by olive fly and other pests.

Grapes.—The grapes continue to have a good and healthy appearance in general. Sunburn, however, from excessive drought and hot winds has caused certain damage in vines planted in moist deep soils. The late rains which fell in the greater part of the vine districts will help the ripening and improve the quality. The crop is expected to be 25 to 30 per cent. less than that of last year. The export of grapes from Limassol to Egypt began from the first fortnight of August. Price ¾d. per lb.

Wines.—Red dry wine, 22s. to 25s. per load; Raisins, 1s. 3d. per stone; Zivania, 11d. per quart.

BALKAN LABOUR IN FRANCE.

Shortage of labour in France recently led a French organisation to investigate the position in Roumania with regard to the introduction of Roumanian labour into France. Apart, however, from a preliminary inquiry, it is understood that no definite steps in the matter have yet been taken. In this connexion it may be pointed out that superfluous labour in Yugoslavia has for some time past found a market in France. The labourers come for the most part from the districts of Maribor and Celje, in Slovenia. A special train containing 300 of these recently left Maribor, and it is stated that there are already 4,000 Yugoslav unemployed for whom work has thus been found in France. The men are personally selected by a representative of a French organization, and the necessary arrangements for their temporary emigration are then made with the Yugoslav authorities.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended September 4:—

Egyptian Futures.

Sakel Contract.—Increasing activity has been witnessed in this market throughout the past week, more trade support has been in evidence, and this contract with a re-awakening of speculative interest has resulted in the market developing a broader tendency. Just after our last report values reached about twenty points on a moderate amount of profit-taking, however, good Alexandria reports and firmer American advices quickly re-established the level, and since a gradual rise has been in progress. At the time of writing Novembers stand at 16.95d., or a recovery of apparently 175 points from the low level reached in the early days of last month. Further advances will probably meet greater resistance and bring out speculatively-held cotton. However, with sentiment becoming increasingly "bullish," operations on the short side are not advisable till a clearer perspective of next season's supplies can be obtained. Crop reports from Egypt are rather conflicting, some contending that more than average damage has been sustained, whilst more conservative sources place the deterioration as normal. It is generally admitted that the crop is about a fortnight behind, and this in itself warrants a certain amount of apprehension, as the later picking commences the greater possibility of a cut in yield and quality, especially from fogs. Trade reports on the whole show a moderate measure of improvement, and this has had to move actively in both c.i.f. and spot cottons. In addition quite a fair amount of "fixing" has been noticeable during the past few days.

Little change has taken place in differences between the various deliveries, although Novembers and Januaries have closed in slightly, due to the greater part of the covering against spot sales and calls falling in the last-named position.

Alexandria still commands a heavy premium over the local contract, and provided that the demand fulfils the promise of the past few days we anticipate a gradual narrowing of the present parity before the new crop starts to move. Values since our last report have improved 42 to 46 points for near and 47 to 42 points for more distant positions.

Upper Contract.—The turn round in sentiment commented upon by us last week has since been followed by a further sharp recovery in prices. Some outside buying has been in evidence, but the more important purchases have been made for Alexandria account, one firm alone earlier in the week taking about 4,000 bales, probably reversing an old straddle against purchases of Sakels. No important crop news has come to hand, and the following cable received earlier in the week allays, to a certain extent, anxiety due to the high Nile: "Damage high flood so far negligible possibility inundation which inherent to high floods as present year exist, but no immediate danger." Trade interest appears to be recovering, and a satisfactory demand for cotton out of the local stock has been expressed; new crop business, however, is slow in developing. The future course of our contract depends largely on the action of the American markets and in this account a clearer view of the position will be obtainable after next Monday's Bureau report.

Egyptian Spot.

The demand has had a broadening tendency throughout the past week, and trade reports are beginning to show a greater measure of trade activity. Values continue to have an advancing tendency, due to further pessimistic crop advices, but authoritative sources still maintain that so far only average deterioration has occurred; it is acknowledged, however, that conditions are backward, and on this account increasing nervousness and periodical scares are probable during the next few weeks.

Sakels are beginning to attract a healthier inquiry, and with old crop stocks restricted premiums are hardening rapidly, especially for the medium grades. Only occasional sales in cotton grading over Good have been made.

Uppers continue to enlist a good proportion of the local sales, with the demand still mainly centring on the G.F. to St. F.G.F. qualities. The basis for all grades shows a gradually hardening tendency, and desirable lots are becoming increasingly difficult to pick up.

Pilion has only been occasionally in request, but in isolated cases full prices are being paid for choice lots. The selection all round is poor.

Nahda and White continue to attract little attention from buyers, and stocks held here are restricted to a few lots of each variety.

Sudan Sakel is attracting increasing interest from spinners, and anticipations of a material expansion in the off-take appear justified in view of the present restricted selection of Egyptian Sakels. The lower grades in particular should meet with a good demand, and we would remind buyers that supplies of these this season are below the average of past years.

Tokar Sakel.—The top grades have again been neglected, but one or two inquiries have been made for the lower qualities without business resulting to date.

C.i.f. business again shows a slight improvement both for prompt and forward shipments. Forwardings to the trade last week amount to 6,457 bales Egyptian and 1,772 bales Sudan. Estimated sales of the week 3,100 bales Egyptian and 750 bales Sudan Sakel. Quotations of Sakel are advanced 65 points, and those of Upper and Pilion +8 and 45 points respectively. F.G.F. Sakel to-day 17.70d., F.G.F. Upper to-day 12.08d., F.G.F. Pilion to-day 13.15d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended August 29 state:—

Since our last report the futures market has been very active, the tone has been firm and prices have registered a fairly appreciable advance. The week's summary of price movements is as follows:—Sakellaridis: November, 33.29 dollars, 1.24 dollars up; January, 33.65 dollars, 1.20 dollars up; March, 34.14 dollars, 1.24 dollars up; May, 34.50 dollars. Ashmouni: October, 21.39 dollars, 0.87 dollars up; December, 21.82 dollars, 0.83 dollars up; February, 22.26 dollars, 0.84 dollars up; April, 22.65 dollars, 0.70 dollars up; June, 23.06 dollars, 0.83 dollars up.

Sakel.—Contrary to the general opinion that the market would for some time to come remain rather quiet, we have had during the week under review a succession of very active and continually rising markets. This unexpected change in the situation has been the result of unfavourable reports from up-country on the progress of the crop, reports which have been naturally interpreted in the most pessimistic manner by local long operators. Heavy speculative buying followed, a good proportion being for account of a clique whose financial means are very weak.

The facts that the crop is backward, and that in case of careless use the actual superabundance of water might cause some damage, are the foundation for these unfavourable reports. In the meantime it must be noted that the condition of the plant at the moment is rather satisfactory, probably slightly more so than at this time last year, so it would appear that the pessimism of operators on the subject of the final out-turn is not based on any definite facts, but rather on possible future damage.

Spinners continue to persevere in their indifferent attitude, and the trade interest in the market has been insignificant, merely consisting of a few hedge sales against fixations of up-country purchases.

It is our opinion that the recent rise, not being based on any expansion in the trade demand nor on real damage to the crop, can only be maintained with difficulty.

The Government offered for sale on Wednesday, August 28, 1,218 bales Sakel, of which 318 bales found buyers.

The Sakel/Uppers straddle (November/October) this week stands at 1,100 points against 1,153 points last week and 1,359 points at this time last year.

Uppers.—In this market also sentiment has been very bullish for the same reason as in the Sakel market, i.e., the circulation of unfavourable reports on the crop progress. These reports are true only to a very slight degree; the crop is merely slightly backward. Apart from this, everything seems to be very satisfactory.

Hedging operations against spot cotton and against fixations of up-country purchases have been fairly numerous, but these sales were easily absorbed by speculative purchases and some trade buying against sales to spinners.

We maintain our opinion that the Ashmouni market will continue to follow, for the time being, very closely the New York market.

The Ashmouni/American straddle (October/October) this week stands at 260 points against 222 points last week and 427 points at this time last year.

Against the third August tender, dockets for 2,000 kantars were issued, bringing the total since the beginning of the month up to 6,500 kantars.

The week's receipts amount to 2,000 kantars against exports 112,355 kantars; the stock in Alexandria stands at 1,260,218 kantars.

The official figures of arrivals and exports for the period September 1, 1928, to August 21, 1929, are as follows:—

Arrivals: Sakellaridis, 2,524,566 kantars; Ashmouni and Zagora, 4,560,454 kantars; Pilion, 419,032 kantars; Various, 317,941 kantars; Scarto, 137,650 kantars. Total, 7,959,643 kantars.

Exports: Sakellaridis, 2,532 kantars; Ashmouni and Zagora, 4,611,639 kantars; Pilion, 367,026 kantars; Various, 223,612 kantars. Total, 7,734,443 kantars.

Spot.—We have had a very moderate market this week, new crop cottons only coming on to the market towards the end of the week. Total sales amount to about 2,050 bales, of which we estimate Sakellaridis 1,000 bales, Ashmouni and Zagora 1,720 bales, Pilion 130 bales and other varieties 100 bales.

Sakellaridis: Here the greater demand has been for cotton grading Good and Good about. There has been a small inquiry for medium grade cotton, but owing to its scarcity very little business was put through. The basis is unchanged.

Ashmouni and Zagora: The strong demand for Fully Good Fair and Fully Good Fair Good still exists, and good premiums were paid. The bulk of the business done, however, has been in Good and Good Strict, as these are the only grades being offered freely on the market, holders wishing to clear their stocks before new crop arrivals.

Pilion: A few lots have changed hands at last week's premiums.

Other Varieties: Here there has been a small inquiry for White and Nahda. A small lot of a new growth, Giza 3, was shown on the market, and bought by several export houses at a very good premium on Uppers.

Crop 1929.—The temperature in Lower Egypt has continued favourable for the opening of the bolls, but the crop is still backward about ten days. Some fogs have been reported, but have not caused any damage. In addition, the leaf worm has reappeared on a small scale in certain districts of the North. The pink boll worm attack has increased slightly and the proportion of attacked bolls varies be-

tween 5 per cent. and 15 per cent., which is slightly less than at the same time last year.

In Upper Egypt picking is in full swing, and arrivals at the ginning factories are increasing daily.

There have been complaints of attacks by the "Nadoua Assalia" pest; the top bolls have been those which have principally suffered.

This year's high river level, together with the crop delay of about a week, are causing some uneasiness to the southern growers. The rumours that vast areas have been flooded are, however, without foundation, and we understand that all necessary precautions have been taken to prevent the loss of crops.

The traffic receipts of the South Indian Railway Company for the week ended August 10 amount to Rs.12,25,273, making a total of Rs.2,44,57,718 for the period from April 1, as compared with Rs.11,09,010 and Rs.2,21,79,903 for the corresponding periods in 1928.

Imperial and International Communications, Ltd., announce that the purchase of the Imperial Cables has been completed and the lease of the Beam Wireless Stations taken up by the company. The other necessary agreements in connexion with the cable-wireless merger have been exchanged with the Government, and it is anticipated that the Imperial Cable and Beam Wireless Services will be operated by the Communications Company at an early date. These arrangements are in accordance with the recommendations of the Imperial Wireless and Cable Conference for the unification of the Telegraph Services of the British Empire.

The Board of Directors of the Guaranty Trust Company of New York declared a dividend on September 4 of 5 per cent. for the quarter ending September 30.

The Yugoslav Ministry of Finance is reported to have called upon all Departments of State to effect in their new estimates a reduction of at least 15 per cent. on the amounts in last year's Budget.

Steaua Romana (British), Limited, are advised that the production of the Steaua Romana Company, Bucharest, for the month of August was 83,480 tons.

According to a report from Berlin, the Roumanian State Railways have concluded an agreement with the Allgemeine Electricitaets-Gesellschaft for the delivery of a hundred locomotives. Tenders were received from 24 different firms of seven different nationalities.

The Czechoslovak Government will be represented at the forthcoming Ideal Holidays Exhibition by an exhibit displaying some of the attractive features of the State, its spas, winter sports centres and industries.

The P. and O. Barrapool is the last of five sister ships—the others being Ballarat, Balranald, Baradine and Bendigo—that the company has had overhauled, reconditioned and converted for burning oil fuel. They are to be used on the London to Australia route via the Suez Canal.

Notes of the Week.

Egypt and the Proffered Treaty.

Those who have followed the course of events in Egypt since the publication of the proposals for an Anglo-Egyptian Treaty, will not be surprised to learn that some time must still elapse before the country is able to pass its verdict on those proposals. It was not unreasonable on the part of the British Government to indicate that it expected to arrive at a settlement with the Egyptian nation, rather than with any particular party, and it was natural to imagine that any elections to be held in Egypt would be, in the words of the *Daily Herald*, "not merely the choosing of a Parliament," but "the considered verdict of the nation upon its future position and status." This view, however, is now shown not to have taken into consideration the mentality of the Wafd's leaders, who have stipulated that the elections to be held shall be precisely what the British Labour organ considered that they must not be, "merely the choosing of a Parliament," without any reference to the proposed Anglo-Egyptian treaty. Accordingly, the following situation has been created: the British Government, influenced by the claim of the Wafd to represent the great bulk of the nation, warned Mahmoud Pasha that the proposed treaty must be accepted by the Egyptian people, under the impression that a general election would enable the people to record its view of the proposals. The Wafd, however, by imposing silence upon its handful of articulate followers, has shown that the great mass of the Egyptian people is inarticulate as well as illiterate, and that consequently the submission of the treaty to the Egyptian people through the medium of a general election would not mean what the British Government imagined that it would mean when it imposed the condition. The question, therefore, arises whether the course of make-believe is to be persisted in or whether facts will be faced and the pretence of bracketing an Egyptian electorate with a British electorate and of crediting the Wafd leaders with British ideas of liberalism and constitutionalism will be abandoned. Elections held during the next few weeks must be, on the Wafd's own showing, a farce from the British point of view. Parlia-

ment would not have been elected on the basis of the people's attitude towards the treaty, but at the Wafd's dictation. The treaty would, therefore, be rejected or accepted according to the fancy of the Wafd's leaders, and the verdict of the people would be more effectually ignored than under the most extreme form of despotism.

A Referendum the Solution.

As was pointed out in these pages last week, the only way of allowing the Egyptian people to pass judgment on the proposals for an Anglo-Egyptian treaty would seem, in the circumstances, to be by means of a Referendum. Insistence by Great Britain upon elections constitutes unmistakable interference in Egyptian domestic affairs, because it re-imposes parliamentary institutions upon Egypt at a time when the nation as a whole, which has no understanding of the proper way of working such institutions, has clearly shown that it is not sorry to be rid of them. It is not contended that Egypt can dispense indefinitely with Parliament; on the contrary, it is well that she should have one, but it must be a parliament in the accepted sense of the word and not the parody of one that was previously imposed upon the country. Save in the eyes of those who make a fetish of parliamentary institutions, regardless of the fact that they can be used as an instrument of undisguised tyranny, the present Egyptian Government appeared to have acted reasonably in terminating the abuse by the Wafd of constitutionalism to serve its own ends, and the attempt to train the nation for a short space in the rudiments of self-government was being watched with interest and with no little sympathy. The interruption of that attempt before it has gained its ends is not likely to advance the interests of Egypt, and Mahmoud Pasha has good reason to regret the dilemma in which he has been involuntarily placed. The holding of elections bids fair to undo at one stroke all the good that Egypt has gained from one year's suspension of parliamentary institutions, while it affords no guarantee that the proposed treaty will be accepted or even considered on its merits. He is well advised, therefore, to take his time before deciding how the opinion of the

Egyptian people can be taken on the treaty. By getting into close touch with them he can make sure that his own views are known to the electorate; but it may be doubted whether he has the machinery to counteract the terrorism of the Wafd, when once the flood-gates of an electoral campaign have been opened. The Wafd hopes by its tactics to defeat both Mahmoud Pasha and Great Britain; it will not dare to reject the treaty, but it counts on coming into power again through the British insistence on a general election and thereafter being in a position to flout Great Britain as it flouted her before.

The Sudan and Egypt.

If on receipt of the first telegraphic summaries of the proposed terms for an Anglo-Egyptian treaty, reinforced, as they were, by anxious comments on the part of certain London newspapers, public opinion in the Sudan was left wondering what the future might have in store for the country, it would appear to have lost little time in recovering its equanimity. The Condominium worked well enough in the past, until the misguided attempt was made to transplant Egyptian politics into the country. The conspicuous failure of that attempt affords sufficient security against its renewal, and all that the proposed treaty sets out to do is to record an "as you were" for the Sudan. There will be no treaty, unless Egypt is satisfied with this arrangement, and the very essence of the agreement is that she accepts all that it implies. Trade, and not politics, is after all the main concern of the Sudan. The Egyptians' major interest in it is centred in their water supply, and not in claiming blood-relationship with Shilluks, Dinkas, Nuers and Fuzzy-Wuzzis; still less do they desire, when they have occasion to consider the matter dispassionately, to embark on the thankless task of taking over from the British the administration of the numerous races at a time when these will be tempted to maintain that, if there is to be any change in the Sudan, the sacred principles of independence and self-government must be applied, as in Egypt.

Brigands in Greece.

Brigandage dies hard in the Balkans, but it is almost in Greece alone that the evil lingers in the form of a recognised profession untinged by political factors. Economic conditions are more often than not a contributory cause, and this circumstance may account for a recrudescence in recent years. The latest incident, the capture of some of the members of a large party near Trikkala—a town of over twenty thousand inhabitants—is attributed to a well-known brigand, who has been a thorn in the side of the Greek authorities for many years. He was arrested in 1921, but escaped from Salonika prison and fled to Yugoslavia. His return to Greece and his subsequent exploits suggest that, as in most cases of successful brigandage, he has by terrorism or from sympathy secured the connivance of villagers, and it rests with the authorities to convince the latter that their duty, as well as their interest, calls for their active co-operation in ridding the country of these anachronisms.

Abyssinia.

It is to be hoped that the simultaneous appointment of Abyssinian Ministers to London, Paris, Berlin and Rome implies that the old policy of aloofness is to be discontinued in future at Addis Ababa, and that the Abyssinian Government will be as anxious to report abroad the progress that the country is making as many people will be to hear of that progress. The question of slavery is still one that exercises the mind of the Government. The problem of freeing all the slaves in the land is not as simple as it appears at a distance. Abyssinia's capacity to absorb freed slaves to any large extent in useful employment is limited, as is also the capacity of many of the slaves for other than slave work. A school for freed slaves has been in existence for a few years in Addis

Ababa, and it would be interesting to have a faithful account of the experience gained from this source. Unfortunately one result of the freeing of slaves has been noted in the increase of petty crime—a clear indication that the grant of freedom has not been correlated with the provision of suitable employment. Abyssinia's primary need is necessarily education, and the steps to provide it can only be slow. A recent advance that has been made is the opening of schools outside the capital, some indeed in the western provinces. It will be by a judicious blending of the furthering of education and the gradual opening up of the country by means of communications that Abyssinia will most successfully work out her own salvation. There will always be a temptation to set store on the outward trappings of civilisation, and remarks made last week by our Addis Ababa Correspondent suggest that a pitfall of this nature has been found in the passport system. On behalf of the Abyssinians, however, it may be pointed out that unfettered ingress into their country has not been without its drawbacks to them, and one result of the tightening up of the passport system has been to enable them to rid the country of certain Bolshevik agents or sympathisers. Ability to use the passport system as a means of defence without making it an instrument of offence will provide a test of Abyssinian statecraft and administrative efficiency.

The Palestine Commission.

Given its terms of reference, the Commission of Inquiry which is to investigate the disturbances in Palestine has been admirably composed. Those terms are, according to the second statement, issued by the Colonial Office on September 14:—"to inquire into the immediate causes which led to the recent outbreak in Palestine, and to make recommendations as to the steps necessary to avoid a recurrence." These terms will include, presumably, the earlier statement by the Colonial Office, made on September 3, an inquiry into whether the outbreak might be regarded as having been preconcerted or due to organised action. All the members of the Commission are men with excellent records of intellectual ability, and no stones can be thrown from either side on the score of probable partiality in any single member. At the moment we can recall no published statements by any of the four men on the question of Palestine and Zionism; we hope, indeed, that they have made none. If there were grounds for the slightest suspicion of prejudice or of pre-judgment in the Commission, half the value of its recommendations would be destroyed. Both Arabs and Jews will, it may be taken for granted, be disappointed by the recommendations of this Commission, if only because "major policy" is not to be considered by it. But if it settled the question of the Wailing Wall alone—recommendations on which will, of course, have to be one of its features, if not its capital feature—it would do an immense amount of good. For the fact remains that, though Arabs were, apparently, increasingly fretting at the implications of the Balfour Declaration, and Jews at the slowness of the British Government in implementing that Declaration, it was the Wailing Wall which supplied the spark to the fuel. Without the Wall, in short, which was transformed into the symbol of Arab and Jewish pretensions, there would have been no outbreak in Palestine.

The Palestine Police.

Quite obviously it was a very wise move on the part of the British authorities to recruit and to send to Palestine more British police. The reason for this step, however, appears in part to have been misinterpreted. As soon as the outbreak began stories were set in circulation by Jewish agencies of the desertion of the Arab members of the Palestine Police Force. The impression was allowed to develop that, because so many members of that Force were Muslims, the slaughter of Jews was looked upon unheedingly. This was, we believe, a libel. No official confirmation of the charge of disloyalty on the part of the

Palestine Police has yet been produced, and in later statements we find even Zionists modifying the first bad impressions. The point is one well worth making, if only on account of the demand made by certain Jews for an increase in the number of Jewish members in the Police Force. Upon the demand in itself we have nothing to say, except that we would trust Lord Plumer, who had the last word upon its composition. But the motive in reiterating the demand so loudly at the present time is patent. Since Arab policemen must inevitably sympathise with Arab rioters against the Jews, there must be Jewish policemen armed with an anti-Arab complex. To allow such a preposterous argument to succeed would be incredible. Its realisation alone would completely mar the prospects of a united nation in Palestine, of a single Palestinian nationality, composed of Arab and Jew. But here we are not so much concerned with that problem as to deal with the charge of grave partiality made against a British-trained Police Force. We remember, for instance, the Police Force in Mesopotamia during the Rebellion of 1920: it remained absolutely loyal to the cause of order. And the Palestine Police Force will similarly, we fancy, emerge from the scrutiny of the Commission with far more credit than is now commonly given to it. Individual incidents of conduct unworthy of a policeman there may have been, but the impartial critic will wait for further evidence before committing himself to the generalisation that the Palestine Police Force has been a failure.

The Mandate for the Holy Land.

Inevitably the disturbances in Palestine have raised the question whether Great Britain ought any longer to retain the Mandate for Palestine. Those who assert that the time has come for her to drop it belong to two classes: (1) those who have consistently deprecated all British commitments in the Middle East; and (2) those who wish to see the Palestine Mandate in hands other than those of Great Britain. Of the first category it is sufficient to say that its prestige, never very considerable, is not increasing; but of the second it is worth recording that Poland must now, after the riots in Palestine, be added to Italy as an aspirant to the rôle of tutor in Palestine. This new Polish desire has not, of course, been officially expressed, but it appears to be very generally shared, both by Poles and by Jews in Poland. Elsewhere there has been a demand for Jewish self-government in Palestine. Much in these proposals is wild talk, the outcome either of jealousy or disillusionment, but it does provide evidence of the very wide repercussions which follow action in Palestine. That Great Britain will retain the Mandate has been stated unequivocally, however; and those who would counsel her handing over the reins are doomed to certain disappointment. It may be admitted that Great Britain, though her knowledge of the Islamic world is unequalled, knows little enough of the mentality of the East European Jew who has supplied the bulk of the immigrants to Palestine, but to suggest that any other nation is better equipped to administer the Holy Land, with its conflicting aspirations, rights, and claims, is absurd. Under any other Power than Great Britain, Palestine, with neighbouring countries, would probably be ablaze within a month.

INDIAN NOTES.

The Simon Commission.

When they resume their sittings on Tuesday next, after the summer vacation, the members of the Statutory Commission will enter upon what will be, presumably, the last stage of the great task which has been laid upon them. They have now been at work for about a year and a half, during which time they have paid two visits to India and have thus been enabled to obtain first-hand knowledge of the conditions prevailing there. They have examined a host of witnesses, and have recorded a vast mass of evidence. In addition, they have had the advantage of

joint free conferences with the Committees appointed by the Central and Provincial Legislatures. The reports of the Provincial Committees, some of which are summarised on another page of this issue, are now before the Commissioners; and it is expected that the report of the Central Indian Committee will be ready in a few weeks. It is true that the extreme section of the Nationalist, or Congress, party in India decided to boycott the Commission. But the drafting and publishing of the document which has since become known as the Nehru report, and in which a new Indian Constitution is outlined, showed that even these extremists really recognised the Commission. In fact, it may be, we think, confidently assumed that the Commissioners must have become acquainted with every phase of opinion regarding the questions that they are investigating. Their inquiries have been so exhaustive in character, and have been so prolonged, that we should be surprised to hear of any race, or community, or sect of whose views on constitutional progress they have not acquired some knowledge. They will now enter upon the most difficult and onerous part of their undertaking, namely, the formulation of their proposals. It is expected that they will be engaged on this task until the beginning of the new year. Rumours are still current on the point whether their findings will, or will not, be unanimous. There is also, naturally, much speculation as to the nature of their main proposals. In India it seems to be taken more or less for granted that a not inconsiderable advance in the direction of responsible Government will be recommended, certainly as regards the provinces. Even after the presentation of the report to the Government there will necessarily be considerable delay before any legislation can be undertaken by Parliament. For in accordance with the decision arrived at when the Commission was constituted the Government, after receiving the report, will present proposals to Parliament, and these will be examined by a Committee of both Houses. With this Committee delegates appointed by the Indian Central Legislature will sit. It is unlikely, therefore, that any proposals which may be agreed upon can assume legislative shape until somewhere near the end of next year.

THE ROSS INSTITUTE.

Dr. John Gordon Thomson, director of the Department of Protozoology, London School of Hygiene and Tropical Medicine, has resigned the position, and has been appointed Principal of the Department of Parasitology at the Ross Institute for Tropical Diseases, London. Dr. Thomson served in Egypt during the War, specialising in pathology and protozoology at the Military Hospitals in Alexandria. Returning to London in 1918, he was appointed Officer in Charge of the Malarial Research Laboratory at the War Office.

THURSDAY, SEPTEMBER 19, 1929.

THE POSITION OF IRAQ.

The tragic death last week of the High Commissioner of Iraq, Sir Gilbert Clayton, cast a shadow over the whole of King Faisal's dominion. For the late High Commissioner has been cut off at the crowning-point of his Arabian life, just at the moment when he was moulding the opportunity, or seizing the occasion, of realising in Iraq those ideals of Anglo-Arab relations which he consistently upheld. Neither foolish enthusiasm nor jaded cynicism inspired his outlook on the affairs of Arabia; and there are reasons for thinking that the time was peculiarly ripe in Arabia for the exercise of his essential liberalism. Not that Sir Gilbert Clayton had any preconceived notions upon what was expedient for Iraq. His invariable method was to investigate, to test, and then to practise. In Iraq, unfortunately, only the preliminary stages of his method had been accomplished. Upon the burning problems of the day in Baghdad he had publicly expressed no opinion, and expectant Iraqis as well as observant Englishmen were awaiting a pronouncement by him with something more than usual keenness. It will be sufficient, however, if we indicate that Sir Gilbert Clayton's opinions may to some extent be early reflected in the attitude of the British Government, whose curious habit of appearing to strain at financial gnats when swallowing camels has in the past caused dismay even to the staunchest supporters of the British alliance among the Iraqis. We feel confident, in fact, that the negotiations which have been proceeding between London and Baghdad will ensure that no abrupt *impasse* is created in Iraq's internal political situation. In the shaping of such a smooth future it must be assumed that the late High Commissioner's hand played no unimportant part, and it is a cruel fate that he should have been denied even the first-fruits of his carefully conciliatory policy. Unquestionably his prestige in Iraq—already considerable from his long-standing friendship with King Faisal—was steadily increasing throughout the country, and there is abundant evidence that his beneficent influence was extending far beyond Palace-Residency relations. In this connexion it may be well to remember that the late High Commissioner went to Iraq, so to speak, as a new broom. He represented, and could be made out to represent, none of the traditions of India which Iraqis, with or without justification, have had the opportunity of ascribing to former High Commissioners: his record of dealing, on an equal footing, with Arabs and Egyptians was known and respected. But from being a distant name he had the chance, in Iraq, of becoming a revered guest, and the consequences of the sad fact that that opportunity has been denied him are incalculable. For it is to be doubted whether any living man had in so great a degree as the late High Commissioner a knowledge of all the aspects of the political problems of Arabia. Iraqis, Syrians, Trans-Jordanians, Palestinians, Wahhabis, Yamanis—he knew them all. Nor was there any indication that, in taking up the particular task in Iraq, he was likely to forget that not irrelevant problems existed elsewhere in Arabia. His

prospective, like his knowledge, was comprehensive; so that his untimely end may be regarded as nothing less than a tragedy by and to those Arabs who could look outside their own "national" boundaries.

The most obvious question to ask concerning the present position of Iraq, now that Sir Gilbert Clayton is no more, is: how will the Wahhabis behave towards their neighbours? For, as is well known, one of the happiest coincidences of the appointment to Baghdad of the late High Commissioner was the fact that his personal relations with King Ibn Saoud were so excellent: though the two diplomatists disagreed upon the problem of the Iraqi-Najd frontier, they disagreed as friends, and, so far as King Ibn Saoud was concerned, there was little danger of any violence on that frontier. But the very happiness of this aspect of Sir Gilbert's appointment as High Commissioner in fact revealed the difficulty of the situation: that peace should depend in so large a measure upon a personal relation. That feature was in essence a misfortune; for tranquillity on such a question as a frontier should be secured by law or by mutual agreement and should not be at the mercy of blind chance. This problem of Najd is not, however, quite so serious as the death of Sir Gilbert Clayton might appear to make it. For, although King Ibn Saoud has been entirely friendly and loyal to his words, there is indisputable evidence now that certain tribes in Najd are out against him. This fact is at the base of the Wahhabi problem, and must be recognised, if correct conclusions are to be drawn. So rebellious are some of the Najdis, in fact, that the Mutair actually asked for the support (which was, naturally, curtly refused) of Iraqis against King Ibn Saoud. At the moment, indeed, the problem in Central Arabia is rather one of the relations between King Ibn Saoud and the Hijazis, on the one hand, and certain Najdi tribes, on the other, rather than between Iraq and Najd. So much publicity has been given to the matter of the disputed "forts," that the subsequent antagonism to their King of the adherents of and collaborators with Faisal al Duwish has largely been overlooked. What turns the affair may take in the future, it is impossible to guess, but it is certain that present anxiety in Iraq arises more from the nature of the Wahhabi King's control over his Najdi tribes than from their hostility to Iraq. Even so, however, it is lamentable to think that whosoever may be appointed to succeed Sir Gilbert Clayton in Iraq must of necessity lack those close relations with King Ibn Saoud which, quite apart from the question of the Iraqi-Najd frontier, gave high promise of a period of peaceful progress throughout Arabia.

From the internal point of view, the future of Iraq is obscure but untroubled. It is a remarkable testimony to the common-sense of Arab leaders and to the stability of the situation that the sight of Baghdad without a Cabinet (for the Cabinet of Taufiq Beg Suwaidi is waiting only for the formation by Sir Abdul Muhsin of a new Cabinet), without a Counsellor to the Residency, and with only an Acting High Commissioner, should result in no political agitations. Partly this fact is due to the prestige of the late High Commissioner and to the personal esteem in which he was held by many leading Iraqis, and partly, possibly, to the report that Great Britain is about to make such concessions as will placate Sir Abdul Muhsin and his supporters. Of these last negotiations nothing is publicly known, but there appears to exist a general confidence that the anomalous situation which had been allowed to arise in Baghdad will shortly be ended. It is profoundly to be hoped that agreement may at last be reached. Too long, much too long, have certain questions, particularly financial questions, been permitted to remain without a solution, but if, in the next few weeks, Sir Abdul Muhsin can return to power on such terms as will fully satisfy Iraqi *amour propre*, there is little reason to think that all may not go so smoothly in Iraq as to end in the consummation of King Faisal's State being enrolled, in 1932, among the members of the League of Nations.

*The Near and Middle East

From Our Own Correspondents.

Cairo, September 6.

The High Commissioner.

Sir Percy Loraine, the new High Commissioner, arrived on September 2, by the Sitmar steamship *Esperia*. He was greeted on board by Sir Reginald Hoare, Counsellor, and Mr. Grafftey Smith, Acting Oriental Secretary at the Residency, and, on landing at the Arsenal Quay, he was welcomed by Said Zulfikar Pasha, Grand Chamberlain, on behalf of H.M. King Fuad, Ahmed Khashaba Pasha, Minister for Justice on behalf of the Prime Minister, Lutfy Sayed Bey, Acting Minister for Foreign Affairs (the Minister, Hafez Afifi Pasha, himself travelled by the same steamer as Sir Percy), Hussein Sabri Pasha, Governor of the city, Mr. Heathcote Smith, British Consul-General, and the senior British officials, such as Mr. Cecil Campbell, Acting Financial Adviser, Mr. Besley, Acting Judicial Adviser, Mr. Graves, Acting Director General of the European Department, Rear-Admiral Tomlin, Director-General of Ports and Lights, and Mr. Ryder, Acting Sudan Agent. The High Commissioner inspected the guard of honour, provided by the Durham Light Infantry, and shook hands with the British residents present, each of whom was introduced to him by name by the Consul General. The gathering of British residents was remarkably large for the season of the year, and it is interesting to note that Sir Percy made an excellent impression on them all. Noteworthy absentees from the reception were the Diplomatic Corps. Present in a body when Lord Lloyd, the last High Commissioner, first arrived, they were duly invited to Monday's ceremony, but they abstained, and the incident in the existing peculiar circumstances has not unnaturally caused considerable comment.

Shortly after Sir Percy Loraine had reached the Residency, Mohamed Mahmoud Pasha called upon him, and the High Commissioner returned the courtesy the same afternoon at the Government offices at Bulkeley. Next day he had an audience of the King at Montaza, and the same evening the Prime Minister dined at the Residency. Although this might have been an ideal occasion for a preliminary talk on the question of the hour—the treaty and the manner in which the opinion of the nation is to be obtained on the terms—I am in a position to state that up to the time of posting this letter there has been no conversation whatever on the subject between the High Commissioner and the Prime Minister. The problem of how to submit the treaty to the nation under conditions meeting the requirements of the British Government and at the same time assuring the most satisfactory results, in regard to the acceptance of its terms and to the subsequent state of affairs in the country, is still as far from solution as ever.

The Wafd's Attitude.

The situation is indeed a most involved one, the like of which has never before been experienced in this country,

land of confused issues that it is. There seems to be fairly general agreement that the terms are such as Egypt could never expect to improve upon. Even the Wafd tacitly admits that, since, if there had been anything worthy of criticism, it would surely have expressed its view instead of steadfastly refusing to give any opinion whatever on its merits. But how to get that view put on record by a satisfactory representative body in the country is what is baffling everyone, Palace, Residency and Cabinet.

The British and foreign communities, as well as the more responsible-minded Egyptian, agree that it would be fatal to the execution of the treaty and the state of public security in the country if the Wafd were to be allowed to get back into office as a result of the course followed to secure the opinion of the nation on the acceptability of the treaty. That they are perfectly right in their view was proved by what happened at and after the meeting which the Wafd held on August 31, as a counterblast to that at which the Prime Minister was to address his supporters here.

While Mohamed Mahmoud Pasha confined himself to dealing with the treaty and refrained from any references to the opposition, Nahas Pasha surpassed himself—and that is saying a great deal—in his abuse of the Premier to which his whole speech was devoted. Interruptions from the audience saying that they knew his opinion of the Premier, but that they wanted to know his opinion of the treaty, elicited no reply except a gesture from Nukrashy Effendi, one of the "heroes" of the Political Murders Trial and always associated with extremist tactics, who caused them to be expelled forcibly from the meeting. When refused permission in the past to hold meetings, the Wafd has always protested at what it termed Government interference with liberty of opinion and speech. In preventing these questions being asked at its meeting it does not appear to realise that it is itself doing exactly what it accuses the Government of having done in the past.

At the same meeting a well-known Wafdist rose and delivered an impassioned attack on *Al Ahram* for its attitude, which has seriously displeased the Wafd. The attack was received with uproarious applause, and the audience was so excited thereby that a band forthwith made off for the offices of the paper where they behaved in a disgraceful manner and had to be driven away by the police. Such was the result of the first public meeting the Wafd has been allowed to hold for over a year, and one must say that its result has fully justified the fears of the communities and has confirmed the argument of the authorities that any licence accorded to the Wafd under the Nahas-Makran-Nukrashy triumvirate risks being followed by disorder.

TURKEY

Sir George Clerk, accompanied by Mr. Grew, U.S.

Digitized by Google

Ambassador, and attended by Colonel Woods, British Commercial Secretary, recently paid a visit to the south-eastern littoral of the Black Sea, travelling by the s.s. *Izmir*, of the Turkish National Steam Navigation Company. The journey was effected under the most comfortable conditions, the party being hospitably entertained by the local authorities at every port of call.

A flying visit was paid to Amassia, situated between Samsoun and Sivas, and renowned for its apple orchards, and a further excursion was made by car to the famous Zyghana Pass on the Trebizond-Erzzeroum road. It was from the summit of this precipitous pass that the remnants of Alexander's legions beheld the waters of the Black Sea amidst shouts of *Thalassa, Thalassa*. From Zyghana the road descends by hair-pin bends amidst pine-clad slopes through "Djevizlik" (The Walnut Grove) to Trebizond.

Execution of Judgment Summonses.

The recovery in Turkey of monies owing by a recalcitrant debtor has hitherto been a slow process, attended by interminable judicial formalities, and calling for the exercise of much patience on the part of the suing creditor.

A recent Ordinance of the Ministry of Justice (ratified by the House of Assembly) based on the Swiss Code, puts an entirely new complexion on this matter of procedure which is of importance to both native and foreign mercantile communities and merchants alike.

In future a creditor need do no more than apply directly to the Sheriff's Officer without the formality of either a judgment-summons or a bill of exchange bearing the acceptance of the defaulting debtor. The Sheriff's Officer, after calling upon the debtor to satisfy the claim of the creditor, will proceed to levy distraint on the debtor's movable property and then upon his landed estate. In the event of an economic crisis, however, such as that through which this market is passing at the present time, a first delay of six months, renewable periodically, may be granted to the debtor at the Sheriff's Officer's sole discretion.

The intervention of the judicial bench is thus entirely dispensed with, the underlying idea being to facilitate an accommodation between potential litigants, and thus to save time and money. Imprisonment for debt is abolished, all debtors now in jail being released four months after the Ordinance comes into force. The onus of discovery of the debtor's worldly possessions rests with the creditor, the Executive Officer intervening only when and as such property is duly located.

Foreign Commercial Enterprise.

At a juncture when international competition for the capture of foreign commercial markets has reached an acute stage, it is interesting to record the activity which is being displayed by certain manufacturing countries which, for one reason or another, but mainly for lack of transport facilities, were at one time almost strangers to the Turkish market.

Russia, Poland and Japan have each, in turn, cast their eye on Turkey as a potential dumping ground for their superfluous wares. Russia started with a successful floating exhibition in 1924, she was followed by Poland in 1926, who, more ambitious than her easterly neighbour, sought for and obtained permission to erect a number of temporary buildings on the site of the old British Naval Base at Tophane, where accommodation enough was found to house a number of railway engines and freight-trucks.

Japan has now followed suit with an Exhibition which is to remain open to the public for three years. The Japanese exhibits, which are housed in a building situate at the Galata bridgehead—a central and commanding position—comprises textiles, jewellery, household utensils, electric appliances, and ornaments of ivory and mother-of-pearl.

GREECE.

Athens, September 6.

Fire Insurance.

Fires at the Piræus are almost daily occurrences; an especially serious one, however, on August 16, which destroyed a whole block of buildings, mostly warehouses, and did damage estimated at more than half a million pounds, has drawn attention to the fact that the local fire engines are quite inadequate, while the engines from Athens took two hours to arrive after being summoned. It is small wonder that the numerous foreign insurance companies have decided to raise their premiums 50 per cent. until such time as the town is properly equipped with means for coping with outbreaks of fire. The present writer has only once seen the Athens fire engine in use, and that was some years ago: but what especially struck him on that occasion was the fact that the hose was so full of holes that not much of the water reached the nozzle. But things may be better now. In connexion with civic needs, the recent arrival of five new water-carts, ordered by the late Mayor of Athens, is an event of some importance, and should be remembered to his credit. Speaking of Mayors, one notes that the Liberals of Salonika have at last been able to agree on a candidate for the second election; the first, it will be remembered, was cancelled, as the elected candidate did not get the required percentage of votes.

Political Activity.

In spite of the absence of M. Venizelos and of his deputy, M. Michalacopoulos, there is great activity among members of the Government, and Ministers are running to and fro, acquainting themselves with the work of their respective Departments in preparation for the forthcoming session—a very healthy sign of the times and promising for the future.

The Condition of Salonika.

M. Papas, who replaced M. Chrestomanos as Minister of Health, when the latter made his regrettable decision to stand as candidate for the Mavoralty of Athens, has been examining the condition of Salonika from the point of view of hygiene, and has received what, to those who know it better, seem unduly favourable impressions of it. As a corrective to his rosy description of those impressions appeared a letter in the Press the following day from a Salonika resident, which put the matter in a truer light and pointed out some of the city's more glaring deficiencies. Apart from primary and essential requirements like drains and hospitals, what Salonika mostly needs is open spaces and parks; also bathing-places which can be reached by the ordinary citizen. It is regrettable that, with the re-erection of the city, so little provision should have been made for such needs, and that the only open spaces should be the streets. One fears that the Minister was so hospitably entertained by his hosts that he had not the heart to comment unfavourably on their city. This happens, of course, all over the world, but perhaps more so in Greece, where the desire to create a favourable impression on visitors, whether foreigners or not, amounts to a passion. A case in point is the reception of M. Herriot. From the moment when he crossed the frontier at Ghevgheli to the moment of his departure from the Piræus he has been sedulously escorted everywhere and loaded with attentions. Opportunity for independent observation has been denied him, and the result is that instead of a little wholesome criticism, he has felt obliged in the interest of politeness to express the fulsome platitudes which were expected of him, and which might equally well have been unloaded without visiting the country at all.

Ministerial Tours.

Other Ministers who have been touring the country are M. Spyrides, Minister of Agriculture, who has been studying at first hand the numerous and thorny problems that demand solution in Thrace and Macedonia, regions

which have suffered terribly from floods during the year; M. Karapanayiotis, Minister of Communications, who has also been in Macedonia, visiting the railway which is being made between Verria and Kalabaka, and the drainage works of the Foundation Company in the Vardar valley. With the latter he expressed himself satisfied, admitting that the State was not free from blame for delay in the progress of this important work; with the former he expressed himself not satisfied, attributing the delay partly to the Company and partly to the deficiency of the supply of trained personnel on the part of the State. The necessity of the terms of their contracts of attaching innumerable half-trained engineers, etc., to their staffs, who are merely hindrances, is, in fact, one of the principal obstacles to the execution of any work undertaken by foreign concerns in this country, and M. Karapanayiotis is to be congratulated on exposing it.

M. Argyropoulos, Minister of the Interior, has also been visiting various districts. His Department is engaged in preparing a new scheme of administration, of which the leading idea is to replace the existing division into Nomes and Eparchies by the creation of 16 new administrative areas with 66 sub-divisions. Three of the larger units, Corcyra (Corfu), Samos, and the Cyclades, will be known as "independent" areas. The scheme envisages an experiment in decentralisation of which the administrative units will be 66 sub-divisions.

The School at Spetsae.

The School at Spetsae will shortly enter upon its third year of life. It is gratifying to know that the headmaster, Mr. Sloman, is remaining, and that the Committee has been reorganised. Mr. Sloman is to have, it seems, a former Master of Robert College as co-director. It is to be hoped that the experiment will prove a success.

ROUMANIA.

Bucharest, August 30.

The Work of Parliament.

Parliament closed for the summer vacation at the end of July after having triumphantly passed the new Administration Law, which the Government will at once begin to bring into force. The Liberal Party, however, still considers that the new measures are diametrically opposed to its traditional theories, which are based upon the principle of absolute centralisation. It is, accordingly, carrying on a violent Press campaign against the Law, pointing out the baneful consequences which it is likely to bring in its train. The partisans of General Averescu have ranged themselves on the side of the Liberals, and their Press echoes the same objections to the Law, while both parties propose to take more active measures to oppose the Law as soon as the autumn session opens.

M. Duca still shows his aversion from his Party's campaign of opposition and considers that it would be better to allow the Government of M. Maniu to try the experiment of their innovations. M. Lupu sits on the fence.

In the meantime the National-Peasant Government is strengthening its position and gaining in popularity, in spite of the new taxation that it was obliged to impose owing to the precarious financial situation inherited from its predecessors. The crisis, which has been acute, shows daily signs of alleviation, thanks to the wise and radical measures of economy, which have been gently but firmly applied.

M. Mihal Popovici, Minister of Finance, has published a Bulletin of Financial Information, giving figures that are distinctly reassuring for the future. M. Popovici says:

"Roumania has just passed through the most serious economic crisis in her history. This was brought about not only by the combination of circumstances and difficulties caused by the War, but also, and in greater measure, by the erroneous economic policy hitherto adopted by suc-

cessive Governments. The present Government, abandoning the narrow and retrograde "nationalistic" policy of its predecessors, has re-established contact with the economic tendencies of the modern world by means of a series of judicious laws, which, taken together, cannot fail to open up new outlets and give a fresh impetus towards happy prosperity to the national economy as soon as normal conditions have set in. Before long stabilisation will have proved the wisdom of the wider view which characterises this policy."

Economic Reconstruction.

The harvest promises to be very abundant this year. As regards wheat, it is not yet known what quantity there will be for export, but the requirements of the home market are already abundantly assured. As to other cereals, there will be a large surplus for export both of maize and of barley, of which the value is estimated approximately at 20 milliard lei.

The revised Import Tariff, which was passed by Parliament just before it rose and came into force on August 1, is also expected to contribute to a general improvement of trade. In fact it is long since the agricultural prospects appeared in so favourable a light from the economic point of view. It is, therefore, confidently hoped that the autumn will bring relief from the great strain to which the trade and finances of the country have recently been subjected, more especially as the advances of foreign capital already obtained are beginning to have a favourable effect.

The Agrarian Bank of Roumania, a new institution established under the auspices of the present Government for the express purpose of coming to the aid of agriculture (one of the governing principles of the Government's policy) has now received legal sanction by vote of Parliament, and its subscription list is already well covered. A large proportion of its capital comes from French and German sources.

An Arghesh-Bucharest Canal.

Another Law passed last session is that sanctioning the construction of a canal connecting Bucharest with the Arghesh and with the Danube, which would make Bucharest a port. The capital for this enterprise will be partly Roumanian and partly subscribed by a group of Dutch and English banks. A great future is predicted for the canal, in view of the enormous advantages to be obtained.

The Railway Administration.

The question of transport is another of the vital matters to which the Government has given its serious consideration, and active measures have already been taken to start a road-repairing scheme on a large scale, while the Railway Administration is carrying out a wide-reaching system of improvements both in internal administration and by the purchase of rolling stock and material of all kinds. Efforts are being made to finish some of the new lines already begun, to form connecting links between the provinces united to Roumania since the War, and, with a view to economy and efficiency, radical modifications are being made in the staff of the central Railway Offices.

The Lupeni Strike.

In Roumania as in other countries the opening day of August passed without notable incident. During the first week of the month, however, a large number of the miners in the Lupeni Coal Mine came out on strike, and attempted to destroy the pumping station. The situation was so critical that a police force had to be called in to defend the mine, and, as the miners would not listen to reason the police were obliged to have recourse to arms. A struggle ensued in which ten men were killed and twenty wounded. Order was restored, however, within half an hour. A judicial inquiry was made into the cause of this outbreak, and it appears to have been due to a difference between the miners and their employers, whom the former accused of not having kept certain engagements. This-

difference was exploited by certain outside agitators who excited the miners to revolt. The incident was not due to Communist influence, and was purely a local matter.

The Anniversary of Marashesht.

On August 7 was celebrated with solemn ceremony the anniversary of the victory of Marashesht, Roumania's Verdun, where Roumanian troops wrote one of the most glorious and blood-stained pages in the annals of the country's history. Though terribly outnumbered, the Roumanian soldiers fought with indomitable courage and grit against the repeated furious assaults of the superior forces of Mackensen, on whom they inflicted heavy losses, obliging them to retreat and thus saving Moldavia from the German invasion. Religious services were held in all the Churches of Roumania; military parades were held, and thousands of pilgrims and the heads of the Government and of the Army visited the battlefield to do pious homage to the thousands of Roumanian dead there buried, who fell in defence of their country. Prince Nicholas, as Regent of Roumania, was also present at the Marashesht ceremony.

The Summer Exodus.

Queen Marie of Roumania has taken up her residence at Sinaia, on her return from Bled, where she visited her daughter, the Queen of Yugoslavia. King Michael has gone to Mammaia on the Black Sea (near Constantza) with his mother, the Princess Helen.

In Bucharest the thermometer daily registers from 38 to 40 degrees Celsius (100 to 104 degrees Fahrenheit) and consequently everyone who can is taking refuge in the mountains or at the sea coast.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 29.

Indian Finance.

There was a puzzling contradiction in the statement made recently by Mr. Faizulla Gangjee to Sir George Schuster, Finance Member, in Calcutta. As I could not throw any light on it immediately, I said nothing. I have had some talk this week with a leading Nationalist, and now I have some light to throw on the matter. The contradiction was in the following: "We need not repeat here what has already been made clear on the floor of the Assembly, i.e., that the taxable capacity of the country has reached a limit beyond which it is impossible to go, and we wish to make it further clear that it will be impossible for the Government to get general consent for any proposal for new taxation unless the same is indispensable and calculated to promote the interest of the country." That was to say, first, that further taxation is impossible; secondly, that the country would agree to new taxation (then new taxation is possible?), if there was no help for it, and if the money was to be spent to promote the country's interest. That is an obvious contradiction. What I have now learnt is that the opinion is held by Mr. Gangjee that the raising of new taxation by the Government as now constituted is impossible. The country would never tolerate that at the hands of a Government so unpopular. I was for a moment in doubt whether I might not write "so detested." It would more than tolerate it at the hands of a Government that was representative of and trusted by the people. There is sense in that.

A Popular Government's Finance.

I asked my friend to tell me a little more of the financial policy of a Government of India representative of the Indian peoples. There would certainly be new taxation, he said. The Provincial Governments must be given a larger share of the revenue raised in the Provinces; for they must spend much more on such things as education, health services, agricultural and industrial research. There would be a greater deficit in consequence in the

Central Government's budget than could be met by retrenchment. They would count, of course, on retrenching. The head under which they counted on retrenching most was that of the army. They would save by having less British troops to pay for. All that saving would not be a clear saving, i.e., a saving available to meet the revenue lost to the Provinces; for they would increase the Indian Army. My interlocutor thought the British garrison might be reduced—not of course immediately, but say in the course of ten years—from 80,000 to 40,000. The country would cheerfully bear new taxation, if it was imposed by a trusted, popular Government. A Government representative of the people would be a popular one. Perhaps; but it is true that there have been Governments in France that were, in a sense, more representative of the people than the new Government of India can ever be, whose greatest difficulty arose from the fact that the existing taxes were unpopular.

The Unpopular Government.

What makes the present Government of India so unpopular? That was another question I asked. Some of the members of it are actually Indians. The Secretariat is composed, below the rank of Secretary, and not a few of the Secretaries are Indians, almost entirely of Indians. Why should that Government be so unpopular? First, there are enough Britons for the Government to appear in the general mind of the country as wholly British. Men will say: "We are governed by foreigners." Then there is a general dissatisfaction, largely fed by the unemployment among the *intelligentsia*, and in the "mist" of that atmosphere of dissatisfaction every ill thing appears hugely magnified. The news of the blow that Lala Lajpat Rai received on the day the Statutory Commission entered Lahore, followed not so long afterwards by the news of his death—those things have worked upon the popular imagination until its feeling against the Government is bitterness. The Government is not just unpopular; it is detested, and men are ready to destroy it violently. I myself see in all that the working of that love in Indians of the excitement of hysteria of which I have written. The Indians naturally do not see themselves in any such light.

The Presidentship of the Congress.

Another puzzle, if not a contradiction, was why Mr. Gandhi, declining the presidentship of the Congress himself, should have recommended, not Mr. Vallabhai Patel, who received five votes as against his ten, but Pandit Jawaharlal Nehru, who received only three. That is Mr. Gandhi's clever "diplomacy," we are told. The British Government were shown the Gandhi whips last December: next December they will be shown the Jawaharlal scorpions. Or to put it another way, it is as if Mr. Gandhi had said: "I have showed you how far I myself am ready to go, if you do not pledge Great Britain to accord India a sufficient measure of self-government, and if you do not do that this year. You had better be quick about things; for see, after December 31 the man you will have to deal with will no longer be the relatively pacific Gandhi, but the fire-eating Jawaharlal." Indians watching events, men of long and wide experience of public affairs, will say: "He is a clever man is Mr. Gandhi," and they are proud of their leader. Mr. Gandhi, one can see oneself, is certainly the leader they have most right to be proud of.

A Round Table Conference.

The opinion still holds, that Mr. Ramsay MacDonald, but he must not defer acting much longer, has it in his hands to avert the threatened crisis at the end of this year: the using of the Jawaharlal scorpions. Let him but once have issued invitations in his own name to the leading Indian politicians to a Round Table Conference in London, be it a Conference in the spring or in the summer, and all those leaders will be ready to stay their hands. To some it is grievous that Mr. MacDonald should not issue the invitations at once. Why doesn't he? they ask.

The answer is that he "must save Sir John Simon's face;" that Sir John, if he thought he had been treated by the Prime Minister with less than the deference due, would take steps to have the present British Cabinet turned out of office. That may be: it is more likely that the Prime Minister is still consulting those who will tell him how many Indian leaders to invite, and who they are who should be chosen rather than others. Sir John Simon, if he were told that, while the issue of the invitations was to take place before the sending in of his Report, the Conference would not be until after it was published, would see that he had nothing to complain of. One writer thinks the situation is complicated by the fact that the Secretary of State for India canvassed against Sir John Simon during the General Election. Can that now count? One knows there is pettiness enough in British politics: is there as much as that would show?

Communalism.

Attention may be drawn to an address by Mr. N. C. Kelkar as President of the Provincial Hindu Conference at Dacca. Mr. Kelkar deals very frankly and openly with the hydra-heads of the communal problem—conversion to Muhammadanism and Christianity; separate electorates; the Hindu fear that the Muslim is aspiring once more to overrun India, "through the corridor he has proposed to build from Constantinople to Calcutta." Mr. Kelkar would himself prefer separate electorates rather than yield as much as the Muslims are demanding as the price of their agreeing to joint electorates. "We may have to accept eventually," said Mr. Kelkar, "what Government will make up their mind to give us by way of a solution of the communal problem."

THE MIND OF MODERN INDIA.

BY THE HON. SIR PHIROZE SETHNA, O.B.E.

We always profess to know other countries and other peoples, and we even think that a few weeks' visit to a country entitles us to write a book thereon and to tell the whole civilised world that we have discovered the secret of its greatness or the causes of its backwardness, fall or ruin. What is most important about a country is to know its Mind or Soul. This is an extremely difficult thing. To know the mind or soul of an individual, even after a close contact extending over many years, is difficult enough. Infinitely more difficult is it to know the mind or soul of a country or its people. It can only be gleaned from a patient and careful study of its past history, its ideals of thought and life, the vicissitudes which those ideals may have passed, the impact of outside forces, the aims which inspire its great men, its literature, the activities and movements which occupy the people and receive their earnest and single-minded devotion. Superficialities and appearances must be cast aside, prejudice must be given up, judgment must not be allowed to be warped by any conscious or unconscious sense of racial or national superiority; we must penetrate, with deep imagination and sympathy, below the skins of the people, and then only their mind or soul will be revealed to us. But if it is difficult to know the mind or soul of a people, it is absolutely necessary to do.

We have now reached a stage in the development of the world which requires us to think internationally, to develop an international mind and outlook, to approach all important questions not only from the national point of view, but also—and perhaps more—from the international point of view. Three years ago Professor Alfred Zimmern delivered a lecture at the Geneva Institute of International Affairs "on the development of the International Mind," and he concluded his lecture with these words:—

If we are to stand together and to work together, let us work together so that every one of us, like Shakespeare's Puck, may

learn how to stretch a girdle of thought and of sympathy round the entire world.

Yes, it is quite true that we must all develop the international mind, but it is obvious that the right international mind cannot be developed unless we know the national mind of each country or people. This is all the more necessary in the case of those countries or peoples that are not yet politically free or self-governing.

What is the mind of modern India? India is such a vast country with such diverse conditions that some people may be inclined to doubt whether modern India has one mind. To this it may be replied whether any nation or people has one mind. Can England claim to have one mind? Can France? Can Germany? It may perhaps be said that at least Italy has one mind, but even that is doubtful. But I shall not pursue this point further; it is more in the nature of a retort than an argument.

The first thing that must be realised is that modern India, in spite of her vastness, the variety of her populations and the diversity of her conditions, and in spite of communal discords and fights, the flaring headlines about which in the Press may perhaps give rise to false impressions, is developing a common mind. The development is not yet complete, but the process has been going on, and it seems reasonable to infer that it will continue until the development is complete and a common national mind is fully evolved. The common mind is at present in the making, just as it may be said that the international mind in the world is in the making, but there is no doubt that the evolution of the common mind has reached a stage which renders further development inevitable.

Where does modern India begin? It begins with the establishment of British rule and the introduction of Western education. What contributions have British rule and Western education made to the formation and development of the Indian mind? In order to understand those contributions, let us first bear in mind that India has had a long and chequered history, that she had already developed a peculiar and unique civilisation before she came under British rule and Western influences began to act on her in full force. Though split up into numerous kingdoms, great and small, which only twice were consolidated into a vast almost All-India Empire—once under the great Buddhist monarch Asoka in the 4th century B.C. and again under Chandragupta in the 4th century A.D.—India enjoyed independence till the establishment of Muhammadan domination in the 13th century A.D. During the long period of Hindu rule, Hindu civilisation itself had undergone many phases, some most brilliant and progressive, others marked by decline and disintegration. The two centuries before the Muhammadan invasions constituted the darkest period of ancient India, her middle ages. But before the shades of this period began to fall on her, her life had been marked by harmony between thought and action, by a happy blend of the material and spiritual sides of civilisation. But this harmony was subsequently broken. Life came to be realised as an evil and an illusion, fatalism ran rampant, men began to wrap themselves up in the barren spirit of dreaminess and mysticism; and their interests became coterminous with those of bread-and-butter and of the petty concerns of caste. And the material standard itself declined and no incentive was felt to maintain a high level of economic existence. A mistaken and misunderstood philosophy of life and the disintegration of caste had done their work, and the Indian mind had become passive, dreamy, mystic, caste-ridden, parochial, inert, wanting in vigour of body, mind and soul and therefore easily liable to be overcome by superior foreign forces. Such was the state of the Indian—that is, the Hindu mind—when India came under Muslim rule, and such on the whole it continued to be on the eve of the British conquest.

Have British rule and Western education changed this mentality of India or not? British rule has been on the whole an enlightened and progressive force, whatever sins of commission and omission it may have been guilty of

and whatever criticisms may justly be passed upon it. Some Indians decry Western education, but there is no doubt whatever that it has exercised a tremendous and far-reaching effect upon the Indian mind. Racial or national mentality is supposed to be immutable and fixed, incapable of being modified—radically modified—by the operation of new forces. This notion is wrong and can be easily disproved by historical instances. The German mentality, or soul, of Goethe's time was quite different from the mentality or soul which Germany evolved under the Bismarckian régime and ultimately developed in the pre-War period. The change was due to the system of government, the system of education and the new ideals and aims which were deliberately inculcated into the minds of the German people. These two forces—the system of government and the system of education—never fail to produce great effects upon the mental type of a people; they can even change it radically. Speaking about the Russians of the present Bolshevik régime, Mr. Michael Farbman said in a lecture he delivered in 1926, on "The Foreign Policy of the Union of Socialist Soviet Republics":—

Anyone who compares, either from personal experience or from knowledge of Russian literature, pre-revolutionary Russia and Russia to-day must be struck by the change in the mentality and the aspirations of the people. The main element in this new mentality is activity instead of dreaminess, the utmost degree of self-confidence in place of diffidence and humility, and the desire to get on and to make money in place of a longing for spiritual and artistic perfection. The tendency to make good is so amazingly developed and cultivated among Russians of to-day that one gets the impression that Russia is speedily acquiring the American spirit.

These instances clearly show that a nation's or a people's mentality can be radically altered by the action of new powerful forces. And British rule and Western education have proved such powerful forces that it is no wonder that under their influence the Indian mentality has undergone and is undergoing great changes. And one change it has undergone is that it has given up and is giving up its age-long dreaminess and has developed and is developing the spirit of activity. For the most important feature of the mind of modern India is the spirit of activity that marks it. It is active in almost every sphere of thought and life. Though handicapped by various circumstances and limitations, it is yet showing marvellous activity. She has discarded the passive type of life and adopted or readopted the active type of life. I say readopted, because such a type of life is not a new thing to India, since before her decline in the 12th century it was a normal type. The keynote of the Bhagvatgita, the one religious book that has exercised and still exercises the greatest influence upon the Hindu mind, is a life of activity, of strenuous and disinterested duty for the sake of duty and of nothing else. In readopting the life of activity modern India has reverted to a type that prevailed in the best days of ancient India and made her great, powerful and prosperous.

What is the impelling motive of this spirit of activity? It is to make India a great self-governing modern nation that will take a high rank among the great, enlightened and progressive nations of the world.

(To be continued.)

THE STATUTORY COMMISSION.

The Provincial Reports.

The reports which have been issued so far by the Committees which were appointed by the Provincial Legislative Councils to confer with the Simon Commission are interesting documents. These Committees, it will be recalled, are representative of those members of the Councils who were willing to co-operate with the Commission. The Swarajist members, in pursuance of their policy of boycott, refused to co-operate and they consequently had nothing to do with the Committees. This being so, the opinions expressed in the reports are those held by the more moderate sections of the politically minded classes. Consideration of them suggests that there is much diversity of opinion even as among those classes. But at the same time the reports exhibit a certain measure of agreement, as will be clear from the following summary of their more important proposals.

The Madras report deals in more or less detail with most of the major issues. Its main recommendations are: (a) that provincial autonomy or, in other words, full responsible government in the province, should be granted; (b) that responsible government should be established in all the civil departments of the Government of India with the exception of those dealing with defence, foreign relations, and relations with the Indian States; and (c) that the British Government should declare that full dominion status within the British Commonwealth of Nations is accepted as the goal of India to be achieved within a reasonably definite period. Provincial autonomy is defined as meaning self-government of the people in the province, which implies responsible government. Responsibility should not be limited, the Committee recommend, to a part of the provincial sphere of government, but should be extended to that sphere in full; and that the limits within which the Provincial Government is independent of the Central Government should be prescribed. The Committee do not favour the extension of the franchise to all adults. They would leave the franchise as it is, and empower the Legislative Council to alter it according to requirements. They would retain for a time communal electorates for Muslims, Indian Christians, and Europeans and Anglo-Indians. The executive power in the province the Committee would vest in the Governor acting with a Cabinet of seven Ministers. The Governor would select the Chief Minister, on whose recommendation he would appoint the other six Ministers. The Ministers would be jointly responsible to the Council and should resign if a no-confidence motion against them were carried by a majority of the total strength of the Council. A second Chamber is considered to be necessary, its constitution and functions to be tentatively similar to those of the Council of State. It would have not more than fifty members; and the Legislative Council would number 150 or, if the franchise should be lowered, 200 members. As regards the Central Government, the Committee believe that control of the Civil Departments by a popularly elected legislature, to whom the executive should be responsible, is essential in the interests of true economic

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or—from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express—before you leave England.

AN advantage of American Express Independent Tours is that you travel with everything arranged but nothing to interfere with your liberty. We suggest itineraries and quote cost of tours combining Egypt and India, without obligation.

progress. They hold that "control over customs, railways, shipping, banking and currency, and exchange, if it continues in the hands of an irresponsible Government, however justly the latter may act, will breed irritation and suspicion on the part of the people." With reference to the Army the Committee recommend that immediate action be taken on the lines of the report of the Skeen Committee, so that defence forces mainly officered by Indians may be created within the period set for the attainment of Dominion status.

The Bengal Committee, in summarising its main conclusions, says that the ultimate goal, so far as the province is concerned, is complete provincial autonomy. That is to say, autonomy *vis-à-vis* the Central Government, and the establishment of an internal political system of full responsible government. For the attainment of this goal the immediate steps recommended by the Committee are, first of all, a revised financial adjustment between Bengal and the Central Government; and, secondly, the transfer of all provincial subjects except Law and Order to Ministers responsible to and removable by the Legislature. Thirdly, the Committee recommend the establishment of an Upper Chamber. Other recommendations are that the two major communities should be represented in the Legislature in proportion to their numbers; that the ultimate authority for legislation should vest in a joint session of the two Chambers; and that separate communal electorates should be maintained. With reference to the first recommendation quoted above the Committee hold that no political reform is worth having, unless and until the financial problem is satisfactorily solved. They are of the opinion that under the present allocation of revenue Bengal is the least solvent of the provinces; and they insist that an additional Rs.4 crores must be assigned to her. Under the Committee's scheme the Executive Government would consist of the Governor with a body of seven Ministers to be appointed by the Governor. All the Ministers would have joint responsibility; they would be selected from both Houses; and one of them would be the Prime Minister. Regarding Law and Order, the Committee make an interesting suggestion. It is that this subject should be transferred to a Minister who would be assisted in administering the Department by a Board consisting of three members, namely, a Hindu, a Muslim, and a European, to be appointed by the Governor. Universal adult suffrage is deemed by the Committee to be undesirable and impracticable on account of the illiteracy of the masses. But they would reduce the franchise and increase the number of members of the Council. As to the precise

number they are not agreed, but 200 on the one hand and 280 on the other are the limits which they suggest. The number of members of the Upper Chamber would be equivalent to 30 per cent. or 40 per cent. of the Lower. The Committee hold that a strong Central Government is essential; and they consider that it should be of the federal type, and that the minority communities should be adequately represented in it.

The Bombay Committee are divided in their views and one member has issued a separate report. The majority urge the removal of the official *bloc* in the Legislative Council; and they are also opposed to the principle of nomination in respect of the Council. They are in favour of the immediate transfer to Ministers of all provincial subjects with the exception of law and order, which should, they consider, remain reserved for a further short period. The communal disorders which have occurred in Bombay and elsewhere in India are such as to make it, in their opinion, dangerous to transfer this subject at once. After the expiration of, say, five years the province would become completely autonomous with a unitary government consisting entirely of Ministers chosen from among the members of the Legislative Council. They would have a chief Minister at their head, and they would be jointly responsible to the Council. The Committee would widen the electorate so as to enable the rural population to be more largely represented. The existing system of communal electorates would be continued and seats would be reserved for the depressed classes, for labour, and for other sections of the population. The establishment of an Upper Chamber is recommended with the object of providing a safeguard against the passing of hasty and ill-considered legislation. The Upper Chamber could be elected on the franchise prescribed for the Council of State. It might consist, the Committee think, of about thirty members, of whom ten might be nominated. The special powers of vetoing and certifying which are now vested in the Governor might, the Committee suggest, be withdrawn. But they would favour the retention by the Governor of certain emergency powers. They are unanimous in assuming the existence of a strong Central Government, capable of exercising a unifying influence over the country by legislation and by administrative action, and of interfering effectively in the administration of a provincial government in the case of a break-down. The Central Government which they have in mind would be of the unitary and not of the federal type. On the important question of the separation of Sind, the Committee are divided, but the majority are opposed to separation. Financial reasons are of themselves sufficiently strong, the majority consider, to make the proposal impracticable.

The other provincial reports will be dealt with in a subsequent issue of THE NEAR EAST AND INDIA.

The Indian Legislative Assembly on September 11 passed the transfer of Property Act Amendment Bill.

The Indian Legislative Assembly on September 12 discussed the Home Members' Criminal Procedure Code Amendment Bill, which was introduced for its second reading.

Mr. Reuben Manley Thurley, late Deputy Commissioner of Abkari and secretary of the Board of Examiners, Government of Madras, died in London on September 10 at the age of 65.

Sir Sassoon Jacob David, Bt., K.C.S.I., of Esplanade Road, Bombay, India, merchant, lately Chairman of the Bombay Electric Supply and Tramways Company, Ltd., and a member of the Imperial Legislative Council of the Viceroy of India, who died on September 27, 1926, aged 77, left personal estate in England now sworn as of the net value of £4,242, in addition to property in India of the net value of 1,607,500 rupees (at par value £241,125), making a total of £245,367. The Indian grant states that this is exclusive of trust property valued at over 20,000,000 rupees. The will is dated February 10, 1926. He left 5,000 rupees for distribution within one month of his death among the needy poor of the Jewish community of Bombay: 5,000 rupees each to his "old friend and medical adviser," Sir Temuljee Bhicaji Nariman, and my "confidential adviser and friend," Jivali Dinshaw Ghandy, in each case "as a token of my great regard for them." And he directed that any of his descendants who shall marry a person not of Jewish descent and professing the Jewish Faith should forfeit all interest under his will.

PERSONAL AND GENERAL

TO-DAY

September 19, 1929 (New Style).
 September 6, 1929 (Old Style).
 Rabia II, 14, 1348 A.H., of the Muslim Calendar.
 Ellul 14, 5689, of the Jewish Calendar.

Lady Edward Spencer Churchill has returned to London from Belgrade.

Sir Victor Sassoon will leave Marseilles to-morrow (Friday), for Bombay.

Sir Geoffrey Archer arrived at Marseilles from Bombay on September 13, in the P. and O. s.s. Malwa.

The Maharaja of Tikary arrived at Marseilles from Bombay on September 13 in the s.s. Malwa.

Sir Leslie and Lady Wilson returned to Wokingham on September 14 from Spain.

M. Aliasghar Taleghani, ex-Provincial Treasurer of Tabriz, has been transferred to Teheran.

Following the collapse of the revolt of the Bakhtiari, Modirol-Molk has been appointed Governor of the Bakhtiari country.

Sir Archibald and Lady Weigall, who have been staying at Le Touquet, have returned to 39, Hill Street, Berkeley Square.

Sir Henry Norman and Miss Rosalind Norman have left England for a Mediterranean cruise. They expect to return early in October.

Captain and Mrs. Duncan McCallum who recently returned to Cheyne Walk, from Italy, left London for Ireland and Scotland at the end of last week.

Sir Reginald Patterson, who has been staying at Dalmeny Court, Piccadilly, since the end of July, left on September 14 for Egypt.

M. Jem, formerly Minister of Public Works and Commerce in the Persian Cabinet, has proceeded to Meshed to take up his new appointment as Governor-General of Khorasan.

Major Hubert Young, Colonial Secretary, at Gibraltar, who was recently appointed Counsellor to the High Commissioner in Iraq, left Gibraltar on September 15 for England, travelling by the overland route. He will probably fly to Baghdad.

The programme of lectures to be delivered at the Royal United Service Institution, Whitehall, at 3 o'clock on Wednesday afternoon during the winter include one on December 11 by Sir E. Denison Ross, on "The Situation in the Middle East," at which Major-General Sir Percy Cox will take the Chair; and on February 19 a lecture on "The Navy in the Persian Gulf," will be delivered by Captain R. St. P. Parry, with Vice-Admiral B. S. Thesiger in the Chair.

Mr. Charles Rey, who has been until recently Assistant Secretary at the Ministry of Labour, is leaving England to take up the post of Resident Commissioner for Bechuanaland. Apart from his Government services, extending over nearly thirty years, Mr. Rey is well known in connexion with his special work in Abyssinia. His first association with that country in 1919 and 1920 led to three subsequent visits, and he is the author of two books: "Unconquered Abyssinia as it is To-day," and "In the Country of the Blue Nile." In all these travels he was accompanied by Mrs. Rey.

Mr. E. G. Lomas, H.B.M.'s Consul in Cairo, has been appointed H.B.M.'s Consul-General in Tunis. Mr. Lomas is expected to leave Cairo to take up his new appointment in a few months' time.

THE CENTRAL ASIAN SOCIETY.

The new session of the Central Asian Society, in which is incorporated the Persia Society, begins to-morrow (September 20), when, at 5 p.m., in the Royal Society's Hall, Burlington House, W.1., Brig.-Gen. H. Rowan Robinson will lecture on "The Place of India in Imperial Defence." General Sir George MacMunn will be in the Chair.

The next lecture will be given on September 25, at 5 p.m., at 74, Grosvenor Street, by Dr. Emil Trinkler, whose subject is "Geographical and Archaeological Explorations in the Deserts of Chinese Turkistan." This lecture will be illustrated.

THE PALESTINE INQUIRY.

The Secretary of State for the Colonies has appointed the following Members of Parliament to serve under the chairmanship of Sir Walter Shaw, formerly Chief Justice of the Straits Settlements, on the Commission of Inquiry regarding the recent disturbances in Palestine:—Sir Henry B. Betterton (Conservative), Mr. R. Hopkin Morris (Liberal), and Mr. Henry Snell (Labour). Mr. T. I. K. Lloyd, of the Colonial Office, will be Secretary of the Commission.

It is hoped that the Commission will sail for Palestine towards the end of this month or early in October.

Book Reviews

THE LITTLE ENTENTE.

"THE LITTLE ENTENTE." By Robert Machray, Illustrated. (London: George Allen and Unwin Ltd., 12s. 6d. net.)

Whatever may be the individual reader's views on the effect of the Little Entente on post-War European politics, it is certainly desirable that there should be available in English a consecutive story of its origin, its aims and its accomplishment up-to-date. So far the only book, in a language accessible to ordinary Western Europeans, that has tried to fill the gap is by M. Albert Mousset, a book which Mr. Machray has made full and frank use of. But it is six years old and is in French.

It is an everlastingly disputed question whether a historian should be entirely impartial or not. Possibly the verdict of most of the readers of THE NEAR EAST AND INDIA would be for the man who takes sides, provided that he does so fairly and avoids the pitfalls of propaganda. If so, Mr. Machray's version of the story will find favour. He is quite definitely a warm admirer of the *Petite Entente*, but he does not distort facts in order to make converts. Indeed, the reviewer's only serious complaint against him is that he is apt to be, especially in the latter half of the book, unnecessarily long winded and prosy. After all, one does not want to be told the exact hour at which each Conference of the Entente opened, or to read the *communiqués* issued after each *séance* with their monotonous repetition that the three parties found themselves in perfect agreement. And long extracts from the three speeches to the Press which regularly follow each Conference tend to be dull. So, one may say, are the constant and long quotations from the numerous carefully prepared speeches by Monsieur Benesh in Parliament and elsewhere. One cannot but feel that, with a little more trouble, the author might well have been able to digest these things and to give them to us in his own, and much fewer, words. He might also, had he given himself more time, have presented us with a real history of the movement instead of a series of glimpses into the very unreal tracts of diplomacy outside which he rarely wanders. Or again, he might have been able to place Yugoslavia and Roumania in better perspective, instead of allowing Czechoslovakia, or rather Benesh, to occupy the whole foreground and most of the middle distance.

But these are faults readily forgiven in view of the substantial value of a book that will hold the field until it has to give way to the critical and philosophical work by the historian steeped in the knowledge of his subject—which may be expected one day, but not till much that is now dim and misty in the future of Central Europe has become clear by the evolution of circumstances.

The eight excellent photographs of the chief Foreign Ministers of the Little Entente are much to be commended.

C. S.W.

THE DIWAN OF NASIR-I-KHUSRAU.

The publication* in Teheran is announced of a critical edition of the works of Násir-i-Khusrau of Isfahan, free-thinker, poet and traveller of the eleventh century, and perhaps the best known exponent of the Sufi philosophy, which originated in Persia, probably as a reaction from the rigid bonds which the Arab conquerors attempted to impose upon a more cultured race, and has had widespread repercussions throughout the East.

Násir Khusrau was a contemporary of another famous Persian, Avicenna, physician and mystic of Rhages, who was also regarded as a heretic, and had the mortification of seeing his works publicly burned. He was a thorough Sufi, and his poetry, though strikingly beautiful, was so heretical as to be abhorrent to all good Muslims. Once whilst in Balkh he

stopped at the booth of a cobbler to have a shoe repaired : a great uproar was heard in the distance ; the cobbler ran to see what was the matter and returned a few minutes later with a piece of raw flesh on his awl. "What is that?" said Násir Khusrau. "An ill-advised youth recited in public some of the infamous verses of the detestable Sufi, Násir Khusrau of Isfahan : he has been hewn in pieces before the Lord, and I myself, as an act of merit, have taken a fragment for remembrance." "Shame on the city," replied the trembling poet, "where the poetry of such a man is known or even heard of. As for me, I will depart forthwith" : and go he did, leaving his shoe with the pious cobbler.

The volume under review, consisting of 810 pages, is prefaced by a scholarly and comprehensive study of the life and teachings of Násir Khusrau by H.E. Saiyid Hasan Taqizadeh, the present Persian Minister in London, who, like his cultured predecessor, Hovhannes Khan, is deeply interested in Persian literature, and has done much to elucidate and popularise the greater classics of his own country.

The main body of the work consists of : (1) the "Diwan" proper, containing over 11,000 verses, collated by the learned scholar Haji Saiyid Nasrallah Taqawi, from a number of ancient MSS.; (2) the "Rushanai nameh"; (3) the "Saadat nameh"; (4) a hitherto unknown prose work, all by the same author; and (5) critical notes by Agha Mainavi and Agha Dehkuda, a former editor of the "Sur-i-Israfil." Scholars will be interested to compare this edition with that published by the Kaviani Press in Berlin in 1922, and with the translations and commentaries of Schefer, Ethé, Fagnan, Pertsch and Rieu. The last three authorities held that there were two Násir-i-Khusraus, of whom one was the poet, philosopher and magician, and the other the traveller, but E. G. Browne (J.R.A.S., April, 1905) considers this thesis to have been decisively disproved by Schefer and Ethé.

The publication of critical texts of notable Persian authors has hitherto been left for the most part to European savants, and there is no better proof of the growth of national life and public spirit than the renewed interest now being shown in Persia, of which this volume is the first fruits, in the classical literature of the nation. To quote a traditional saying of the Prophet Muhammad, generally recognised as authentic—"If knowledge were in the Pleiades, the Persians would reach it."

SOME TRIBES OF THE SOUTHERN SUDAN—I.*

(From a Correspondent.)

The one "object of interest" for tourists who reach Rejaf is Baker's Rock. It is a large, flat block of granite, standing upon a pedestal of clay, at a height of some ten feet from the ground. Europeans and Arabs have painted their names, initials, and dates all over the rock, but if the traveller takes the trouble to climb on to the flat top of the rock, he will find a more ancient and more interesting kind of inscription. The smooth face of the

A SHILLUK OF MALAKAL.

rock is pitted with a series of small depressions, worn by women grinding *durra* there for many years, if not for centuries. That must have been long ago, for now the rock stands some ten feet or more above the level of the surrounding ground: the soil has been washed away for that depth with the exception of the column which the rock caps. The Upper Nile has thus been inhabited for centuries, and has a history perhaps as ancient as that of the Lower Nile Valley. But it is unwritten, for the European has arrived late on the scenes. A hundred years ago Khartoum was founded by one of the military expeditions of Mehemet Ali. It was this southward movement of the Turkish power in Egypt which first brought Europeans into touch with the Shilluks, the northernmost of the Nilotic negroes. Fifty years ago, the German scientists Schweinfurth and Junker were writing the first detailed accounts of the tribes of the Bahr el Ghazal and the Nile Congo watershed. Thirty years ago, after the dozen years of the Mahdist rule, the country was once more thrown open to investigation by the victory at Omdurman.

By now a great deal of miscellaneous information exists about the inhabitants of the Southern Sudan, and within ten years or so it may be supposed that the origin and relationships of the various tribes, the provenance of their languages, and the other problems of the kind will be more or less thoroughly solved. As it is, a few main facts begin to stand out and help to show the wood from the trees.

In the first place, along the whole length of the Nile, from Lake Albert to Dongola, there is or has been a common language stock. Thus the Acholi who live on Latitude 3°N., have a language closely similar to that of the Shilluks, who live as much as seven degrees further north. In the same way the Bari, who are found round Rejaf, have many word roots in common with the Mahass,

a much Arabized people living on the Nile north of Khartoum. It may in the end prove that the Meroitic inscriptions of the Northern Sudan which at present can be read but not translated may have a Nilotic element in them.

In the second place, there has been a stream of influence in culture and language coming in upon the Nile Valley from the east, from the Red Sea, Abyssinia, and Somaliland. This influence, which has been labelled Hamitic, can be recognised by the good facial type of many of the people on the Nile, who are far from negro in appearance, and also by a particular syntax which has been grafted on a number of Nilotic tongues. Further, it seems to have conferred on them their extreme devotion to cattle raising. This Hamitic influence is strong among the Bari, but it has also apparently touched the Dinka and the Shilluk.

The best known example of a Hamitic strain in negro Africa is that of the Bahima, the good-looking cattle-tending aristocrats of Uganda.

Lastly the Nile negroes have probably not been left untouched by movements and influences from the west. Within historic times at any rate the Azande, a vigorous fighting people, have moved up from the south-west forest land over the watershed between the Nile and the Congo. They have overwhelmed and submerged a number of weak tribes, who have adopted the Zande language even when they preserved their own as well, and the Azande might very well, but for British rule, be established on the banks of the Nile to-day. Their origin is not certain, but they have linguistic affinities with tribes on the west coast of Africa.

At first sight the Upper Nile, which has been so long unknown to and unexplored by the European, seems a necessarily isolated and stagnant part of Africa. This is largely because its northern approach lies through the almost impassable *sudd*. Thus it has been closed from the north, but south of that barrier there have probably been considerable movements, the main lines of which may some day be revealed by the study of language and customs.

From another point of view the facts of environment give another broad grouping of these Sudanese tribes. Thus the Arab ceases to possess the land roughly where

A NUER.

the desert scrub gives way to the grass country, that is to say, about 200 miles south of Khartoum. This belt of grass country which stretches across the Sudan at a width of about 5 degrees is the natural home of the cattle-owning people, the Shilluks, Dinkas, Nuers, and Anuaks.

* This is the first of a series of three articles.—Ed.

The belt of open forest country which succeeds the grass land is in its turn peopled by the Bari, Mandari, Nyangwara, and Lokoya close to the Nile. Further to the east, where the forest country grows more sparse and barren, the Taposa, Turkana and Suk are to be found; while on the west, where there is a better rainfall and a more luxuriant type of vegetation, there are the Moro, Mondu, Avukaya, Kaliko, Makaraka, and Azande.

To speak in a general way, the Shilluk, the Dinka, the Nuer, and the Anuak may be classed together. They have a common physical type; they are tall, thin, and very long legged. They have a common pursuit and basis of livelihood, for they are all great cattle people. They inhabit a generally similar tract of country, the vast grass plain of the White Nile, and of its tributaries, the Bahr el Ghazal, and the Sobat.

Their tastes lie mainly in the direction of idleness, relieved by periodic cattle-raiding, and they have not much genuine liking for a régime which, while it brings peace and good government, prevents inter-tribal war, and encourages agricultural development and spells of manual labour on improvement schemes of various kinds.

The white man is apt to look at these wide grass lands as a possible reservoir of a meat supply as copious as that

strap work of beads over the face. The Shilluks raise a line of small circular scars across the forehead, apparently in imitation of a band of beads; the Nuer has a series of deep transverse cuts across the forehead, a painful and dangerous operation, while the practice of pulling out four of six incisors of the lower jaw is almost universal among all these tribes.

Of their history little is known. It has been surmised that the original home of some of these tribes may have been in the hill country of the Lotuka, that the Acholi and kindred tribes struck south, while the Shilluk, Anuak and others migrated north. A historical memory of the last of these migrations is preserved in the Shilluk traditions of a great hero Nyakang. His genealogy would point to this movement having taken place towards the end of the sixteenth century.

SIR GILBERT CLAYTON.

We regret to have to record the death of Sir Gilbert Clayton, which occurred with tragic suddenness in the Residency, Baghdad, on September 11. The High Commissioner for Iraq had been playing a game of polo, and collapsed shortly afterwards. Death was officially stated to be due to *angina pectoris*. He was buried at Hinaidi, with full military honours, on the following day.

No student of Middle Eastern affairs can fail to be familiar with the achievements of Sir Gilbert Clayton. From his earliest days in the Sudan, success had, almost without interruption, crowned his efforts in the fostering of peace between various Oriental peoples and the British Empire. His loss will be very keenly felt indeed in official circles, and in a hundred unofficial circles, particularly among Arabs and Egyptians, there is the feeling that a patriotic but friendly Englishman has passed away.

Gilbert Clayton was born at Sandown, Isle of Wight, in 1875. Entering the Royal Artillery, he was enabled to see Kitchener recover the Sudan, and was present at the battles of Atbara and Khartoum. From 1900-1910 he was employed with the Egyptian Army, but then transferred to the Sudan Government Service, becoming Private Secretary to the Sirdar. From being Sudan Agent, he was appointed as Director of Intelligence on the outbreak of the Great War, and during the War years he was mainly responsible for the establishing of the Arab Bureau at Cairo, from which were supervised the operation known as the Sharifian revolt against the Turks in the Hijaz. When the War was over, he was made Adviser to the Egyptian Ministry of the Interior, which post he held until 1922. Then he was appointed to be Chief Secretary of the Palestine Government, headed by Sir Herbert Samuel. For three years at Jerusalem he held the scales equal as between Arab and Jew. But in 1925 he was chosen to visit Ibn Saoud on a delicate mission, that of adjusting the Wahhabi's ambitions to the needs of the mandated territories of Iraq and Trans-Jordan, on whose behalf he was acting. In this purpose of defining the frontiers and of keeping the peace he was completely successful—a success shown in concrete form in the two Treaties of Bahra and Hadda.

His achievement with the Wahhabi King prompted the British Government to send him afterwards to treat with the Imam Yahya of the Yaman. He could not, however, persuade the Zaidi monarch to cede his ground in the Aden Protectorate, and in 1926 returned from Sanaa empty-handed, but with considerable knowledge upon the real potentialities of the Yaman and of the alleged power of certain foreign nations to steal a march on the British Empire in south-western Arabia.

A year later he was again a special envoy to Jidda, where he arranged with King Ibn Saoud of the Hijaz and Najd a Treaty providing for the respecting by the Wahhabis of all British commitments in Arabia. Once more, in 1928, he was to return to the Hijaz, this time over a question of the frontier between Iraq and Najd. On this

DINKAS AT TORY, NEAR RENK.

of the Argentine. But the native will need many years of persuasion before he views his possessions at all in this light. He is devoted to his cattle, and there is little he does not know about them. His vocabulary bears witness to this, for there is no combination of colour or marking for which he has not the appropriate word. But he does not regard cattle as so much meat, but as a symbol of wealth and position and as a means to marriage.

These people, as the photographs show, take considerable trouble over their appearance, though they are averse from wearing clothes. The peculiar head-dresses of the Shilluk are well known. Boys of 17 or 18 wear their hair in a short grease-matted red mop; as they grow older, they adopt a more elaborate style. They stiffen their hair with gum and mud and work it into a variety of shapes. Sometimes it is made into a large fan at the back of the head, sometimes into two saucer-like circles on either side of the head, or a coxcomb cut like a cog-wheel down the middle. The Dinka more often shave their heads or stain their hair a yellowish red.

There are various other adornments; waistbelts, collars, and armlets are made up of beads, and some of these are very handsome. Round Renk the Dinkas wear a peculiar

occasion he could not persuade King Ibn Saoud to alter his views, but the friendship between the two men remained unbroken.

When Sir Henry Dobbs resigned from the High Commissionership of Iraq in 1928, Sir Gilbert Clayton was appointed to succeed him. He left for Baghdad in January of this year, and after a terrible journey—the Orient Express was snowed up in the Balkans—arrived to take over his new post in the following month.

The late High Commissioner had not, up to the time of his death, made any general statement upon the situation in Iraq, which he was carefully considering. He was bringing to bear on the problem, not only of Iraq's relations with Great Britain, but also of her relations with her neighbours, a new mind, and was resolved to study every aspect of the question before he made any formal pronouncement. It was known, however, that he was striving very hard to help on an amicable understanding between Iraq and Najd, and to hasten Iraq's entry into the League of Nations. He became immensely impressed with the possibilities of economic development in Iraq—a point which his experience of Egyptian development no doubt helped him to realise. And now before he had time to achieve anything very much either in the political or the economic sphere, he has been taken away. Both Arabs and British in the Middle East may well mourn the loss of a friend.

Memories of Sir Gilbert Clayton's accessibility, frankness and tact will be stored up in a thousand minds. If anyone needed help or advice in the Middle East, he would, on coming to Sir Gilbert, never be disappointed, though it should not be supposed that the bounds of discretion were ever overstepped. For when facts had to be concealed, no one was more of an artist than the late High Commissioner. His watchwords in dealing with the peoples of the Middle East were courtesy, firmness, and tact. A convinced unbeliever in the forceful school, he sought to gain his ends by diplomacy, which involved the consideration of all men as being equal. And few men will be found to say that his results did not justify his methods.

Very wide sympathy will be felt for Lady Clayton and her young family in their sad bereavement. Lady Clayton had accompanied Sir Gilbert Clayton on what proved to be the arduous journey to Baghdad *via* Constantinople, and after spending a few months in Iraq had returned to England for the summer. During those few months she had already shown herself an able helpmeet to the High Commissioner by interesting herself in such matters as fell within her woman's sphere, and the sorrow felt in Iraq over Sir Gilbert Clayton's death will be the keener because that death entails the added loss to the country of one who had promised to be a wise and needed guide to Arab womanhood.

THE WEEK AT HOME

London, Tuesday Morning.

Labour and Liberals.

An interesting development is going on at the present time in the mental processes of certain members of the Labour and Liberal parties. That the greater section of the Liberal Party will eventually drift into the Labour Party is widely taken for granted: the urgent point is, how soon?

Certain members of the Labour Party are for holding out the olive branch at once. Only one thing, they say, really keep the Liberals from us, and that is Nationalisation. But Nationalisation, they go on, is not the absurd fetish that it once was. We Socialists are not Marxists, and we do not really believe in the utter and ubiquitous necessity of public ownership. What we do believe in, and what many of you Liberals also believe in, is that any enterprise, whether publicly or privately owned or controlled, should regard its obligation to the State as its capital duty. Let us, therefore, cast aside the *démodé*

shibboleths of our ignorant past.

But this argument is an unofficial one, and there is yet no means of gauging how extensively it is being used. Official Labour circles still seem reluctant to give up the rigid creed of Nationalisation, thinking that even with its retention, which is necessary to keep up the spirits of the more fervent followers, Liberals will secede to their party.

Yet there are still thousands of Liberals who, even were the ideal of Nationalisation jettisoned by the Labour Party, would staunchly refuse to be assimilated. For they live on and in the past as surely as some Socialists live on outworn shibboleths, and it is they, together with their counterpart in the Labour Party, who make very difficult to believe a real fusion of the two anti-Conservative parties.

Reclamation of Land.

With the reports last week of more acres in Norfolk falling into the sea, one reads the revived proposals for reclaiming land by the Wash with special interest. For unless we cannot make up on the roundabouts what we lose each year on the swings, this erosion of our coast is going to cost us very dear. Unfortunately, it seems to be only at holiday time that the general public takes much notice of it: for the rest of the time it conveniently forgets.

Most people who know the King's Lynn and Boston area are aware that the reclamation of the Wash has often been thought of. About a hundred years ago a committee of landowners and engineers was formed to see whether the areas flooded, which are said to contain the most fertile agricultural land in all England, could not be reclaimed. A scheme was drawn up, by Sir John Rennie, for joining the four rivers, Ouse, Nene, Welland, and Witham, into one and discharging through an embankment made between Gibraltar Point on the Lincolnshire side and near Hunstanton on the Norfolk side.

Nothing, however, was done. But recently, as was pointed out in an article on the subject in the *Manchester Guardian*, a day or two ago, a revived interest has been shown in the scheme, partly owing to the success of the Dutch Government in reclaiming the Zuyder Zee (it is now making between the mainland and the Island of Wierigen an embankment nearly 20 miles long, whereas the Wash is only about 14 miles across), and partly to the fact that the Commissioners appointed in 1925 by the Minister of Agriculture and Fisheries to report on the drainage of the Ouse district foreshadowed that, unless their drainage recommendations were carried out, serious inundations would follow and "the whole fen area will return to primeval conditions."

One hopes that the project is engaging the attention of the Labour Government, which would earn not only the immediate gratitude through the employment of labour involved, but also the undying gratitude of future generations of fen-men, who have long outgrown their seventeenth century prejudices against using the resources of science in aiding the productivity of their land.

Congresses.

This may be the season of mists and mellow fruitfulness: it is also the time when cranks and crankesses assemble in congress. Year after year these people pour out their souls to others—and the world wags on, cheerfully indifferent to their passionate counsels.

One particularly fatuous gathering has just ended in London: the Sexual Reform Congress. Of course, it was widely reported, but, equally of course, badly, so that eminent or anaemic professors have had to point out that really their views were not so conventional as might have been thought, and so on. In any case, it seems a little late in the world's history to talk about sexual reform, does it not? Somehow or other one has an instinctive distrust of these pleaders for more "openness," "frankness," "liberty," and the rest of it. They are at the wrong end of the stick. Of that fact you would have been certain had you seen some of the men in Wigmore Hall, in blouses, open-necked, and sockless.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Progress in Flying.

The glamour attaching to the great race for the Schneider Trophy will not, it is to be hoped, obscure the real goal towards which progress in flying is being directed all the time. That goal is primarily threefold—the maintenance of stability at low speeds, ability on the part of aeroplanes to land and rise more directly, and reduction in cost of construction. High-speed research is necessary and invaluable, if only because the proof that these flying tests afford of soundness of construction leads to the application of the knowledge thus gained to other more general purposes. Great Britain's success, moreover, is evidence that British invention and workmanship, no less than personal prowess, still hold their own, and there is certainly no domain in which these attainments are more essential than in the construction and manipulation of aircraft. For the present, however, it is not the Supermarine Rolls-Royce or the Gloster Napier VI that is going to encourage air traffic, but the increasing perfection of the light aeroplane which ultimately should have the effect of sending the individual into the air, as the cheaper motor-cars have already sent him careering along the high road. In the recent race round Europe for the International Challenge Cup for Light Aeroplanes the striking qualities of the British light aeroplane were well brought out and British light aero engines were largely used by foreign competitors. In the meantime research is being steadily carried on in regard to what has been called above the primary threefold problem of aircraft construction, and it is not without interest to know that the cost of aeroplane engines per horse-power is considerably less than that of marine engines—in fact, about an eighth of the latter—and on a level with that of locomotives.

Roumania and The Hague Settlement.

Although Roumania's representatives at The Hague did not compete with their Greek and Yugoslav colleagues in broadcasting the advantages that their country stood to derive from the new Reparations agreement, it is clear that the Roumanians also have reason to be satisfied with the revised scheme. For the full details of the settlement it may be necessary to await the completion of the tasks of the various committees; but it is known that Roumania is to have her indebtedness to the Allies covered, at least for the earlier part of the period of repayment, by the amounts that she herself receives as reparations. Her quota, it is stated, has been raised from 1.1 per cent. to 1.4 per cent.; and, will be met for the most part from Germany's unconditional payments. These results will be the more welcome, as the country has experienced a severe strain in surmounting a prolonged financial crisis.

Fiscal Reorganisation.

Not the least of the difficulties inherited by the Government of Dr. Maniu was the lax system that characterised the collection of the State's revenue. Roumania has only recently had experience of direct taxes, and the method of their encashment left so much to be desired that an official estimate places the loss to the State in the five or six years during which they have been in force at more than fifteen thousand million lei, or nearly twenty million pounds. The new Government, therefore, has to incur the odium of tightening up the machinery of tax-collec-

tion. Closer watch will be kept on all sources of income, agricultural property as well as commerce and industry. Owing to the many loopholes for evading payment that had been discovered or created, the country had reached the anomalous position of collecting more revenue from the incomes of State officials than from any other class of the community.

A Tax Pass-Book.

Roumania must have been for some time the only State that found it necessary, in order to combat the evil of absentee landlordism, to compel those who owned landed property to reside at least six months of the year in the country under pain of confiscation of their land. She is now to introduce another innovation, a taxpayer's pass-book, with which each taxpayer will be provided and which he will have to produce whenever he has any dealings with the State authorities. Unless the pass-book shows that all taxes have been duly paid, up to date, the unfortunate citizen will seek in vain to enlist official services on his behalf. In South-Eastern Europe, it must be remembered, the average citizen finds more occasion to rely on State intervention on his behalf than his opposite number in the West, who is generally more impressed, particularly when paying taxes, by his own services to the State than by the State's services to him. Before the Roumanian dilatory taxpayer will now loom up, it may be, the prospect of being prevented from buying a postage stamp, not to mention a ticket on the State Railways. Fortunately, there are indications that the nation as a whole—Opposition politicians and their Press being the chief exceptions—having appreciated the necessity for these drastic measures, has begun to realise the advantages accruing from them. When, as a further reform, the fiscal authorities throughout the country are divided into two separate sections, the one to assess taxation, and the other to receive payments from the individual taxpayer, one of the easiest avenues for evasion of payment will have been closed. In the meantime tax collectors and others have been informed that they will be held personally responsible for delay in the collection of taxes, unless some valid reason is forthcoming. This warning, it is stated, has had the effect of increasing income tax receipts in Bucharest alone four fold.

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathén."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Correspondents all over the World.

Affiliated Institutions in the United States:

NEW YORK: The Bank of Athens Trust Company, 205, West 33rd St.
BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

Great Britain's Mandates.

The perverse British public, which refused to wear the hat that a popular newspaper prescribed for it and to change its opinion that any revision of the Peace Treaties must be secured by agreement and not by dictation, and which has, indeed, consistently rejected the views of an organ whose strong points are news, advertisements and an insurance policy rather than political acumen or knowledge of foreign affairs, is now being urged to abandon the British Mandates over Palestine and Iraq. The suggestion would call for no comment—in Great Britain it counts for nothing—were it not for the fact that in foreign countries exaggerated opinions prevail regarding the influence exercised by certain British newspapers. Any mistaken conceptions engendered abroad on the subject, it is to be hoped, therefore, will have been corrected by the emphatic declaration of the British Foreign Minister at Geneva that the British Government would not give up its Mandate over Palestine to the League or to any other Power, but would carry on, determined to do its full duty as a trustee and guardian. In the case of Iraq the problem of arranging for the Mandate to fade away into a treaty relationship that will satisfy the national aspirations of the Iraqis—not necessarily the same thing as the claims of urban politicians—and Great Britain's own responsibilities has already been taken in hand, and will, no doubt, in good time be satisfactorily settled. In the meantime it is to the interest neither of Great Britain nor of the Mandated Territories that misstatements regarding the actual situation should pass unchallenged. To say that £300,000,000 of British money have been spent on "these alien people" may be as true as to say that twenty times that amount has been spent on the French and other alien people in the prosecution of a war for the defence of British interests; but to link up the statement with the insinuation that money is still being spent "so freely" in these countries is entirely a perversion of the truth. The statement that out of every £100 worth of goods imported into Palestine last year the amount that came from the United Kingdom was £11 12s. 6d. does not take into consideration the position of Egypt as a clearing-house for British goods; and the gibe that the last official report dismisses the cotton exports of Iraq as negligible could with equal force have been levelled at the Sudan a few years back. Fortunately for Great Britain and the world it is a divinity and not a daily Press that shapes our ends, leaving to the latter the rough-hewing of them.

Paper from Bamboo.

An interesting question has been raised by an enthusiastic statement of the potentialities of bamboo pulp as a substitute for wood pulp, in the manufacture of paper, that appears in a report on the Bamboo Pulp Survey in Burma issued by the Indian Forests Records. The author is Mr. W. Raitt, officer in charge of the Paper Pulp Section of the Forest Research Institute, Dehra Dun, who finds a guarantee against the exhaustion of the bamboo as a final solution of the papermakers' problem in the fact that bamboos are annually self-reproductive and may be cropped every fifth or seventh year, and he is convinced that bamboo pulp can be produced at a cost which will permit its export to Europe. It is noticeable that in a foreword to the report the Chief Conservator of Forests, Burma, accepts for his Department no responsibility for the opinions expressed by Mr. Raitt, and emphasises certain considerations. He points out that in view of the heavy capital requirements of the industry the first essential is a continuance of supply of the raw materials. A secure supply of bamboos may exist, but the problem of getting it to the mill is by no means easy to solve, partly because the local inhabitants provide a very unreliable source of labour. He recommends, therefore, a very careful investigation into the questions of supply, maintenance, and cost of the labour force before any commercial schemes are launched.

Previous Experiments.

Mr. Raitt supports his arguments by having his report printed on paper made in the paper pulp section at Dehra Dun from bamboo from the Arakan coast of Burma; but it does not appear that he has made any special effort to meet the difficulties that have been experienced in the past in connexion with the use of bamboo pulp for paper-making. A paper mill was working for some five years in Travancore, using bamboo almost exclusively. The fibre was regarded as superior to *esparto*, but the expense of chemicals killed the industry, as a larger quantity was found to be required than with other paper materials. In Sir George Watt's "The Commercial Products of India" other difficulties are mentioned:—If only young shoots of the bamboo are serviceable, these have to be gathered during August and September, their removal damages the stock, and each clump yields only about three or four shoots a year; unless a large percentage of old stems are left on the stools, the plants are killed; during the months in which the bamboo shoots appear, the climate of the most important bamboo tracts is such that labour could not be obtained. In the twenty years or more that have elapsed since these difficulties were encountered it is possible that advances in chemical knowledge will have obviated one of them; whether the climatic obstacles can be overcome remains to be seen. The bamboo grows in sub-tropical as well as tropical regions, and it may be that the labour problem will not prove as insuperable as it is understood to be in Burma. The purposes to which the bamboo is put range from a vegetable to a means for carrying grand pianos; it serves as a walking-stick, lance-shaft and scaffolding-pole, for mats, sieves, furniture and roofs, for the production of fire and for torches. The Chinese certainly use it for paper-making, and it would be strange if modern ingenuity could not overcome the physical drawbacks enumerated, when the threatened exhaustion of the wood pulp supply draws appreciably nearer.

COMMENTATOR.

THE PORTS OF BULGARIA.

(From Our Sofia Correspondent.)

Bordered by the Danube on the north and by the Black Sea on the east, Bulgaria has devoted herself, during her fifty years of national life, to the improvement of her ports on the Black Sea and the Danube and the development of her trade through these ports. I propose to give some details on this subject recently published by two engineers, MM. Boikoff and Dantcheff. Being divided by the mountains of the Balkans into two parts, northern and southern, Bulgaria was compelled to concentrate on the construction, and the development, of her two principal Black Sea ports—Varna in the north and Bourgas in the south.

Varna.

This port is very important for the export of cereals, as it serves a fertile agricultural region. Its development began in 1848 when it was linked up by regular services with Constantinople, Marseilles, Trieste, etc. Its traffic increased to a marked extent after the construction in 1867 of the Rustchuk-Varna line, which is used by travellers to Constantinople from western and central Europe. Under special laws of 1889 and 1912 the Bulgarian Government authorised a French engineer, Admiral Gúerard, Port Inspector at Marseilles, to prepare plans for the construction of ports at Varna and Bourgas. The construction of the port of Varna lasted ten years, from 1895 to 1905, and cost 7,450,000 gold leva. Since 1919 the enlargement of the port has been taken in hand, and special warehouses have been constructed for cereals and flour; but the works are being carried out very slowly, for the means are lacking, and the traffic of Varna has notably decreased as a result of the annexation of the Bulgarian Dobrudja by Roumania.

Bourgas.

This port became more important than the natural port of Anhiolo about 1848, when steamers began to appear in the Black Sea, and found a safer harbour in the bay of Bourgas. The port acquired great importance because of the extensive commerce between Southern Bulgaria and Constantinople, as well as with the other countries bordering the Black Sea.

The construction in 1874 of the Adrianople-Dedeagatch railway led to competition on the part of the latter with Bourgas in the handling of Bulgarian exports and imports, but the Nova-Zagora-Bourgas line and the construction of the port at Bourgas by La Société Française des Batignolles assured to Bourgas a very important trade. Although an amount of 7,080,000 gold leva has been expended on the port, it is clear that it will have to be enlarged, at a still greater cost, but the work of construction is in abeyance owing to the difficult position of Bulgaria's finances. The statistics show that in 1924-5 the port was visited by 1,836 vessels of a tonnage of 795,499, with 180,928 tons of merchandise exported and imported; whereas in 1886 it was visited only by 1,412 vessels, 147 of which were steamers.

Other Black Sea Ports.

(1) Bessemvria, an old and poor port, is visited by the steamers of the Bulgarian Navigation Company. Its traffic is on the decline. The little town has become a much-frequented watering place.

(2) Anhiolo is an old and once famous town. The port, which is old and constructed of wood, is on the down grade owing to the competition of Bourgas.

(3) Sozopol. Here an artificial port has been constructed. The traffic in 1926-27 amounted to 473 vessels, 9,144 passengers and 2,684 tons of merchandise.

(4) Achtopol. There has been no building, and the traffic is small.

(5) Vassiliko is developing in economic importance. For the future exploitation of the forests of the neighbourhood a port has recently been constructed at a cost of twenty million leva.

Danube Ports.

Bulgaria's Danubian ports are more numerous, but less developed. Rustchuk, finished in 1912, ought to be enlarged and improved by the construction of warehouses, hangers, and offices which would entail an expenditure of 63,000,000 leva. Svishtov, completed in 1913, lacks hangars. Nikopol has no special works, and requires for its development a railway (Nikopol-Somovit) and various buildings. Somovit was only finished in 1924. Orehovo has increased its traffic as a result of the construction of the line from Sarajevo to Orehovo. Competition will arise from the port of Kozlodouï in the course of time. Lom, the most important port in western Bulgaria, was constructed in 1915-18. It will be necessary to expend a sum of 30 million leva on certain additional works. Vidin has been open since 1908. In 1913 it was connected by railway with Sofia.

The Danube ports are visited by the ships of the following lines:—

(1) The Danube Navigation Company (D. D. S. G.), (Austrian) with 31 passenger vessels, 43 tugs, and 424 barges.

(2) The Hungarian Maritime and River Navigation Company (M. F. T. R.), with 48 passenger vessels, 30 tugs, and 200 barges.

(3) Roumanian River Navigation (State-owned) with 19 vessels, 23 tugs, and 151 barges.

(4) The Roumanian Danube Navigation Company, with 11 vessels and 80 barges.

(5) The Bavarian Lloyd (N. L.), with 16 vessels and 90 barges.

(6) South-German Navigation Company which possesses 3 tugs and 7 barges.

According to reliable information the completion of the

Government's programme for the improvement of the Black Sea and Danube ports will entail an expenditure of about 405 million leva.

THE EGYPTIAN POSTAL ADMINISTRATION.

Annual Report, 1928.

In submitting to the Minister of Communications his Annual Report on the Post Office for the year 1928, the Postmaster-General of Egypt states that the receipts of the Administration exceeded expenditure by 35 per cent. Details of the revenue, which showed an increase of £E11,436 on the returns of the previous year, were as follow:—

Postage and poundage in stamps	...	...	£E626,708
Poundage in cash on monetary remittances	...	...	„ 43,230
Other items	...	...	„ 63,759
Services rendered by the Postal Administration to Ministries and Governmental Departments	...	...	„ 301,170
Total	...	...	£E1,034,867

Expenditure, amounting to £E767,465, was made up as follows:—

Salaries	...	...	£E440,535
General expenses	...	...	„ 261,015
Services rendered by other Government Departments	...	...	„ 65,915
Total	...	...	£E767,465

At the end of the year the Postal Provident and Mutual Help Association possessed scrip to the value of £E120,582. Income dividends and other receipts amounted to £E15,033, while expenditure and sums paid as indemnity to members amounted to £E10,432, leaving a net profit for the year of £E4,601.

Development in 1928.

Internal developments during the year included the following:—

The opening of fifteen Second Grade post offices (with Savings Bank facilities) brought the total number of First and Second Grade offices to 434. Ten new Third Grade offices brought the number of these to 108, and twelve new Fourth Grade "unestablished" offices brought the total number of these to 67. Fourteen rural stations were created, making a total of 2,672. Ten fresh offices adopted house-to-house delivery, and seven the telegraphic money-order service. Five railway stations have been admitted to the Travelling Postal Service, bringing their total to 358. The transport of mails twice a day between Assiut and Abnub by means of a motor-cycle was introduced in the place of once a day by means of a runner.

A Second Grade temporary office was opened on the occasion of the Medical Instruments and Medicines Show in the park of the Royal Agricultural Society at Gezira, Cairo, from December 1 to 31. Another Second Grade temporary office was opened on the occasion of the Medical Congress in the Club of the Medical School at Qasr-el-Aini, Cairo, from December 12 to 31. Both offices were admitted to the exchange of Reply-Coupons. On the occasion of the Medical Congress new postage stamps of 5 and 10 mills. values were issued similar in colour to the corresponding stamps of the current issue. The design of the 5 mills. stamp represented the old Egyptian statue of Amhotep, God of Medicine, and that

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

of the 10 milis. stamp the portrait of late Mohamed Aly Pasha, Vali of Egypt. These stamps have been used for the prepayment of all items of correspondence and parcels in Egypt and for abroad in the periods fixed to that effect by the Postal Administration.

Developments in the foreign service included the issue of money orders on Palestine in sterling currency, the inauguration of a money order service with Iraq, Syria, Lebanon Republic and Alaouites, inauguration of the C.O.D. Parcel Service with Palestine and the inauguration of the Collection Order Service with Czechoslovakia.

Correspondence.

There was an increase of 6 per cent. in 1928 in the total number of articles dealt with, inland and foreign, which amounted to 154,491,000.

The number of registered articles lost was 8 from about nine millions exchanged with the interior and abroad.

The figures for inland correspondence were as follows, the figures for 1927 being in brackets: Letters 59,521,000 (55,315,000); Post-cards, 3,910,000 (3,603,000); Registered articles, 7,227,998 (6,883,398); Newspapers and other printed matter, commercial papers and samples, 21,957,000 (22,858,000); Government correspondence carried free 9,429,000 (9,212,000); Totals 102,044,998 (97,871,398).

The corresponding figures for foreign correspondence were as follows:

Despatched:—Letters, 15,670,000 (14,338,000); Post cards, 1,928,000 (1,808,000); Registered articles, 932,128 (911,148); Newspapers and other printed matter, commercial papers and samples, 4,933,000 (4,327,000); Totals 23,463,128 (21,384,148). *Received*: Letters, 14,248,000 (13,457,000); Post-cards, 1,150,000 (1,215,000); Registered articles, 826,221 (835,421); Newspapers and other printed matter, commercial papers, and samples 12,759,000 (11,080,000); Totals 28,983,221 (26,587,421).

The following table shows the numbers delivered per head of population:—

Category.	1924.	1925.	1926.	1927.	1928.
Letters	5.6	5.8	6.3	6.0	6.4
Post-cards	0.5	0.5	0.4	0.3	0.4
Newspapers, commercial papers and samples	2.6	2.8	2.5	2.4	2.5

In the total correspondence exchanged with foreign countries Great Britain and Dependencies (including Palestine) head the list with 16,489,245 articles or 31.4 per cent.; France and Dependencies, including Syria, is second with 10,550,458 articles, 20.1 per cent.; Italy and Colonies third, 9.3 per cent.; the United States fourth, 7.7 per cent.; Germany fifth, 6.5 per cent.; and Greece sixth, 5.4 per cent.

Express Letter Service.

During the year under review, 114,078 letters were handed in for express delivery, against 73,832 in 1927, an increase of about 55 per cent.

Air Mail.

The following table relates to correspondence despatched and received by the Egyptian Post Office:—

		Ordinary letters.	Registered articles.
Dispatched		20,206	4,281
Received	{ for Egypt	19,040	4,003
	{ in transit	18,269	4,490
Total		57,605	12,774

Overland Mail Service (By Motor Car).

The total weight of correspondence despatched in 1928 amounted to 4,144 kilogrammes, as compared with 1,509 kilogrammes in 1927—an increase of 175 per cent.

Parcels.

The total number of parcels dealt with was 2,015,773 as against 1,924,296 in the previous year, making an increase of 4.8 per cent. 5,509 Inland Express Parcels and 446 from abroad have been delivered to addresses by special messengers. Details of this service were as follows, the figures for 1927 being in brackets:—

Number of parcels exchanged: In the interior 1,258,714 (1,189,839); With the Sudan 158,653 (153,416); With abroad, 598,406 (581,041); Total 2,015,773 (1,924,296);

Of the parcels exchanged with foreign countries 125,901 were despatched and 472,505 received. Of the joint total, 598,406, France and her Colonies were responsible for 194,600, Great Britain and Dependencies (including Palestine) for 160,481. Next in order came Germany, 64,380, Italy, 44,367, and Switzerland, 25,919.

Newspapers and Periodicals.

The following is a classification of the newspapers and periodicals handled by the Post Office:—

CATEGORY.	PUBLISHED IN				TOTAL.
	Arabic.	Other Oriental Languages.	European.	Oriental and European.	
Newspapers, political, commercial, and financial ...	37	6	44	—	87
Newspapers, humorous ...	4	1	3	—	8
Reviews, literary ...	75	1	34	1	111
.. judicial ...	5	—	2	—	7
.. religious ...	27	—	3	1	31
.. for women ...	6	—	2	—	8
Totals	154	8	88	2	252

Of 252 newspapers and reviews, 178 are published in Cairo, 50 in Alexandria, 8 in Tanta, 3 in Minya, 2 in each of Port Said, Mit Ghamr and Bilqas, and one in each of Asyut, Benha, Beni Suef, Fayoum, Mansura, Nikheila and Zagazig. Of the 252 newspapers mentioned, 23 are illustrated. Subscriptions taken out for foreign periodicals amounted to 1,615, as compared with 2,737 in 1927.

Cash Services.

The total value of cash handled in respect of Money Orders (Inland, Sudan and Foreign), Specie, Collection Orders, Postal Orders (Egyptian, British and Palestine) in 1928 amounted to £E13,150,253 as against £E13,479,599 in 1927—a decrease of £E329,346.

Staff.

At the end of the year the staff of the Postal Administration numbered 4,353, of whom 1,597 were pensionable.

CONSTANTINOPLE MUNICIPAL LOAN.

Bondholders and coupon holders of the City of Constantinople Municipal Five per Cent. Loan, 1909, are informed that, owing to the vacation, it has not yet been possible to obtain the signatures of the Judges of the Anglo-Turkish Mixed Arbitral Tribunal to the homologation of the agreement dated April 30, 1929, made between the representative of the bondholders' committee, the National Bank of Turkey and the municipality.

The date provisionally fixed under the agreement as September 15 for payment of Coupon 38 has been postponed.

A further announcement will be made in due course.

The yield of the plum crop in Yugoslavia is expected to amount to 17,000 tons.

The yield of the maize crop in Roumania is estimated at 6,380,000 tons.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ending August 20 amounted to £E8,433, making a total for the period from April 1 of £E112,820, as compared with £E7,577 and £E98,724 for the corresponding periods of 1928.

Engineering Topics

(By Our Engineering Correspondent)

Engineer or Business Man.

At one time there was a considerable amount of controversy as to whether a trained engineer or a successful commercial man made the best head for an engineering business. Those who supported the first view ridiculed the idea that a man with no knowledge of the subject could steer an engineering venture to a safe port; the other group argued that if a man could sell matches in bulk he could sell machine tools.

As usual in controversial matters, the truth seems to lie somewhere near the centre of the two extreme views. If a man has neither a good head for business, nor possesses sound commercial training, an engineer attempting to act as a head of a business would soon occupy the position of an oyster at an banquet; someone would be certain to take an interest in him before long. Without some engineering training, a commercial manager of an engineering concern should wear a card: "Pity the Blind," and pray for help to pass the pitfalls on his way. Putting it plainly, no amount of engineering or metallurgical knowledge can make a business a success without sound commercial judgment.

Further, engineering production is only one of the problems that a manager has to face; in addition he must know how much every ounce of raw material costs, what it costs to bring it to the works, handle and machine it, and he must be able to gauge accurately the percentage of the many overhead charges and provision for depreciation that every part and every tool should carry.

He must know when to buy material and when to sell finished products—knowledge that is possessed by hardly one engineer in a thousand. He must know what to charge for the goods turned out; another thing which sounds simple but is a trifle less easy than it looks. How many engineers can keep touch with the fluctuations of overhead expenses, varying as they do according to the rate at which the shop is operating?

An engineer with a mere smattering of business knowledge would probably be content with averaging his overheads for the year. Such a man to-day would fill up hours in wondering why he didn't get business, ignorant of the fact that a large number of works to-day are cutting under their average overhead to get business to help reduce it. Commercial judgment is needed here, as an error in calculation may mean a serious loss.

A Rara Avis.

Of course, a commercial man, ignorant of even the rudiments of engineering, who had to manage an engineering undertaking would have the active help and assistance of all the engineers beneath him; they would all do their utmost to help him and steer him clear of error! That goes without saying. But even with all their kindness he might do something or other that he would eventually wish undone.

The commercial engineer is greatly needed and seldom found. Commercial engineering is as important a branch of the profession as is electrical, aeronautical or chemical engineering. The training for a post of commercial engineer should be highly scientific and intensive, and, in my view, it should be possible to apprentice boys to commercial engineering, as well as to send them to a course of commercial engineering training.

Pyrometers.

A pyrometer installation is a valuable adjunct to a steam plant, as by its means one is able to ascertain the working temperatures in various positions which would

otherwise be inaccessible, as, for example, the temperature of the exit flue gases in various places, the temperature of the superheated steam, and the temperature of the boiler feed water. Mr. W. E. Warner, who is an authority on the subject, says that two objections are usually raised to the use of such instruments as pyrometers in a boilerhouse: firstly, cost and maintenance costs; secondly, their unsuitability for the severe conditions under which they will have to operate. By carefully selecting the pyrometers, however, and other instruments to which a similar criticism might be applied, the first cost can be kept down, and provided the pyrometers, leads and instruments have been carefully chosen to suit the working conditions, and have been carefully installed, the cost of maintenance and renewals will be small, too.

Although the conditions are naturally severe, pyrometers are now made of robust construction and, when necessary, the elements are themselves protected by porcelain and steel tubes. Writing in "Cheap Steam," Mr. Warner says that the indicating and recording instruments can be situated well away from the actual boilers and connected to the pyrometers by means of connecting leads. The accuracy of the temperature measurement is not affected, owing to the metal these leads are manufactured from. The actual pyrometer tubes, which are placed in the temperature to be measured, consist of the element wires or hot junction mounted in a tube, this being of sufficient length to bring the hot junction to the spot where the temperature is to be measured, suitable arrangements being made for holding the pyrometer in position and for protecting the connecting leads as they pass to the external circuit. There is also the cold

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK
LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

junction which has to be situated in some position of low and non-variable temperature, and it is the temperature difference between this cold junction and the hot junction that is measured on the instrument. The principle of the measurement is that of the thermo-couple. If two dissimilar metals, electrically connected, are heated to different temperatures, an electric current will flow between them, its magnitude depending on the temperature difference. The hot junction provides one dissimilar metal and the cold junction the other. These two being electrically connected, a current flows between them when a temperature difference exists, and by placing a galvanometer in the circuit, calibrated in temperature degrees, the temperature of the hot junction will be indicated on the instrument. The actual construction of the pyrometer tube and the metal of which the hot junction is composed, depend upon its purpose and the temperature which is to be measured, and naturally, the higher the temperatures that have to be dealt with, the higher the cost of the instrument. The metal used for the hot junction may be either platinum or platinum-rhodium wires, as these are suitable for the highest temperatures likely to be met with in commercial practice. In fact, these wires should be used for all temperatures in excess of 1,000 degrees C. These are known as rare thermo couples. On the other hand, what are technically known as base thermo couples made of Titan alloy wires can be used for temperatures of between 800 and 1,000 degrees C., whilst for temperatures of below 800 degrees C. a number of couples are made of iron constantan wire, and these answer the purpose admirably.

Coal Saving on Industrial Boiler Plants.

Two important points in connexion with industry are that most of the coal of the world used for steam generation is consumed in the industrial boiler plant, and also that substantial economies are in most cases waiting to be effected in the smallest plant, even when only one boiler is used. A typical example of savings being effected concerns a well-known gold mining company on the Rand, showing also the efficient utilisation of a high ash content, cheap, low-grade coal instead of a good quality material.

In this case the boilers are of the very small hand-fired, water-tube type, without feed-water economisers, of 1,265 square feet heating surface, having a calculated evaporation of 3,850 lb. of water per hour, based, of course, on good coal. One of these boilers was subsequently fitted with the "Turbine" forced draught steam jet furnace of standard design, 27.5 square feet actual effective grate area (5ft. 6 in. long) exposed to the air blast, and a detailed series of tests under very accurate conditions have been carried out side by side with the "Turbine" boiler and another boiler having the ordinary hand firing.

In the case of the normal good quality coal used (Whitbank) containing 20 to 25 per cent. ash, under ordinary conditions the coal burned per boiler per hour was 500 lb., and the water evaporated 1,776 lb., that is 3.55 lb. of water per lb. of coal, the general conditions also of the test being a steam pressure of 150 to 160 lb. and very hot feed water, about 200 degrees F.

The corresponding boiler under exactly the same conditions equipped with the "Turbine" furnace burned 760 lb. of coal per boiler per hour and evaporated 4,200 lb. of water per hour, that is $2\frac{1}{2}$ times the amount of steam, exceeding the calculated rating of the boiler, hardly ever attained in practice, and corresponding also to 5.60 lb. of water per lb. of coal.

In a second series of tests much inferior coal was used, known as "Springs," containing 33 per cent. ash. In this particular test the ordinary natural draught boiler with good quality Witbank Coal as before, burned 600 lb. of coal per boiler per hour and evaporated 2,275 lb. of water, that is 3.70 lb. of water per lb. of coal, a slightly better performance than the first one. Using Springs inferior coal the "Turbine" furnace boiler burned 900 lb.

of coal per boiler per hour and evaporated 3,275 lb. of water, corresponding to 3.60 lb. of water per lb. of coal. That is about 50 per cent. more of the inferior coal was burnt with an evaporation of more than $1\frac{1}{2}$ times as much, naturally representing a very great economy because of the difference in price between the two coals.

Obviously also a further improvement would be the installation of feed-water economisers, which perhaps however, would be difficult in the case of ordinary firing because presumably the natural draught available is not good. It may be stated that in many parts of the world large numbers of extremely small water tube boilers are still at work, largely because of considerations of difficulties of carriage in connexion with plant and machinery, although the modern heavy 6- and 8-wheeler motor wagon with caterpillar tractor wheels if necessary has now altered the whole situation in this respect.

Generation of Electricity by Water Power.

Notable in the field of hydro-electric power, as well as reservoir and other pipe line work, is a patent, automatic, self-closing, needle-valve, with precision timing gear, that has been introduced recently by Messrs. Glenfield and Kennedy, Ltd., of Kilmarnock, and the firm have just supplied a 21 in. diameter unit to the order of Thomas Piggott and Co., for the Hermitage Dam Hydro-electric Scheme in Jamaica. This valve operates under a head of 140 feet and is designed for a normal water velocity of $4\frac{1}{2}$ feet per second, while it automatically closes when a velocity of $5\frac{1}{2}$ feet per second is attained, such as for example to a burst pipe, blown joint, racing of the turbine, or similar cause.

The chief feature of the design is that hydraulic forces only are employed, no accessory mechanical contrivances being necessary to assist closing, the design consisting fundamentally of a loose sliding plunger suspended in the water stream, which moves forward and closes the orifice upon the velocity of the water increasing beyond the predetermined amount. The valve casing is somewhat smaller at the outlet than at the inlet—a divergent taper pipe being added to continue the main pipe at its original diameter—and held centrally within the casing is a cylinder which houses the freely moving plunger, provided with a differential piston dividing the cylinder into two internal working chambers. The back end of the plunger is subjected to the full water pressure in the main, and the front end of the low pressure in the throat, while the two internal chambers are connected by the group of small valves on the top of the main valve body, and are normally in equilibrium under the same pressure. This pressure difference between the back and the front ends of the plunger becomes greater as the velocity of the water increases, and as soon as the pre-arranged limit is attained— $5\frac{1}{2}$ feet per second—the external poising weights are overcome and the valve begins to close. The rate of closing is adjusted to take five minutes, thus enabling the pipe to be closed down and the water brought to rest without violent shock and excessive surge pressure in the pipe.

The first portion of the stroke is controlled by isolating the two internal chambers, for which purpose the connecting valve operated by one of the side levers is closed, thus transforming the float chamber into a dashpot cushion. Then at about half-stroke the precision timing gear is released and takes complete control of the closing operation by admitting pressure water to either chamber by means of a hydraulic valve, which in turn is controlled by a floating lever attached to a cataract piston and the near side lever, so that the valve is constrained to close exactly at the rate determined by the loaded cataract gear.

The Nizam's Guaranteed State Railways have given a contract to Kitson and Co., Ltd., Leeds, for ten locomotive boilers.

The Khedivial Mail Steamship and Graving Dock Company announces a dividend on the cumulative preference shares at the rate of $5\frac{1}{2}$ per cent. per annum for the six months ended June 30, 1929, payable, less tax, on September 30.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 17.

Business in the Stock Exchange still remains below the normal level, though the new account opened under fairly cheerful conditions. A rise in Bank rate was not generally anticipated and gilt-edged stocks have been firmer than for some time past, with India loans sharing in the general recovery. A rise in home rails was checked by profit-taking and a less favourable batch of traffic returns, and Argentine rails were unaffected by the dividend declarations, which were in accordance with expectations. Activity in the industrial section was again confined to a narrow range of specialities, the international favourites being affected by uncertain movements in Wall Street. Margarine issues were again very active, though quotations show little alteration on balance, in spite of the circulation of a rumour that Union and Lever shares are to be exchanged on a figure about 20s. above the present market price. The Imperial Airways statement produced little enthusiasm, but there was a marked rally in newspaper issues on the publication of a reassuring notice.

"Johnnies" Accounts.

The accounts of the Johannesburg Consolidated Investment Company, Ltd., for the year ended June 30, 1929, disclose a fall of £100,000 in net profit for the second year in succession, the net earnings being £593,199, compared with £692,722 in 1928 and £793,827 in the preceding year. The usual dividend of 15 per cent., free of tax, is nevertheless to be paid, although this distribution absorbs practically the whole of the amount available, a mere £700 being added to the carry forward. Nothing is therefore allocated to the reserve, compared with £100,000 and £200,000 on the two previous occasions. The reserve fund, however, already stands at the respectable figure of £1,000,000, against an issued capital of £3,950,000, and, it is stated, is entirely invested in gilt-edged stocks. The balance-sheet reveals a rather less liquid position than a year ago. While cash is £149,000 higher, call loans have declined by £73,000 and debtors by £82,000, and creditors have advanced by £83,000. No explanation of the decrease in profits is contained in the report, of which the most interesting feature is the statement that the company has acquired large interests in the Northern Rhodesian copper fields, the directors expecting to see an extensive and profitable industry developing there in the next few years. These interests, it is to be hoped, will in time compensate for the recent diminution in revenue from other sources, but meanwhile the yield of £7 12s. per cent. on the ordinaries does not appear unreasonable.

Argentine Railway Dividends.

As was generally expected, the first of the Argentine railway dividend announcements were of distributions at unchanged rates. Buenos Aires Great Southern is paying 8 per cent. for the third year in succession, Buenos Aires Western maintains the 7 per cent. paid on the last three occasions, and Central Argentine is distributing 7 per cent., as in 1927 and 1928. The gross traffics for the year ended June 30, 1929, were satisfactory in view of the reductions in rates introduced in accordance with the

Mitre Law. True, the receipts of B.A. Great Southern fell away by £229,000, but the decline compares with one of £313,000 in the preceding period. B.A. Western reported an increase of £4,000, Central Argentine one of £485,000, and the Pacific company one of £863,000. With cheap fuel obtainable throughout the year, the net receipts are expected to show advances rather than declines. The cautious dividend policy, however, had been anticipated in view of the drought prevailing in the Argentine. So far this has not materially affected traffics, but the conditions may at least retard any increase for the current year as a whole. On a longer view, however, the position of the securities of the Argentine railways as high-class investments is unaffected by such a temporary factor. The Republic has made solid progress in recent years, which should continue, and the railways will naturally benefit. The companies themselves have built up a sound position, and have made liberal allowances for maintenance and renewals. Great Southern and Great Western ordinary, and Central Argentine deferred can all be bought to yield £7 14s. per cent., while Pacific ordinary stock returns £7 per cent.

NEAR EAST MARKET REPORTS.

The September issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports:—

The Sudan.

Gum arrivals in Kordofan stations are steadily declining, the total, during July, amounting to 172 tons (about half of which was rain damaged), against 495 tons in the same month last year. Although the demand has been slight, El Obeid prices for gum free from rain damage closed, at the end of July, at about 10s. per cwt. above those of the previous month. Coffee prices, both on a cash and credit basis, show little material change, the former being P.T.380.385 and the latter P.T.390.395 per kantar, 100 rottles. Stocks are estimated not to exceed 16,000 bags. The sesame market is dull, with little domestic or foreign demand, and prices remain steady at £E17.500 for white and £E17 for red, f.o.t. Port Sudan. Groundnut prices have hardened slightly, from £E10-£E10.500 to £E11.200 per ton Port Sudan. Exports are negligible. Owing to adverse reports regarding the wheat crop in America and Canada, prices for flour have risen, quotations being £15 for Indian and £15 10s. for Australian, per ton, c.i.f. Port Sudan. There is, at present, very little demand for gunnies, but with the new crop coming forward, an appreciable improvement is anticipated. Dura crop reports are encouraging, rains having been plentiful, but it is not yet known whether the Government will permit exports.

Palestine.

The following report, received by mail, was written before the recent disturbances in Palestine occurred.

The construction works on the river Jordan, in connexion with the Rutenberg Concession, are expected to be completed within a year, or, at the most, 18 months. The supply of cheap electrical power should prove a great boon to the many small industries which have sprung up in Tel Aviv and elsewhere and should also give considerable encouragement to the extension of irrigated plantations. The Jerusalem Electric Company is expected to be in a position to supply current in the autumn, and a good demand for electrical accessories is expected, in anticipation of which a considerable quantity of cheap German goods has been imported.

Harvesting is completed. A slight rise in the prices of cereals is attributed to the fact that imports of wheat from Trans-Jordan have diminished, as cereal merchants in that region are disposing of their goods in other markets in the Near East. The flour market is now more healthy and active, as the heavy selling of imported flour, which has depressed prices for the last three months, appears to be coming to an end. The market for rice is quiet and quotations are weaker, Rangoon being £P.1:700 per sac of 103 kg. Business in cotton and woollen goods has continued to be of moderate dimensions, at poor prices, although the market for Manchester goods has been active and merchants report satisfactory sales.

LIVERPOOL

MANCHESTER

GLASGOW

THE ROUMANIAN TEXTILE INDUSTRY.

Roumania offers an excellent market for all kinds of textiles and for raw materials required by the domestic textile industry, which has made considerable progress during the last few years, despite the absence of such essential raw materials as cotton, superior quality wool and various yarns which have had to be imported from other countries (says an article in the United States "Commerce Reports.")

The number of textile enterprises, which in 1922 was only 182, producing manufactures valued at £3,993,300, had multiplied to 462 in 1926. In 1926 these mills produced goods valued £6,243,386, while textiles produced in 1927 amounted in value to £9,544,800. The consumption of textiles has steadily increased in Roumania since the War. In 1925 the total consumption of textiles amounted to £18,598,600 in value, of which 29.5 per cent. was supplied by the domestic industry and 70.5 per cent. by importations from other countries. During 1926 there was an increase of £1,488,646 over the 1925 consumption—32 per cent. of the total representing production of the local industry and 68 per cent. goods imported from other countries.

In view of Roumania's importance as a sheep-growing country and as a result of the protection offered by the Government, the wool manufacturing industry has made notable progress during recent years. The total annual production of wool is officially estimated at 26,000 tons, the major portion of which is worked up by the peasants. The home industry is an important customer of the small spinning mills in Bessarabia and the Old Kingdom, to which washed wool is furnished by the peasants in exchange for yarn. As the quality of domestic wool is inferior, better-grade wool and yarn is imported and mixed with the local product.

A characteristic of the Roumanian wool manufacturing mill is that the manufacturing process begins with the raw material and continues to the finished product, washing, spinning, dyeing, and finishing being done in the same plant. Only one Roumanian mill is equipped for wool combing: it has 10,000 spindles and a total annual production capacity of 300,000 kilos of combed yarn. However, the production of this mill is much below its capacity, its output having been 260,000 kilos in 1924, 290,000 in 1925 and 171,000 in 1926. The cause of this reduced output of local yarn is attributed to the insufficiency of the tariff protection afforded the domestic combed-yarn producers against foreign competition. The consumption of carded yarn is met almost entirely by local production.

In 1927 there were 97 wool manufacturing mills in Roumania, with 110,414 spindles and 2,282 looms, employing 8,884 workers. Of the total number of mills in operation in 1927, 57 were in Transylvania, 22 in the Old Kingdom, 17 in Bessarabia, and 1 in Bukovina. Although the production of these mills covers the greatest part of the local consumption—especially heavy inferior quality cloth—large quantities of better cloth are imported from abroad.

Production of Cotton Mills.

Cotton, which is not grown in Roumania, is imported in both the raw and semi-manufactured state. The Roumanian mills using cotton as raw material are divided

into three groups—spinning, weaving, and knitting. The cotton spinning mills in Roumania, located in Arad and in Bucharest, possess a total of 33,228 spindles. The cotton weaving industry in 1927 had 59 factories with 5,413 looms and it employed 7,695 workers. The Old Kingdom had 34 of these mills; Transylvania and the Banat, 23; and Bukovina, 2. The cotton yarn used by these establishments, as well as by the peasant home industry, is largely supplied by importations from abroad. From the year 1922 to 1925 imports for mills increased three and a half times, while those for the peasant home industry remained practically stationary. In view of the fact that the production of Roumanian cotton mills is insufficient to cover the growing consumption of cotton textiles, over 80 per cent. is imported from various countries.

The Roumanian knitting mills, although using as raw materials not only cotton but also wool and silk yarn, are producing mostly cotton knit goods. The cotton-knitting industry in 1927 employed 5,443 workers in 85 establishments, operated 3,844 knitting machines, and had an invested capital of £468,879. Of the 85 knitting enterprises, 46 were located in the Old Kingdom, 25 in Transylvania and Banat, and the remainder in Bukovina and Bessarabia. The production of the knitting mills in 1925 was 972 metric tons, as compared with 1,202 metric tons in 1924. Consumption of knitted goods equalled 1,566 metric tons in 1925 and 1,787 metric tons in 1924. Local production practically doubled from 1922 to 1926 and there was a continual growth in consumption.

Flax and hemp are cultivated in Roumania to some degree, but unfavourable climatic conditions have resulted in a decrease of the yield per hectare of both of these fibres during the last three years. In 1927 Roumania possessed a total of 17 mills working flax, hemp, and imported jute. The production of the mills, comprising coarse hemp, cord, ropes, halters and belting, cannot be ascertained, owing to the lack of official statistics. From import figures, however, it appears that the major portion of local consumption is covered by imported goods. A small quantity of fine flax and hemp textiles are produced in some of the local cotton mills.

Despite favourable climatic conditions sericulture is not highly developed in Roumania. As the quality of Roumanian silk is inferior the importation of silk yarn for admixture by the domestic silk industry is necessary. In 1927 Roumania had 15 silk mills, 8 in the old Kingdom and 7 in Transylvania, with a total of 273 looms. It is reported that the Roumanian silk industry has developed rapidly since the War, but there are no recent statistics covering the production of the mills. Some idea of the rate of growth of this industry may be obtained from statistics showing the production of textiles composed partly of pure silk and partly of an admixture of silk. During 1925 the value of the production of silk and rayon textiles was £145,985, as compared with £43,755 in 1924. It is estimated that of the local production of silk and rayon about 80 per cent. is rayon and only 20 per cent. pure silk.

It is stated that the Roumanian textile industry has succeeded in meeting only 30 per cent. of the country's total needs in textile goods. Of the quantity of textiles required for local consumption the greater portion produced comprises coarse and inferior products, it being necessary to import the better grade goods from abroad.

The Eastern Telegraph Company announces a dividend at the rate of $3\frac{1}{2}$ per cent. per annum, less tax, on the preference stock for the quarter ending September 30, payable October 15.

The Albion Motor Car Company, Ltd., Glasgow, have secured from the Government of India a contract for the supply of 100 Albion special six-wheeled lorries with the carrying capacity of three tons. The value of the contract exceeds £200,000, and delivery of the vehicles will be given over the next six months. These six-wheeler vehicles are specially designed to operate across country and, if desired, can leave the hard roads and travel over broken ground and up extraordinarily steep gradients with a full load.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British Bulgarian Chamber of Commerce of Sofia, dated August 31.]

General Situation.

Owing to the seasonal harvesting activity, trade has been rather slack in August. The peasant population is busy bringing home the different crops and, as a rule, does not sell the produce before September 15. Local markets are, therefore, almost inactive. It is generally expected that, with the opening of the sales of grain, maize, grapes, sunflower seeds, beans, etc., active purchases of manufactured goods will set in towards the end of September.

Weather conditions continue to be favourable and the forecasts for fairly good results of various crops appear to materialise, with the exception, perhaps, of wheat and rapeseed.

A certain activity in the general situation of trade will most probably be brought about by important orders for railway and building materials on account of the Railway Administration. Numerous tenders are to be invited to this effect in September, October and November next. Among other appliances, there will be placed important orders for switches, steel bridges, weighing platforms, construction steel shapes, etc.

Contracts for the supply of railway carriages have been awarded to one Czechoslovak and two Italian concerns. Two British firms did submit tenders, but their prices were higher than those of the successful tenders.

An important contract for a complete Briquette Making Plant for the State Collieries at Pernik was not awarded, as no offers were submitted. The terms of the supply, as established by the Administration of the Collieries, were found difficult to be complied with.

The position of the textile and leather trades is still uneasy owing to difficult sales as a consequence of excessive foreign commitments to be met by local importers; in order to secure funds for their payments, they are underselling one another. An improvement of the situation is expected to set in with the beginning of peasant purchases in September.

Foreign trade remains passive. No definite data are available for July and August, but, according to preliminary information, the position has not improved since the end of July.

Railway traffic has considerably increased and the rolling stock available threatens to prove deficient for the heavy transport of grain, sugar beet and other agricultural products.

Cotton in Bulgaria.

The favourable conditions in the southern part of Bulgaria for growing cotton, on the one hand, and the large imports of raw cotton, on the other, have induced the Ministry of Agriculture to start a campaign among the peasants for intensifying the growing of cotton. This pioneer work has reached a stage at which cotton grown in Bulgaria has proved to be of good quality. The area under cotton has increased steadily from 16,585 decares in 1923 to 51,521 decares in 1929. This year the area is estimated at 48,687 decares. Production of raw cotton which amounted to 286 tons in 1923, rose to 749 tons in 1927 and 941 tons in 1928.

Forthcoming Tenders.

The Ministry of Finance is inviting tenders to take place on October 14, 1929, for the coinage and supply of silver coins of a total nominal value of 580,000,000 leva. Offers may be submitted in either Bulgarian, French or English languages. Only State Mints or such other institutions as have manufactured silver coins for either their own government or other governments since 1920 will be allowed to compete. Such institutions should submit samples, of the various coins which they have struck. Competitors are required to deposit a sum of

400,000 leva with the Bulgarian National Bank, and to produce a deposit certificate together with their offers before the Adjudication Commission. This caution must be completed to 5 per cent. of the price offered by the successful tender. All expenses incurred in connexion with the supply including all fiscal taxes and revenue fees will be for the account of the contractor.

Tenders are also invited to take place on the same date for the coinage and supply of an alloy of copper and nickel coins of a total nominal value of 250,000,000 leva. The requirements for these are the same as those for the silver coins, except that the amount required as the first caution deposit is set at 700,000 leva.

Agriculture.

According to information obtained from the Ministry of Agriculture, the apple crop of Bulgaria is considered satisfactory. Five districts of the country will show a surplus production of over 450,000 kilograms to be exported. The pear crop is reported to be excellent throughout the country. However, the exports will be very insignificant due to the fact that the pear fruit is not of that standard which would sell abroad. The pear trees of the better sorts are still too young to bear sufficient quantities for the purpose of export.

The crop of water melons this year has been abundant, 90 cartloads have been already exported, and owing to the flooding of the market, prices have been extremely low as compared with former years.

The prospects of the plum crop are very good and important quantities of prunes are expected to be exported. The Ministry further reports that the honey yield, especially in some districts, is satisfactory.

The total remittances from the Government of India to the Secretary of State for India in Council from April 1 to September 7, 1928, were £10,250,000, of which £2,750,000 was remitted by means of purchases of sterling in India and £7,500,000 transferred from the Paper Currency Reserve in England to the Home Treasury.

THE NEW OLYMPIA.

New Setting for the British Industries Fair.

A battery of six high-speed "talky" lifts, announcing the different floors automatically; 36 staircases and escapes; flood-lighting for the front of the building and advertisement letters six feet high in stainless steel—these are some striking features of the new £500,000 building at Olympia, London, two floors of which are to be ready in time for the British Industries Fair next February. Although there will be two floors still to complete, the whole front of the building will be finished for the forthcoming Fair. It is 330 feet long and will completely dwarf the existing Olympia buildings.

Prejudice against exhibitions on upper floors has had to be overcome. The building has been made "super-safe," to use the words of the architect, Mr. Joseph Emberton, A.R.I.B.A. The steel in it amounts to 6,500 tons, all of which has been erected in three months—five times the average speed of steel construction in London. But strength has had to be combined with wide spans so as to keep the floors as free as possible from encumbrances. Some of the girders weigh 22 tons each and some of the columns carry 1,500 tons, the spans being over 50 feet.

With the unusual number of staircases and escapes, each emergency stair serving only one floor, it will be possible to clear the entire building, with 3,600 people on each of the four floors, in two minutes.

The "talky" lifts, announcing what is to be seen on each floor as they go up and down, will be opened and closed at each floor by one man sitting in a glass control box. Between them the lifts will be capable of transporting 500 people at the rate of 350 feet per minute. There will be two goods lifts besides, with room for the largest motor cars.

Each floor provides an exhibiting area of about 60,000 square feet, bringing the total at Olympia, including the old buildings, up to nearly 600,000 square feet. In cubic content the new building by itself, it is stated, will be the largest building in the Empire, and it will also be the most up-to-date exhibition building in the world.

The stands will be 11 feet high and the long horizontal windows will come above that. These windows will run the full length of each floor, broken in the middle only by a big vertical window which will light the well around which the floors are built and limited at each end by the arrangement of staircases.

The long windows make the building horizontal in form, which the architect maintains is more reposeful than the vertical lines of the new Regent Street.

There is no cornice or ornament of any kind, but along the whole front will run, above the ground floor entrance, a canopy of reconstructed stone—the material for the whole facing of the building—with a projection of 10 feet, increasing to 14 feet over the doorways. This will give

protection from the weather and at the same time carry the lamps for flood-lighting the whole front of the building above the canopy.

This is believed to be the first time that a permanent building has been designed with the deliberate object of flood-lighting it. The necessity, too, of giving a building a new interest for each exhibition—for subsequent motor shows and other trade exhibitions will use the premises—has been thought of, for space is provided for posters and advertisement lettering in stainless steel. "British Industries Fair" will be emblazoned there in six-foot letters without destroying the design of the building. Surmounting the building, and probably also in stainless steel, there will be some simple statuary symbolic of the British industries for the display of whose products the new building will be principally used.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

System of Water Mains.—The Ministry of the Interior invites tenders for the supply of 6,580 metres double wrapped steel pipes with valves and specials, 28 hydrants, 11 column hydrants and 4 fountains (drinking water). October 15. (D.O.T.)

Pumping Units.—The Director-General, Mechanical and Electrical Department, Public Works Ministry, Cairo, invites tenders for the supply and erection at Giza and Gebireh Waterworks, Giza, of two Diesel pumping units, complete, with all accessories. October 15.

INDIA.

Fans.—The Indian Stores Department, Delhi, invites tenders for the supply of ceiling and table fans. December 3. (D.O.T.)

SYRIA.

Sewerage System.—His Majesty's Consul-General at Beyrout (Mr. H. E. Shaw, O.B.E.) reports that the Municipality of Beyrout is calling for tenders, to be presented in Beyrout by January 15, 1930, for the construction of a sewerage system for the town of Beyrout. It is stated that firms desirous of tendering must signify their intention in writing to the Municipality before October 15. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Glasgow, September 28; Manchester, October 4; Birkenhead, October 5). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Calcutta (Birkenhead, September 30); s.s. Mahratta for Calcutta (Glasgow, September 26; Birkenhead, October 8).

Bibby Line.—S.s. Staffordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 2).

British India Line.—S.s. Mulbera for Colombo, Madras, and Calcutta (London, September 21); s.s. Warfield for Bombay (London, September 21); s.s. Mashobra for Colombo, Madras, and Calcutta (London, October 5).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 5); s.s. Jessmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 10).

P. and O. Line.—S.s. Ranpura for Bombay (London, September 27); s.s. Nankin for Calcutta (London, September 27).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, September 28).

Ellerman and Papayanni Lines.—S.s. Egyptian for Gibraltar*, Algiers*, Piræus, Patras, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 28; Swansea, September 28); s.s. Serbino for Malta, Alexandria, Haifa*, and Jaffa* (Glasgow, October 1; Liverpool, October 3); s.s. Oporto for Algiers*, Oran*, Piræus, Patras, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 12; Swansea*, October 12); s.s. Algerian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, October 12; Swansea, October 17). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

ECONOMIC CONDITIONS IN ROUMANIA.

Messrs. Watson and Youell report as follows from Galatz for the week ending September 7 :—

Grain.—Although grain markets abroad continued to be weak, the local market was fairly active, and occasionally merchants paid prices over the parity in order to fulfil pressing sales, mainly for Germany. Fair quantities of wheat have been sold to Levant ports, chiefly Constantinople, and the first arrivals of oats are about to be shipped, probably to Antwerp. In view of the foregoing, the accumulation of tonnage, which was anticipated last week, has not taken place, and ships are receiving fairly good dispatch, whilst freights have been inclined to harden. In certain instances 15s. 9d. has been paid for the Continent. For Constantinople rates from 8s. to 8s. 6d. were current. Steamers to the extent of about 100,000 tons have been fixed from the Danube for September/October loading at from 17s. 6d. to 18s. 3d. Continent according to size, position, and destination. At Constantza there has been a restricted business at 10s. 6d. Continent, but further tonnage has been taken for September, and September/October at slightly higher rates. Owing to one of the silo-elevators being out of commission and a third not yet having been equipped, the present accommodation at Constantza is not adequate for rush periods and the steamers now arriving have to wait five to six days for a berth.

Timber.—The demand for usual Mediterranean and Near Eastern destinations remains weak, there being almost no inquiry for Greece or Syria, for which freights are nominally £7 10s. and £8 10s., respectively. There is a small inquiry for Italy, principally Naples, at £9, and also for North Africa, for which tonnage is asking £11 10s. per waggon. Some parcels are in view for Rotterdam, but no new freight engagements have yet been made for this destination, as shippers are hoping to get on at less money than the rate of £12 which was paid in the case of recent shipments.

Weather and Crops.—The weather during the week continued to be fine and dry, with a high day and low night temperature. There were occasional showers, mostly in the western part of the country, and on the whole it was favourable for the ripening of the maize. At the moment of writing a thunderstorm accompanied by a deluge of rain lasting about an hour passed over

the Galatz district and caused a heavy drop of the mercury. It is stated by the Ministry of Agriculture that, as a result of the dry hot weather last month, a reduction of 10 to 15 per cent. must be made in the estimates published with regard to the yield of late-planted maize in Bessarabia and the neighbouring districts of the Old Kingdom. On the other hand, the prospects in Transylvania, where beneficial rains have fallen, are excellent, and the crop in the watershed of the Theiss is reported to be exceptionally large. Provisional estimates are published of the average weights per hectolitre of the principal straw crops as follows :—

	Wheat.	Rye.	Barley.	Oats.
	Kilograms per hectolitre.			
Old Kingdom	75.5	70.5	62.0	45.4
Bessarabia	78.4	72.7	67.5	47.0
Bukovina	78.0	72.2	67.8	46.6
Transylvania	75.2	70.5	64.2	47.4
Average for whole of Roumania	76.7	71.4	65.3	46.6

Owing to shortage of seed for autumn sowings of wheat in certain localities, a proposal for a loan of 300 million lei for supplying the deficiencies, made by the Minister of Commerce, was promptly agreed to in principle by ten of the leading Bucharest banks. The State guarantees the loan, and the money will be advanced to the peasants' banks as required. The interest proposed is 3 to 3½ per cent. over the National Bank rate.

Sulina.—Bar : On the resumption of dredging operation it was found that a bank extending about 300 feet had formed in the navigable channel, reducing the depth to 22 feet, but this has been already improved to 23 ft. 6 in. These fluctuations are attributed to extra silt having been brought down by flood water, which now appears to have subsided. River depth : The depth of 24 feet has been restored at the 39th milepost.

Constantza.—About 10,000 tons of grain were shipped for Hamburg during the week, and about 15,000 tons are being loaded for Rotterdam and Antwerp. Several steamers are waiting for berth, including a 7,000 tonner destined for the Weser.

Petroleum.—Seven vessels loaded about 28,000 tons of petroleum products and five ships were supplied with about 2,500 tons oil fuel as bunkers.

Bulgarian Report.

Bourgas, August 31.—The market remained slack for prompt business, but in fulfilment of old engagements about 1,200 tons of barley were shipped from Antwerp, most of this quantity having been booked at 10s. 6d. net. Only trifling quantities are available for shipment to the Continent during the first half of September, and no large movement is yet in sight even for later positions. About 1,200 tons of barley and 1,500 tons of sunflower seed for Antwerp and Rotterdam are offered for end September shipment.

Weather and Crops.—Rain has been reported from most parts of the country, except in the Varna and Bourgas districts. Floods have occurred in a few parts, causing loss of life to man and beast. The rain has improved the condition of the maize considerably, and there are hopes of a very good crop.

The Mercantile Bank of India has declared an interim dividend on its "A," "B," and "C" shares of 8 per cent., less tax, payable September 23. (Last year's interim dividend was the same.)

The traffic receipts of the South Indian Railway Company for the week ending August 17 amounted to Rs.12,06,258, making a total for the period from April 1 of Rs.2,56,63,976, as compared with Rs.11,28,138 and Rs.2,33,08,041 for the corresponding periods in 1928.

At the Yugoslav Economic Congress held in Belgrade, which closed on September 9, it was stated that the country's exports for the current year were estimated at 8,600 million dinars, or an increase of 1,600 million dinars on the value of the exports for the previous year.

It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of *Atta of Roses* is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ending September 11:—

Egyptian Futures.

Sakel Contract.—Rather erratic fluctuations have been witnessed during the course of the week, and there is little doubt that the disappointing response shown by the American markets to Monday's "bullish" Bureau figures has unsettled confidence in both trade and speculative quarters for the time being. A slackening off in business was noticeable towards the end of last week, and with the general policy to even up commitments bringing in a moderate amount of local and Continental liquidation, values developed a somewhat reactionary tendency; just prior to the report, the level broke sharply owing to absence of support, Novembers declining to 16.50d. Subsequently, a recovery of 50 points occurred; however, as mentioned earlier, the action of the American markets has latterly checked activities on the buying side, with the result that values on the week show declines of 8 points for near and 2 to 6 points for more distant positions. Sentiment at the moment appears to be against a maintenance of present values, and this, combined with the sharp price movement in raw material values, has checked, but only temporarily it is hoped, the expansion of the recent improvement shown by trade reports. At the present juncture, steady markets are required to bring out business, and with this in view it is satisfactory to note that at the time of writing a firmer undertone appears to be developing. Taking all things into account, Alexandria has shown considerable resistance throughout the week; crop accounts continue to be rather conflicting, and the following cable from an authentic source just received no doubt partly explains some of the buying that has come into our market to-day:—"Fresh rise Nile causing more serious apprehensions damage crop lower Egypt. Yesterday's 'Bull' liquidation absorbed by purchases trade."

As a result of the week's trading local differences show very little change; near months continue to enlist quite as much support as later deliveries, and will probably hold their ground until clearer ideas of next season's supplies can be formulated. Generally speaking, we are moderately "bullish" on the outlook, and, taking a strict view of the position, would advise conservative purchases should the market develop a reactionary tendency.

Upper Contract.—Only a moderate amount of business has been attracted to this market during the past week, and, as values have been mainly governed by the ruling tendency in American values, we have to report a decline of 20 to 27 points for near and 25 to 29 points for distant positions, since we last wrote. The after-effects of the Bureau report have proved rather against trade interests, and less support has been received from this quarter than has recently been the case. General ideas at the other side are that the crop will prove smaller than last year, but to what extent depends on conditions and ginning yields shown during the next two or three weeks. The Alexandria General Produce Association's report for August reads as follows:—"Temperature in general was favourable to plants. Boll worm and pink worm caused damage, varying from 5 to 10 per cent. according to district. Irrigation water was plentiful and waterings took place normally. First picking commenced towards the 20th of the month, about 15 days later than last year, and it will become general during the first week of September."

Egyptian Spot.

This has been a somewhat disappointing week, as, prior to the publication of last Monday's Bureau report, business was showing distinct signs of improvement and it was generally felt here that should the tenor of the report prove to be "bullish" a very useful fillip to the trade would be provided. Although the report was of a markedly "bullish" character, the trade entirely failed to respond and values have actually sagged, and this in spite of efforts from Egypt, whence reports of flood damage are being daily received. This would seem to point to the fact that spinners have no confidence in current rates were it not that the spot demand is notoriously an unsafe criterion to be guided by, and we are inclined to the belief that the neglect of the spot has been compensated for by an improvement in c.i.f. business. It is merely repeating ourselves to say that the cotton chiefly in request, i.e., G.F. and F.G.F., both in Sakel and Upper, is becoming increasingly difficult to find locally.

Sakel.—The demand has broadened somewhat, and practically all qualities have been in request at one time or another, with the exception of the very best. As usual, most of the business has taken place in cotton at from 50 to 150 on November contracts.

Uppers.—The customary steady offtake has occurred for cotton at from pass to 50 on contracts. Staple lots are becoming harder to select each day. The basis has remained steady. Cotton at from 10 to 20 points off has also attracted some attention.

Pilion has been in moderate request for the medium qualities.

Nahda, White, and Maarad.—Rather more doing, but actual sales are hard to trace.

Sudan Sakel.—The demand continues to expand and foreign buyers have this week shown more interest.

Tokar Sakel.—This cotton still fails to attract buyers.

C.i.f. business has shown further improvement. Forwardings to the trade last week were returned as 4,004 bales Egyptians and 999 bales Sudan. Estimated spot sales for the week, 2,100 bales Egyptians and 1,650 bales Sudan. Quotations of Sakel have eased

20 points; those of Upper and Pilion 40 points on the week. F.G.F. Sakel to-day, 17.50d. F.G.F. Upper to-day, 11.6d. F.G.F. Pilion to-day, 12.75d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended September 5, state:—

Since our last report the futures market has been very active and appreciable fluctuations have been registered; at the close to-day the tendency was somewhat undecided. The week's summary of price movements is as follows:—Sakellaridis: November, 33.92 dollars, 0.63 dollars up; January, 34.28 dollars, 0.63 dollars up; March, 34.72 dollars, 0.58 dollars up; May, 35.07 dollars, 0.57 dollars up. Ashmouni: October, 21.82 dollars, 0.43 dollars up; December, 22.22 dollars, 0.40 dollars up; February, 22.67 dollars, 0.41 dollars up; April, 22.95 dollars, 0.30 dollars up; June, 23.43 dollars, 0.37 dollars up.

Sakel.—We have had a series of very firm markets, with numerous transactions passing, chiefly of a speculative nature, and during yesterday's session November almost touched 34½ dollars.

During to-day's session there was a reversal of the bullish sentiment in the ring, as a result of the decline of about 30 points in the American market and the news that the river level in the Sudan was falling. Heavy liquidating followed and prices declined more than ½ dollar.

During all this movement the trade took very little interest in the market, chiefly because of the scarcity of orders from spinners. Local bull operators maintain that stocks in the hands of spinners are very low, and that sooner or later they must come into the market; but in view of the fact that prospects of production of both American and Egyptian cotton are reassuring, we do not think that spinners will change their attitude of the past year—that is to say, they will continue to buy only according to their needs.

Notwithstanding the bull liquidations of to-day, the market is still overbought, and we expect that any reaction in New York will be fully reflected in our market.

The Sakel/Uppers straddle (November/October) this week stands at 1,210 points, against 1,190 points last week and 1,408 points at this time last year.

Uppers.—This market has followed the movements of the Sakel market, but on the whole transactions were more commercial in character. Fixations against spot cotton have been fairly heavy, but the sales were easily absorbed by the purchases of both the trade and the speculative element.

The difference with New York has widened slightly; at one time it was over 3 dollars, but we do not think that this parity can be maintained and expect that the weight of new crop arrivals will probably again reduce, at least temporarily, the difference between Ashmouni and American.

The Ashmouni American straddle (October/October) this week stands at 270 points, against 260 points last week and 384 points at this time last year.

The official figures of arrivals and exports for the period September 1, 1928, to August 28, 1929, are as follows:—

Arrivals: Sakellaridis, 2,524,566 kantars; Ashmouni and Zagora, 4,561,025 kantars; Pilion, 419,032 kantars; Various, 317,941 kantars; Scarto, 139,179 kantars; total, 7,961,743 kantars.

Exports: Sakellaridis, 2,584,450 kantars; Ashmouni and Zagora, 4,664,856 kantars; Pilion, 372,211 kantars; Various, 225,285 kantars; total, 7,846,802 kantars.

Spot.—With the arrivals of new crop cotton more interest has been shown. New crop arrivals have, however, been very few, owing to the lateness of the Ashmouni crop. Of a total turnover of about 3,420 bales, we estimate Sakel 950 bales, Ashmouni and Zagora 2,000 bales, Pilion 340 bales, White 90 bales, and Maarad 40 bales.

Sakellaridis has been in moderate demand and business has been done in low cottons and cotton grading Good about to Good/Fully Good. There has been a demand for medium grades, but with very little result, as the offerings were of a very poor quality indeed. There would have been a much better business done in medium grades had there been any decent cotton on offer. Premiums are much the same as last week.

Ashmouni and Zagora.—There has been a very good demand for the better grades and the turnover was only limited by the smallness of the arrivals. Low cottons have been neglected. Premiums are unchanged from those of last week.

Pilion.—There has been a much better demand for Pilion grading Fully Good Fair and upwards, but the bulk of the business done has been in the better classes. Premiums are unchanged.

Other Varieties.—Apart from a small business in Fully Good Fair/Good White and Good Maarad, other varieties have been very neglected.

Crop, 1929.—The reports which we have received from our agencies in Lower Egypt indicate satisfactory conditions; despite the attacks of the various pests, the crop has, on the whole, suffered less damage than last year, and, unless something unforeseen happens during the next three or four weeks, final results should at least be equal to those of last year. Picking has commenced in some advanced fields, notably where brown varieties have been planted, and is expected to become general about the 20th instant.

In certain localities near to the Nile, the high level has caused infiltration in some places, the effect of which may be to cause some slight damage to the later pickings.

The situation in Upper Egypt is satisfactory, thanks to the favourable temperature. It would seem that all fears of floods may now be dismissed. Arrivals of cotton at the ginning factories are steady and large in quantity, and the daily arrivals in our market will soon reach a fairly high figure.

The report of the Alexandria General Produce Association for the month of August reads:—

Lower Egypt.—The temperature during August was in general favourable and the plants made normal progress. Fog was reported on certain days, but did not cause any damage.

Boll worm, pink boll worm, and leaf worm were remarked everywhere and caused certain damage; the percentage of bolls attacked varied, according to district and the variety of cotton, from 7 to 25 per cent.

Water for irrigation was abundant and waterings took place normally except in certain lands where the growers took advantage of the excess of water.

Picking is from 10 to 15 days later than last year and will commence for Sakellaridis between September 20 and 25 and for other varieties between the 5th and 10th.

Condition of the crop at the end of August is satisfactory. Prospects are almost the same as last year, but it must be remarked that a crop as late as the present one is more susceptible to worm attack and dampness.

Also the abnormal Nile flood gives rise to fears of damage by infiltration.

Upper Egypt and the Fayoum.—The temperature in general was favourable to the plant.

Boll worm and pink boll worm caused damage varying from 5 to 10 per cent., according to district.

Irrigation water was plentiful and waterings took place normally.

The first picking commenced towards the 20th of the month, about fifteen days later than last year. It will become general during the first week of September.

DIVIDENDS.

IMPERIAL AIRWAYS.

The directors of Imperial Airways announce that the net profit for the year ended March 31, 1929, after providing £36,175 for obsolescence, amounted to £78,861, which, together with the carry-forward from the previous year of £4,049, leaves available an amount of £82,910. Out of this amount there has been written off the balance of the preliminary expenses and underwriting commission amounting to £20,663 and £20,000 has been appropriated for additional obsolescence reserve. A dividend of 7½ per cent. is proposed on the ordinary share capital, leaving to be carried forward £6,689. For 1927-28 the net profit amounted to £72,567, and the company, which was formed in 1924, paid as its first dividend 5 per cent.

BANK OF ATHENS.

The Bank of Athens has paid an interim dividend of 5 drachmæ per share, less tax.

Notes of the Week.

Egypt and the Treaty Proposals.

So far the Egyptian Wafd has shown no disposition to modify its intransigent attitude towards the proposals for an Anglo-Egyptian treaty. With the one idea of regaining office, it is understood to have intimated that its "demands" include the unconditional resignation of Mahmoud Pasha and the holding of elections on the basis of the existing Electoral Law. The *quid pro quo* that it offers, it would be supposed, would be the unconditional acceptance of the proposed treaty; but that apparently is not the Wafd's way. When its demands have been granted, it will then accept the proposals as a starting point for further negotiation. If this attitude should be persisted in, the Wafd could devise no better way of disillusioning the British Government, and it is to be hoped that there will be no further suggestion of seeking through an elected Parliament an expression of the Egyptian people's opinion of the proposed treaty. There is no reason to suppose that office has ever held the same attraction for Mahmoud Pasha as it holds for Nahas Pasha and his colleagues; but it would be a grim commentary on the country's capacity for gratitude, if it sacrificed on the altar of party politics the man responsible for the improvement in Anglo-Egyptian relations. For the sake of Egypt as a whole it was hoped that King Fuad's efforts to unite all sections of the people for a general acceptance of the treaty would be successful, and that, when once this question was out of the way, the ground would have been cleared for the resumption of normal political conditions, with the inevitable differences of opinion on policy and methods, but always conditioned by the devotion of all parties to the true interests of the country. Egypt, however, it is to be feared, will not be out of the wood quite so easily.

A Cypriot Delegation.

Yet another delegation of Greek Cypriots, it is announced, is arriving in London to plead with the British Government the cause of the union of the Island with Greece. The step was inevitable with the change of Government in Great Britain; but it is interesting to note that opinion among the "Unionists" themselves appears

to have been divided as to the wisdom of action at this particular moment, quite apart from the not unimportant question of funds, and there was a short delay in the dispatch of the delegation. That a political mission of two members should include a high ecclesiastical dignitary may seem strange until the conditions of the Greek Church in Cyprus are understood. In Turkish lands the Orthodox Church was the rallying point for Greek nationalism, and the tradition has been perpetuated in Cyprus under the present Archbishop, to such good purpose that political activities would seem to be regarded as the surest road to Church preferment. Consequently an ambitious prelate must necessarily tread in the Archbishop's footsteps, and the Bishop of Kition has no difficulty in laying aside his spiritual duties and other pre-occupations which have served to keep him in the public eye, in order to plead in England the cause of the union of Cyprus with Greece. For the purpose of this political mission a sum of over £600 has been provided by the Greek Church in Cyprus; but, as both delegates, Mr. S. G. Stavrinakis, and the Bishop, are travelling at their own expense, the whole of this amount will be at the Bishop's disposal for other ends, which seem to be vaguely grouped under the word Propaganda. It may be for this reason that the Greek community in Cyprus, which is inclining to the idea that the Church possibly has other than political duties to perform, makes merry over the mission, and the Bishop is depicted in a cartoon as riding away, as in a car, on his £600. It is satisfactory to know that the burning passion for "union," which is represented as eating away the hearts of the humblest Greek peasants, has not affected their sense of humour and appreciation of the ridiculous.

"Me Kinei Kamarinan."

The hopes of the Greek "Unionists" in Cyprus have been raised by the statement very sedulously circulated in Cyprus and in Greece that in February, 1919, speaking at a Socialist Congress at Berne, Mr. Ramsay MacDonald announced that the Labour Party would apply the principle of self-determination to Cyprus. Moreover, a few days earlier on January 5, 1919, the *Daily Herald* declared that it was high time that the Government gave

Cyprus the liberty that she [*sic*] demanded. In the face of these utterances, it is argued, there can be only one course for the present British Government to take. Few people in Great Britain nowadays can make out a good case for the "No, No, Never" line of policy. A British Prime Minister once tried to drive a bargain over Cyprus, and another may be found to believe that the same thing can be attempted again with advantage to British interests. He will not be thinking of the Island's interests, but he will, under the Agreement of 1916, have to secure the consent of France. Whether Italy would remain a disinterested spectator of the change in the Mediterranean situation is yet to be seen; Turkey would certainly be displeased, to the prejudice of Greco-Turkish relations. Thus what seems such a simple matter to a comparatively few urban Greeks in Cyprus bids fair to set quite a number of nations by the ears, while holding out no prospect at all of any material advantage for Cyprus, and conferring no benefit upon Greece. On the other hand, if Cyprus could be made the fulcrum of the Millenium in the Near East, any sacrifice on Great Britain's part in regard to the island might be worth while. Thus Italy would surrender the Dodecanese, Greece would give up a large part of Macedonia and the Dedeagatch corridor to Bulgaria, and various adjustments in other directions might be made. If the Cypriot delegation had proposed on its way to England to stop first in Greece to urge the Greeks to make the first move, and then to break its journey at Rome to commend the suggestion to Signor Mussolini, still greater difficulty might have been experienced in dispatching the Delegation. Fortunately for the Greek Cypriots the British are easy-going people and contrive to convey the impression that they suffer nuisances gladly.

Iraq and Great Britain.

As we foreshadowed last week, though we wrote before the publication of the Report on Iraq for 1928 (Colonial No. 44), which contained a significant passage called *Al W'adha' Al Shadh* ("the perplexing predicament") the insertion of which will certainly be attributed to the late High Commissioner, Sir Gilbert Clayton, Iraq is to become a member of the League of Nations in 1932. In England, no surprise will be felt at this announcement, for here it was recognised that the conditions which were attached, in the abortive Treaty of 1927, to Iraq's entry in 1932, were, so to speak, unreal or barely conceivable contingencies that appealed to the mind rather of lawyers unversed in affairs than of the administrators actually handling the problem. Quite certainly it was the general British opinion that in 1932 representatives of King Faisal would be taking their rightful places at Geneva. In Iraq,

however, this impression was by no means widely entertained. There, it was felt that Great Britain was but finding excuses for a prolonged stay in the country: the suspicion grew, in fact, that British control was intended to be permanent. And that suspicion naturally begot a certain hostility. The most gratifying feature of the present situation, therefore, arising from the announcement by the British Government that unconditionally recommendation will be made for Iraq's entry into the League of Nations in 1932, and from the consequent formation of a Cabinet under Sir Abdul Muhsin as Saadun, is the fact that the planes of thought on which Iraqis and British representatives have hitherto attempted to conduct negotiations have been adjusted. There is room now for no misgiving. Each side knows where the other stands. It will, then, be in an atmosphere of perfect amity and understanding that the long-unresolved problems attaching to the military and financial agreements will again be tackled. But no observer will imagine that a settlement will be reached without most earnest discussion, for actually it is the smaller, not the larger, nut that has been cracked by the decision pertaining to 1932. There is, however, abundant time before that date for the good will that has been generated by the latest British declaration to effect the desirable consummation in the form of an Anglo-Iraqi Treaty. In the meantime, let us congratulate both the British Government, which has made the decision, and the Iraqis who have so enthusiastically received it. For no one who knows the genuinely friendly sentiments of the Iraqis can imagine that a situation will arise analogous to that which existed in Egypt after the famous Declaration of Independence in 1922, in which the outstanding problems were persistently ignored: the psychology of the two peoples, like the history of their relations with Great Britain, is different. It is the psychological aspect of the present Anglo-Iraqi situation, in fact, which gives the brightest promise for the future.

Iraq and Palestine.

Just as one inevitably considered how the proposed Anglo-Egyptian Treaty would effect the rest of the Middle East in which Great Britain was directly interested, so one is prompted to consider the effect of the latest decision concerning Iraq upon the Arabs of Palestine. That it will reburnish their hopes of self-government goes without saying, for their claim, made long ago, that educationally they were ahead of their Iraqi brothers, cannot well be gainsaid. (With even more emphasis the comparison is true of Syria). It is, therefore, from their point of view one of the ironies of the situation that, at a time when the question of representative government for the Palestinian Arabs was being investigated afresh by the British Government, the Wailing Wall affair should have begun in Palestine the disturbances which, quite plainly, have put out of court for the time being any thought of further Arab influence in the administration of the Holy Land. Quite apart from this factor, however, there remains, in even more glaring light, now that Iraq has been definitely promised entrance into the League in 1932, than was visible hitherto, the contradiction between the Balfour Declaration and the implication of the Mandates of "A" category that self-government is but a question of years. Naturally, therefore, concentrated attention will be paid to the issues at stake in the Balfour Declaration. Somehow or other, politically or administratively, the problem of Arab-Jewish co-operation and mutual tolerance will have to be overcome—for the Government has lost no time in reaffirming the intention of Great Britain to stand by the Declaration. It is impossible not to foresee trouble in Palestine, unless the Mandatory Power is prepared indefinitely to keep troops there—a policy which would meet with very considerable hostility at home, where people are apt to judge the desirability of Oriental policies solely by the cost involved to the British taxpayer. What is granted to one section of the Arab people cannot easily be withheld from another, certainly not less advanced section, unless there are very attractive compensations.

YUGOSLAVIA'S PROBLEM.

An objective view of another country's affairs is never easy to form. Prejudices creep in where conviction and the utmost honesty of intention appear to hold supreme sway, and the very desire to be just prompts the use of a microscope when a telescope would be the more reasonable instrument to use. To appreciate how wide a margin of error is always possible it is only necessary to recall the perfervid denunciations of Great Britain and all her ways that often proceed from those who would indignantly repudiate a charge of bias. In these cases the average Briton has no difficulty in deciding at which point the critic's line of vision has left the clear atmosphere of reason and truth, to become distorted by some denser medium. Consequently it is necessary for the student of contemporary affairs to be on his guard as much against the wholesale condemnation of a country as against the lack of discrimination which denies the possibility that a given people or Government can ever be in the wrong. Probably in regard to no country at the present moment is it more difficult to obtain a strictly fair verdict than in the case of Yugoslavia. For ten years the people floundered in a political morass; few, if any, of the things that the country needed for its political, economic and social rehabilitation after a devastating war were put into execution, and until the beginning of the present year there existed no prospect of any escape from the chaos for which parliamentary government was obviously responsible. On January 6 came the sudden establishment of a dictatorship. The fiat went forth that all politics were *tabu*, and that the people who had hitherto been wasting, presumably their talent, certainly their time, were to set themselves to work for the good of the country, if not for their own edification. As the Serb is not in the habit of doing things by halves, the new régime has been very effectually enforced on the nation. Political discussion—formerly the life-blood of the people, and allowed to course through them subject to no restrictions, legal, moral or æsthetic—was entirely forbidden; political associations were closed, and no political subject could be mooted in the Press. Little wonder that considerable resentment is felt in many quarters, and it may be inferred that, where opportunity offers, the old excessive denunciation that used to be exchanged freely in public or in the Press is still ready to be poured into sympathetic and trusted ears. The sincerity of the critic may be manifest, the truthfulness of the medium through which the criticism is conveyed may be above challenge; but it requires little perspicuity to discover that the picture presented is blurred and does not reproduce the whole truth.

Considerations of this character are forced upon the more careful reader of an article entitled "The Dictatorship in Yugoslavia: A Reign of Terror" in the *Manchester Guardian*. The article, it is stated, was written by a correspondent who, after a tour of Yugoslav towns, was refused permission by the authorities in Belgrade to remain in the country, "unless he pledged himself to write only such articles as were favourable, or at least not unfavourable, to the Dictatorship." As the correspondent "was unable to give this pledge," he left Yugoslavia. Having thus proclaimed incompatibility of

temperament as between himself and the Yugoslav authorities, but without mentioning the antecedent causes, the correspondent proceeds to elaborate his opinion of the Dictatorship. For seven months, he declares, Yugoslavia has been like a cemetery. If so, it would know true peace for the first time; but he has mistaken a prison mortuary for a cemetery. Parliament, he says, is dead, the Press is dead, the political parties are suppressed. In the presence of death a certain amount of awe is appropriate, but no fair-minded man seeks to build up a serious accusation on the just execution of three notorious criminals. No one needs to shed a tear for the Parliament, Press and parties that the Dictatorship has scotched, for, collectively and individually, they were the curse of the country. The Dictatorship, however, set out to be constructive and not merely destructive; and it will be judged in the long run by its ability to build up a healthier State than that which existed prior to January 6 last. On this point, unfortunately, the correspondent is not helpful, as he attempts no discrimination in his general denunciation. "The economic and financial crisis is worse than it was." It should be shown that the deterioration has nothing to do with world conditions; otherwise the Dictatorship is not necessarily responsible. "The Dictatorship has destroyed whatever confidence in Belgrade Zagreb may have had." Zagreb never had any, and the point of real interest is whether the fault lies wholly with Belgrade, or whether some responsibility does not also attach to Zagreb. "In the prisons confessions are extorted by the most inhuman torments." The same charge was brought home to the police in the palmiest days of parliamentarism. "In Macedonia things are much worse than in Zagreb." They always were.

Although it may not be difficult to demolish the denunciation of a biased critic, it is far from easy to determine with certainty the degree of success that has so far attended the efforts of the Dictatorship in Yugoslavia. Undoubtedly, there are disquieting features in the situation; it has not been found possible to relax the censorship, with the result that there can be no means, even for the Government, of gauging the real opinion of the nation; in various directions—foreign policy not excepted—the Government appears to speak with two voices, as if it were subjected to conflicting influences. On the other hand, there is evidence that the Government is actuated by good intentions. It is, however, almost impossible for the foreign observer, especially if he has to rely on the impressions of a brief visit to the country, to decide whether in the peculiar circumstances of the Kingdom of the Serbs, Croats and Slovenes King Alexander and his present advisers could be expected to have achieved more in the eight months during which the Constitution has been suspended. It is to be noted with satisfaction that King Alexander is seen more frequently among his people, although he still hesitates to visit Zagreb; General Zivkovitch's sudden appearances in different parts of the country suggest that he not only recognises the necessity of keeping a close eye on the details of the Administration, but that he is also adopting the most effective way of doing this. There are, moreover, apparent the beginnings of a movement to bridge the gulf that has hitherto divided the Serbs from their "minority" fellow-countrymen; no very definite progress in this direction may yet have been made, but one or two incidents suggest that those now in authority wish to promote the unity of country even if they have no very practical policy to this end in view. The more conscientious the efforts of the Yugoslav Government to give effect to the splendid promises made by King Alexander when he established the Dictatorship, the easier for it to tolerate the free expression of opinion. It is within its rights in preventing liberty from becoming licence, and its case against the early restoration of Parliament may still well be a strong one; but if it aims at creating a good impression abroad, it will muzzle the representatives of the foreign Press only when uncompromising hostility or prejudice is shown.

*The Near and Middle East

From Our Own Correspondents.

Cairo, September 14.

The Ittihad and the Treaty.

There is little change in the situation, except that the Ittihad party has declared its opinion on the Treaty, which differs very little from that which it is understood the Wafd holds, viz., that the proposals constitute a good basis for a settlement (though not a settlement itself), and that the Wafd is as determined as ever not to allow the Treaty to be made the basis of the elections to Parliament. This expression of opinion by the Ittihad is significant in view of the fact that it is in Coalition at present with the Liberals, who have declared unreservedly for the Treaty. But to those who understand a little the inner workings of the present political situation it affords, by its similarity to the views of the Wafd, instructive confirmation of the influence which they have suspected of being behind the Wafd's attitude.

The powers that be seem still unable to make up their minds on the line of action to be followed with regard to the Treaty. With a Coalition apparently ruled out by the attitude towards each other of the two parties most concerned, three courses would seem to remain open, viz., elections on universal suffrage lines—the *Daily Herald* leader this week would appear to exclude any alteration in the electoral law which was at one time contemplated—conducted either by the present Cabinet, or by an administrative one which would take its place, or postponement of the Treaty and a continuation of the present régime until a more favourable opportunity presents itself for obtaining the views of the Egyptian nation.

Elections, which, as is generally agreed, would in any case produce a Wafdist majority, would open the door wide to wrecking the Treaty altogether. The Wafd is determined that only Parliament shall deal with it. This means that the deputies would arrive without any mandate on the subject from the electorate—which does not meet the requirements of the British Government. But even if this objection on the British side were overcome, the fact that the Wafd cannot, out of consideration for its political future, accept the Treaty as it stands, and must, if only as a camouflage, seek further negotiations, would seem to foreshadow an *impasse* in that connexion, since the British Government are understood to be averse from any further discussion of the proposals. In that event the Treaty would fall to the ground, and as that would leave the country with a Wafdist Cabinet with all the ugly possibilities that past experience show as attendant

on such a régime, probably the most prudent course, even in the interest of Egypt, would be in existing circumstances to postpone the Treaty altogether. That appears to be the view of the more instructed people out here, Egyptian as well as foreign. But things are at the time of writing in such an unsettled state that it is quite impossible to forecast, and one can only register the tendencies as they are to-day.

The Late Sir Gilbert Clayton.

Wherever one goes one hears expressions of the most sincere regret at the sudden and premature death of Sir Gilbert Clayton. His long connexion with this country, first in the British Army, then attached to the Egyptian Army, later as Sudan Agent, then as Chief Political Adviser to the Ministry of the Interior, enabled his sterling qualities to be appreciated by all classes, and his death is mourned as that of a friend.

The Agricultural Reserve.

A decree has been signed authorising the creation of the "Agricultural Reserve" which was foreshadowed in one of my letters some four months ago. The preamble says that the economic situation of the country demands that steps should be taken to ameliorate the agricultural conditions and to safeguard the national wealth by the enactment of financial measures of a nature to increase the productivity of the soil, facilitate and organise the disposal of the country's products, and assure to the poor and middle classes the means to obtain the necessary funds for their agricultural needs. In order that these measures shall rest upon a stable basis a special reserve from which funds for carrying them out can be drawn is created and, to start it, a sum of £E4,000,000 is to be taken from the General Reserve to which will be added the amounts realised by the sale of the cotton held by the Government in June last and by the receipts from the Cotton Tax as from the coming financial year. As a matter of fact part of the £E4,000,000 in question has already been utilised for advances to cultivators, and, as one of the objects of the new reserve is to provide means for making such advances, their total will be passed to the new account which will be credited with the difference between that figure and £E4,000,000. That assistance to be given to Egyptian agriculture in general—it is to apply to all crops without distinction—and to Egyptian cotton in particular, should be put on a permanent basis is satisfactory, but it is extremely doubtful whether it is really in the interests of the country that Government interference with the cotton market should become such a permanent feature as the institution of this reserve seems likely to make it.

The Nile Flood.

There is better news this week of the Nile, in the sense that a drop in levels is reported from Roseires, whence comes by far the greater portion of the flood water. If there is no compensating fresh rise at that point in the meantime, the main river in Egypt will begin to drop in about a month's time, and the anxiety of the irrigation authorities will come to an end. How great that anxiety has been, and still is, can be gauged from the fact that, while the fall in levels in Egypt normally occurs on or about September 20, the flood itself started twenty days earlier than usual this year—which means that, in the best of eventualities, high Nile conditions will have existed for about seven weeks longer than normal, with

a consequent greater strain on the river banks. In various parts of the country inundations on a small scale have been reported, but so far no very serious damage has been done, and one can say that the banks have held, thanks to the measures taken and the close supervision of the irrigation authorities. But we are by no means out of the wood yet, and we shall not be able to consider that Egypt has escaped the disaster that threatened her until the end of October has been reached. Nothing that the authorities could have done, however, will prevent damage to the cotton crop owing to the rise in the level of the subsoil water as a result of infiltration, and, as the crop is unfortunately late in Upper Egypt, the damage will, it is to be feared, extend to that area as well, though not, of course, to the same extent as Lower Egypt.

Sofia, September 10.

Bulgarian Intellectuals in Macedonia.

It is reported in the Press that the Young Macedonian, Blogoi Moneff, a student at Belgrade University, who, tried not long ago with a group of Macedonian students, was acquitted by the Skoplye tribunal, was recently assassinated in his native town of Ishtip. Two other Macedonian students of the same town, Hajji-Kimoff and Kiril Karajoff, are also said to have mysteriously disappeared.

All these young men had taken part in the famous trial at Skoplye. The sole crime of these Macedonian students was to have wanted to organise themselves for the defence of their ethnic character and of their national culture—without any hostility towards the central power.

Yugoslavia and the Pirot Agreement.

The Yugoslav Government has just replied to the Bulgarian Note of August 9 upon the Pirot Agreement.

In its answer, the Yugoslav Government takes note of the declaration of the Bulgarian Government that it was ready to accept a modification of and additions to the agreements reached at Pirot and a new examination of the two requests concerning the liquidation of the bilateral properties and the establishment of a "dead zone" ten kilometres wide along the frontier; and it states that on its part it is ready, first, to put into immediate effect the Pirot Agreements, modified and completed according to the amendments contained in an Annexe to the Note; secondly, to consider the accords thus amended as provisional and valid for three months only; thirdly to undertake at once negotiations for the settlement of the two points under dispute by nominating a mixed commission, to liquidate on the spot the bilateral properties as far as possible; and fourthly, to let fall automatically the agreements in question if at the expiration of the three months' period a definite understanding has not been reached between the two parties on the régime of the frontier. The Yugoslav Government declines, moreover, all responsibility for "incidents" which might occur on the frontier in default of the radical liquidation of properties and of the institution of a "dead zone," which, in its opinion, constitute the sole means of avoiding disputes between the two countries.

This Note, which is conciliatory in appearance only, has caused in Bulgarian the impression of deceitfulness, as much by the reserves which it provides as by its insistence on the acceptance of the two Yugoslav suggestions which

Sofia has always thought unacceptable. On the first point the Bulgarian Government consents to a partial liquidation of the bilateral properties by an exchange of property of equal value, where it is possible with the assent of the proprietors interested; but it rejects all compulsory expropriation, for that would mean the exodus into Bulgaria of 1,500 families of refugees. On the second point, the Bulgarian Government, supported by public opinion and by all the political parties, is obdurate, for this measure would result in paralysing the economic life of all the villages in the neighbourhood of the "dead zone," and, in addition, the surveillance of such a zone would necessitate the employment of more soldiers than could be provided under the meagre allowance permitted to Bulgaria by the Treaty of Neuilly. Further, the problem of the régime of bilateral properties would reappear on the internal frontier of the "dead zone," and that would have no end—not to mention the new charges which would be imposed on the border population, already weighed down by many burdens. In short, were the Yugoslav demands accepted, they would only complicate the situation on the frontier instead of simplifying it, and thus increase the tension in Yugoslav-Bulgarian relations.

And so everybody here envisages with profound misgivings the direct negotiations which have just begun at Geneva between M. Marinkovitch and M. Bouroff.

Greco-Bulgarian Negotiations.

A grave crisis in the relations between Greece and Bulgaria has just been averted. In the pourparlers that were taking place, the Greeks threatened to break off all negotiations and to have recourse to reprisals against the Bulgarians. The crisis has been avoided by the long and fresh conversations which M. Bouroff had before his departure for Geneva, in the course of which all the questions outstanding between Greece and Bulgaria were reviewed.

These questions concerned the liquidation of a series of Greek and Bulgarian claims, to which it is necessary to add the demands of six thousand families of Macedonian refugees who presented their claims after the expiration of the period agreed upon by the Commission of Emigration; they concerned also the conclusion of a Treaty of Commerce, and the determination of the régime for Bulgarians remaining in Greek Macedonia.

It is believed that on all these points an agreement in principle was arrived at between M. Bouroff and M. Dendramis.

CYPRUS.

Nicosia, September 11.

The Delegation to London.

Although the Greek Archbishop and Holy Synod have adhered to their opinion that a more largely representative meeting, including mayors of towns and others, should be convened, it was finally decided at that held on August 22 that the two delegates—the Bishop of Kition and Mr. Stavrinaki—should proceed to London as bearers of the new memorial. It has also been decided that the expenses of the mission, estimated at £600, should be borne by the island Church as follows:—The diocese of the

Archbishop, £170; the Monastery of Kykkou, £120; the Bishops of Papho and Kyrenia, £70; the Church of Phaneromeni, Nicosia, £60; and the balance by four other monasteries and churches, the Bishop of Kition being responsible for his expenses.

The Greek Memorial.

The memorial, which is signed by the 12 Greek members of the Legislative Council, contains 23 paragraphs. It included matters which have been the subjects of frequent complaint and alleged grievance in the Greek Press, and in previous memorials. The 23rd paragraph advocates, as expedient and necessary, the appointment of a Royal Commission of Inquiry into "the pitiable state of the island after fifty years of British rule."

The Governor, Sir Ronald Storrs, received on Mt. Troodos, on September 6, the two chosen delegates, the Colonial Secretary being present. They handed to him copies in Greek and English of the memorial, and also a covering letter from the Greek Members of Council, in which His Excellency is asked to furnish the delegates with letters of introduction. The Governor, having examined the documents with the Colonial Secretary, and having found them in order, informed the deputies that he would forward the memorial to the Secretary of State. He stated that some of the matters referred to therein had already been dealt with, and that others were at present under consideration of the Government. The Colonial Secretary having subsequently suggested to Mr. Stavrinaki another interview, either on Troodos or at Nicosia, the latter replied that they proposed to leave Cyprus on the 10th and to reach London in all probability on September 23 or 24. Another meeting, therefore, would be difficult.

The delegates are carrying letters of recommendation from the Archbishop to the Premier, Mr. MacDonald, to the Archbishop of Canterbury, Mr. Lloyd George, Mr. T. P. O'Connor, Sir Arthur Crosfield, and Lord Longford. They are proceeding by a Lloyd Trieste vessel to Venice, and thence by rail to Calais. They also bear the addresses of all Members of Parliament who responded to the copies of the memorial sent by His Eminence to them. Special prayers for the success of the mission are to be offered in the Cathedral Church of Nicosia, in which the Archbishop and clergy of the capital will officiate.

The Forthcoming Loan.

A Cyprus loan which, it is said, will be of £150,000, is now the subject of grumbling if, as it is assumed, it is to be applied chiefly, or wholly, to roads. Mr. Stone, Director of Public Works, has been called to London to consult, and it is said that a special engineer, with salary of £800 a year and various allowances, will be appointed. Many other needs of the island, it is said, should take precedence. If the loan is proffered as a gift, it is a "gift of the Danaï."

General News.

In view of the unceasing complaints by the Greeks, discussed by the Greek Press, regarding education, it is satisfactory to know that the general reorganisation of the educational system is now "under the active consideration" of the Government.

Canon Newham, Director of Education, having returned to duty too soon, after illness in hospital, had a relapse and returned to hospital. He is now convalescent, but it is improbable that he will be able to resume work.

The Greek Archbishop has written to the Director of the *Journal de Genève*, thanking him for a recent article on the claims of Cyprus and has sent him a copy of the memorial with a request that it may be published in that journal.

About 100 distinguished representatives from various countries will attend an International Peace Congress in Athens between October 6 and 10. The principal subjects of discussion will be the confederation of the nations against war and international legislative reforms to adjust the Kellogg Pact to the League of Nations Covenant. The final sitting of congress will take place at Delphi, where the Amphictyonic peace meetings were held in classical times.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE LATE SIR GILBERT CLAYTON.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Having had certain opportunities of studying the personality and work of Sir Gilbert Clayton, I venture to ask for your hospitality in order to refer to two points which do not seem to have been sufficiently stressed in the various published accounts of his life.

(1) Sir Gilbert Clayton was remarkably free from official prejudices; he was invariably willing to try to help those who desired to obtain the truth, and he always gave one a clear-cut answer without endeavouring to create mysteries. He was extremely modest and quiet; he knew whom he could trust; and he was not afraid to express his opinion. In fact, he was a far bigger man than appeared at first sight.

(2) Whilst I should be the last person to minimise the value and merit of Sir Herbert Samuel's administration in Palestine, there is no doubt that, during the critical period which accompanied Lord Balfour's visit to that country in 1925, Sir Gilbert's wisdom and knowledge were important factors in the prevention of an outbreak such as that which has recently occurred. I saw him repeatedly at that time; he was constantly pouring oil on troubled waters, and, when difficulties were overcome, one realised that this was largely the result of the work of a man who was trusted by Arab and Jew alike.—I am, etc.,

September 18.

H. CHARLES WOODS.

LONDON CYPRUS SCHOOL.

The new Colonial Secretary for Cyprus, Mr. H. Henniker Heaton, before sailing for Cyprus paid a visit to the London Cyprus School for the teaching of English at the L.C.C. Pulteney General Institute, Peter Street, Soho, W.1., where over a hundred Cypriot students are studying English.

The Principal of the School welcomed Mr. Heaton, and wished him a happy and successful career in Cyprus. The Colonial Secretary replied that he would do all in his power to help the Colony of Cyprus, and, urging the students to be proud of being Cypriots, he asked them to do their best during their stay in London to maintain the good reputation of their country. He congratulated the students for their courage and patience, and pointed out the usefulness of the English language, which was now becoming universal. Before leaving the School he expressed his admiration of the splendid work of the staff, and of their great zeal and self-sacrifice.

"LE MESSENGER DE TEHERAN."

To celebrate its fifth anniversary, the *Messenger de Téhéran*, which contains news in French and English, and appears every day of the week except Tuesdays and Saturdays, published, on September 1, a twenty-page supplement—a most creditable production. This journal performs a very useful service, and the Editor, François Malek-Karam, is to be cordially congratulated on the increasing success of his enterprise.

THE OVERLAND MAIL TO IRAQ.

Communications to Iraq by the desert mail route are now being dispatched with no extra charge, thus bringing the practice into line with that obtaining for many months in regard to outward mails from Iraq.

The French Minister in Budapest on September 18 informed the Hungarian Government that the committee for the settlement of Reparations in Eastern Europe, sitting in Paris, passed a resolution the previous day inviting the representatives of Hungary, Austria, and Bulgaria to assist at the sittings of the Commission from to-day (September 20) onwards, whenever questions touching their interests are discussed.

(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:

NAJEM HOUY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

Major and the Hon. Mrs. Heyworth have left England for Trimulgherry, Deccan.

General Sir Alexander and Lady Cobbe will sail from Marseilles to-morrow (Friday) in the Ranpura on their return to India.

Shaikh Hafidh Wahba, representative in London of King Ibn Saoud of the Hijaz and Najd, left London on September 17 for Egypt and the Hijaz.

The Greek Minister to the United States and Mme. Simopoulos arrived in London on September 9, and are staying at 10, Harewood Court, Hanover Square, W.

Major Taufiq Wahbi Maroof, Commandant of the Iraq Military College, Baghdad, is proceeding from London this week to Sheerness on a three months' course.

Sir Herbert and Lady Samuel returned last week to 35, Porchester Terrace from the Continent, where they have been spending some weeks in Austria, Czechoslovakia, and Germany.

Major-General Lord Edward Gleichen and Lady Edward Gleichen returned last week to Court in Holmes, Forest Row, from abroad. They will go to 35, Catherine Street, Buckingham Gate, in the middle of October.

M. Athos Romanos, Senator and former Minister of Foreign Affairs and Minister of Greece in London and Paris, arrived in London last week, as the guest of the Greek Minister at 51, Upper Brook Street.

Mr. R. A. C. Sperling, C.M.G., the retiring British Minister to Bulgaria, who left Sofia at the end of last week, presented his letters of recall to the King of Bulgaria.

Dr. G. Stuart, Colonial Medical Service, has been awarded the North Persian Forces Memorial Medal for 1928 for his paper, "The Serological Diagnosis of the Enterica by the Method of Qualitative Receptor Analysis," written in conjunction with Dr. K. S. Krikorian, and published in the *Journal of Hygiene*.

Col. G. de S. Dudley, C.M.G., A.D.O.S., Headquarters, British Troops in Egypt, having completed his term of service in that country, has been appointed Chief Ordnance Officer in charge of the Central Ordnance Depot, Dideot, England. He and Mrs. Dudley and their two daughters sailed from Port Said for England on September 15.

The following appointments to the Near East services have been made by the Secretary of State for the Colonies: Iraq.—Major D. Brown, Royal Army Ordnance Corps, to be Inspector of Ordnance Services, Grade B, Iraq Army. Palestine.—Mr. A. Levin to be Lands Officer, Class III.; Mr. G. B. Simmins, M.R.C.V.S., D.V.S.M., to be Senior Veterinary Officer; Mr. A. G. Turner, to be Citrus Specialist.

It is announced in the *London Gazette* that the King has appointed Canon Richard Dyke Acland, M.A., to be Bishop of Bombay in succession to the Right Rev. Edwin James Palmer, M.A., D.D., who has resigned. Canon Dyke Acland has worked in India since 1910, when he joined the S.P.G. mission at Ahmednagar, working there for two years, and afterwards at Kolhapur, Sonai, and Dapoli. He has been S.P.G. Secretary for the diocese of Bombay since 1924, and in charge of the Mission at Kolhapur City since 1927.

A Persian Government Commission has found a deficit of approximately 4,600 tons of wheat in the public granaries of Teheran.

It is stated from Constantinople that the state of health of his Beatitude the Ecumenical Patriarch, Mgr. Vassilios, is giving rise to anxiety.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 5.

Viceroy and President.

Our newspapers this week have been full of echoes of the "incident," the first act of which was President Patel's ruling on the Public Safety Bill, the second being the observations of the Governor-General on the subject in his closing address to the two Houses on May 8, and the third, the subsequent amendment of the Rules. Two long letters have been read to the Assembly, one from the President to Lord Irwin, the other a reply to that letter. The solution has been spoken of as "a peaceful and amicable" one; "an honourable vindication." The President said to Lord Irwin in effect: "You came down to address the two Houses, and you took that opportunity to pronounce a censure upon me." Lord Irwin replied in effect: "No, my dear friend: I would never do such a thing. In any circumstances I must withhold any opinion of mine that would lower the dignity of the Chair." But he goes on to say that is, his secretary does: "He earnestly hopes, and has no doubt that such a hope is entertained by the President, that the passage of time may see the gradual establishment around the Chair of the Assembly . . . of such a body of tradition as has, in the sphere of the House of Commons, enabled each of a long line of Speakers to be accepted as an impartial guide and trusted friend of all sections of the House."

The Implication.

The implication of that is that, in Lord Irwin's opinion, such a body of tradition has not yet established itself around the Chair of the Assembly. That is clearly Lord Irwin's not more openly expressed opinion, and it is the fact. There was not last session that body of tradition established around the Chair that would have made it impossible for the President's ruling to raise that cloud of suspicion that the ruling was not impartial. It is not established then, nor is it even now. There is no feeling throughout India of confidence in the Chair and the impartiality of its rulings. But four days before my newspaper had the President's and Lord Irwin's letters in them, it had this from the mouth of Sir P. S. Sivaswami Iyer: "The ruling of the President that the Home Member's motion for consideration of the Public Safety Bill on its return from the Select Committee was out of order, seems to me to be quite wrong . . . I cannot help thinking that, in ruling out the motion, he was clutching at powers he did not possess." That is what is worth bearing in mind, instead of talking of "honourable vindications"—that a public man can see nothing wrong in criticising the Chair with that freedom. There is nothing wrong either; for our body of tradition has not yet been established, and it only will establish itself after many doubtful rulings have been freely criticised.

The Chair.

What is the proper thought to have of the duty of the occupant of the Chair? It should be that he is to use his utmost endeavour to see that the proceedings of the House are conducted in accordance with the law of the land. The law includes the rules of the House. Now the present occupant of our Chair may be written of as follows: "If this advice is followed, and the Opposition and the Chair, in the interests of the cause they have so deeply at heart, decide on such a policy, we hope that Government will heartily co-operate." The "cause" the writer had in mind was India's political progress. It is clearly the business of the Opposition to have that cause deeply at heart. It is no business whatever of the Chair. It is for the Opposition to decide upon a policy, and to pursue it. It is no business of the President even to begin to concern himself with a policy. His sole business is to see that the debates of the House are conducted in accordance with the rules. *Bas*, as we say in India.

The Political Imbroglia.

There are things worth calling attention to in the last "Political Notes" in the *Pioneer*, the writer being that Indian student of politics from whose Notes I have once or twice quoted. He speaks this time of Pandit Jawaharlal Nehru as one who "stands as the spearhead in the mind of the beardless crew at school and college." I wrote on July 11: "You hear that Mr. MacDonald or Mr. Baldwin has addressed a political meeting. You think of grown men and women as forming the bulk of the audience. In India it would be schoolboys and college students." If you feel disposed to be anxious, after reading such or such an utterance of Pandit Jawaharlal's, remember that it was probably addressed to the "beardless crew." It was a playing up or down to them. If you think the threat of the Calcutta Congress that, if Dominion Status is not granted to India before December 31, 1929, we shall see "non-violent non-co-operation and civil disobedience" in full swing in January, consider this from the "Political Notes": "There is no harm in reiterating the acknowledged truth that, again in its long history, the Congress is about to be divided on a question alike of goal and method. Of one thing there is no doubt. The return to non-co-operation, as originally conceived, is entirely out of the question. That was patent even to the framers of the famous Calcutta resolution."

The Congress Presidentship.

The two quotations in the last paragraph are from an article headed: "Mr. Gandhi and the Congress. His Refusal of the Presidentship." The article begins thus: "It is difficult to believe that the protestations of eminent leaders that he is the fittest to lead our varied hosts in the crucial period ahead will in any way affect the decision at which the Mahatma has apparently arrived in regard to the presidentship of the Lahore Congress. But the grounds on which the Mahatma refuses the crown of thorns are worth examination." So the student proceeds to examine them. If I have read his argument rightly, it is that the Mahatma, who this year has been in effect the leader of the Congress, must be its leader next year in name; for otherwise the leadership will fall into the hands of the impetuous youth of the country, and there will be bloodshed, provoked either by them, or by conservative elements in India roused by fear of them. That bloodshed the Government would have to stop, and when it had done so, it would say: "Now there is to be no more nonsense talked about a self-governing, democratic India." Well, it might think that the only thing left to say.

Child Marriage Bill.

I wrote on July 18, expressing some distrust of the Simla Secretariat in connexion with Mr. Sarda's Child Marriage Bill. It is now seen that I might have spared myself that anxiety. The Assembly had a motion before it yesterday for the postponement of the Bill until India had had time to study the Report of the Age of Consent Committee. It was well known that the object of the mover was to gain time for the "orthodox party" to gather its forces for a wrecking of the Bill in the winter session of the Assembly. There is strong opposition to the measure, as I stated in my letter of July 18. It looks to-day as if it would not prevail; for Sir James Crerar has shown that the Government of India wish the Bill to become law. He described child marriage as "a grave and corroding evil clamouring for remedy," and ended his speech with: "Where we find that evil, and where we find a promising remedy, we feel we must support what we think to be right. I trust that the great majority of the House will agree in the view that this measure is one in the right direction and that it is their duty to support it." There ought to be no doubt that the Bill will become law. Yet only a few days ago the Viceroy had to listen to a deputation, protesting against the proposed law. One of the speakers, a woman, said that at the age of three she was married to a boy eleven years of age; that she was

now sixty, and enjoys good health. One wants, however, to know much more. What age was she when her husband was given custody of her - he or his family. It does not matter when you are legally married, if in effect you are not married until a much later age.

THE MIND OF INDIA.

BY THE HON. SIR PHIROZE SETHNA, O.B.E.

(Continued from page 307.)

There are many prevalent misconceptions regarding the mind of modern India. One such idea is that modern India is hostile to the Western spirit and Western civilisation. This is far from the truth. On the contrary, it is precisely the Western spirit that modern India wishes to cultivate, as she thinks that only by the cultivation of that spirit she can realise her ideals and hold her own. As regards Western civilisation, far from being hostile to it, her attitude is one of admiration and appreciation and she wants to assimilate all that is good in that civilisation that is essential for her own development as a great modern nation. Some criticisms upon Western civilisation by Mahatma Gandhi are taken to indicate an attitude of hostility on the part of India towards that civilisation. But it must be remembered that no civilisation is so perfect as to be immune from criticism, and even Mahatma Gandhi's attacks are directed more against its extravagances and evils than against its merits. And if they really indicate an attitude of hostility towards Western civilisation, they do not faithfully reflect the real attitude of modern India. All the material appliances of the West modern India has adopted and is adopting. Motor services are now connecting town to village and village to village, and have already brought towns and villages much nearer. Electricity has not as yet made much progress, but there can be no doubt that the next generation will witness in an interesting measure the electrification of all the towns and the larger villages.

Does this show hostility to the civilisation of the West? Mahatma Gandhi himself has expressed his approval of a Constitution for India which is based on the principle of adult suffrage and on full democratic self-government. Does this evince hostility to Western civilisation? Many Indians are admirers and lovers of Western literature. Can this be said to indicate hostility to Western civilisation? The political movements of India are very largely influenced by European political thought. Does it show that Modern India is hostile to Western civilisation? She may be - she is - hostile to the dominance of the West. She does not brook any pretensions on the part of England or any other Western Power. But it is absolutely untrue to say that she is hostile to Western civilisation, that her attitude is one of antagonism to that civilisation. Just as the mind of modern India is marked by the spirit of activity, so also it is marked by a desire to improve and perfect her own civilisation by assimilating all that is good in Western civilisation.

What is the attitude of modern India towards internationalism? Has she developed or is she developing an international mind or an international outlook? Or has she become, or is she becoming, too intensely, too narrowly national? Internationalism is not a new thing in India; in fact what is new is nationalism. Indian nationalism is the product of British rule, of European political thought and of Western influences as a whole. It derives its inspiration partly also from Japanese nationalism, which is a thoroughly and purely native growth of the soil. Before the birth of nationalism in modern India, India resembled Europe of the Middle Ages, before the formation of the national States. Europe then was not national, but European or international, that is, she thought in terms of the Empire or the Papacy. India had a provincial, communal, religious or caste sense, but no national sense, and along with the provincial, communal,

religious or caste sense, she had the international sense, or rather the sense of internationalism. She was absolutely free from religious or racial prejudice. Her civilisation and culture were humanitarian, the unity of humanity, indeed, of all creation, with its potential divinity, was a cardinal doctrine of her philosophy, and some of her best and noblest sons made it their goal to realise this unity in their lives. It is this international or human sense that made the Hindus give a ready welcome to all foreigners; this sense prevented them from developing that sharp edge of the spirit of resistance, without which it is difficult to roll back the tide of foreign aggression. The international or human element was thus already a part and parcel of the content of the Hindu or Indian mind.

But the mind of modern India has realised that just as nationalism without internationalism is a great danger, so also, internationalism without nationalism is a source of great weakness. Hence she wishes to develop the strength of nationalism or humanism. The International Movement, the League of Nations will find in her a great tower of strength, but not until and unless her newborn nationalism attains its fullest development and realises its ends.

The spirit of activity, the spirit of nationalism, the spirit of progress, in order that modern India may attain as high a place in the scale of civilisation as the most advanced countries of the world, these are among the chief elements in the mentality of modern India. And all these elements make her self-introspective and bent on removing every evil that may have crept into the body politic. She wishes not only to be a politically great nation, but also to recreate a sound and healthy social system. Her national pride would naturally resent any false or misleading features of her social condition or any sinister or dishonest attempt to run her down. But she is fully alive to the necessity of purifying and improving her social system. Caste is doomed, the emancipation of woman has already made great advance. The social conscience is fully awakened, and every social evil is sought to be remedied and every social wrong to be redressed. Liberty, equality and fraternity are the watchwords of modern India in the social, no less than, in the political sphere. The spirit of reform and progress is infusing its fresh and vivifying breath in every sphere of social and national life. The Hindus are said to be the slaves of the gods, and one lady writer, who has developed a peculiar and, by no means, enviable genius for moralising on the evils in other societies than her own, has already essayed to portray the religious slavery of the Hindus. This again is a one-sided and misleading feature. It is one of those half-truths which conceal the truth and thereby do great injustice and create international ill-feeling. The fact is that behind the Hindus' so-called slavery to the gods, there is the living recognition of the unity and the purity of the Divine principles, and moreover, strange as it may seem, the Hindu mind is not at all so much in the grip of priestly influence as the Christian mind in Catholic countries. Nevertheless, the purification of the religious life of the people is also included in the all-pervasive movement for reform and progress.

There is one element in the mind of modern India which I must not omit here to mention. It is the sense of absolute justice and fairness. We want to be just and fair to all, to every race, to every community to every minority, to every vested interest. Modern India wants to build up her life, social, political, economic, national, international on the granite foundation of full justice to each and all. And all that we ask for is that our viewpoints should be thoroughly and sympathetically considered and that others, while asking for justice, should not seek to do us injustice.

The subject is very tempting and capable of almost indefinite expansion. But I wish to emphasise first that, if the British Commonwealth of Nations is to become a great force, the instrument of Divine Providence for the promotion of peace and progress of mankind, it can do so

only by mutual understanding, sympathy and appreciation. You cannot run down India and her aspirations and at the same time expect that the British Empire will rest on the firm foundation of good will and co-operation. Secondly, I wish to make clear what a great potential asset modern India is in the reconstruction and the rejuvenation of the modern world. Here is a country which is so vast as to be equal to Europe minus Russia, whose population numbers one sixth of the entire population of the world, which boasts of an ancient and glorious civilisation, whose intellectual achievements testify to a perennial source of vitality, and which has exercised throughout the ages a vast and subtle influence upon world politics. Can any one doubt that its future or evolution is a matter of supreme importance to the world? When India's aspirations are realised, when she attains her highest development, she will be the greatest instrument of Divine Providence for bringing together the Eastern and the Western civilisations, for putting an end for ever to the clash of colour or race, for furthering the ends of international peace and justice and for evolving a type of culture, of civilisation of social, political and economical structure, which will at once ensure stability and progress and diffuse happiness throughout all races, communities and classes, because the happiness will be such as will be born not of strife and competition, but of the harmony of the diverse and conflicting elements of life. The sooner the Western world realises that India is not only the political pivot of the world, but also its intellectual, moral and spiritual pivot, the better will it be for its peaceful progress and for the achievement of the highest ends of mankind. I would earnestly plead for a true and better understanding and appreciation of the mind of modern India, for it is by such understanding and appreciation that one of the greatest, if not the greatest problem with which the British Empire and race are confronted to-day, will be satisfactorily solved.

INDIAN NOTES.

The Indian Labour Commission.

The European members of the Royal Commission on Indian labour leave Marseilles by this week's mail for Bombay. It is expected that they will there be joined by the Indian members, and that the Commission will then lose no time in getting to work. We shall be interested to see what manner of reception the politicians will accord to the Commissioners on their arrival in India. At any rate the reason which was given for the attempted boycott of the Simon Commission will be inapplicable, seeing that of the twelve members of the Labour Commission six are Indians. But a boycott has been threatened, and doubtless reasons for it can be easily found. It is true that half the members are Indians, but the critics have already complained that they are not the right Indians. The fact of the matter seems to be that there is very little enthusiasm among the politicians for an inquiry into labour conditions in India. If there were, they could hardly fail to recognise that the Commission is, as we remarked a few weeks ago, a singularly well-equipped body for the task which it has in hand. And there cannot really be any question that that task is of the utmost urgency and importance. Labour disputes have been a feature of the industrial life of India since the War. But last year, 1928, established a record, as during the twelve months no fewer than 31½ million working days were lost on this account. Considering the stage of India's industrial advancement this is a lamentably heavy total. In fact it is equal to the aggregate of all the days lost, from the same cause, during the preceding five years. The disputes exceeded two hundred in number, and involved upwards of half a million workers. As was to be expected, the trouble was chiefly in Bombay and Bengal, which are the two leading industrial provinces. Such a series of disputes certainly justified an

investigation, and the happenings of the past few months in Bombay and Calcutta have made the case even stronger. A searching inquiry into every aspect of the Indian labour problem is what is wanted, and fortunately the terms of reference to the Commission would seem to be wide enough to admit of this. The inquiry will extend not only to purely industrial undertakings such as mills, factories, etc., but to plantations also; and it will cover the health, efficiency and standard of living of the workers, and also the relations subsisting between them and their employers.

The League of Nations' Malaria Commission.

The members of the League of Nations' Malaria Commission arrived in Bombay from Europe on August 23. They expected to stay there for about a week, and then to go on to the Punjab, where there is usually an epidemic outbreak of malaria in the autumn. After visiting the Malarial Survey at Kasauli, and the Ross Experimental Station at Karnal, the Commissioners will go to the United Provinces. Thence they will make their way through Bihar and Orissa and Bengal to Assam. Thereafter they will return to Calcutta and cross to Burma. Returning to India *via* Vizagapatam, they will visit the Madras Presidency, ending their tour at Bombay by the last week of December or thereabouts. The Commission was constituted in 1923 by the Health Committee of the League of Nations with the primary object of advising certain of the malaria-stricken countries of Southern Europe. The leader of the Commission is Professor Schueffner, a well-known Amsterdam specialist in malaria; and the other members are also experts representing respectively Holland, Roumania, France, Spain, and the United States. Several countries where malaria is prevalent, notably Spain, Sicily, Bulgaria, and some of the South American States, have been already visited. In these countries the Commissioners have studied the disease, and in some cases they have suggested methods of dealing with it. In visiting India—at the invitation of the Government of India—their main object is the study of malaria by obtaining first-hand knowledge of the malaria position there. They will not, it is understood, propose measures having for their object the solution of India's malaria problem. But it is not, perhaps, unreasonable to hope that results likely to be useful in the Indian campaign will accrue from the Commissioners' investigations and from their discussions with those who are conducting it. In any case it is a good thing that more and more attention should be directed to the question of the prevalence of malaria in India. For, as we mentioned in a recent issue of *THE NEAR EAST AND INDIA*, the position there is unquestionably serious. It will be recalled that in its annual report for last year the Ross Institute and Hospital for Tropical Diseases referred to malaria in Bengal as "a great tragedy." And in view of the very large number of deaths for which the disease is yearly responsible in that province the description is no exaggeration.

The Indian Legislative Assembly at Simla on September 17 adopted without a division a resolution in favour of throwing open the military schools of Jullundhur and Jhelum to all Indian boys, irrespective of caste, creed, or family connexions with the Army.

Major Hugh L. Ovans, O.B.E., of The Northumberland Fusiliers, has been appointed Director of Military Prisons and Detention Barracks in India in succession to Colonel J. C. Loch, C.B.E., who was appointed in December, 1925. Major Ovans is due to complete a four years' tenure as D.A.A.G. in the Directorate of Personal Services at Army Headquarters on September 30.

A conference to discuss the furtherance of movements concerning the training of social workers and women's institutes in India and also the extension of the Women's Educational and Medical Services there will be held at the Caxton Hall, Westminster, on Monday, October 8, 3 to 6 p.m. Among the speakers will be Mr. J. Richey, former Educational Commissioner with the Government of India, Dr. Kathleen Vaughan, author of "The Purdah System and its Effect on Motherhood," Captain J. Ingram, organising secretary of the Gurgaon Experiment, Mrs. Sen, and Mrs. Bruce Richmond. The Chair will be taken by Miss Eleanor Rathbone, M.P.

THE WEEK AT HOME

London, Tuesday Morning.

On Cabbages and Kings.

I do not know when the silly season is supposed definitely to end, but even in late September the chief topics of thought appear to be concerned with whether women stammer or not, whether they have genius or not, how Milan should be pronounced, and various other things that have not yet been, nor ever will be, resolved by our imperfect world.

It is, perhaps, a good thing that our humdrum but fast-moving life allows breathing-space for the discussion of such things, but it is really extraordinary to find the number of people who are passionately searching for an Absolute in matters of no consequence, whereas in things that are of vital importance they deny the possibility of an Absolute.

Of course, opportunity has been afforded for such discussions mainly because of the chief "sensations" of the time—Mr. Ramsay MacDonald's visit to America, Mr. J. H. Thomas's plans for unemployment, the conduct of certain financiers on the Stock Exchange—too little is at present known.

The Government's Position.

A quite remarkable feature of the present period is the way in which the Conservative Party has "curled up" in face of the Labour Party's achievement up to date. No one, I think, will deny that that achievement has already been considerably greater than was generally thought possible. Particularly in the sphere of foreign politics have Labour politicians shown enterprise. It has been said that they are reaping where others have sown, but everyone admits that they are using their sickles very aptly.

It may be, of course, that much of what at the moment seems to have achieved dazzling success in foreign policy is destined to be undone by events; quite patently some of the Labour Party's acts in foreign politics have aroused grave misgivings. But on the whole their actions have been very generally applauded in the country, and the Government's position is at least fifty per cent. safer now than when it took office.

Not foreign politics, however, but home politics it is that will determine the lot of the Government. That is why everyone is looking anxiously to see how the problem

of unemployment, and particularly the demands of the miners, will be met. One of the chief difficulties, from the Government's point of view, is the fact that such large promises in regard to the ending or modification of unemployment were made before the last election. It has, however, the good will of every single elector in this gigantic matter.

Psychologically, the moment is the Government's. Optimism reigns supreme therein. A consequent depression is visible in the Opposition. Some symptom of Conservative discontent has been shown in the Duke of Northumberland's articles in the *Morning Post*. A curious hesitation seems to exist in Conservative minds over whether out of ordinary loyalty to a decent English gentleman they should continue to support Mr. Baldwin, or whether they should demand a more virile lead. As far as the outsider can see, the former sentiment is prevailing. But as for the suggestion that the Conservatives should now come out as the only trustworthy leaders of democracy in this country, it is only possible to say that had Mr. Schnadhorst never lived, and had the Conservative Party not derived from the Party System and from the indirect corruption which it entails as much benefit as anyone else, the idea might have been listened to with more respect. The standard of public life had declined long before the advent of Lloyd George's Coalition. There are bigger brains in the Conservative Party than that so zealously employed by the Duke of Northumberland, but unless they are used, the chances of an early return to power of any party other than Labour are remote indeed.

London's Traffic.

It is true that in some places in London at the present time there is little need for traffic signals. From Ludgate Circus to Charing Cross, for example, it is quicker to walk than to take the road, for in a bus or taxi one has but mournfully to look out and remind oneself of the poet's lines: "seeking some painful inch to gain." But generally speaking, there appears to be room for improvement in London's traffic control, which is commonly supposed to be the best in the world.

Motorists are complaining of slovenly hand signals given by the policemen on point-duty; that is as it may be. But there does seem to be point in the suggestion that London, like certain large provincial cities, should adopt automatic signals. Where one main thoroughfare cuts across another, this system of automatic signals is extremely useful, and it is difficult to see why, even though traffic be denser in London than elsewhere, it could not be tried in the capital.

The English "Ballad."

I do not know at what date the virile English poem known as the "Ballad" was usurped by the sentimental, drawing-room affair which always began in the major key, had something in the middle in the minor, and the penultimate note of which was a top-note and, therefore, passionately clung to by the amateur singer. Probably it arose in Victorian times: it is not quite buried yet.

But the death the other day of F. E. Weatherly, who is said to have written over 2,000 of such songs, reminds one of how the musical taste of England is changing. I do not say it has improved. But the "commercial ballad," the thing which used to mar the second half of Promenade concerts, the mainstay of a "smoker," the delight of maiden aunts, and so on, has disappeared from all but the lower middle-class suburban house, which, conscious of its superiority in scorning jazz, still faithfully adheres to the ideals of Pinsuti, Kennedy Russell, Stephen Adams, Sanderson, and the rest of the sentimental or rollicking co-operators with Weatherly.

But the phenomenon lasted long. Its disappearance coincides with the arrival of mechanical music, with the entrance of women into "smoking concerts," and with the setting-up of higher critical standards among writers on music. Whether it is also due to these things must be left for the musical and social historians to decide.

TOBACCO-PRODUCING COUNTRIES OF THE NEAR EAST.

ORIENTAL TOBACCO

BY DR. IVAN STANSKI,
Professor of Agriculture at Sofia University.

By its origin, tobacco is a plant of the warm and damp climate of the Tropics. At Sumatra, for example, the average yearly rainfall is over 2,000 mm. (78 inches). Quite apart from this, in America and the islands a particularly rich and strong soil, often damp with high water capacity, is best suited to the cultivation of tobacco. On account of such a strong, damp and abundant feeding, tropical tobacco, as used for cigars, has usually a luxuriant growth and yields large leaves.

In contradistinction to these tobaccos, small-leaf Oriental tobacco is the plant of a dry climate. It grows in countries with the so-called modified Mediterranean climate, with a total annual rainfall of about 600 mm. (23.6 inches), and with very dry summers. On the other hand the soil on which such tobacco is grown is in no way remarkable for richness. It is rather a poor soil, often with gravel, and consisting generally of large particles.

THE DRYING OF TOBACCO LEAVES IN GREECE.

That is the reason why tobacco grown in such conditions has an entirely different appearance from that of the large-leaf tobacco. Grown under conditions in sharp contrast with those in which it originated, it has not only changed its outward appearance, but has also acquired other qualities.

It cannot be said that small-leaf tobacco is a result of the hereditary qualities of genus, kind or race. On the contrary, when placed under conditions of strong, damp and abundant feeding, it develops large leaves and loses its essential qualities. An important difference between the two classes of tobacco is the fact that the large-leaf kinds are abundantly fed with manure, while the small-leaf kinds do not take kindly to stable manure. Experiments with artificial manure in Bulgaria tend to show that phosphorus and potassium fertilizers are the most useful.

Small-leaf tobacco may, therefore, be considered as an abnormally developed plant, artificially maintained in its abnormal development. The leaves of the plant, however, have just those qualities of taste which are so much appreciated by smokers. By virtue of all these specific conditions, the area of cultivation of the small-leaf tobacco is limited. Even in the countries of its greatest development—Bulgaria, Turkey, Greece and part of Russia—this development is not continuous as in the case of other cultures, but is disconnected in, as it were, a series of oases. These oases are the cause of the great diversity of Oriental tobaccos, which has given rise to

what is known as the "poetry of tobacco." This diversity is particularly dependent on the qualities of the soil. The best Oriental tobacco is situated on special surfaces of land called by the Turkish name of *Yaka*. These are the lowest parts of a mountain slope, at the place where it passes into a plain. If the mountain slope is covered with sparse wood or with shrubs, or if the forest trees on it are felled, the water from the rainfall flows down on the surface, dragging with it the materials it meets on its way, and depositing them at the edge of the slope, where the ground levels out and the force of the water thereby decreases. The materials washed down by the flowing waters are of a great diversity, stones and pebbles of various sizes, sand, small particles of clay, various salts, dissolved in the water, organic waste, such as leaves and other vegetable matter, in various degrees of decomposition, soil particles, etc. It is evident, therefore, that each district has its own particular features and will impart a different character to the tobacco grown on it, conditioned by the materials thus deposited by the flowing waters. These peculiarities are further emphasized, although in a smaller degree, by the difference in the heating of the surface in connection with its situation as to the sun, the degree of shelter from winds, and so on. The considerable quantity of large objects contained in the soil of such *Yakas* has a particular influence on the tobacco plants. The stone particles of various sizes absorb the rays of the sun, and reflect their heat in an upward direction from the surface of the soil. In this way the plants are maintained in a condition of intensive heating. Even during the night, when a cooling of the atmosphere supervenes, the refraction of the absorbed heat continues, the tobacco plants being thus still kept in a dry and warm atmosphere.

All this lends to small-leaf tobacco those peculiar qualities of aroma and taste which are its particular feature and make it incomparable of its kind. All attempts to produce Oriental tobacco in other parts of the world have failed, just for the lack of such a blend of climate and soil that is found in the Near East.

TOBACCO IN THE NEAR EAST.

Tobacco is stated to have been introduced into the Ottoman Empire by the English in 1600, and smoking came into vogue at about the same time as the drinking of coffee. The first tobacco plantations were established in the Smyrna region, and the cultivation of the plant gradually extended round the coast of Asia Minor, until it found its most favourable ground in the neighbourhood of Samsoun. From Anatolia tobacco cultivation spread to Turkey-in-Europe, ultimately making its way through the agency of Turkish peasants to all the Danubian countries. Turkish sponsorship is revealed to-day in the retention of Turkish terms for various stages of cultivation, and in part for classification. The Turks introduced tobacco into Russia, and for a long time found in that country their chief market for the product. It is claimed that the subsequent introduction of Turkish tobacco into Western Europe was due to the devotion of Russians in Paris, whose insistence upon their favourite tobacco led to the importation of Turkish workmen, for the manufacture of cigarettes, and of Turkish tobaccos. To-day Oriental tobacco is very largely used for blending with American tobacco.

GREECE

AS A TOBACCO PRODUCER

Landmarks.

The history of the tobacco industry in Greece is the story of an industry which, while for long an important element in the national economy of the country, has developed out of all knowledge in the last decade as a result of what may, perhaps, best be termed external happenings. The two factors which have led to the expansion of the industry have been large accessions of territory, important from the point of view of tobacco production, and the influx of refugees. In regard to the former there are two landmarks, 1913 and 1920, the effect of each event, as will be shown by a few statistics, being almost equally marked. The production of tobacco in Greece before 1913 was on the average round about 9,000,000 kilograms, and was derived mainly from Acarnania (Agrinion), Thessaly, the Peloponnese (Argolis), and the islands of Samos and Mytilene. The result of the Second Balkan War was to add to Greece most of Macedonia, which brought within Greek territory Kavalla, Drama, and other important tobacco-growing districts. The consequence was that in the following year—1914—Greece's tobacco production showed an increase of over 150 per cent. on the previous figures, the production being 27,569,894 kgs. The second landmark was the addition to Greece of Western Thrace after the Great War, which gave to the country the important tobacco-growing district of Xanthi.

The second factor, the influx of refugees, has had a very important influence on the tobacco industry. The number of refugees from Turkey was 1,500,000, and of these a large number had been tobacco growers in the districts of Smyrna, Trebizond and Samsoun. These tobacco growers have naturally followed their industry in Greece, have been very successful in producing the best qualities of tobacco, and have been able thus to establish themselves and their families as self-supporting units. The refugees have been responsible for the introduction of the crop into Crete, Eubœa, Attica and Bœotia. They have further been instrumental in developing the successful cultivation in Greece of two varieties of Anatolian tobaccos which were not formerly grown there. These are tobacco of the Smyrna type (Caloup), which is being grown in Southern Greece, the Islands and Central and Western Macedonia, and the Samsoun type, which is being cultivated in the district of Katerini, Macedonia, and parts of Thessaly. The successful introduction of these two varieties of tobacco into Greece has completed the range of Greek tobacco production, which now includes all the varieties and types of Turkish tobaccos, for the manufacture of high-quality cigarettes from a mixture of tobaccos of strictly Greek origin.

The tobaccos produced in Greece are thus those which have popularly been known as Turkish. While it was never a satisfactory description, it served its purpose at the time when most of the tobacco area formed part of the late Turkish Empire. Now, however, as Turkey has not the remotest connexion with the tobaccos produced in Macedonia, there is a natural tendency to leave the name Turkish to the tobaccos actually produced in Turkey, and to give to the tobaccos of Greece a distinctive title. As some of the best types of Turkish tobacco come from Macedonia and Thrace, Greece's anxiety on this account can well be understood. Macedonian tobaccos, as they are frequently called, is one solution, but it is understood

that the name which appeals to Greek growers is Oriental Tobacco.

The ravages of the Great War, the task of reorganising agriculture generally, and serious pre-occupations in Asia Minor, followed by the arduous work of refugee settlement combined to prevent the figures for production from reflecting the increased area under the crop until 1923, when the output totalled 56,108,432 kgs. Since that year the average production has ranged between 50 and 65 million kgs. The following table shows how the production has changed between 1914 and 1928:

Year.	Kilograms.	Year.	Kilograms.
1914	27,569,894	1922	25,346,197
1915	18,523,441	1923	56,108,432
1916	19,367,288	1924	50,174,398
1917	28,163,634	1925	65,564,295
1918	35,332,323	1926	55,534,127
1919	17,878,423	1927	61,898,701
1920	32,613,958	1928	52,725,484
1921	25,426,565	1929 (approx.)	61,870,000

Production in Recent Years.

The total production of the Turkish type of tobacco is approximately 6 per cent. of the world's output of tobacco, and of that production Greece is responsible for a sub-

A GREEK TOBACCO FIELD.

stantial proportion. But for unfavourable market conditions the figures of production for the last two or three years could easily have been improved upon. The tobacco industry of the Balkans has been passing through exactly the same crisis as has affected the cotton and oil industries—over-production. In all three of the chief tobacco-growing countries in the Balkans production has been on the upgrade, and has coincided with the temporary decline in the demand for choice qualities, with the result that the disposal of the crop has been a difficult matter and the industry has been handicapped by the existence of considerable old stocks.

Categories and Varieties.

The remarkable quality of Oriental tobaccos in general is well known. The various varieties have an excellent aroma, the tobacco burns thoroughly and evenly without any chemical treatment, and there is only a small nicotine content, which cannot affect injuriously the health of the smoker. It is not surprising in the circumstances that the

so-called Turkish cigarettes should enjoy such considerable popularity. The strength of the Greek tobacco industry lies in two things—its large production, which is capable of marked expansion, and the fact that the tobaccos of Greece include some of the finest types of Turkish tobaccos, notably those produced in the districts of Xanthi, Kavalla and elsewhere. Greek tobaccos can be divided into two main categories—Basma with small, oval leaves, a thin edge and delicate veins and with a specially fine flavour, and Bashi-Bagli, a second quality leaf. The complete list of tobaccos grown in Greece is as follows: (1) Basma, (2) Bashi-Bagli, (3) Kaba-Koulak, (4) Smyrna type (Caloup), (5) Samsoun type, (6) Sari, (7) Mavra, (8) Tsembelia Agriniou, and (9) Argos type. The following is a list of some of the varieties classified by districts:—

Thrace.—1. Xanthi (a) Yaka and Karsi-Yaka; (Basma) (b) Jebel; (Basma) (c) Ova; (Basma).

2. Comotini—Gumuljina); (Basma and Caloup).

3. Orestia (Karagatch) Demotica, Sufli, Alexandropolis (Dedeagatch); (Basma and Caloup).

Macedonia.—Zichna; (Sideli) (Basma); Kiria—Mahalla—Little Mahalla (Basma); Serres, Yaka and Karsi-Yaka (Basma); Nestos (Sari-Shaban); Ova (Basma); Drama—Nevrokop (Basma and Bashi-Bagli); Kavalla (Basma and Bashi-Bagli); Salonika Chalcidice—Langada—Selitza Kilkish—Kozane (higher qualities of Bashi-Bagli and Caloup); Pravi Kavakoulaki); (Bashi-Bagli).

Thessaly.—Almyros (Basma and Bashi-Bagli); Carditza; (Bashi-Bagli and Caloup). Rest of Thessaly (Volo, Pharsala, Larissa, Trikkala, and Lamia) (Bashi-Bagli and Caloup).

Agrinion.—Agrinion, Makrineia, Missolonghi, Amphiloehria; (Aromatic and Zembilia, Bashi-Basma, Caloup); Xeromera (Basma and Caloup).

Peloponnese.—Tripoli, Calavryta (Basma and Caloup); Argos (Caloup).

Islands.—Samos, Chios, Mytilene, Lemnos, Amorgos, Naxos, Crete, Eubœa; (Caloup and Basma).

Attica.—Marathon, Thebes (Caloup).

Exports of Tobacco.

The figures for the export of tobacco from 1912 to the present time are as follows:—

Year.	Kilograms.	Year.	Kilograms.
1912	10,981,739	1921	26,191,741
1913	9,667,512	1922	36,671,305

The following table shows, by countries of destination, the exports of Greek tobaccos in 1928:—

Country.	Kilograms.	Country.	Kilograms.
Germany	20,805,327	Norway	54,204
U.S.A.	8,135,263	Eritrea	48,493
Italy (Trieste Transit)	6,824,344	Argentina	48,018
Egypt	2,163,385	Russia	43,059
Austria	2,032,596	China	37,165
Holland	1,979,607	Arabia	24,556
Belgium	1,653,105	Abyssinia	14,873
Czechoslovakia	1,005,874	Switzerland	13,625
Great Britain	244,563	Syria	12,783
Cyprus	239,588	French West Africa	5,009
Poland	173,140	Palestine	3,231
Tunis	152,670	Algeria	2,760
Sweden	151,431	Malta	1,722
Hungary	149,706	Latvia	799
France	149,612	Portugal	32
Finland	138,401		
Aden	77,618	Total	46,385,959

In addition to the export of leaf tobacco Greece also exports cigarettes, but so far only on a small scale, as the existing factories have hitherto disposed of by far the greater part of their production locally. In view of the advantageous conditions for this industry, with the highest quality of tobacco produced on the spot, it should be capable of important development, and the manufacturers are endeavouring to expand their production with a view to increasing the exports of cigarettes. In 1928 the exports of cigarettes amounted to 58,252 kgs., as against 56,676 kgs. in 1927 and 84,534 kgs. in 1926. The principal countries of destination in 1928 were the following: Egypt, 12,512 kgs.; Italy, 11,896 kgs.; Abyssinia, 7,561 kgs.; France, 5,673 kgs.; Algeria, 3,976 kgs., Africa, 3,213 kgs.; Great Britain, 2,781 kgs.; Japan, 2,301 kgs.; and Sweden, 1,008 kgs.

Tobacco as a National Factor.

From the employment standpoint the tobacco industry is of the greatest importance to Greece. In the actual cultivation 170,000 families are engaged, while 40,000 men and women, representing an additional 25,000 families, are employed in the manipulation and sorting of the tobaccos into grades in the warehouses of the tobacco centres. As a factor in the export trade tobacco, of course, looms very prominently. It is not merely the most

STRINGING TOBACCO LEAVES.

important agricultural product, but it now accounts for more than half the value of the total exports. For 1928 the value of the export trade was £16,652,000, and that of the tobacco exports was nearly ten millions. These figures need no emphasis, and fully explain the care that successive Greek Governments have given to the development of this industry. In view of the position of the industry, Bureaux for the Protection of Greek Tobacco have been established at Kavalla, Salonika and Volo. These offices, administered by representatives of tobacco merchants and tobacco planters of the respective districts, have as their chief aim the constant improvement of the quality of Greek tobacco and the lowering of its cost. This object is pursued by the diffusion among tobacco growers of scientific methods of tobacco cultivation and the means of controlling the various tobacco diseases. A Tobacco Institute has been established in Macedonia by these Bureaux for scientific research in relation to various tobacco-growing problems. The Bureaux for the Protection of Greek Tobacco, in order to keep in touch with general tobacco questions and for the purpose of joint management, have now been united, and their headquarters are at Salonika at the Bureau for the Protection of Greek Tobaccos there. Any information concerning Greek Tobaccos in general can be obtained from the Salonika Office.

YUGOSLAVIA

THE IMPORTANCE OF TOBACCO.

For several reasons the production of tobacco occupies a most important place in Yugoslav agriculture. First of all, it must be taken into account that about four millions of the population, or about one-third of the total, take part in the work and share in the profits involved. Secondly, the production of tobacco is exclusively in the hands of small peasant proprietors, whose land rarely exceeds from 5 to 10 hectares. In the third place, it is important since it provides the State with considerable revenues. Finally, tobacco plays an important part in the rotation of crops, as it improves the soil, leaving it in

and extensive production. By 1924 production had reached 33,000,000 kgs., so that the Monopoly had not only sufficient for its own use, but also enough to create stocks for maturing purposes and for export. Measures were then taken greatly to restrict production in the interests of quality, and by reason of the difficulties of storage and of preventing smuggling. No one is allowed to plant tobacco without a special permit obtained from the Monopoly, which has now its specially trained expert staff in every district to control the choice of seeds, the field which may be planted, and the amount each grower may plant in a particular year. Seed is supplied free of charge, and all seedlings not planted out must be destroyed in the pre-

TRAVNIK TOBACCO FACTORY—CIGARETTE MAKING DEPARTMENT.

excellent condition; its cultivation occupies a relatively short time, at most little over three months, and it thrives on a limestone soil not very suitable for the majority of other crops. From the economic-social point of view the production of tobacco is important, as it finds work for all members of the producer's family; even the little children and the old folks can help and thereby earn a welcome addition to the family income.

Agricultural experts believe that the production of tobacco in Yugoslavia, although it has attained very considerable quantities, has by no means reached its maximum. Immediately after the Great War the State Monopoly, which has sole control of the production, sale and manufacture of tobacco in the whole country, had no stocks, and was forced to encourage the most intensive

sence of the Monopoly officials before July 1. The crop is examined at least twice during the season by the Monopoly experts, once immediately after planting out and once just before the harvest, and careful estimates of the yield are made, inasmuch as every leaf must be handed over to the Monopoly. The Monopoly experts supervise the picking and drying of the leaf, insisting on each kind of tobacco being baled separately and controlling every process with a view to obtaining the most perfect product and to preventing smuggling.

When the tobacco is harvested and ready for handing over to the Monopoly, it is received by commissions on which the producers are represented. These estimate the quality of the tobacco and fix prices for the various grades, which are announced in advance. Production was hindered

in the past by the interference of party politicians in the determination of quality and the fixing of prices in their own particular district; but it is to be hoped that under the new régime this will be carried out on a purely commercial basis by the Monopoly experts and the producers only. There is also a strong demand among the producers for greater freedom in producing tobacco for export. It is believed that an amendment to the Monopoly Act may be introduced, authorising the production of tobacco for export under the control of Monopoly experts, but for free sale by the producers' associations. This would tend greatly to encourage the production of tobacco, especially in those district whence the finest sorts of tobacco come.

The Chief Tobacco Fields.

The tobacco fields of Yugoslavia are divided among three districts: South Serbia; Herzegovina, Bosnia and Dalmatia; and the Voivodina. South Serbian tobacco is

1927 and the average price per kilogram paid by the Monopoly to the producers.

Kind of Tobacco.	1923. Kgs.	1924. Kgs.	1925. Kgs.	1926. Kgs.	1927. Kgs.

Average price dinars per kg.	33.5	20.0	20.5	13.5	17.0

The sale of tobacco abroad presents considerable difficulties. A new tobacco needs much launching on the world markets, where the many known brands have all their regular places and a newcomer has difficulty in getting in. Especially is this so in the case of Oriental tobacco, among which the best Yugoslav tobacco is placed, since there is already an over-production of this sort of tobacco from Greece, Bulgaria and Turkey. Nevertheless Yugoslavia has succeeded in placing considerable stocks in Poland, Czechoslovakia and Holland. The interest of foreign tobacco factories for Yugoslav tobacco is growing, and many inquiries are received from

SARAYEVO TOBACCO FACTORY—FROM THE AIR.

of the finest quality and was well known on the world markets before the War under the name of Macedonian or Turkish tobacco. It is of the small leaf variety, of a good light colour and very aromatic. The finest tobacco comes from the Strumitza, Radovitchki and Prilep districts. Near the outskirts of the tobacco district the leaf gets bigger, and the tobacco is darker and stronger. Among the limestone mountains of the Herzegovina district excellent medium and large leaf tobacco is produced, light in colour, tender and elastic, yielding; when cut, long equal fibres especially good for hand-made cigarettes. It has not, however, so good an aroma as the tobacco of South Serbia. The best districts are the Mostarski, Stolarski and Imotski districts. The Voivodina tobacco is of exceptionally large leaf, dark in colour and very strong in flavour. It is used mainly for mixing in pipe tobacco and the cheapest cigarettes and for making the cheapest cigars.

The table below shows the total production of tobacco of various kinds in the whole of Yugoslavia from 1923 to

them. With the building of new storehouses and the careful extension of production in those districts most suited to the production of tobacco of the quality demanded for export the Monopoly should have still greater quantities of tobacco available for sale abroad, especially if modifications in the Monopoly Act can be made further to encourage the producers of these sorts of tobacco.

During the last few years the sales of Yugoslav tobacco abroad amounted to:—

1923	Czechoslovakia (Régie)	...	193,071	kgs. from 1920-21 crop.

[Thanks are due to M. Dragan Militchevitch, B.A. (Oxon.), Secretary of the Chamber of Industry, Belgrade, for assistance given in the preparation of this article.]

THE TOBACCO INDUSTRY OF YUGOSLAVIA.

When the tobacco crop has been harvested and handed over to the State Monopoly's collecting centres, it is placed in special warehouses for fermentation. Great attention is now paid to this process, since on its success depends the conservation of the good qualities of the leaf and even its improvement. The tobacco is carefully sorted into various kinds and grades, and is packed according to its kind in the best manner to assure that fermentation shall be regular and complete. Experts arrange the temperature and moisture of the fermentation chambers and watch over the whole process, which takes at least two years to complete. The tobacco is then sent to the State factories in various parts of the country according to their demand, or, if its quality meets the demands of the world market and there is a surplus over home demand, it is sold abroad.

At present the State has 38 warehouses for the storing and fermentation of tobacco. Of these 12 are in South Serbia, 2 in Montenegro, 7 in Dalmatia, 4 in the Voivodina, 3 in Serbia, 3 in Bosnia, and 7 in Herzegovina. There is, however, great need for more and bigger warehouses, so that a larger production may be allowed and a greater store of fermented tobacco be available for manufacture and export.

In general the South Serbian and Herzegovinian tobacco is used for cigarettes and the better cigars, and Voivodina tobacco for pipe tobacco and the cheaper cigars. A certain amount of foreign leaf is also purchased to improve the aroma of luxury cigars. These purchases amounted in recent years to:—

		Kgs. "Smyrna"	Kgs. "Holland"
		Tobacco.	Tobacco.
1924	...	28,628.5	—
1925	...	20,808.5	—

1927	...	290,153.5	189,956.25

Cigarettes, cigarette tobacco, cigars, pipe tobacco, chewing tobacco, snuff and tobacco extract for home consumption are manufactured in eight State factories, placed advantageously for the distribution of the products and for the employment of labour in the more necessitous districts. One is in Serbia, four are in Bosnia and Herzegovina, two in Croatia, and one in Slovenia.

The factory in Nish is typical of these factories. It was founded in 1915, but had to be completely reconstructed and re-equipped after the War. It has 22 cutting machines of the latest type, 17 packing machines, and 19 cigarette-making machines. It has its own electric generating station, now to be enlarged, bath houses for the workers, rest rooms and gardens, a tool shop and a box-making department capable of satisfying all its needs. The staff comprises a director, three experts, fifty-two clerical workers, and seven hundred manual workers, of whom some 500 are women. The factory produces all kinds of cigarettes and cigarette tobacco, and has a capacity of 780,000,000 cigarettes and 2,160,000 kgs. of cigarette tobacco a year. A still further increase in the number of machines is contemplated and tenders for the most modern cigarette-making and cutting machines have been invited. Offers have been received from Germany and Britain.

The factory at Senja (1899) is devoted entirely to cigar making; it employs a maximum of 700 workers, and produces about 18,000,000 cigars of the more popular brands yearly.

The Sarajevo factory (1875) is fitted with up-to-date machinery for cigarette-making and has all the accessory departments as in Nish. It employs an expert and clerical staff of 27 persons and 841 workers, approximately 500 of whom are women. Its capacity is 1,500,000 kgs. of cigarette tobacco and 1,000,000,000 cigarettes.

The Liubliana factory (1871) is also well equipped with up-to-date machines. It has a clerical staff of 32 and 1,083 workers; its present annual capacity is 870,000,000 cigarettes, 1,920,000 kgs. of cigarette tobacco, 21,000,000 cigars, 180,000 kgs. of chewing tobacco, 18,000 kgs. of snuff, and 60,000 kgs. of tobacco extracts.

The Mostar factory (1880) has a staff of 16, together with 456 workers; it can produce yearly 480,000 kgs. of cigarette tobacco and 270,000,000 cigarettes. Adjoining the factory is a fermenting warehouse, which deals with from 300,000 to 400,000 kgs. of leaf per annum.

The Zagreb factory is entirely devoted to the production of cigars, including those of the very best quality. It was founded in 1869, and it is interesting to find that one of the women workers who began work then as a child of eight is still employed there. The factory is capable of employing 1,000 workers, but at present only a staff of twelve, with 259 workers, is employed; these can produce about 12,000,000 cigars a year.

The factory at Travnik, founded in 1893 to find work for the poor people of that district, produces only cigarettes and cigarette tobacco. It employs a staff of 18, with 358 workers, besides 44 workers employed in the power station and workshops attached. It produces 490,000 kgs. of cigarette tobacco and 280,000,000 cigarettes per annum.

The cigarettes produced are of the following sorts:—Special luxury varieties: Karageorgie, Strumitza, Yadrin, Kossova, and Shumadia; popular varieties: Vardar (the Serbian Gold Flake), Neretva, Morava, Zeta (the most smoked cigarette, akin to Wild Woodbines), Brigantiza, Krka, and Sava. Cigarette tobacco is sold under the following names: Trebinski, Vardarski, Neretvanski, Moravski, Zatski, Savaski, Banatski, and Dunavski. Cigars made include luxury varieties, Flor de Havana and Perla de Cuba, as well as Regilitas, Trabuka, Brittanski, Opera, Cuba, Virninia, Porturicco, Virginiosa, and mixed short home products. Pipe smoking is not common in Yugoslavia and the pipe tobacco supplied is not of very good quality. The best is a new mixture known as American. Most of the State factories are in need of expansion, since the demand for cigarettes and other products is still growing, despite successive bad harvests, which, in an almost purely agricultural State, have a bad effect on general purchasing power. One or two good harvests would send up the consumption of tobacco in Yugoslavia and make the supply inadequate to satisfy the demand. But the difficulty of providing the new machinery needed lies in the chronic lack of capital in the country. It is possible, however, that an advance might be obtained abroad for this purpose or that new machines might be supplied on credit terms, which would allow of payment over a term of years.

The total production of the Yugoslav State Tobacco Factories during recent years was as shown in the table on the next page.

FACTORY.	Unit.	1921.	1922.	1923.	1924.	1925.	1926.	1927.	1928.

(d) Chewing Tobacco									
(d) Snuff	Kgs.	92,757	92,206	179,544	160,015	113,539	107,989	29,495	37,143
(d) Snuff	"	—	—	—	6,180	5,700	7,330	5,640	4,299

The gross income from the Tobacco Monopoly during the budgetary years 1921 to 1928 was as follows (275 dinars being the equivalent of £1 sterling at the present rate of exchange):—

1921 (7 months)	369,000,000 dinars.
1922 (7 months)	514,000,000 "
1922-23	1,053,000,000 "
1923-24	1,148,000,000 "
1924-25	1,608,000,000 "
1925-26	1,699,000,000 "
1926-27	1,762,000,000 "
1927-28	1,705,000,000 "

The expenses are comparatively small and the net income is, therefore, very considerable. A part of this income, in common with the income from the Monopoly on Salt, Petrol, and other products, is earmarked for the payment of interest on certain State loans contracted abroad, but there is still a considerable sum over to help meet normal State expenditure. The Monopoly receipts show a slight tendency to decrease this year owing to the financial crisis following three bad harvests; but it needs only one or two good years to ensure a great increase in these revenues.

THE LIUBLIANA TOBACCO FACTORY: THE LARGEST TOBACCO FACTORY IN YUGOSLAVIA.

BULGARIAN TOBACCOS

The importance of tobacco in the national economy of Bulgaria is indicated by the fact that it is the chief article of export, providing one-third of the total annual value of the country's exports; its cultivation gives employment,

A TRACTOR AT WORK IN A TOBACCO FIELD.

in whole or in part, to nearly a quarter of the total number of households in the country, and the revenue derived by the State from the taxation of tobacco represents a tenth of the whole Budget.

The distribution of territory that followed the Balkan Wars gave Bulgaria some of the best tobacco-producing areas of the Balkan Peninsula, i.e., Southern Thrace and Eastern Macedonia. After the Great War part of Southern Thrace was surrendered to Greece, but Bulgaria retained the greater portion of the tobacco fields. Under the Turkish Tobacco Régie the Kirjali district, known as Merkez muduriye Xanthi, and famed for its fine aromatic small-leaved type of tobacco, which passed in commerce under the name of *Jebel Basma*, was divided into seven regions: 1, Xanthi; 2, Ahi-Chelebi; 3, Dari-Dere; 4, Sher-Jumaia; 5, Egri-Dere; 6, Gumuljina; 7, Sari-Shaban. By the terms of the Treaty of Neuilly Bulgaria

PICKING TOBACCO LEAVES.

retained four of these regions—Ahi-Chelebi, Dari-Dere, Sher-Jumaia and Egri-Dere, while the others passed under Greek jurisdiction. In Eastern Macedonia Bulgaria possesses the tobacco-fields of Gorma-Jumaia, Melnik, Petritch and Nevrokop. Their products, which are known as Macedonian tobaccos, are distinguished by their light golden-yellow colour and strong flavour; they are light in weight, and for this reason are specially adapted for

cigarettes, being at the same time mild and pleasant to smoke. The acquisition of these regions gave a great impetus to the Bulgarian tobacco industry, which was further encouraged by the interference with tobacco production in Greece and Turkey. Apart from the produce of the new fields, tobacco cultivation was stimulated throughout the whole country, particularly in the districts of Plovdiv (Philippopolis), Haskovo, Kavakli, and Dupnitsa. Thus the production of tobacco increased from 6.3 million kilograms in 1910 to 10.6 million in 1915, and to 20.4 million in 1918. By 1920 the annual production was 28.5 million kilograms; a set-back came the next year, but in 1923 the high-water mark of 52.2 million kilograms was reached. As the consumption of tobacco in Bulgaria remains fairly constant, this rapid increase in production meant that the country found itself with enormous stocks for which it had to obtain markets abroad. To a certain extent it was helped by the difficulties of its competitor Turkey, who had not yet liquidated her quarrel with Greece; but from a practical business point of view Bulgaria had indulged in over-production. In the following year, 1924, the area under tobacco was reduced by one-

THE TOBACCO LEAVES ARE COLLECTED IN BALES AND THEN PRESSED.

sixth; but as a result of a particularly good harvest the total production of the leaf amounted to 48.9 million kilograms. From that date there has been a steady decline in the area planted each year under tobacco, owing to difficulties experienced in marketing the crop. As compared with the 59,600 hectares of 1923, an annual average of from 20,000 to 30,000 hectares is now being maintained. At the same time the Government is taking steps to improve the quality of tobacco grown and to introduce standardisation. Better methods of cultivation and of drying the leaf are being adopted; artificial fertilisers and chemical spraying against pests are coming more and more into use. At the present time the Ministry of Agriculture has in preparation a Bill for improving the production and promoting the export of tobacco; in this measure provision is made for an increase in the number of special experimental tobacco farms.

Both climatic and soil conditions in Bulgaria are suitable to tobacco cultivation, particularly in the southern and south-western portions—the valleys of the Struma and Mesta rivers. Here are also grown cotton, sesame,

poppies, and aniseed—all plants flourishing under Mediterranean littoral conditions, and in calcareous soils.*

The number of tobacco cultivators in Bulgaria has undergone a rapid increase. In 1910 it stood at 14,247; in 1915 it was 44,098; it rose to 104,505 in 1918, and three years later attained the record figure of 199,733, which represented almost a quarter of the total number of households in the country. Owing to the fall in prices and the difficulty of marketing the tobacco, some of these cultivators will have turned their attention to other crops; but while the area under tobacco has decreased, the plant still figures as an item in the crops of the bulk of the cultivators in the favoured districts, but only the most suitable land is now given up to it. The mean annual production per hectare shows the inevitable fluctuations, ranging, in the eight years from 1920 to 1927, between 6.61 quintals per hectare (588 lb. per acre) to 9.91 quintals (881 lb. per acre), the average being 8.23 quintals.

Tobacco Exports.

The value of the tobacco crop as a factor in the maintenance of Bulgaria's trade balance and in the stability of the lev is shown in the following table:—

Year.	Total Exports.		Tobacco Exported.	
	Millions of leva.	Millions of leva.	Percentage of Total Export.	
1912	...	156.4	1.4	0.9
1918	...	415.4	331.2	79.8
1919	...	552.3	374.7	67.9
1920	...	1,642.9	801.0	48.8
1921	...	1,217.3	568.6	25.6
1922	...	4,329.7	1,168.9	27.0
1923	...	3,557.1	1,064.8	30.1
1924	...	4,902.2	1,828.1	37.1
1925	...	5,642.5	2,329.0	41.5
1926	...	5,617.6	2,060.5	39.7
1927	...	6,684.2	1,117.1	32.4
1928	...	6,379.4	2,111.7	33.1

The exceptional high percentage in 1918 and 1919 was due to the accumulation of stocks in Bulgaria during the War and the general depletion of world stocks. The main export is in the form of tobacco leaf. Among the chief purchasers of this leaf are the following countries:—

	Millions of kilograms.				
	1928.	1927.	1926.	1925.	1924.
1. Germany	8.9	9.2	9.3	11.9	10.9
2. Austria	3.1	4.0	1.4	4.4	3.2
3. Czechoslovakia	0.6	3.3	3.8	4.5	6.3
4. Holland	1.4	3.2	4.4	0.9	1.5
5. Italy	2.1	2.6	5.1	6.3	4.6
6. Hungary	0.9	1.5	1.0	0.8	1.1
7. Belgium	2.3	1.1	1.0	1.0	0.9
8. Poland	2.4	0.7	1.5	2.6	2.0

The market for Bulgarian tobacco, however, is steadily being expanded. Exports to Egypt, for instance, have increased from 53,200 kilograms in 1923 to 693,730 kgs. in 1927 and to 901,312 kgs. in 1928. In regard to other countries it is not always possible to determine the ultimate destination of some of the tobacco sold in view of the tendency for buyers to purchase through the big depôts in Antwerp, Amsterdam, Hamburg, etc., where Bulgarian tobacco may be merged with those of other countries. For this reason tobacco merchants in Great Britain, America and elsewhere are urged to buy direct from Bulgarian firms, both for the sake of eliminating the middleman, and in order to be sure of obtaining the best type of Bulgarian tobacco. In this connexion it may be mentioned that several of the largest tobacco-purchasing institutions are now establishing permanent agencies in Bulgaria, among them several German firms, and the Austrian and Polish Tobacco Régies.

* N. Stoyanoff, "Tobacco in Relation to the Mediterranean Flora in Southern Bulgaria," Sofia, 1922.

THE BULGARIAN TOBACCO INDUSTRY.

The tobacco industry in Bulgaria has not only suffered from the general economic crisis which the country has shared with rest of the world; but it is also the victim of special disabilities of its own, which have acted as a check on its development. Being subject to taxation as a luxury, tobacco has proved one of the most lucrative sources of revenue for the State. The Budget for the year 1929-30 amounting to 7,000,000,000 leva, estimates a revenue of 780,000,000 leva from tobacco banderoles, or rather more than one tenth of the total revenue of the State. To obtain this sum, the taxes on cigarettes are fixed at 75 per cent. of the retail price, 70 per cent. being accounted for by the banderole, with an additional 5 per cent. for the monopoly. The following table gives the quantities of tobacco produced during the last five years, together with the revenue derived by the State from the banderole tax:—

Year.	Factories.	Tobacco Produced.		Banderole Revenue.
		Kilograms.	Leva.	
1924	...	56	4,197,062	521,082,513
1925	...	56	5,213,088	659,245,150
1926	...	52	4,690,106	675,832,037
1927	...	52	4,599,600	695,608,739
1928	...	50	5,037,457	752,629,085

The decrease in the number of tobacco factories is evidence of the unsettled economic conditions that have prevailed since the War. As in other spheres, so in the case of the tobacco industry the situation immediately after the War led to the establishment of more enterprises than the real capacity of the market justified; and when competition became intensified the weaker went to the wall. The production during the five years shows marked fluctuations. In 1925 there was a big jump of 25 per cent., (1,016,026 kilograms) over the figure for 1924. In the next year there was a substantial decrease as a result of the increase in the banderole charges, which checked consumption. A further diminution took place in 1927, but in 1928 there was an increase of 437,857 kilograms, owing mainly to the better prices obtained by producers. In that year the banderole charges for third-quality cigarettes were increased by 10 leva per kilogram, but without any corresponding increase in the retail price, the additional burden being borne by the manufacturers.

For the proper development of an enterprise a steady increase in production is necessary, but in this respect the tobacco industry is independent of ordinary business principles and is placed at the mercy of the State finances. The State intervenes to raise the banderole charges, with the resultant increase in the retail prices of tobacco products, as happened in 1926, and the industry experiences a considerable set-back to its normal development. The steady increase in the banderole revenue accruing to the Treasury over the five years will be noted. In this connexion a table showing the changes in the local consumption of different qualities of tobacco products during the last four years is of interest:—

	1925.	1926.	1927.	1928.
	Kilograms.			
Special Cigarettes	1,985	1,809	1,702	2,008
Double Extra "	4,335	2,609	1,917	1,806
Extra "	162,774	106,547	86,827	78,400
1st Quality "	878,799	671,598	583,473	492,887
2nd Quality "	1,153,108	778,616	526,400	415,084
3rd Quality "	2,993,984	3,101,809	3,373,139	4,009,150
Pipe Tobacco and Snuff	...	18,103	27,118	26,072

During the four years under review there has been each year a gradual diminution in the consumption of cigarettes of the three higher grades, with a single exception in the case of Special Cigarettes, which were made chiefly for private export. On the other hand the production of what are known as the Third-Quality cigarettes—the cheapest kind—has steadily increased, and there has been a marked advance in the production of pipe tobacco. Although there can be no doubt that the purchasing power of the Bulgarian people has diminished during the last few years, as indicated by the changes in cigarette smoking, it must also be pointed out that the consumption of “contraband” tobacco has probably made great strides. It is difficult to prevent the producer from smoking tobacco grown by himself, although the use of cut tobacco which has not been made into cigarettes in the factories is forbidden. Various measures have been adopted to restrict the use of contraband tobacco, such as restrictions on the importation of cigarette paper or paper that might be used in cigarette-smoking; frequent checks on the quantity of tobacco stored by producers and in warehouses; and more rigid control by excise officials. These steps are understood to have had some measure of success, but it is unlikely that the contraband smoking will be wholly eliminated until there has been a general improvement in the economic conditions of the country.

In proportion to other industries the tobacco industry in Bulgaria has outgrown its strength. As the capacity of the fifty factories exceeds the requirements of the market, there is considerable competition, and wholesale prices, (retail prices are fixed by the State) in Bulgaria have been cut to the lowest possible limit. When to this narrow margin long credit is added, in order to insure sales, the position of some manufacturers is often critical, as the banderole tax, representing three-quarters of the total investment, has to be paid in cash.

In foreign markets there is only a small demand for Bulgarian cigarettes owing to the high duties now imposed in most States on goods that can be manufactured in the country. The export of tobacco products—mainly cigarettes, as the export of pipe tobacco is insignificant—is shown in the following table:—

	Cigarettes, Kgs.	Value, Leva.	Average Price per kg.
1924	... 33,549	... 3,138,671	... 93.55 leva.
1925	... 42,913	... 3,807,253	... 88.72 "
1926	... 41,802	... 14,566,312	... 348.45 "
1927	... 35,580	... 18,286,575	... 513.95 "

The sudden rise in the value of the cigarettes exported in 1926 and 1927 was due to the opening of markets for high-grade cigarettes in Western Europe and America. Austria has so far been the largest purchaser of Bulgarian cigarettes; imports into Germany have diminished, but a factory, known as Bulgaria, has been established at Dresden for the manufacture of cigarettes exclusively from Bulgarian tobacco. The output of this factory is from 60,000 to 70,000 kilograms per month. Germany, it may be mentioned, is the largest importer of Bulgarian tobacco leaf, as appears from the following table of the principal countries importing Bulgarian tobacco in 1928:—

Country.	Kilograms.	Country.	Kilograms.
Germany	... 8,543,507	Egypt	... 897,472
Austria	... 2,932,902	Hungary	... 886,417
Poland	... 2,402,763	Czechoslovakia	... 792,702
Belgium	... 2,319,791	Greece	... 51,863
Italy	... 2,073,114	Great Britain	... 31,996
Holland	... 1,355,022		

With a view to fostering the export of cigarettes the export duty was abolished on May 12, 1926; but owing to the heavy duties levied on tobacco in the importing States, the demand of foreign markets is likely to be restricted to high-grade cigarettes.

SABI NENOFF.

Cyprus

TOBACCO GROWING IN CYPRUS.

The history of tobacco growing in Cyprus is a record of vicissitudes. Many years ago the industry was one of some importance for the Island, but it declined owing to a variety of causes. It was revived to a considerable extent owing to the arrival of a number of Syrian refugees at the beginning of the War, and in recent years, as a result of official and private efforts, substantial progress has been made in the industry, which is once again becoming a factor in the Island's economics. Modern methods of cultivation and curing have been introduced, and last year six itinerant instructors were appointed, responsible to the Government Tobacco Expert, to give advice and instruction to growers. For the past eight years there has been an almost continuous tendency for an increase in the area under the crop. The following table gives the area under tobacco and the production for that period (a dunam equals 0.227 acre, and an oke equals 2.82 lb.):—

	Area.		Production.	
	(Dunams)		(Okes)	
1921	...	93	...	4,887
1922	...	568	...	17,095
1923	...	615	...	11,834
1924	...	609	...	7,037
1925	...	694	...	6,493
1926	...	1,634	...	56,725
1927	...	3,145	...	141,302
1928	...	3,140	...	167,963

These figures throw an illuminating light on the expansion of the industry. The position with regard to the crop came under review last year at a Conference held at the offices of the Agricultural Department when measures were discussed for the encouragement of the better cultivation of, and preparation of, tobacco for export. The project of settling Greek and Turkish and other tobacco-growing families in the Island came under consideration, but it was subsequently found impossible to carry it into effect owing to the difficulty experienced in obtaining suitable families, so recourse was had instead to the appointment of itinerant tobacco instructors, reference to whom is made above. Of the six instructors one is at Larnaca to supervise the Larnaca District and part of Famagusta and Nicosia, one is in the Limassol District, one is in the Paphos District, while there are three in the Karpas District. One of the most important points calling for attention has been the question of the provision of suitable seed. It has been desired to obtain seed of some of the best types of the tobaccos grown in Greece and Turkey, but this has proved a difficult matter as there are restrictions on the export of seed from these countries. Small quantities of seed of the Kavalla, Agrinion, Sari, Giaourkeui, and Samsoun types of tobacco have, however, been procured, and in consequence it is anticipated that this year's shipments will show a marked advance both in quality and quantity. It may be mentioned that, besides the yellow leaf tobacco, Cyprus grows the Latakia type. As the Island is believed to be the only Empire source of this type, the Cyprus product is important for manufacturers, through its being entitled to the preferential rate of import duty.

Cyprus cigarettes made from imported Macedonian leaf or a blend of Macedonian and Cypriot leaf have for many years been popular abroad, and now several brands of all-Empire cigarettes made from pure Cyprus grown leaf are on the English market, as well as cigarettes which are made in London from imported Cyprus tobacco and are retailed at the low price of 4s. per 100.

Turkey's Tobacco Industry

Tobacco is Turkey's premier export. The tobacco plant is cultivated in all parts of Asia Minor, but the best tobacco comes from the coast line of the Black Sea—the principal centres being Samsoun, Bafra, Sinope and Trebizond and from the district of Smyrna. Large crops are also grown along the southern coast of the Sea of Marmora, where Brussa, Ismid and Balikesir are the chief producing districts. The production of tobacco in Turkey has experienced the usual seasonal fluctuations, but has also reflected the political vicissitudes of the country. The high-water mark was reached just prior to the Balkan War with crops estimated at 58,000,000 and 63,000,000 kilograms in 1910 and 1911 respectively. At that time the best Turkish tobacco was grown in Macedonia, and the loss of the Macedonian fields as a result of the Balkan War caused a drop of twenty million kilograms in the annual production of tobacco. After the setback of the Great War there was a marked increase in 1920 with a crop of nearly 30,000,000 kilograms, followed by a fresh relapse as a result of the Greek invasion of Asia Minor. By 1924, however, Turkey had not only recovered from this invasion, but was reaping the benefit of the presence of expert tobacco-growers from Macedonia, who had come to Anatolia as refugees or in exchange for the expelled Greek population, and were able to take the place of the Greek tobacco cultivators whom Turkey had lost. From this date onwards the rivalry was set between Greece, Bulgaria and Turkey, for the exclusive heritage of "Turkish" tobacco, the first two basing their claim on their possession of the Macedonian fields, the latter maintaining that tobacco grown in Turkey can alone be Turkish. As a tribute to the cogency of this latter argument comes the suggestion that the tobaccos of the Near East should be known as Oriental, and be graded on their actual merits, rather than on virtues supposed to be inherent in any particular name.

Zones and Varieties.

Four main zones for the production of tobacco are recognised in Turkey:—

1. Samsoun. The most important centre of cultivation which includes the following localities: Samsoun, Bafra, Alasham, Sinope, Ghered, Gumush, Hadjikeui and Tashova.
2. Smyrna, including Akhissar, Karagatch, Ephesus, Focœa, Giaourkeui, Bouja and other districts.
3. Trebizond, comprising Trebizond, Ordu, Olti and Ardahan.
4. Marmora Basin, including Brussa, Ismid, Hendek, Dusje, Gieve. This zone generally grows the largest crop, but the tobacco is inferior to that of the other zones.

It is in the Samsoun district, which produces the highest quality tobacco in Anatolia, that the future of Turkish tobacco may be said to rest.

The Bafra district also produces a tobacco of high quality, the prices of which are from 20 to 30 per cent. lower than those of Samsoun tobacco. The tobacco of Bafra is stronger and has a less fine leaf than that of Samsoun. The tobacco of Sinope is inferior and in little demand.

Trebizond produces a tobacco specially suited for blending with inferior brands produced elsewhere. Its chief customer in the past has been Egypt, but the demand from that country is decreasing with the growing popularity of the manufactured cigarette. Similar in kind to Trebizond tobacco, but inferior in quality, is Hendek tobacco. Since the demand for Trebizond tobacco has fallen off in Egypt a similar difficulty has been experienced

in the sale of Hendek, the only market now remaining open being Central Europe, where the prices paid are below the former Egyptian prices.

The best brands of Ismid tobacco resemble in appearance Bafra tobacco, but are inferior. The best tobacco of this district is Dusje, which is cheap and has a fine leaf, and is used as a substitute for Bafra. The cheapest Turkish tobacco, which is used mainly for blending, is that of Brussa and Balikesir.

The region of Smyrna produces three separate kinds of tobacco: (1) scented tobacco en caloup; (2) scented tobacco en basinas (pressed tobacco); (3) Yerlis tobacco. The first is that most generally in demand, the best brands being those of Seydikeui and Giaourkeui. The largest buyers of superior caloups are Egypt and America. Inferior caloups are bought mainly by Central Europe. Tobacco en basinas is chiefly grown in Odemish, Lygda, and Thyra, and is mainly bought by Germany. This method of manufacture is being slowly displaced by the caloup. Yerlis tobacco is a local growth cultivated in the districts of Kassaba and Magnesia. Smyrna tobacco is at present bought by the Government for blending with the stronger mixtures of Anatolia, which are thereby improved. The Smyrna industry, like that of Samsoun, would yield far greater produce if fully developed.

It is estimated that the consumption of tobacco in Turkey itself is about 10 million kilograms, while the amount available for export in 1922, 1923 and 1924 was respectively 13 million, 15 million, and 50 million kilograms. The largest importer of Turkish tobacco is the United States, but Italy, Austria, Germany, and Holland are all regular buyers, and in recent years Poland and Czechoslovakia have become so.

Government Monopoly.

In 1879 the tobacco revenues of Turkey were ceded to the services of the Public Debt, and in 1883 a tobacco monopoly was granted to a consortium of banks including the Ottoman Bank, which for the administration of the monopoly formed a company known as the Régie Co-intéressée des Tabacs. The company had powers to regulate the cultivation of tobacco and had the exclusive rights of manufacture and sale of tobacco in Turkey. Taking advantage of the expiry of the concession, the Government abolished the Régie and assumed control of the tobacco industry on March 1, 1925, converting the Régie into a State monopoly. Restrictions on the cultivation of tobacco were removed, but a State monopoly for the sale of cigarette papers was established.

Experience is teaching the Turkish Government, as it has already taught those of Bulgaria and Greece, that in these days of fierce competition it will not do to entrust the tobacco industry entirely to the whims or the instinct of the unenlightened cultivator. Left to his own devices, the latter has in certain districts been known to indulge in the introduction of "foreign matter" as a make-weight for his tobacco bales, while a steady deterioration of the leaf has emphasized the necessity for careful and more scientific methods of cultivation. While such measures may require time to produce a marked effect, the Turkish Government is paying attention to the problem of opening up markets abroad for Turkish tobacco. To this end it is announced that a concession has been granted to a British syndicate for the manufacture of Turkish cigarettes in Great Britain and on the Continent of Europe. At the same time a Turkish tobacco monopoly will also be established in the United States of America for the exclusive manufacture of Turkish Régie cigarettes.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Cotton Growing in Egypt.

As was to be expected, questions connected with cotton growing in Egypt have taken an important place in the discussions at the International Cotton Congress at Barcelona. Of particular interest was the speech by Mr. William Howarth, managing director of the Fine Cotton Spinners' and Doublers' Association. He paid a well-deserved tribute to the attention that the Egyptian Government devotes to cotton. In this connexion we need only refer to the work done with regard to new strains and the maintenance of the purity of varieties. The question of output is, of course, all important for Egypt, particularly in view of the steady increase in the population, and in recent years the Government has found it necessary to take steps to limit the acreage. It was pointed out that if Egyptian producers determine to increase their output, other costs besides labour costs (which are much lower in Egypt than in the United States) will have to be reduced. The importance of this reduction was emphasised particularly in view of the competition with cotton of artificial silk. It is believed that the opening up of new areas in Upper Egypt will have a marked effect on costs, owing to land being much cheaper there than in the Delta. Mr. Howarth's assurance that, given low-priced cotton, Lancashire will use every pound of it, should be a great encouragement to the Egyptian authorities to extend the area under the crop.

The Question of Supply.

That Egypt has the question of an increase in supply in view was made clear by the statement of an official of the Egyptian Ministry of Agriculture that he is looking forward to the time when Egypt will produce 10,000,000 kantars per year. At the present time a crop of between seven and eight million kantars occasions considerable anxiety because of the effect on prices and the existing situation in the world markets. The solution is, of course, to be found in the reduction of costs, to which I have already referred, and besides the effect of cheaper land on the crop it is believed that the development of new high-yielding strains will conduce to make cotton growing in Egypt more profitable than it is in any other cotton-growing region. Maarad and Nahda are two of the important new strains that are now available, and there are others that will soon be making their appearance. It is in this ceaseless quest for ever better strains that Egypt will achieve the success she desires for her staple crop. It must be emphasised, however, that a low price for Egyptian cotton is only one side of the equation, and that if Lancashire, as Mr. Howarth says, is to take every pound that Egypt produces it can only be as a result of the reorganisation of manufacturing and selling methods.

A Notable Exhibition.

Like the recent Aero Exhibition, the Shipping, Engineering, and Machinery Exhibition, which is now being held at Olympia, is notable for the wealth of evidence that it affords of new developments in these important branches of industry. While the Exhibition may lack the appeal which is bound to attach to a display of the latest aircraft, it has many attractions which serve to give it a popular interest. I need only instance the motor boat "Miss England" and the extensive display of outboard motor boats, which seem to be a never-

ending source of attraction for the youth of the present day. The engineering and machinery exhibits seem to cover every aspect of these industries. There are, for example, large numbers of internal combustion engines, while pumps, compressors and air tools are to be seen in variety. There are some interesting exhibits of refrigerating machinery, also of furnaces and boilers, among the firms showing boilers being Messrs. Babcock and Wilcox, whose exhibit includes a complete scale model of a marine boiler with oil-firing equipment. Altogether it is one of the best exhibitions of the kind that I have seen.

Nizam's State Railways.

The board of directors of the Nizam's Guaranteed State Railways is to be commended for losing no time in informing the stockholders of the possibility that the Government of H.E.H. the Nizam may make an offer to take over the line before the anticipated period. The Government have an option under their contract with the company to purchase the broad and narrow gauge lines on January 1, 1934, on giving twelve months' notice. The directors state that though no definite proposal has been made, they have reason to believe that the Government are anxious to anticipate the purchase date and are not unlikely to make an offer to buy up the company's lines and take them over on March 31. If such an offer is made and the terms are such as the directors can recommend, the stockholders will be consulted before a final decision is arrived at. Obviously the offer will have to be a good one to obtain the acquiescence of the stockholders, for the company has done consistently well in recent years and the ordinary stock is now quoted round about 240. For the year ended March 31 last the proposed final dividend is 8 per cent. plus a bonus of 4 per cent., making 12 per cent., which compares with 16 per cent. for the previous year plus 2 per cent. on account of a refund of surcharge imposed on certain goods traffic in 1921-22.

Imperial Airways.

The particulars of the past year's working of Imperial Airways given in the preliminary statement were elaborated in the full report which was forthcoming last week. As already recorded, the profits amounted to £78,861, as compared with £72,567 for the year ended March 31, 1928. The profits from the trading account at £141,000

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathens."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Correspondents all over the World.

The BANK OF ATHENS specialises in the development of Trade between GREECE and the UNITED STATES and GREAT BRITAIN, and in General Banking Business.

London Branch:

22, Fenchurch Street, London, E.C.3

Affiliated Institutions in the United States:

NEW YORK: The Bank of Athens Trust Company, 205, West 33rd St.
BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

showed an increase of £8,400, this total including the Government subsidy and an amount for the sale of aircraft and engines. The all-important fact is that mail and passenger traffic is now steadily growing, as it was bound to do once the benefits of air communications became realised. It is bound to take a considerable time to establish air services, and it is very satisfactory that thus early Imperial Airways have made such notable progress.

COMMENTATOR.

PERSIAN FINANCES.

The reports of the Persian Ministry of Finance have hitherto been issued every three months, but that now forthcoming covers the first six months of the Persian year 1307 (1st Farvardin to the end of the month of Shahrivar or March 21, 1928, to the following September 22). This change has been introduced because it is held that half-yearly reports present a more correct picture of the facts.

Of the events in the period dealt with special mention is made of the important change introduced in the method of dealing with the country's finances by the approval of the 1307 Budget in the early months of the year. This step, which is unique in the history of the country, has put an end to the system of requisitioning a credit of one-twelfth each month. Thus Persia has taken an important advance towards regularising her finances, a departure which is justly characterised in the report as a "great step." Other measures passed in the Majliss were the "Government Monopoly of Opium" Law to secure greater revenues from this source and the law for the punishment of opium smugglers.

The total of the State revenues for the period was 110,068,997 krans as against 96,036,701 krans for the corresponding period of the previous year, an increase of 14,032,296 krans. Notable increases took place in Customs, 10,789,661 krans, Posts and Telegraphs, 14,349,852 krans and Excise 1,020,514 krans. The revenue from tobacco increased by 91,935 krans which is attributed partly to the increased use of cigarettes. It is pointed out that the use of pipe and Kalia tobacco is continually decreasing while that of cigarette tobacco, which pays a heavier duty, is on the upgrade, and it is anticipated that the introduction of the new tobacco law will result in doubling the yield from the Tobacco Tax. The revenue from opium showed a decrease of 490,059 krans which is held to be due to the exceptional circumstances arising from the introduction of a new régime.

As from September 30 the London office of James Finlay and Co., Ltd., will be at 9, St. Helen's Place, E.C.3.

BULGARIA'S TOBACCO CROP IN 1929.

As is known, Bulgaria's tobacco crop of last year was excellent in quality but insufficient in quantity as a result of the very dry summer. Owing to the manufacturers of cigarettes throughout the world having to obtain supplies of aromatic tobaccos, called "Oriental," without which the best quality cigarettes cannot be manufactured, Bulgarian tobaccos, which occupy a place of honour among aromatic tobaccos, have been sold from the autumn, which is very much earlier than usual, at very high prices. These tobaccos, bought in 1928, have been exported after manipulation, principally this year. During the first five months of the current year the exports totalled over eleven million kilograms of tobacco, of the value of 1,525 million leva, which shows that a kilogram of these tobaccos has fetched on an average 136 leva; while during the first five months of the previous year the exports totalled about 12½ million kilograms, for which the payment was only 1,146 million leva, or an average of 91 leva per kilogram. Thus the foreign buyers have paid 45 leva more for the 1928 crop than for that of the previous year, or nearly 50 per cent.

In 1928 about 25,000 hectares (one hectare equals 2.47 acres) were planted with tobacco in Bulgaria, and the yield was only 15.7 million kilograms, owing to the drought. The high prices at which these tobaccos were sold have encouraged the planters to increase the area under tobacco this year. It is believed that this increase has been very considerable, and that nearly 40,000 hectares have been put under tobacco. What will be the yield? The normal return per hectare is 750 kilograms of leaf, and from this it can be anticipated that the crop this year will be from 30 to 32 million kilograms, or nearly double that of the past year. The annual local consumption does not exceed 5 million kilograms, so that the amount available for export will be about 25 million kilograms.

As regards the quality of this year's crop, all the information available points to its being exceptionally good. Following the belated cold weather of the spring, the sowing of the plants was carried out much later than usual, but the months of May and June were sufficiently wet and sunny, and it was possible to transplant the plants in excellent conditions. The terrain where the transplanting took place was soft and damp, and this fact made it possible for the plants to take root easily. So the cultivation was begun this year in satisfactory auspices and proceeded normally up to the middle of July. At that period the whole country suffered from drought, which stopped the growth of the plants to some extent; but even in July rain fell in many parts of Bulgaria, and this was also the case in the first half of August. In these conditions a sufficiently abundant crop can be looked for this year, and one, too, of very good quality. Two circumstances have particularly favoured tobacco cultivation in Bulgaria this year: the first is that the hail has almost everywhere spared the plants. The second is that from no part has the terrible tobacco disease called "Thrips" been reported. The high temperature in July has permitted the tobacco to ripen in good time, and the gathering of the first leaves was begun throughout the country from July 10. Since then developments have been normal, despite the storms of recent weeks, which have caused considerable damage in certain districts.

IMPERIAL AND EMPIRADIO TELEGRAPH SERVICES.

Imperial and International Communications, Ltd., announce that on and after September 30 they will operate the cable and radio systems of the Eastern Associated Telegraph Companies and of Marconi's Wireless Telegraph Company, Ltd., together with the direct Empiradio and Imperial Cable Services which are at present under the control of the General Post Office.

Telegrams for the "Via Imperial," "Via Eastern" (cable routes), and "Via Empiradio," "Via Marconi" (radio routes), will be accepted at all offices in Great Britain of the Eastern Telegraph Company, Ltd., and Marconi's Wireless Telegraph Company, Ltd.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 24.

The Stock Exchange has passed a dull week, the uneasiness resulting from the continued uncertainty of the monetary situation being added to by the discomfort caused by the collapse in a group of speculative shares, to which further reference is made below. A rise in Bank Rate is still generally regarded as a probability, but it is still felt that the Bank of England will not take such a step unless and until it is forced to do so by a heavier gold efflux than at present. A feature of the foreign bond market was a rise in Chinese issues. The slump in the Hatry group of shares had no real significance for the industrial market as a whole, but naturally caused general uneasiness, and small falls were general. Oil shares were a bright spot at the beginning of the week but became irregular later.

Hatry Group Slump.

The sensation of the Stock Markets this week has been the slump in the shares and the group of companies associated with Mr. Clarence Hatry, culminating in the unprecedented suspension of dealings on Friday. The market valuations of the ordinary shares of the five concerns affected—Photomaton Parent, Associated Automatic, Retail Trade Securities, Corporation and General Securities and Oak Investment—had fallen by amounts varying from 2s. to 10s. in two days, and a very large number of shareholders suffered a substantial depreciation owing to the collapse, but its immediate cause was pressure to sell on an unwilling market, and some of the later markings were purely nominal. Those associated with the companies must, however, be blamed for the delay in publishing the accounts of two of the concerns, which helped to weaken confidence in the group as a whole. The fall probably went further than the true position of the companies justifies, but the collapse must be regarded as a sequel to the "boom" finance of last year. Investments in new companies operating patent or novel processes are always liable to extreme fluctuations upwards or downward, on favourable or adverse market rumours, owing to the speculative nature of the business, coupled with the inability of accurately assessing the prospects for the future of the individual concerns in question.

Rhodesians Prospects Analysed.

The feature of the Stock Markets this summer has been the continued activity in the shares of the Rhodesian copper companies. Although this activity has been largely professional it would not have been maintained for so long had the public not been attracted by the undoubted possibilities of this great mining field. There are other considerations, however, which suggest that prospects are somewhat discounted in the market values. In the

Economist of last Saturday it is shown that before a reasonable return is obtained on the shares at current prices, a tonnage of ore estimated to amount to 6,500,000 tons in the case of Bwana M'Kubwa, 3,400,000 tons in that of Roan Antelope, and 1,000,000 in that of N'Changa will have to be treated. If allowance were made for the probable need of raising further capital, and the fact that for some time a loss of interest on the capital has to be faced, much larger figures would be required to give a "reasonable" return. There are no insuperable difficulties preventing such an output being achieved, but the task of raising the necessary labour force, and the technical problem of treating varying types of ore have to be solved first. Moreover, as we have explained before, this great increase in production must inevitably have some effect on the commodity price. Current production is in excess of consumption, though the latter may be expected to grow, and in the older fields metallurgical progress is increasing the amounts of ore which can be worked profitably. While there is no gainsaying the likelihood of Rhodesian copper shares rising to still higher values, the market is one which the ordinary investor should enter only after careful thought.

First Co-operative Trust Interim.

The accounts of the First Co-operative Investment Trust, Ltd., are of interest, not only because of the fact that its members number 22,000, but because several similar institutions have followed its policy of paying relatively high dividends. Since its inception the Trust has paid 7 per cent. per annum, but the current interim dividend which was declared on Wednesday is at the rate of 6 per cent. per annum. Although it is stated that the intention is to pay a higher rate at the close of the year it is clear from the half-yearly report, that this would not have been possible on this occasion without exceeding the revenue earned. During the six months to July 31, 1929, the capital was raised from £1,555,268 to £1,663,487 and gross earnings rose from £64,380 to £76,934. After deducting all expenses and paying the interim dividend the carry forward is £10,874 compared with £1,955 brought in. It appears, however, to be desirable that the company should strengthen its reserves, although this may involve a further reduction in the dividend. On July 31, the market value of the Trust's investments was £87,296 below their book value. It is true that this is covered by reserves amounting to £89,000, including the carry forward, but of these the entrance fees reserve of £38,202 has been accumulated from the premiums paid by the shareholders, and is strictly part of the capital. The reduction of the dividend is, therefore, fully justified, and it is arguable that it did not go far enough.

The new Yugoslav education law, providing for three types of secondary school, namely, classical, scientific, and mixed, has received the Royal assent.

THE HEAVY INDUSTRIES FAIR.

15-Acre Addition to Site.

Exhibitors and trade buyers alike will find important additions to the arrangements for their comfort and convenience at the forthcoming British Industries Fair to take place in Birmingham next February. Among the developments for the 1930 Heavy Section is an entirely new building, now in course of construction, on the north side of the present 11-acre Fair. This will comprise a dining-room specially for exhibitors, another for trade buyers, a large Conference Hall, and a series of private dining-rooms for the use of the numerous trade and professional societies and institutions which have made it their practice for many years to forgather at the Birmingham display. Two spacious passages, each 72 ft. by 40 ft., connecting the new block with the main building, will be arranged and furnished as comfortable lounges for exhibitors and their visitors, the whole occupying over an acre.

The plan of rearrangement now decided upon has the further advantage of solving—for the present, at any rate—the problem of the ever-increasing demands for space made by exhibitors in the engineering, gas, and general hardware sections of the Heavy Fair. It is also so adapted that the manufacturers of building materials, which will be even more than usually a prominent feature next spring, are provided with considerable additions to space. The electricity section, too, whose rapid growth since its inauguration as a comprehensive display, a few years ago, has severely taxed the resources of the management, will share the benefit of the general extension scheme.

Exhibitors at the Heavy Industries Fair, appreciating the progressive policy of the Birmingham Chamber of Commerce (Inc.) in erecting permanent new buildings to the limits of the original site, will be particularly interested in the announcement that negotiations are practically completed for the acquisition of a further 15 acres of land immediately adjoining—an enterprise which will permit of expansions year by year, as circumstances demand, to an aggregate of nearly one-and-a-half times its present immense size.

Stand lettings in Birmingham for 1930 already beat all previous records, nearly the whole of the accommodation, including the year's extensions, having been booked six months in advance of the opening date—February 17. This year, for the first time in Birmingham, in response to requests from overseas and home buyers, an advance catalogue will be issued, giving particulars of the principal new or improved products to be displayed. A minimum of ten thousand free copies will be issued early in December to prospective purchasers of 1930 British-made goods, this being, of course, supplementary to the full classified catalogue in English, French, and Spanish available at the opening of the Fair, giving details of the numerous services extended to trade visitors.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Sewage System.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for Contract No. 1, Giza Main Drainage—rising sealed sewage and air mains. (1) Supplying, laying, jointing and testing approximately 16,300 metres lineal of 30 inches diameter cast-iron pipes (British standard and all accessories at and between the sites of the proposed new Sewage Pumping Station, Giza, and the proposed Sewage Purification Works and Farm in the Western desert, north-west of the village of Abu Rawwash. (2) The supply and laying of approximately 16,300 metres lineal of 0.60 metre gauge light railway, and the construction of masonry and steel bridges over irrigation canals and drains and the formation of an earth embankment across Hod El Esward basin area. (3) Supplying, laying, jointing and testing approximately 15,000 metres lineal of cast-iron sealed sewage and air mains (British standard) varying in diameter from 4 inches to 12 inches, and all accessories at Giza, Roda, and Ghazirah Islands complete with crossing at river bridges and syphons under the River Nile at the opening spans of the Abbas and English Bridges. (4) Supplying special castings, spare parts, and materials at the site of the Giza Pumping Station. November 13.

ROUMANIA.

Copper Wire.—The Roumanian General Post Office invites tenders for the supply of 31,500 kilograms of hard copper wire, 3 mm. diameter. October 18. (D.O.T.)

TURKEY.

Turntables.—The Administration Générale des Chemins de fer et des ports d'Etat invites tenders for the supply of five turntables. October 10. (D.O.T.)

Tin.—The Administration Générale des Chemins de fer et des Ports de l'Etat invites tenders for the supply of 5 tons of tin. October 12. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Glasgow, September 28; Manchester, October 4; Birkenhead, October 5). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Calcutta (Birkenhead, September 30); s.s. Mahratta for Calcutta (Glasgow, September 26; Birkenhead, October 8).

Bibby Line.—S.s. Staffordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 2).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, October 5); s.s. Dumana for Bombay (London, October 12).

Cunard Line.—S.s. Bothnia, closing Glasgow, September 26 for Casablanca, Gibraltar, Corfu, Bari, Venice, Trieste, and Fiume; and also at Gruz if sufficient inducement; closing Liverpool, September 28 and Swansea, October 1 for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Corfu, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, and Gruz, if sufficient inducement; s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement (Glasgow, October 15; Swansea, October 17; and Liverpool, October 16); s.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz if sufficient inducement (Liverpool, October 26; Swansea, October 26).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 5); s.s. Jessmore for Piræus, Syra, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 16).

P. and O. Line.—S.s. Razmak for Bombay (London, October 4); s.s. Nagoya for Calcutta (London, October 11).

Prince Line.—S.s. Soldier Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Limassol, Larnaca, Famagusta, Mersin, and Alexandretta (London, October 2).

Ellerman and Papayanni Lines.—S.s. Egyptian for Gibraltar*, Algiers*, Piræus, Patras, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 28; Swansea, September 28); s.s. Serbino for Malta, Alexandria, Haifa*, and Jaffa* (Glasgow, October 1; Liverpool, October 3); s.s. Oporto for Algiers*, Oran*, Piræus, Patras, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 12; Swansea*, October 12); s.s. Algerian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, October 12; Swansea, October 17). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.
MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

ASSYRIA ...	Sept. 27	CALIFORNIA ...	Oct. 22
BRITANNIA ...	Oct. 11	ELYSIA ...	Nov. 12

*First class passengers only. Specially low fares. †Calls Port Sudan.

‡First and Third class passengers.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

Motors and Motoring.

(By Our Motoring Correspondent)

New Light Goods Chassis.

It will be news to readers to learn that Singer's are entering the commercial vehicle market with a light goods chassis. The firm are one of the biggest and oldest British manufacturers, and the fact that they are now to start to make trade vehicles emphasises what some of us have been thinking for some time, which is that the private car field has now been almost entirely covered; about all the people who are likely to want to own and drive cars are supplied, and the bulk of new sales will be either to replace vehicles worn out or to young people. That may sound blunt, but it is probably quite true. We have talked so loudly about the future being the age for the motor that we have never stopped to consider whether everyone would want to motor in the future. As a matter of fact, quite an army of people do not want to motor to-day and—well, there are hundred of motorists who do not do anything like the amount of annual mileage they did.

Singer's state that the truck turns the scale at 39½ cwt., and so just comes within the two-ton class, and they add that the price of the chassis will be £425. A glance at the specifications shows that the new commercial venture has its full share of refinements hitherto mainly associated with pleasure cars. It has, for instance, Marles type steering, "one-shot" chassis lubrication, servo-operated brakes, and engine self-starter. The right-hand controlled gear-box gives four speeds, with ratios of 6.5, 10.5, 17.9 and 34.8 to 1. An optional fitting is an alternative rear-axle, giving a reduction of 7.25 to one.

The engine is a four cylinder unit, integral with the gear box, and as regards fixing, is bolted to a sub-frame at six points, which is bolted to the chassis at three points. This makes a thoroughly rigid job, and no trouble is likely to ensue at any time through engine fixing. The cylinder dimensions are 90 mm. bore by 120 mm. stroke, the cubic capacity of each cylinder being 3.053 c.c. The valves are overhead, operated by push

rod, and the cylinder head, which is detachable, is of the turbulent type. I am informed that at a speed of 3,000 r.p.m. the engine will develop nearly 60 brake horse-power. Further dimensions are as follows:—Track, 4 ft. 11 in.; wheel base, 11 ft. 1½ in.; body length, 9 ft. 1½ in.; body width, 5 ft. 8 in.; and floor space, 52 sq. ft.

The new Singer industrial chassis has evidently been designed on sound lines throughout, with a view to a maximum of speed, efficiency, convenience, and economy in running at a minimum of expense. It has certainly been built to satisfy all modern requirements, and must be regarded as a very fine production. At the price mentioned for chassis, with full equipment, it evidently means to compete against the cheaper Continental and American productions. I understand that Singer's have also on the market a very handsome 20-seater, low loaded saloon. The engine capacity and general details of the chassis are the same as those given above for the light commercial vehicle.

By the way, I omitted to mention that the lubrication is forced to all bearings, including the overhead valve gear. This result is achieved without a single pipe, and consequently there is no danger of internal breakage in the oil circulating system. The oil passes through two filters of which one is a suction filter in the sump and the other an "Auto-Klean" filter which removes every particle of dirt and carbon, no matter how small, and which can be cleaned without trouble and in a fraction of a moment, by merely turning a handle.

The chassis equipment includes: Front wings and step-board; instrument board with speedometer, lighting and starting switches, oil pressure gauge, petrol gauge, ammeter, ignition switch, and dash lamp; 12 volt lighting and starting set complete with side lamps, tail lamp, and head lamps, electric horn operated from steering column; spare wheel with pneumatic tyre; kit of tools; number plates.

Lubrication to all points of the chassis, with the exception of the main units, is provided for by the Luvax central foot-operated lubrication system, which not only prolongs the life of the moving parts, such as the shackles, steering joints, etc., but saves the time which the operator would normally have to spend with a grease gun. I may add that the chassis is designed to carry a gross load of 48 cwt. With a lorry body of approximately 8 cwt. weight, net loads of two tons can be handled.

A New Rolls-Royce Model.

Rolls-Royce, Ltd., announce that they are bringing out a new model, and I have just received particulars of the "Phantom Two." Lest there should be any misunderstanding, I would say that the "II." does not refer to horse-power. When I told a friend that the Rolls people were bringing out a "Phantom II.," he said, at once: "Why, that's smaller than the Austin Seven!" Well, it isn't.

Actually it is of the 40/50 h.p. rating, and I understand that the original chassis of this type was that "Silver Ghost" which I remember writing about so many years ago. Then, in 1925, we had the Phantom, and now we have its successor. Like the very first Phantom, it is fitted with a six-cylinder engine with a bore of 4½ inches and a stroke of 5½ inches, which gives a total cylinder volume of 7.668 cubic inches. The R.A.C. rating is 43.3 h.p., and the annual tax £44.

A number of new features have been introduced, and before going on to specify these I may say that the joint effect has been to provide a car of reduced height and a lower centre of gravity, improved appearance, greatly

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.
The Bank transacts every description of banking operations.

improved suspension at all speeds, steering control giving greater selectivity, greater ease of operation of steering control, lighter weight, and increased acceleration and maximum speed. The method of lubrication has also been improved, giving less trouble and taking up less time, and in practically every detail of the chassis there is what the firm call "greater refinement."

Most readers will recollect the chassis and other particulars of the present model Rolls-Royce, and the prices of the new long and short chassis models are the same as those asked for "Phantom." The price for "Phantom II." include the same equipment as given with the Phantom chassis, and, in addition, an instrument board, speedometer, clock, spare tyre for the spare wheel and locks to the bonnet. The engine and gear box are unit construction, which means that they are made in one piece, instead of being separate units; the springing is semi-elliptic on the rear wheels instead of being cantilever, although, candidly, I do not know what the firm have achieved by the change; the springing of the front wheels is still semi-elliptic as in the earlier model, and there is forced lubrication to the leaf springs, which is all to the good. The chassis used to be lubricated by an oil gun to each part, but the new model has a centralised system, the body is mounted on a separate sub-frame, thus eliminating all body distortion, and a larger diameter steering-wheel, having a slightly thinner rim, has been fitted. Other changes include an open propellor shaft of lighter construction, an autovac petrol feed with engine-driven vacuum pump; a water-heated induction system, and the petrol gauge is on the instrument board instead of on the tank.

POOR OUTLOOK FOR SMYRNA FRUIT CROPS.

In their report for the week ended September 7 Messrs. C. J. Giraud and Co., of Smyrna, describe the "unprecedented" weather conditions in the fruit belt, and express grave apprehensions as to the effect on the sultana and fig crops. The report states:—

Sultanas.

The sales this week amount to 6,130 tons. Approximate closing prices, Smyrna, c.i.f. U.K.:—Type 12, 29s. to 33s.; type 13, 35s. to 38s.; type 14, 38s. to 42s.; type 15, 44s. to 51s.; type 16, 56s. to 63s.; type 17, 65s. to 80s. It is impossible to give true valuations of closing prices. To-day's sales exceed 1,000 tons and prices paid for each quality varied between above limits. The higher levels were mainly paid in the afternoon.

Prices opened this week at the lowest point touched this season. Rain commenced falling on Monday and has been continuous, with short intervals of sunshine, throughout the week. The damage to the crop increases with each successive day's rain, and has attained the proportions of an unprecedented disaster. The position, approximately as it stands to-day, is as follows:—Sales to date, 13,500 tons; estimated unsold stock of sound fruit in the interior and in dealers' hands, 12,000 tons; estimated quantity exposed on the drying sheds, 20,000 tons; uncut fruit on the vines, 17,000 tons; total, 62,500 tons.

Rains continue, and the apprehensions entertained that whatever fruit remained on the vines would be entirely lost threaten to become an accomplished fact. Furthermore, a heavy proportion of fruit exposed on the drying

sheds, which, it was reckoned, would be only damaged in quality, is also rotting and being lost. Market values since Monday have followed a very irregular course, and, as explained above, it is difficult if not impossible to compute closing prices accurately. The general trend of values continues upward.

Figs.

The estimated arrivals at the Smyrna market since the opening of the season amount to 4,711 tons, and the sales to date are estimated at 4,531 tons.

The abnormal weather we have had over the raisin and fig belt during the past week is threatening an unprecedented disaster to these fruits. In the case of figs, the crop has been very late in maturing, and the bulk of the yield was still on the trees when rain commenced falling six days ago. The first two days' rain was of minor consequence, but the successive downpours have converted the whole fig belt into a mud field practically submerged by water.

Up to date arrivals have been of relatively sound fruit, and the total stock on the market has been absorbed at progressively advancing rates. Henceforward, all arrivals will be of unsound fruit, damaged by rain, fermented or liable to fermentation, and the best of these figs will be unsuitable for packing purposes. Packing houses are closing down for an indefinite period, and will only reopen dependent on the quality of the figs that may be available after an interval of a week or ten days of dry weather. Conditions such as have obtained over the past week are unprecedented in the memory of living man, and it would be an idle forecast to advance an opinion on the resulting consequences to the figs which may remain on the trees after rain has passed off and the ground has dried up.

ECONOMIC CONDITIONS IN ROUMANIA.

Messrs. Watson and Youell report as follows from Galatz for the week ended September 14:—

Grain.—Grain markets abroad continued to fall during the greater part of the week, and local prices, in face of the large daily arrivals of grain at shipping ports, declined almost to a parity with those ruling on consuming markets. This favoured negotiations in respect of fresh sales and at the same time facilitated shippers in the fulfilment of their old engagements. An improvement in wheat having set in on Thursday, a fair quantity of this commodity was sold, mostly for Antwerp. The position in the freight market somewhat improved this week, partly as a result of the amount of prompt tonnage having rather unexpectedly run short of the demand. Several steamers have been chartered for end September/beginning October loading, as well as for later positions, at rates varying between 17s. 6d. and 18s. 3d. Antwerp/Rotterdam, and 18s. to 18s. 9d. Antwerp/Hamburg range, full terms. Local berth rates for these destinations were from 15s. 6d. to 16s. net. As regards Constantza, steamers have been experiencing a certain difficulty, and some delay, in completing, owing to rather quieter conditions in that market.

Timber.—Business is still in a state of comparative stagnation, and the demand for freight is limited, but as suitable tonnage for the Near Eastern and Mediterranean timber trade is scanty, rates of freight have been maintained at about the same levels as those reported recently. For Alexandria £8 per waggon is quoted, whilst for Syria £8 10s./£8 15s. is indicated. Other rates are £7 5s./

STEAM & HYDRAULIC ENGINE PACKING MANUFACTURERS

FLAX, ASBESTOS AND COTTON,
AND ALL ENGINE ROOM STORES.

ATTWATER & SONS,

Hepwood St. Mills, Preston. Tel. Add.: "Attwater, Preston"

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syria, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila.

For Rates of Freight, Insurance and other information apply to:

JOHNSTON LINE, LTD., 6 Billiter Street, London,

88, Cross Street, Manchester.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool.

£7 10s. for Greece, £10 5s. for Sicily, and £11 for South France and North Africa.

Weather and Crops.—The approach of autumn has announced itself by a decided fall in the temperature which has been more pronounced at nights, the days having been still warm, except occasionally when the sky was overcast. Since last week-end, the weather has been generally fine and dry, only a few light local showers having been reported from the south-eastern part of the country, and it has been favourable for the early ripening of the maize, some of which is already being gathered. Consequently there are prospects of an unusually large area being ploughed in good time to be available for autumn sowings, so as to allow the young plants to become well established before being subjected to severe winter frosts, such as caused so much damage to late sowings last season.

Sulina.—Bar depth 23 feet, passage 22 feet.—On Monday, September 9, a fall of 6 inches (from 23 ft. 6 in. to 23 ft.) was reported, and rough weather prevented a prompt improvement. It is expected, however, that, with better weather, the three dredgers available will be able to restore the depth to 24 feet, although the river continues to carry a large quantity of alluvium.

Constantza.—Grain arrivals this week amounted to about 14,000 tons, and about the same quantity was shipped for Antwerp/Rotterdam/Hamburg. Six steamers, totalling about 30,000 tons, are available, or expected, to load for Hamburg, Weser, Hull, etc.

Petroleum.—Thirteen vessels loaded over 42,000 tons of petroleum products, and four took oil fuel for bunkers.

Bulgarian Report.

Bourgas, September 7.—There is no change to report in the situation: For immediate shipment only insignificant quantities of grain are available, but there are hopes that larger arrivals of barley and sunflower seed will come forward for the end of this month.

Weather and Crops.—There were good rains in most parts of the country, but in the Varna and Bourgas districts only very light showers.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended September 18:—

Egyptian Futures.

Sakel Contract.—We have had a series of quiet and somewhat featureless markets during the past week, and with both trade and speculative interests adopting a watching policy for the time being values here have been governed mainly by the action of Alexandria, and, in a lesser degree, the American departments. Very little alteration in the level took place during the sessions up to the week-end, and the trading during that period calls for little comment. On Monday, values broke 40 points sharply on a moderate amount of liquidation, due, in the first place, to weakness in New York, and subsequently to poor reports from Alexandria. However, there has since been no sustained pressure; in fact, under the encouragement of somewhat improved trade support and firmer overseas advices, part of the earlier losses have been recovered, to-night's close being 34 to 37 points lower for near and 37 to 39 points for more distant positions on the week. No fresh crop news has come to hand, and, judging from the course of values in Egypt, we are passing through the period when the majority of the various interests are awaiting developments. Markets at present are meeting little pressure, as it is yet rather early for hedging operations, and whilst the trade off-take is disappointing, and the Sakel premium over other cotton seemingly excessive, there is little inclination on the part of those who hold a

"bearish" view of the outlook to pursue an active policy. Liverpool/Alexandria differences show practically no alteration on the week, but once the crop starts to move we look for some closing in to take place; local near positions have again met more support than later deliveries, with the result that November/January have narrowed to 7 points. Whilst there appears a healthier undercurrent in trade circles, business in fine cottons is slow in developing and spinners' bookings for new crop qualities are abnormally small for this period of the season. At the moment there is nothing in the situation to warrant the adoption of a very decided view; certainly we would not advise working on the "short" side between now and the end of the month.

Upper Contract.—A series of quiet markets have been experienced during the past week, and with Alexandria reports beginning to show an increasing crop movement, the undertone has rather inclined to the heavy side. Local spinners have been consistent buyers out of the local stock, and the resultant repurchasing of hedges has helped to widen slightly our premium over the Alexandria contract. Competitive outsiders, especially Brazils and East Africans, are offered at a cheap basis and are attracting business that otherwise would be transacted in the shorter Egyptian varieties. New crop offers are not finding much business, and the weight of the crop movement may force values lower unless the American markets begin to develop an advancing tendency.

Egyptian Spot.

A better tone has been noticeable during the past week and confidence amongst traders appears to be slowly returning. The demand for spot cotton has shown signs of broadening, and in certain qualities, notably Good Fair Upper, quite a good business has taken place on several occasions. Quotations have remained very steady and the basis for both Sakel and Upper has hardened.

Sakel has been in fair request and the daily inquiry continues to expand slowly. The local selection is of a moderate character, and this fact has hampered would-be buyers.

Uppers.—A good business has taken place in the medium qualities and the local stock is being thoroughly sifted. Alexandria is at present apparently unable to meet spinners' requirements, with the result that business which would normally go there has been transferred temporarily to this market. The better qualities are still slow in attracting attention.

Pilion has been in fair request up to 200 on November Upper, but purchases have been restricted as regards quantity.

Nahda and White.—Little attention has been paid to these two growths this week.

Maarad.—More business has taken place at firm rates.

Sudan Sakel has been in fair request at steady rates.

Tokar Sakel.—One or two inquiries have cropped up, but sales are difficult to trace, and there is, as yet, no enthusiasm evinced for this cotton. C.i.f. business has again been more lively, and some interest has been shown this week in new crops. Forwardings to the trade last week were returned as 3,878 bales Egyptians and 1,284 bales Sudan. Estimated spot sales, 3,800 bales Egyptians and 550 bales Sudans. Quotations of Sakel have eased 5 to 15 points, whilst those of Upper and Pilion show no change on the week. F.G.F. Sakel to-day, 17.45d. F.G.F. Upper to-day, 11.69d. F.G.F. Pilion to-day, 12.75d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended September 12:—Since our last report the futures market has been exceptionally active, but the tendency has been irregular. The week's summary of price movements is as follows:—Sakel-aridis: November, 33.80 dollars, 0.12 dollars down; January, 34.16 dollars, 0.12 dollars down; March, 34.60 dollars, 0.12 dollars down; May, 34.95 dollars, 0.12 dollars down. Ashmouni: October, 21.37 dollars, 0.45 dollars down; December, 21.71 dollars, 0.51 dollars down; February, 22.22 dollars, 0.45 dollars down; April, 22.62 dollars, 0.33 dollars down; June, 22.95 dollars, 0.48 dollars down.

Junkers Company has started a bi-weekly aeroplane service between Teheran and Baghdad.

Following the practice of the last three years, an advance edition of the catalogue of the London section of the British Industries Fair is being prepared with a classified index to goods in nine languages. It will be ready on December 31, in time for it to be in the hands of most overseas buyers before they leave their homes for the Fair, which is to be held simultaneously in London and Birmingham from February 17 to 28. This advance edition will run to 11,000 copies.

MICA AND ALL ELECTRICAL INSULATING MATERIALS.

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following cable from their Cairo office:—The Statistical Department of the Ministry of Finance announces that the total imports for Egypt for the month ended August 31 are £E4,613,852, against £E3,897,586 for the corresponding month last year, and exports £E2,803,700, against £E3,300,767 for August, 1928. Cotton exports amounted to £E2,309,553, against £E2,763,585 last year.

Notes of the Week.

The Position in Egypt.

In spite of audiences and interviews the situation in Egypt in regard to the proposed Anglo-Egyptian treaty shows so far no signs of becoming clarified. Nahas Pasha has seen both King Fuad and Sir Percy Loraine, British High Commissioner, and it must be supposed that he has seized these opportunities to state the reasons which have determined the attitude of the Wafd towards the proposals for a settlement of the relations between Egypt and Great Britain. It might be well if the Wafd were to issue an official statement setting forth in detail those reasons, in order that they could be appraised at their real worth both in Egypt and in Great Britain. As far as it has been possible to gauge the Wafd's attitude from the unofficial but stereotyped statements of its organs and spokesmen—both more concerned to denounce Mahmoud Pasha than to throw light on the Wafd's mentality—the only line of argument that the leaders have allowed the members to adopt is that Egypt can be independent only under constitutional government, and that independence under a Dictatorship entails a contradiction in terms. Whether Nahas Pasha made himself responsible for this curious reasoning we have no means of knowing; but, if he sponsored it before King Fuad and Sir Percy Loraine, the subsequent statement that the situation in Egypt remained unchanged after the two meetings would be explained. The independence of a nation has, clearly, nothing to do with the form of internal administration that it decides to adopt; otherwise no country would have been independent before the era of constitutionalism. Neither Italy nor Turkey would admit that its independence has suffered from the establishment of an all-powerful dictatorship. On the other hand, it is not difficult to understand the dilemma in which the Wafd finds itself, for it shrewdly realises that the conclusion of an Anglo-Egyptian treaty negotiated by Mahmoud Pasha might well render its own return to power, after a more prolonged stay in the political wilderness, still more problematical. Its attempt to use Great Britain's interest in an Anglo-Egyptian settlement to secure the downfall of Mahmoud Pasha's Government would seem to be a tribute to the strong position of the latter as far as the Egyptian public is concerned. If the Wafd occupied in Egypt the position that it claims, it would press for the immediate ratification of an Anglo-Egyptian treaty on the lines proposed and would

then leave it to the intelligence of the people to restore the popular idols to power. With the conclusion of the treaty, however, the Wafd's hold on the electorate must be weakened, for it has no constructive policy to offer in the place of the slogan "Out with the British," and during the last fifteen months the country has learned to appreciate the advantage of efficient government and freedom from an excess of politics.

Treaty v. Good Government.

It is a matter for sincere regret that, all unintentionally, the British Government should have rendered such a signal disservice to Egypt as this offer of a treaty has proved to be. For, whatever opinion may be held regarding the sanctity of constitutional government, there can be no doubt that Mahmoud Pasha's Government has set the country a good example of honest and energetic administration and that it was gradually establishing new standards of honesty and efficiency for all grades of the Egyptian Civil Service. The staunchest supporter of the Wafd would be compelled to admit that hitherto the Wafdists have given no thought to efficiency of administration. Their organisation existed for the definite purpose of countering British influence, and to this end sound administration had to be subordinated to Party exigencies. Wafdist members of Parliament were encouraged to override the civil service where necessary; official posts were filled in virtue of party considerations rather than by merit. The end was held to justify the means, and presumably the Wafd still has the courage of its convictions and would be prepared to maintain that it was rendering a greater service to Egypt than the most efficient Administration which tolerated the British presence in Egypt. Outside Egypt, however, no one will be found to support this view, and there must be many Egyptians, Wafdist as well as non-Wafdist, who appreciate its fallacy. One effect of the thrusting of a treaty by Great Britain on Egypt has been, it is to be feared, to paralyse the efficiency movement in the Egyptian Civil Service, at least in the lower grades. For seven or eight years Egyptian officialdom was taught to take its cue from politicians; for a little more than a year it has been trained to set an example to the country of single-minded loyalty to State interests alone. To-day it suddenly sees a prospect of an early reintroduction of the old system, and it would

require exceptional courage for any subordinate official not to step back into the old ways. If the British Government had realised that it would have to choose between an Anglo-Egyptian treaty on the one hand and the efficiency of the Egyptian administration on the other, there can be little doubt that it would not have pressed the former on the country with the conviction that it was necessarily doing Egypt a good turn.

The Second Pirot Conference.

Negotiations between Yugoslavia and Bulgaria have been resumed at Pirot, and after a few sittings agreement was reached on the subjects of frontier traffic and the regulation of police measures on both sides of the frontier. The conference has now to deal with the difficult problem of properties across the frontier belonging either to Yugoslav subjects or to Bulgarians. The Yugoslav Government is anxious to enforce compulsory expropriation, with compensation; but the Bulgarian Government, although willing to agree to voluntary sale, cannot bring itself to acquiesce in compulsory sales. A further demand on the part of Yugoslavia is that a strip of territory five kilometres wide on each side of the frontier should be declared a neutral or "dead" zone, to which only actual property-holders in the zone and officials should be allowed access. To this suggestion the Bulgarian Government opposes an emphatic refusal, on the ground of the distress that such a scheme would entail, and because instead of making for peace it would create additional bitterness and unrest. The Bulgarians would like to see further steps left in abeyance until there has been time to have the two agreements already reached carried into practice with complete good will on both sides and in friendly co-operation, in the belief that these measures of themselves will go a long way towards the establishment of satisfactory conditions on the frontier.

Petty Bickerings.

It is significant of the difficulty of the problem that at the first sign of the two countries coming to an understanding fresh outrages are reported. A bomb explosion is heard on the Kotchani-Shtip railway, and an unexploded bomb is found still in position on the line. Footprints are discovered leading to the frontier "two kilometres away," and the wrath of the Yugoslav Press is again set in motion against Bulgaria. The Bulgarian Press points out that the village where the incident is said to have occurred is forty kilometres from the frontier, and discovers, as a much more serious matter, that Yugoslav aeroplanes are flying over Bulgarian territory. This charge is repudiated by Yugoslavia, and the explanation is given that a single aeroplane lost its way flying from Pirot, and immediately it found itself over Bulgarian territory returned to Yugoslavia. Neither party seems to realise that neighbourly relations require that mountains should not be made out of molehills. The Bulgarian Government and people are not to be regarded as responsible for a bomb explosion on a Yugoslav railway, whether two or forty kilometres from the frontier, any more than the flight of a single aeroplane, that has lost its way, over Bulgarian territory needs to be exaggerated into a grave violation of territory by Yugoslav aeroplanes. Until, however, each country can bring itself to pass over in silence certain things that cannot be helped by either, Yugoslav-Bulgarian relations are likely to remain troubled.

Sport in Turkey.

The fiat has gone forth from Angora that a higher standard in the world of sport must be reached by Turkey. The present state of sport in the country, according to a statement of the President of the Grand National Assembly, in no way corresponds with the ideals that the Government has set itself. These embody "a robust youth, conscious of its duty, and a strong army of sportsmen." Apparently, little has been done so far to reach this goal. The country, Kiazim Pasha declares, has failed to understand that sport constitutes the most effective

weapon to ensure the defence of a society, of a nation, of a State. The Government wants "all the children and all citizens to excel in sports." The General Staff of the Army had issued an order that everyone engaged in sport could have the benefit of the military organisation of the country, and was to be encouraged to take up riding. No one, it would seem had taken advantage of this generous offer, and the Government was tired of extracting subsidies for sport "from its meagre Budgets, at the expense of its defensive armaments" for the poor results that had so far been attained. What had happened, indeed, was that sport in Turkey had given rise to "disastrous propaganda prejudicial to the country." The reference seemed to include incidents at the last Olympiad, and possibly occasional football matches (some time ago now) in Constantinople that ended in free fights. The upshot of the matter was that the Government intended to interest itself in the organisation of sport, to see that it was properly taken up throughout the country. Turkey would be divided into sport areas; there would be championships held at Angora, and the different areas would have to send representatives to these meetings. Kiazim Pasha did not definitely say that the Government would expect all the competitors in each event to participate in a dead heat, but he left it to be inferred that Turkey did not propose to breed the "also ran" type of "sportsman."

The Situation in Palestine.

It is quite obvious that for some time to come the situation in Palestine will cause anxiety, for the general verdict of independent observers is that relations between Arabs and Jews are so strained that, without the presence of troops, another outbreak would be probable. Minor incidents, or isolated cases of murder and of looting, still occur; the Arab boycott of Jewish goods is still effective; and there is an ugly feeling of resentment all round. In particular, the Jewish Day of Atonement, which falls on October 14, is being awaited with anxiety. It is in such an atmosphere of ill-will and suspicion that the Commission of Inquiry, which leaves England about the middle of this month, will have to pursue its labours. Already disappointment has been expressed on both the Arab and the Jewish side that the terms of reference for this Commission do not include questions of major policy, but at least this can be said: that major policy, as an immediate cause of the disturbances, is not absolutely excluded from the conceivable subjects to be touched on by the Commission. Presumably the Commission will be sitting in Palestine, at such centres as Jerusalem, Jaffa, and Safed, for something like two months, and its actual report might perhaps be expected in the spring. The best that can be hoped is that, in the interval, feelings will so have quietened down that its findings will be accepted with good grace. One thing is certain: that it will preserve a perfectly impartial attitude. Its members are men of intelligence and of common sense, and their Report will at least be the result of independent observation and thinking. But certain things will have to be done, before their recommendations are published, on such urgent matters as the Wailing Wall. If the Commission on the Holy Places of Jerusalem, which was originally provided for, is unable to assemble, could there not be appointed a special Commission for determining this knotty problem of the Wailing Wall, which in our view was most immediately the cause of these disturbances in Palestine?

What is the Solution?

Now "workability" is the only criterion by which any proffered solution for this Palestinian problem may be judged. It is easy, in theory, to defend either the Arab point of view or the Jewish point of view: it is easy, also, to point out the contradiction between the apparent British promises to either side. But theoretical paradoxes are not always actual paradoxes: oxymorons are not unknown to politics. It has been the duty of British officials in Palestine to attempt to reconcile two

seemingly irreconcilable policies. They had no cut and dried formula by which that aim might be achieved, but held on, hoping that a workable policy might evolve. Their mistake, or rather, the British Government's mistake, lay in supposing that the peaceful record of Palestine from 1921 to 1929 implied that a workable policy had been found; and it is at any rate a tenable opinion that but for the Jewish claims made on the last Day of Atonement at the Wailing Wall, and the consequent steps by the Muslims to safeguard their rights in this region, peace would yet have been maintained in the Holy Land. Administratively speaking, that would indeed appear to have been so. But the milk has been spilt; most of it, indeed, has now turned sour. Whatever the explanation of those disturbances, it is perfectly plain that advantage has been taken of them to revive old claims, or to formulate new ones. We in this country may take it for granted that neither the claim of the Arabs to self-government nor the claim of the Jews to an advance upon the Churchill Memorandum of 1922 will be granted, but the Commission of Inquiry will, we imagine, find abundant evidence that this opinion is not yet shared widely in Palestine. The solution upon which the British Government would seem to have resolved is, then, not one involving a change of policy but possibly one involving a change in administrative methods. The instructive feature of the situation will be to see how great a force is required to secure effective administration.

Troubles in Najd.

It is not necessary to accept at their face value all the reports which have recently been spread concerning fighting in Najd to understand that King Ibn Saoud is at the moment very seriously exercised how to maintain order in the eastern section of his Kingdom. The Mutair, under Faisal al Duwish, who, incidentally, is certainly having more than his fair share of the lives even of the ordinary Arab shaikh to whom death in the journalistic sense comes often, the Ajman, and a section of the all-important Ataibah, are not now accepting the Wahhabi King's fiat, and the problem before King Ibn Saoud is how to compel them to obey his commands without losing them altogether to his cause. Quite obviously he cannot crush them, for he has no regular army in the normal sense of the word. Had he a small, mechanised force, a few aeroplanes, armed cars, and the rest of it, the crushing of such a force as that which Faisal al Duwish is able to muster might not be so difficult an affair. But King Ibn Saoud can bring against the rebels only tribesmen equipped in a similar manner: the dangers, moreover, of using to conquer al Duwish and his friends such a force as the Shammar, who have had but eight years of the blessings of Wahhabi administration and to whom even now the restoration of the Rashid régime might not be utterly distasteful, will certainly not be lost on so perspicacious an Arab chieftain as is King Ibn Saoud. It is particularly interesting, therefore, to note the report that some ex-R.A.F. officers are shortly to go out to the Hijaz to assist the Wahhabi King in the training of an Air Force. This force, obviously, will be used primarily for maintaining law and order within his wide-flung dominions, and, if the report is accurate, it may be that King Ibn Saoud has chosen the psychological moment for securing means whereby to re-establish his authority. It is no secret that recent developments in Najd have given rise to anxiety on the duration of King Ibn Saoud's régime, and elsewhere in this issue we give details of actions between tribes loyal to King Ibn Saoud and the rebels. But if the King can counter the rebels' activities with means of punishment swifter than the camel, peace may yet reign again in the Dual Monarchy of the Hijaz and Najd. No general action against them, however, is to be expected before the rains start in November. But the economic aspect of the problem in Najd should never be forgotten, and unless compensations can be supplied for the suppression of the *ghazzu*, which is not only a sport but has been hitherto also a necessity, the indigent

Badawin will always be tempted to kick against the pricks. More light is urgently needed upon the progress made in the agricultural settlements established in the desert by King Ibn Saoud; so far they would seem to have been inadequate to their purpose.

INDIAN NOTES.

The Simla Session.

On account both of the period of the year at which it falls and the long and uncomfortable journey which attendance involves, the brief Simla session of the Central Legislature is unpopular with the provincial members—official and non-official. In consequence it is generally most sparsely attended and usually devoid of outstanding incident. The session which has just closed—the Legislative Assembly was prorogued last week and the Council of State yesterday—has, however, been noteworthy for at least one event of exceptional interest and importance. This was, of course, the passage through both Houses of the Hindu Child Marriage Bill. The Select Committee's report on the Bill, it may be recalled, was presented early in the last Delhi session, when further consideration was postponed pending the publication of the recommendations of the Age of Consent Committee. The appalling conditions brought to light in the report of the latter body have already been the subject of comment in these columns. Little surprise was therefore created when in the adjourned debate on the second reading the Home Member announced that the Government, which has hitherto adopted a strictly neutral attitude, supported the measure which, as amended by the Select Committee, raises the minimum age at marriage to fourteen and the age of consent to sixteen years, respectively. The difficult position of the Government, to whose help, notwithstanding, in reaching the present compromise many notable tributes were paid, is shown by the attitude of the Muslim members who walked out of the House in protest when it was apparent that the Bill would be passed by a large majority. The following day a deputation of their number, headed by the Deputy President of the Assembly, actually waited on the Viceroy to urge him to withhold his assent to the Bill on the time-honoured ground that it is an unjustifiable interference with the observance of their personal laws and religious convictions. While Lord Goschen has promised to consider carefully the points raised by the deputation, there can be little doubt what his reply will be, the more so as the Bill has since been passed without amendment by the Council of State and accordingly only awaits his consent before being placed on the Statute Book.

ROUMANIA AT WORK.

No impartial observer can fail to be struck by the grim determination with which the present Roumanian Government is facing the task of rehabilitating the country, both in the moral and in the economic sphere. There can be no question that until the change of Administration towards the end of last year Roumania was steadily losing ground in the onward march of European countries; her economic position was deteriorating, and foreign confidence had been undermined by the internal conditions of the country, as well as by a policy that seemed unable to draw any line between the legitimate promotion of Roumanian interests and indiscriminate hostility to everything foreign. The problem, therefore, before the Maniu Cabinet was the more difficult, because, whereas rehabilitation was dependent upon an improvement in domestic affairs and a restoration abroad of confidence in Roumania, each of these in turn seemed dependent upon the previous achievement of the other. Concentration upon one or the other was thus impossible, and the Government has had to make what tentative advances it can in each direction, trusting to its ability to inspire confidence both at home and abroad by the obvious honesty of its intentions, and in this way to gain more time for carrying through a task which the passing of the days for a long period showed no sign of lightening. The foreign policy of former Governments had almost entirely checked the flow of foreign capital into Roumania. An essential preliminary to enable the flow to be resumed was the stabilisation of the currency. The latter, however, was useless without the restoration of budgetary equilibrium, and it was found that the Budget which the Government had taken over from its predecessors would show a serious deficit. This had to be removed at all costs, and there was no alternative to increased taxation and a general tightening up of the whole fiscal machinery of the State. Accordingly, a Government which had acquired power largely on the confidence that the nation held in its capacity to improve conditions in the country, among other ways by the remission of taxation, found itself obliged to adopt the unpopular course of adding to the people's burdens. The novelty, however, of a Government manifestly legislating for the interests of the country as a whole and not for the benefit of a party has helped the Maniu Cabinet so far to retain the loyal co-operation of the great mass of the Roumanian people. Although compelled to revise radically the economic policy of the country, the Government has shown that it is not actuated by any unreasoning hostility to the measures introduced by its political opponents, and has exercised a wise discrimination in its reforms. Thus, while the interests of agriculture are no longer being neglected, the claims of industries that were artificially created or unduly fostered by previous Governments for the personal advantage of their supporters have been considered from the point of view of a national asset, and established industrial interests have not been overlooked in the framing of the new Customs tariff.

Both morally and technically the economic policy of the Maniu Government has shown itself to be an improvement on that of its predecessors; but a considerable time may be required for its full advantages to be felt by the country. The peoples of South-Eastern Europe are even less endowed than others with the temperament that patiently accords an exhaustive trial to political experiments of which the immediate advantages are not apparent. For the present, therefore, the main consideration in regard to Roumania is whether the large majority of the people who rallied to the support of the National-Peasant Party at the last General Election will show sufficient political steadiness to give the Maniu Government time to complete the structure the foundations of which it is laying so carefully. No concern for the country's interests tempers the hostility of the Liberals, the viciousness of which is reflected in the Party's organ to an increasing degree as the days pass; but it may be inferred that Liberal exasperation grows with the fading of the hope, confidently formed a year ago, that a National-Peasant Cabinet was doomed to an early collapse. A favourable harvest has come to the help of the Government at an opportune moment. Its effect will be seen not only in the State coffers, but also, it may be expected, in the restoration of public confidence, which has been sorely tried under the severe economic crisis that has prevailed throughout the year.

Neither the country nor the Government, however, can yet regard itself as out of the wood. The economic crisis has been too severe to allow for the recovery to be otherwise than slow. An abundant harvest finds the world's prices for grain low and a consequent difficulty in obtaining markets. Roumania has her own troubles in regard to the movement of crops, owing to the shortage of rolling stock on her railways and to credit stringency. To meet the latter the Government has raised a short-term loan abroad, but the re-conditioning of the railways must necessarily be a gradual process. There has, however, been sufficient improvement of late in this respect to make it possible that the storage of grain may prove to be a greater immediate problem than the transport of the crops to the ports. Sooner or later the countries of South-Eastern Europe will realise that the days when the world markets waited expectantly for their surplus grain have passed, and that in bumper years the disposal of their crops in the face of world competition will call for something in the nature of scientific organisation. The first move in this direction, it will be noted, has been made by Hungary. This subject is only one aspect of the big economic problem that confronts the States of South-Eastern Europe and demands their serious consideration and co-operation in the place of mutual bickerings. In most of the countries one political party at least is to be found which has begun to appreciate the necessity for devoting to economic subjects some of the time and energy hitherto wasted on party politics. The Roumanian Government, as a result of its overwhelming majority in the Chamber, has been able to avoid the barren political discussion that under previous Cabinets occupied the greater part of every session and has encouraged the Deputies to concentrate their attention on urgent economic questions. It will need, however, to press home this policy for a considerable period, as far as can be judged from the attitude of the Liberal Party, before the whole Roumanian people resolves to establish it as a national tradition. For this reason among others the fate of the Maniu Government has an interest outside the boundaries of Roumania. There are signs that the peoples of South-Eastern Europe are wearying of conditions that have been crystallised in the term of reproach "Balkanisation" and would welcome a lead to a better and more profitable state of affairs. So far, however, no country has shown itself able to put its own house sufficiently in order to aspire to the leadership of the Peninsula, and no political leader has proved strong enough or endowed with the requisite statesmanship to take any practical steps towards the goal of the realisation of Balkan unity.

'The Near and Middle East

From Our Own Correspondents.

TURKEY.

Constantinople, September 19.

Bench versus Press.

Hikmet Bey, the Turkish Magistrate to whom it fell to try Kadrie Hanoum on a charge of conspiring with others to do grievous bodily harm to the President of the Republic, has instituted proceedings for libel against the Editor of the *Assyr* ("Century"), a daily paper published in Smyrna.

It will be recalled, in this connexion, that Kadrie Hanoum was acquitted on all counts of the Public Prosecutor's indictment after being twice tried by successive Judges. The libel action came on for hearing yesterday before the Second Criminal Court of Stamboul, Hikmet Bey claiming damages in the sum of £10,000 Turkish liras (£1,000).

The Editor of the *Assyr* who was responsible for penning the leader which Hikmet Bey considers incriminating and calculated to impugn his personal honour, rejected the competency of the Court to try the issue on the ground that the *Assyr* is published in Smyrna, which lies outside of the jurisdiction of the Criminal Court of Stamboul. The Tribunal, curiously enough, upheld this view, despite the fact that complimentary copies of the *Assyr* containing the libel complained of had been freely circulated in Constantinople. Hikmet Bey thus found himself non-suited.

In a subsequent interview with a Press reporter, the Magistrate declared his resolute intention of carrying matters further by lodging an appeal against the decision delivered by the Criminal Court.

Executive versus Press.

Six Turkish newspaper Editors, among them those of the *Milliyet* ("National") and *Ikdam* ("Perseverance") also appeared in Court yesterday to answer a charge of wilfully publishing gross misstatements, calculated to disturb public order, in respect of an impeachment for corruption and malfeasance which the Turkish Treasury are bringing against certain highly placed persons, and this while the matter is still *sub judice*.

The line of defence taken up by Emin Bey, Counsel for another Emin Bey, Editor of the *Vakkı* ("Times") was based on the fact that, as the Criminal Court had not yet pronounced judgment on the charges of corruption and malfeasance, it was obviously impossible for the Tribunal before which his mandatory had been subpoenaed, to decide whether the incriminating newspaper articles did in effect represent gross misstatements of the facts. The President of the Court found that, to say the least of it, the Press articles complained of were certainly calculated to cast suspicion on a number of innocent persons, and that the prosecution must, therefore, be proceeded with.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

As the Editors of the *Son Sa'at* ("Latest Hour"), the *Jumhouriet* ("Republic") and *Vakkı* had failed to put in an appearance, however, further proceedings were postponed until September 21.

Greco-Turkish Relations.

There is, unfortunately, no improvement to report in the delicate matter of Greco-Turkish relations. Ismet Pasha, after being closeted with the Ghazi at Dolma-Baghtche Palace on two successive days, left hurriedly for Angora, where, after a long interview with the Foreign Minister and the Minister for National Defence, the Premier summoned a Cabinet Council. A Note, reported to be comminatory in character, has been drawn up as a result of these meetings and conferences, and it is anticipated in official circles that the document will be presented to the Greek Foreign Office to-day.

The meeting at Geneva between M. Venizelos and Mr. Ramsay MacDonald would not appear to have greatly improved matters. The two statesmen, at all events, cannot be said to enjoy *une bonne presse* in Turkey at the present juncture, as the construction which the Turkish Editors have placed upon the Geneva meeting is that, in the event of serious friction between Greece and Turkey, Great Britain will undoubtedly be found on the side of Greece.

If this view, however erroneous, could be construed as a warning note which political hotheads would do well not to disregard, the meeting at Geneva may possibly have done more good than harm.

The Emancipation of Women.

Except in the political arena, in which Turkish women, so far at least, must admit defeat at the hands of their male relations, the enfranchisement of the distaff side of the Turkish family proceeds by leaps and bounds. The liberal professions which, not long ago, were the jealously guarded patrimony of the "Effendis," have now been thrown open to the "Hanoums," and it is no longer an uncommon occurrence for Turkish Portias to stand up at the bar and enter into a learned discussion of complex legal mysteries.

Medicine, dentistry and hospital nursing are professions which the fair sex have made peculiarly their own. And now the Turkish papers announce the appointment of a Turkish woman to the Civil Service: the post is not a very lucrative one, it is true, merely that of Government Cashier in an obscure Anatolian administrative district—but a precedent is being created.

Turkey's First Beauty Queen.

The Turkish Bey who last week undertook the rôle of Paris and awarded the golden apple to one among a whole bevy of fair "Miss Turkeys," must have been a very bold man. His valour, fortunately, was tempered by infinite tact, as he took the precaution of soothing the ruffled spirits of those who were about to experience the fate of Hera and Athene by impressing upon the luckless ones that on no account must they attribute their failure

to any blemish in their personal charms, which, indeed, had been found flawless, but must lay their want of success entirely at the door of that fickle jade Fortune—Kismet!

Feriha Tewfik Hanoum, an "unbobbed" lady, who was solemnly elected Beauty Queen of Turkey, unequivocally stated to a Press reporter in a subsequent interview that she was quite unable to conceive how the judges could possibly have arrived at any other decision. The second prize fell to another "unbobbed" Hanoum, whilst the third selection fell upon an olive-skinned Armenian beauty infinitely more Oriental in appearance than either of her Turkish sisters.

EGYPT.

Cairo, September 21.

The "Impasse."

A week of much coming and going, much gossip, much interchange of views, and yet no solution, at any rate at the time of writing, to the *impasse* in which Egypt has found itself for over a fortnight now. There has been much activity since my last letter in the high circles most concerned with the political situation. Both the High Commissioner and Adly Pasha have had long audiences with the King, who has also received the Prime Minister. Adly Pasha has lunched at the Residency, and has had conversations with most of the leading Egyptians who are now in Alexandria; while Nahas Pasha, whose sudden irruption during the week on the scenes and whose long-delayed call at Ras el-Tine Palace to sign in the Royal book and at the Residency to leave a card on Sir Percy Loraine caused much comment, has had interviews with Tewfik Nessim Pasha and Said Zulfikar Pasha. Nothing has come of all this except a hardening of the conviction that there is no hope of the necessary Coalition of parties, and that the best course would be some form of postponement in order to give a chance to the feeling of irritation that now exists everywhere to die down.

Everyone, indeed, adheres to his point of view—except perhaps the Ittihadists, who have realised the *faux pas* they committed in their decision of the 10th, and have now come out into the open, and, like the Liberals, have announced that they accept the Treaty without reserve. Thus, the two parties who represent the bulk of the vested interests in the country, are in favour of the Treaty, which makes the attitude of the Wafd even more unreasonable than ever.

In this connexion, the public statements of the leaders

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

Applications are invited for the following posts in a new Educational Institute:—

1. PROFESSOR OF PSYCHOLOGY (Theoretical and Practical)
2. PROFESSOR OF THEORY OF TEACHING.

The salary offered is from £E900 to £E1,140 a year (about £922 to £1,168) according to qualifications, and the appointment will be on contract for three years.

The Professors appointed will be expected to undertake Research Work in the Library.

Applications, with copies of not more than three recent testimonials and giving the names of not more than three persons to whom reference may be made, should be addressed to The Under-Secretary of State, Ministry of Education, Cairo.

of the Wafd, and the manner in which they have tried to get round the three Labour M.P.'s, who have been out here since the beginning of the month, have done the Wafd little good. It is stated on good authority that these three men have perceived the real state of affairs in a remarkably quick manner, and that their views may not altogether be what Nahas, Ebeid, Nukrashy and the others, who now run the Wafd, would quite desire to be conveyed to their friends in England. While the presence of such people out here at the present juncture has certainly strengthened the position of the Wafd, in that it has given the general public the impression that its leaders have the support of the party in power at home, yet in the long run it will have its compensating advantages, if it results in a proper judgment of the situation in Egypt being conveyed to the powers that be and particularly the Labour Party by men in whom they have confidence, and if it can be brought home to the latter that the Wafd, which so appeals to them on grounds of its anxiety to defend the Constitution and to obtain for the people of Egypt the right to express their opinions, are doing so merely to serve their own ends and that, if they came to power, they would institute, as they did before, a dictatorship, nay a reign of terror, which would be nothing compared with what they complain is happening in Egypt to-day.

Effects of Uncertainty.

The uncertainty on the future is not unnaturally having a very bad effect everywhere. Business is at a standstill. The Bourse is depressed as it has rarely been. Except in the most urgent matters, as for instance, irrigation projects, little or nothing of a constructive nature is being done in the Government offices, where the heads are all fully occupied with the political situation. Moreover, in consequence of the desire in higher quarters that no action should be taken for the present that might in any way increase the tension and the irritation existing on all sides, the authority of the Government, and particularly of its provincial personnel, is gradually being undermined and the contrast between the present state of affairs with that which reigned before there was any talk of the Treaty is most marked.

The persistent rumours that the Cabinet has resigned or is about to resign are, in particular, affecting the internal situation. As an example one might cite what happened at Damanhur, where, on receipt of a mere rumour that the Cabinet had resigned, a Wafdist demonstration was made outside the property of a well-known Liberal whose factory was somewhat damaged. This incidentally gives a foretaste of what would probably happen everywhere if the Cabinet did actually resign—for that would be taken as a triumph for the Wafd which would adopt its timeworn tactics to record that fact. The position of the subordinate officials is indeed becoming most difficult. However loyal they may wish to be to Mohamed Mahmoud Pasha and the present régime, the knowledge of what they will suffer, born of past bitter experience, if the Wafd comes to power, and if they have in the meanwhile done anything to displease its adherents, must cause them to hesitate to deal with Wafdist activities even when these are against public security. A condition of things like the present is good for no one, and the sooner a decision is taken, and one that means the restoration of Government authority, the better.

New Banks.

The Council of Ministers has under consideration a request from the Minister of Finance for permission to enter into negotiations with a foreign group in which the local foreign banks are interested for the creation of an agricultural bank, and with an Egyptian group for the creation of an industrial bank in which the Government would participate by supplying half the capital. The need for the latter institution is evident, but for the former there

is no apparent need. There is already a bank of this description in Egypt, viz., The Agricultural Bank of Egypt, and, if its statutes do not enable it to transact all the business for which the modern development of the country calls, it would surely be possible to amend those statutes to meet the new conditions, instead of having to create an entirely new institution and so add to the already too long list of banks operating in Egypt. Since the National Bank of Egypt, which is interested in the Agricultural Bank of Egypt, is understood to be in the foreign group mentioned, there must be some very good reason for this new departure, and it would be interesting, both for the shareholders of the existing bank as well as for those interested in the general question of the financial organisation of the country, if an authoritative statement on the subject could be made.

ROUMANIA.

Bucharest, September 19.

Political Affairs.

Political affairs are stagnant for the moment after the intense activity of the long session which closed in July,

everyone having felt the need of a rest. Meanwhile, the Government has not been inactive, and has taken advantage of the holidays to put the finishing touches to the Administrative Reform Law. Nor has the Opposition laid down its arms, for it evidently has no intention of allowing the Government to continue its work of reform in peace. It continues its heckling and harrying policy, not with the aim of overthrowing the Government, whose popularity it knows well it is powerless to shake, but simply to prevent the Administration from working in peace and to paralyse as far as possible its means of putting its policy into execution.

Several by-elections have amply proved that the Government has lost none of its popularity, in spite of the unusually drastic measures it has been obliged to adopt in the collection of taxes, having in view the absolute necessity of balancing the Budget. With the aim, too, of assuring the stabilisation, it has been found necessary to have resort to measures hitherto unknown, both to bring defaulters to task and to expose irregularities in the fiscal department. In this connexion the Government has not hesitated to resort to legal proceedings, and several important industrial companies have by these means been obliged to disburse large sums long overdue for taxation. Needless to say, the same strictness has been applied to the peasant classes, although in the past they had always been more or less protected in this respect. It is clear that such measures are not calculated to increase the popularity of the Government. The National-Peasant Party are well aware of the possible results of their action, but they feel strong enough to face the results, and, their perception of the need of such measures was one of their chief reasons for claiming the right to come into power, as they were convinced that they alone would be able to impose such measures upon all classes of society. This form of discipline was absolutely necessary for the restoration of the financial situation and the balancing of the Budget. As was to

be expected, the Opposition have not been slow to exploit the situation in every possible way and by all means in their power. Nevertheless, the Treasury encashments are greatly in advance of those of last year at the same period, and are well in keeping with the budgetary estimates for the first time for many years.

The Harvest.

No doubt the excellent harvest has largely contributed to bring about this happy state of affairs. Still the abundant crops have so far produced no reaction on the cost of living and general prosperity of the population. One of the principal reasons for this is that competition on world markets has brought down the prices for grain to very low figures. Everywhere the harvest has been abundant, and every country naturally consumes its own produce before resorting to importation. Moreover, the lack of credit is keenly felt. Landowners have often been obliged to sell the produce at once at the ruling low prices in order to meet their engagements and to pay the fiscal taxes. Consequently large quantities of grain have flowed towards the ports, where the State silos are filled to overflowing. This situation is rendered more acute by the fact that the peasants have nowhere to store their grain; they are obliged to transport it at once to the ports or other distributing centres and are unable to wait for a few months for more favourable prices. It should not be forgotten that this is the first really good harvest since the War and the application of the Expropriation Law, the full consequences of which are, therefore, being felt now for the first time.

Formerly the large landowners could dispose of important personal credit, and they were provided with the necessary plant and means to enable them to store their crops. The small proprietors will be in a position to do this only when they have gradually united in a common effort, and for this they would require long term agricultural credits at low interest rates. The development of the Agricultural Co-operatives will be a great help in this direction, and also the organisation of adequate storage facilities all over the country. It is for this reason that the Minister of Agriculture, M. Mihalaki, was so anxious to create at once the Autonomous Bank of Co-operatives, so as to give these institutions the possibility of dealing with international financial institutions independently of the State.

General Depression.

But the results of this action cannot be immediate, and in the meantime the agricultural depression and the financial crisis remain serious. One of the consequences is a marked industrial depression. The large mining, metallurgical and textile enterprises depend entirely on the State, to which they are obliged to sell their products, and the State is at present compelled to reduce all orders to a minimum, so as to keep its expenditure well within the limits of the Budget estimates.

Government economists, however, are of opinion that the obligation accepted by the State to obtain all its supplies in these branches of industry from the home factories and mines, is an extremely onerous one from the financial point of view. The lack of outside competition, enables the home industries to retain out-of-date methods of production and exploitation, as well as machinery and plant, which fall far short of the required modern standards. Interesting developments may, therefore, be predicted in the near future.

Health of the Patriarch.

The rumours which have been circulated regarding the bad health of the Patriarch and Regent, caused much agitation and not a little intrigue, especially in Opposition quarters, in regard to the succession. Happily all discussion on this subject is premature, as his Holiness was only suffering from a temporary indisposition, and is now completely restored to health.

A Bountiful Harvest.

Belgrade, September 25.

After four successive bad harvests, and the series of economic crises which inevitably followed in an eighty per cent. agricultural country, it is with enormous relief that the people have garnered in this year's excellent crops. Throughout the whole country, even in the normally "passive" regions, the yield has been extraordinarily good. Wheat, oats and barley were above the average in quantity and of excellent quality, maize is excellent in every respect, tobacco has given a good quality crop of fair weight, grapes are fairly plentiful and of good quality, good hay crops were gathered early in the year and in many parts good first and even second aftermaths are now being saved. While it is very probable that the prices of agricultural products will fall and the money value of these crops be very little greater than normal, the important point for this country is that the peasants everywhere will have food for themselves and their stock for the whole of the coming winter. This will do much to satisfy them, while the considerable surplus for export should also lead to a revival of trade and the rescuing of Yugoslav commerce from the slump of the last few years.

The Need for Scientific Development.

While the traveller passing through the rich plains of the Voivodina is impressed by the high standard of cultivation and the wealth of produce, it is when the beaten paths are left and he passes through the mountains and forests of Bosnia and Croatia that he gains a true appreciation of the untapped potential wealth of the country. The hundreds of miles of almost virgin forest, gradually being destroyed by pilferers, but containing enormous quantities of first-class timber still, await rational exploitation by a firm with sufficient capital to construct the necessary lines and to market the products scientifically. The comparatively insignificant workings on the enormous beds of mineral ores, the fertile valleys farmed in primitive fashion, the rich grain still trodden out by plodding oxen and winnowed by the wind, the razor-backed pigs which never get fat, however much food they are given, all point to the enormous waste of potential wealth and of human labour by neglect of the discoveries of modern science in methods of production and distribution. Co-operation, which is essential for the success of scientific agriculture in a land of small peasant holdings, is at present, in many provinces, almost entirely confined to finance, and the peasant still sell their produce one by one to travelling merchants at excessively low prices, and so lose the greater part of the fruits of their labour. With the spread of scientific methods, the co-operative purchase and use of machines, co-operative sale of produce and purchase of necessities, the interior of Yugoslavia will become far more prosperous, and with economic security will come also political stability and satisfaction.

Influences for Balkan Peace.

The pacific effect of economic interests is beginning to be felt with increasing force in the Balkans now that national feeling, enormously overdeveloped by centuries of oppression, by the War and the subsequent Peace Treaties, is tending gradually to become less aggressive. It was recently proposed by Hungary that a scheme should be drawn up for the joint sale of the agricultural produce of the Balkan countries, Hungary, Roumania, Bulgaria and Yugoslavia, to enable them to compete with

America. This proposition is to be considered by a joint commission of exporters from the countries involved and may bring about a realisation of the enormous number of interests which these States have in common and of the waste caused by neglect of these interests as a result of futile political squabbles.

Another great influence for peace is sport. "Yugoslavia," one of the best Belgrade football teams, went last week to Sofia, where they were most enthusiastically welcomed. They defeated one Sofia team and drew with another, and returned to Belgrade laden with Bulgarian cigarettes and greatly impressed by the hospitality and sporting spirit shown by the people of Sofia. Sport is making great headway in Yugoslavia. Her eight came second only to Italy in the European championships this year, her athletes were third in the Balkan Athletic contests recently held in Athens, her water polo teams completely outclassed those of that section of the British Navy which visited the Adriatic ports this summer.

The Renewed Conference.

Much good will was necessary on both sides to bring about the conference of Yugoslav and Bulgarian frontier experts now meeting at Pirot. Questions of frontier traffic have already been discussed, and a considerable measure of agreement reached. Now the delicate and difficult matter of estates divided by the frontier line is being discussed. Agreement on this question and on that of a neutral zone to make komitaji action more difficult is essential to any improvement of relations between the two countries.

As is usual when such conferences are proposed or begun, the unruly elements in Bulgarian Macedonia have tried to demonstrate their dissatisfaction by attacks on Yugoslav territory. Most of these failed owing to the excellent organisation of the defence of this frontier now, but one "troika" managed to get through and an unsuccessful attempt was made yesterday morning to blow up the railway line between Shtip and Kotehani. A bomb which had been fixed to the line apparently exploded prematurely, and, when the gendarmes and peasant guards arrived on the scene of the explosion, they found another infernal machine fixed so that whoever tried to lift it would explode it. It had not yet been properly set so that it was safely removed.

Macedonia.

In connexion with the exaggerated claims made by certain sections of Bulgarians with respect to Yugoslav Macedonia it is interesting to notice that the statement of Dr. Max Fischer, the well-known German publicist, to the *Belgrade Vreme*. He states that on his visit to South Serbia this year he was greatly impressed by the tremendous advances made, especially from a hygienic point of view, since he was last there four years ago. He notes the work for the development of the great mineral wealth of the district, the abundance and excellence of fish and fruit in the Ochrid district, whose wines he specially recommends for export, and the general satisfaction of the people. He says also that the relations between the authorities and the populace "are quite satisfactory and normal for a country which is not homogeneous from the point of view of nationality." He compares the beauties of South Serbia with those of the Black Forest district of Germany and foretells a great future for it when tourists discover it.

King Alexander.

After a prolonged tour of Bosnia, including a visit to Sarajevo, and a stay on his estate at Belye, King Alexander returned to Belgrade to-day. He is reported to be suffering from a slight cold and has been recommended not to leave his room for some days. Preparations are being made in Split for his visit there on September 29, when he is to unveil the enormous monument to Grgur Ninski, designed by Meshtrovitch, which is to stand before the famous Peristyle, part of the relics of the beautiful Palace of Diocletian.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE TROUBLES IN PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I shall be much obliged if you will allow me to comment upon the letter of Miss Margaret M. Farquharson published in your issue of September 12, in which she sets forth what she describes as a "series of unprecedented and fundamental injustices" suffered by the Arabs in Palestine.

(1) According to Miss Farquharson the first of these injustices is that "they are unrepresented in the Administration of their country." According to the latest figures published by the Palestine Government, the Administration is made up of the following:—

In the Senior Service: 299 Christian officials (including Arab Christians), 87 Muslims, 68 Jews; in the Junior Service: 1,220 Christians (including Arab Christians), 1,025 Muslims, and 699 Jews. As, of the total of 3,398 officials, only 343 are British Christians and 767 Jews (British and Palestinian), the other two-thirds of the Government machinery are in the hands of the Arabs.

(2) Miss Farquharson says that "their economic rights are not safeguarded" but does not explain what this means. It may, therefore, be stated that while the Palestine Administration has not yet carried out Article 6 of the Mandate, which promises Jews State and waste lands for the purpose of close settlement, the same Administration a few years ago handed over a vast area of State land at Beisan to Arab squatters, who were unable either to cultivate it or even to pay the Government dues upon it, and who are trying to dispose of a large proportion of their land which is useless to themselves at speculative prices. It required repeated representations to the Government of Palestine to secure even the legal possibility of the Jewish Agency to buy from these Arabs any part of their surplus.

(3) The "30,000 of their energetic sons" (what authority is there for this number?) "temporarily absent from Palestine," have been away—unless I am much mistaken—since before the outbreak of the Great War. They have not been "deprived of Palestinian Nationality." Before the War they were Arabs of Ottoman citizenship, and such they still are. It has been open to them to return to Palestine and to acquire Palestinian citizenship there under the same conditions under which it has been acquired by "Russian and European Jews."

(4) Miss Farquharson refers to "the tampering with the *status quo* declared inviolable by the British Government and the League of Nations." If she means the *status quo* as regards the mode of Jewish worship at the Wailing Wall, I deny that there has been any departure from the observances allowed under the Turks for nearly four centuries. If the Arabs thought that there was a violation of a long-recognised right in the manner in which the Jews prayed on a pavement which Arabs persistently defiled, they could have protested to the Government. But why massacre defenceless Jews all over the country and then cry out that the Jews were the aggressors and that the Arabs are suffering from "unprecedented and fundamental injustices"?

(5) Miss Farquharson says that the Wailing Wall was raised "as a political issue" at the Zionist Congress. She is utterly mistaken. The resolution adopted by the Congress simply claimed the right of the Jews to continue to worship undisturbed at the Wall in a manner consonant with the decencies of religion. To describe this as "raising a political issue" is, to say the least, a misrepresentation.

(6) Miss Farquharson's reference to the Jewish Agency shows that she is not familiar with Article 4 of the Palestine Mandate (which she would do well to study), nor with the fact that the British Government gave its consent to the enlargement of the Jewish Agency by the inclusion of non-Zionist representatives of the principal Jewish communities of the world. She is apparently likewise unacquainted with the fact that the Arabs have derived considerable advantages from the activities of the Jewish Agency during the last seven or eight years, inasmuch as, for instance, they have sold lands at a great profit to Jews, benefited by the medical services of the Zionist Organisation, and found employment in many Jewish settlements, otherwise she would realise that the activities of an enlarged Jewish Agency would inevitably confer still greater benefits upon the Arabs. The functions of the Jewish Agency are confined to advising and co-operating with the Government solely in matters affecting the establishment of the Jewish National Home and the interests of the Jewish population in Palestine, and they do not concern the administration of the country in general.

(7) The inquiry for which Miss Farquharson pleads "into Arab grievances" can do nothing but good if it is carried out by an impartial tribunal. It will show that those "grievances" are purely imaginary. It will show that the Arabs of Palestine were no allies of the British during the War, for they remained passive throughout Lord Allenby's campaign. And it will also show that the "spurious Internationalism," if this is the bogey that the Arab "really fears," has nothing whatsoever to do with Zionism.—I am, etc.,

ISRAEL COHEN,

September 17.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 12.

The Round Table Conference.

A cablegram of a week ago from the London Correspondent of the *Pioneer* repeats what I had been told a fortnight earlier by a former member of the Central Government—that as soon as Parliament re-assembles the Prime Minister will re-affirm the Declaration of 1917, “with the Labour Party’s interpretation of ‘responsible self-government,’ which is Dominion status,” and that he will issue invitations, over his personal signature, for a Round Table Conference. I have been told this morning that the Hartog Committee’s Report, which is all in print, will be presented to Parliament very shortly by Sir John Simon, with an interim report from the Statutory Commission. That should facilitate things for the Prime Minister. It is satisfactory to feel that the great Indian affairs are in his hands. The latest utterances, now two days old, of the Secretary of State for India and the Under-Secretary impress us no more favourably than the earlier did.

Platitudes.

The Secretary of State is reported as having said that “in their hearts there was one desire, namely, that, as long as they were charged with the conduct of those very difficult matters, to do their duty in the best possible way and in the interest of India.” The Under-Secretary said “he hoped that as long as he and Mr. Wedgwood Benn were in office, it would be said of them that they really and sincerely attempted a solution of the Indian problems, which they hoped ultimately successfully to accomplish with the co-operation and assistance of every section of the Indian community.” The newspaper containing those reports was picked up by a visitor in my room. He read the paragraph aloud, and exclaimed: “The emptiness of the things that public men will say!” The utterances do provoke that comment. They might also lead one to exclaim: “Those men will do nothing. Men who have got things in them to do, do not think it worth while to say things so empty.”

The Congress and the Muslims.

Though they are somewhat lengthy, I should like to quote in full three resolutions passed this week by the Executive Board of the All-India Muslim Conference:—

“Whereas the Indian National Congress, having succumbed to the influence of the Hindu Mahasabha, has now abandoned its constitutional ideal of a federal system of government with full provincial autonomy, which it had consistently advocated since 1904;

“Whereas owing to the same influence the Congress has now adopted a Constitution embodied in the Nehru report which, as has been rightly stated by Mr. Kelkar in his recent address delivered at the Dacca Provincial Hindu Sabha, is practically identical with that advocated by the Hindu Mahasabha at Jubbulpore and elsewhere, and is entirely opposed to the unanimous opinion of Muslim India; and

“Whereas the Congress Session to be held at Lahore during the forthcoming Christmas will in these circumstances be essentially a gathering of the Hindu Mahasabha, the Executive Board of the All-Indian Muslim Conference deems it in the highest degree detrimental to the best interest of the country in general and the Muslim community in particular for any Mussalman to attend the forthcoming session of the National Congress and earnestly hopes that the Indian Mussalmans will at this critical juncture show a united front by abstaining from participation in the Congress session, as by such participation they would only be lending support to the Nehru Constitution.”

Muslim Support for the Congress.

It is not true that the opinion of Muslim India is unanimously opposed to the constitutional proposals of the Nehru Report; for the Maharaja of Mahmudabad, Sir Ali Imam, and others whom I have recently met are still in favour of it; but it is true that Muslim opinion is very strongly opposed. One of the least hopeful signs of the times is that there are apparently insuperable difficulties in the way of a lasting understanding between the rival claimants to power in India, if one may put it so when speaking, not of persons, but of great masses of men. In the Punjab one hears the same kind of general charge brought by Sikh against Muslim that one hears throughout India brought by Muslim against Hindu. There does at times seem as much need for ever for an outside Power to keep the peace amongst them.

The Child Marriage Bill.

The Government of India’s intention to support Mr. Sarda’s Child Marriage Bill was reported here last week. It is supported by Pandit Motilal Nehru, who had this, in a telegram to the Congress, Nationalist, Independent and Central Muslim Parties: “We are to-day on our trial before the civilised nations of the world, and the measure of the Assembly’s support of the Sarda Bill will be the measure of our fitness to rank among those nations. The custom of early marriage is undoubtedly a curse, and must be completely abolished at all costs, the supposed sanction of religion notwithstanding.” There is little doubt in most men’s minds that the Bill will become law, but there will be bitter feeling against the law, and those costs that the Pandit speaks of will be heavy. They must be borne, however.

The Financial Position.

On my asking a professional economist, whom I met, how much importance one ought to attach to the view that, if India had a popular government, the raising of a considerably larger revenue would be possible, I was told to study the report of Mr. Layton, the financial expert who was sent out from England to advise the Statutory Commission. My interlocutor was himself of opinion that Mr. Layton’s report will show that many things that the Indian leaders want done simply cannot be done, for the money will never be forthcoming. That was my own impression long enough before Mr. Layton’s connexion with India was dreamt of. Mr. Layton’s report has, of course, still to be published. There would seem to be an advantage to secure in publishing it before the Round Table Conference begins.

The Banking Inquiry.

Within a day or two of reading that it had been suggested that still another should be added to the number of those who form the Central Committee to which the banking inquiry has been entrusted, I learnt, as others did, that the British Government has appointed a committee of three persons to advise it regarding the electrification of the main railway lines in Great Britain. The electrification of railways is ever so much simpler a matter than banking and currency. It is so much easier, therefore, to find someone who understands it, and whose advice it would be valuable to have. The advice on currency questions of half a small congregation—what could it be worth?

Miscellaneous.

Though they cannot keep Calcutta’s streets from being flooded, nor the *maidan*, whenever there is exceptionally heavy rain, or six or seven times a year, one supposes that it would be possible to keep the water out of a tube railway. The tube would have to be watertight. They are boring in Dalhousie Square and elsewhere, and sending the sands, marls, etc., to London for examination, all with a view to ascertaining if a tube railway would be possible. To build one ought not to be more difficult—but that was difficult enough—than to build St. George’s Dock; but

then the dock was intended to be full of water, while the intention of the tube railway will be that it should be full of dry people, except for perspiration, in dry trains. That may not be possible. Talking of the dock reminds one that the Calcutta Port Commissioners have published accounts for last year that make a very good showing.

Mr. Horne, the new Pro-Vice-Chancellor of Aligarh University, has arrived at the scene of his new labours, and the new Vice-Chancellor is expected there about the middle of October.

ANGLO-INDIAN ASSOCIATION, LONDON.

Annual General Meeting.

The sixth Annual General Meeting of the Anglo-Indian Association, London, was held at the India Restaurant, Regent Street, on September 21. Over 80 members were present, including Sir Reginald Craddock (late Governor of Burma) and Lady Craddock, Sir John Henry (late Commandant, Simla Defence Force) and Lady Henry, and Sir John Cumming (late Member of the Bengal Executive Council). The Hon. Secretary having read the proceedings of the fifth annual general meeting, Sir Cecil Walsh, the President, in presenting the sixth annual report, thanked the guests for their presence there and the interest they showed in the Association and complimented the Council of the Association on the methods and results of their work, of which the Memorandum to the Simon Commission was an outstanding example, though, altogether, the work of the London Association spoke for itself.

At the same time, in addition to larger issues, the Association, he pointed out, performed much solid and useful work on a smaller scale: for instance, it had been instrumental in securing a Kitchener Scholarship, and another pupil from the Sanawar School had won an Empire Scholarship at the Loughborough College, which information was received too late for incorporation in the annual report. Sir Cecil regretted that there had been casualties among the friends of the Association, the most noteworthy being Colonel Dowden, a great friend of the Association. He also congratulated Mr. Kenneth Fink (Member of the Council) on his son's successful entry into Sandhurst.

Continuing, he added that one advantage of his not being a member of the community was that it gave him a certain independence of speech, and accordingly he was appropriately able to refer to two things. The first was his admiration of the devotion to duty, earnestness and selflessness of Mr. Gibbon, the Hon. Secretary and, the second, his appreciation of the sober judgment and earnest desire to serve the interests of the community which was always evinced by the Council. The members of the Council had recently been referred to as Elders, and Sir Cecil considered that they had shown themselves to be the elders, or wise men, of the Association, in London. He emphasised the fact that their decisions were not dictated by the President but were arrived at by the judgment of the members of the Council themselves and he was in a position to testify to the moderating influence the Council always endeavoured to exercise. Sir Cecil next expressed a sense of the gratitude the Association owed to Mr. Palmer not only for his readiness in placing the splendid apartments of the India Restaurant at their disposal for their meetings but for the help he was always ready to afford in their discussions. This centre in the heart of London was, Sir Cecil considered, invaluable to the Association.

After thanking the ladies of the community for their help and support, Sir Cecil referred briefly to certain variances with the All-India Association which were indicated in the annual report, where also, he said, would be found a specific statement of the aims and objects of the London Association and a definite expression of the desire of the London Association for friendship and co-operation with the other Anglo-Indian Associations. Personally he was ready, he said, to sink any differences there had been and he earnestly appealed to India and London to turn over a new leaf and work together in peace and harmony for the common interests of the community. No remarks were offered on the report, which was therefore considered as passed *nem. con.* From the Council Messrs. Kirkpatrick and Bason, who retired by rotation, having offered themselves for re-election, were duly re-elected and Major H. Mansfield was elected in place of Mr. George, resigned. Mr. Wood proposed that two new members be co-opted on the Council to help to encourage the social side of the Association. The motion was carried. The Secretary proposed the confirmation of the supplementary rule empowering the Council to invite a Past President and an Honorary Member to be members of the Council in addition to the number laid down in Rule 5, which was duly confirmed. As no member put forward any further proposals the President declared the meeting closed. The members and guests lingered for some time renewing acquaintances and discussing old times and absent friends.

An India Office *communiqué* announces that the King has been pleased to approve the appointment of Mr. Sarat Kumar Ghose, Indian Civil Service, as Puisne Judge of the High Court of Judicature at Calcutta in the vacancy caused by the death of Mr. Justice Panton.

LIABILITY OF VISITORS TO UNITED KINGDOM INCOME TAX.

The question of the liability of visitors from the overseas Dominions to income tax during their stay in the United Kingdom continues to arouse keen discussion in India. Although many letters which have appeared in the Press both in this country and in India appear to have been written under a misconception of the position, the assurance given by the Financial Secretary to the Treasury in May last, and reproduced in THE NEAR EAST AND INDIA of May 16, that the circular issued by the Board of Inland Revenue in February, the bone of contention, was not capable of bearing the interpretation placed upon its provisions, as we anticipated, has by no means allayed the widespread anxiety felt by British residents in India, and which has undoubtedly caused many to spend their leave this year outside Great Britain. In its issue of July 25, THE NEAR EAST AND INDIA was able to announce that further representations had been made on the subject to the Board of Inland Revenue which had again emphasised that the circular was not a declaration of policy, but merely a statement of the law as it appeared to the Board, and that the latter was not in a position to express any opinion as to either the necessity for, or the probability of, the law being altered in the desired direction.

The latest protest comes from the Committee of the Bengal Chamber of Commerce, which, in a letter to the Federation of Chambers of Commerce of the British Empire, points out that: "there is a very strong feeling, on the part of people from home whose careers lie in India, that the position as explained in the circular operates on them with considerable harshness." The Committee then proceed to state the position with admirable clarity, explaining that the particular portion of the statement to which the criticism relates is paragraph 3 (b).

"Paragraph 3 (a)" the letter proceeds, "explains that a visitor who maintains no place of abode in the United Kingdom, and whose visits are not habitual, but occasional only, is not regarded as resident unless he has been in the United Kingdom for a period or periods equal in the whole to six months in the income tax year. But paragraph 3 (b) is to the effect that if he maintains a place of abode in the United Kingdom, available for his use, he is regarded as resident for any year in which he pays a visit, of whatever length, to the United Kingdom.

"As is well known, it is the aim of the average Britisher in this country who has children to give them a home education such as he has himself had. In a very large number of cases, especially where there are several children, this aim can be achieved only by the maintenance of a home where the children can be cared for by their mother or some other relative. The man who thus, himself living and working in India, settles his family at home employs home labour and pays home rates; and he take furlough every three or four years, not only for the necessary purpose of recruiting his health, but also of course to see his children and keep in touch with them and their education. As a rule, the length of his visit to the United Kingdom does not exceed six months, and if he were not compelled to maintain a home for his family in the circumstances explained, he would not be regarded as liable to home income tax. But he is, in point of fact, by reason of the ruling of the income tax authorities, most unfairly penalised as compared with the man who either has no family or, if he has one, either educates them abroad or sends them to a boarding school and himself, when on leave, stays in hotels and thus escapes being regarded as a resident for the purpose of income tax. Such a man pays no rates, he gives little employment to home labour, and the fact that this is so throws into greater relief the harshness of the distinction.

"As has been stated, the position has been much discussed in this country, and it has given rise to a great deal of heartburning particularly, as is natural, on the part of the very large number of persons—and these

constitute the majority of those affected—who draw fixed salaries either as Government servants or as employees of commercial firms and companies. British residents in India would greatly appreciate any assistance which the Federation of Chambers of Commerce of the British Empire could give by way of representing the position to the Board of Inland Revenue at home with a view to having some modification introduced in the ruling, and I am directed to express the hope that the Federation will consider the question of taking the matter up with the Board, and endeavouring to obtain an alteration in the law should such be necessary."

THE STATUTORY COMMISSION.

The Provincial Reports.

(Continued from page 308.)

In a recent issue we outlined the more important features of the reports which have been framed by the Committees appointed, by the Madras, Bengal and Bombay Legislatures respectively, to confer with Sir John Simon and his colleagues. We now summarise the reports framed by the United Provinces, the Punjab, and the Burma Councils.

The United Provinces Committee have issued a unanimous report, but a Muslim member has added certain explanatory notes to which the Chairman has appended a rejoinder. The Committee contemplate the grant of Dominion status in the near future; and they have framed their recommendations on the assumption that the Indian Constitution will be on the Canadian model. Dyarchy is condemned as unworkable, and full provincial autonomy is proposed, but, during the transition period, the Governor would retain substantial powers of control. There would be a Cabinet of six Ministers, of whom one would be Chief Minister. The Ministers would be jointly responsible to the Legislature. The Governor would select the Chief Minister, on whose recommendation he would appoint the others. An Upper Chamber is contemplated with a membership of about fifty or sixty. The Lower House would consist of 182 members. A certain number of seats would be reserved for Muslims, as provided for by the Lucknow pact of 1916. The landowning classes, namely, the *Zemindars* and *Taluqdars*, would be given separate representation in both Houses; and the depressed and backward classes would be provided for in both Houses by nomination. In respect of the Upper House the franchise would be on similar lines to that of the Council of State; and the franchise for the Lower House would be reduced to about one-half of its present level. The Governor would not be vested with power to certify legislation.

The Punjab Committee failed to agree and they have accordingly issued a majority report with a dissenting minute by the two Hindu members. The majority favour the grant of full provincial autonomy, that is to say, the transfer to Ministers of all provincial subjects. As regards Law and Order the majority take the view that when this subject is transferred to a Minister the Police will be no longer regarded as a weapon in the hands of the bureaucracy to be used against politicians with advanced views. On the contrary the Police will be regarded as an agency for ensuring internal peace and security. Separate electorates should, the Committee think, be continued. The strength of the Legislative Council should be increased to 165 members; nominated members would disappear; and special constituencies would be abolished. The Legislature would be unicameral. The Executive would consist of the Governor with a Cabinet of not fewer than four, and not more than seven Ministers including a Chief Minister. The Ministers would be jointly responsible to the Legislature. The Governor would appoint the Chief Minister, on whose recommendation he would also appoint the other Ministers. It is

suggested in the majority report that autonomy in the provinces should not wait for the introduction of the principle of responsibility in the Central Government. As regards the form of the Central Government the federal system is considered to be the safest and most proper form of government for India. Under it, the majority state, the provinces would have complete control over all subjects entrusted to them under the Constitution, while subjects of all-India importance such as the Army, Foreign Affairs, Railways, etc., would remain with the Central Government. The Committee also recommend that Sind should be separated from Bombay, and that reforms should be introduced in the North-West Frontier Province and in Baluchistan. The majority report is severely criticised by the dissenting Hindu members on the ground that it is based on communal feelings.

The Burma report deals primarily with the question of separation from India, to which reference was made recently in *THE NEAR EAST AND INDIA*. It strongly recommends separation immediately, although one member dissents from this recommendation. Opinion is divided on the point whether the provincial Legislature should be unicameral or bicameral, but the majority favour a single House. The majority would also retain the official *bloc*; and would maintain the existing franchise unchanged. Executive power would be vested in the Governor under the advice of Ministers, of whom five would be non-officials. The Ministers would be jointly responsible to the Legislature. (To be concluded.)

INDIAN CIVIL SERVICE OPEN COMPETITION.

List of Successful Candidates.

The list of successful candidates for the first 48 places at the recent open competition for the Indian Civil Service was published last week. Thirty-six are Europeans and twelve Indians, the former including the sons of three members of the Indian Civil Service, namely, Mr. J. P. Brander, Mr. J. M. Dunnett, and Mr. L. M. Stubbs. The total entries comprised 92 Europeans and 175 Indians, as compared with 103 Europeans and 148 Indians last year.

The list, in order of merit, is as follows:—

Dean, M. J.; Williams, J. B.; Langford, J. B.; Compton, E. G.; Bakhlé, D. S.; Brander, G. M.; Cunningham, C. C.; Walley, J.; Dunnett, G. S.; Vaughan, J.; Lloyd, S.; Morton, K. V. F.; Guthrie-Smith, F. J.; George, F.; Bromfield, G. S.; Lasrado, J. P.; Venkatasubramanian, V.; Damié, K. R.; Tural, G. R.; Siva Raman, M. S.; James, J. H.; Georgeson, W. W.; Cadman, S. P. H.; Rangaswamy, K. R.; Prideaux, E. T.; Ronson, H.; MacDermot, D. F.; Day, B. W.; Weston, W. G.; Bhargava, V.; Carnish, W. H.; Varghese, T. A.; Bell, F. O.; Luke, S. E. V.; Morris, F. W. A.; Nayar, K. K.; Kamath, H. V.; Gracie, C. F.; Storr, N.; Booth, J.; Stewart, G. P.; Lambert, J. H. U.; Chapple, F. G.; Pradhan, D. R.; Cole, F. N.; Dey, S. K.; Mitchell, A. N.; Stubbs, J. L. C.

Of the successful European candidates 19 were at Oxford, 12 at Cambridge, three at Trinity College, Dublin, and one each at St. Andrews' and Glasgow Universities. Twenty-four out of the 31 Oxford and Cambridge men were scholars or exhibitioners of their colleges, and twenty-five secured a First or Second Class in their Schools or Triposes.

It is understood that in official circles the result of this year's competition is regarded as very satisfactory from the standpoint alike of the numerical proportions and quality of the British candidature. There is no sign, it will be noted, at any rate, of a return to the unfortunate state of affairs which prevailed when recruitment by open competition was restored soon after the War. In this connexion it will be recalled that the representatives of the Indian Civil Service (retired) Association, comprising a large majority of retired members of the Service, in their evidence recently before the Statutory Commission emphasised the necessity for a British element in the security and development services. The status of the British official in India, they also contended, should be guaranteed on certain lines, not solely or even mainly in his personal interests, but for reasons of efficiency and integrity.

RAIDING IN NAJD.

It appears to be beyond dispute that there is trouble in Najd. Rebel tribes are carrying on intensive raiding operations against the tribes still loyal to King Ibn Saoud. The reports which we publish below have been received from Arab sources, and while it is possible that they may not be strictly accurate, it is hardly to be doubted that some serious engagements have recently taken place. For example, we learn that a raid on Sinjara Shammar was undertaken on August 25 by Mutair, led by Jaber Ibn Ashwan. The Shammar were camped at Al Aah. A considerable number of camels were looted, and heavy casualties were inflicted. The Shammar immediately sent in information to the Iraq Government post at Salman; upon which, two armed police cars were dispatched in pursuit. The raiders were caught up at Jokha (within Iraq territory), and all the loot was recovered and handed back to the Shammar. The raiders left eleven corpses on the scene of action, and fourteen camels were captured from them, in addition to which twenty of their raiding camels were killed.

These details are not yet confirmed, but it is particularly interesting to note that the Najdi Shammar appealed for aid to the Iraqi police.

Another raid, led by Azaiyiz, eldest son of Faisal al Duwish, of the Mutair, with about 800 camel-men, took place on September 1, on some mixed tribes, including Sherarat, Anaiza, and Shammar, who were camped at Al Hazul, in Najdi territory. A large proportion of the flocks belonging to these tribesmen were taken by the Mutair, but meanwhile Abdul Aziz Ibn Musaad, King Ibn Saoud's Governor at Hayil, having received information of this raid, marched from his camp at Ajibba to Umm Al Rudhulla, to intercept the return of the Mutair. When the raiders arrived at Umm Al Rudhulla, driving their loot in front of them, they were suddenly attacked by Ibn Musaad's force, and were completely defeated, all the stolen flocks being recovered. It is rumoured that Azaiyiz Ibn Duwish was killed.

Faisal al Duwish is reported to be camped at a place called Al Tawil, on the southern frontier of Kuwait, and with him (in addition to his own Mutair), are Ibn Hithlain of the Ajman, and Farhan Ibn Mashhur of the Ruwallah.

Hamid Kholussy Bey, Egyptian Minister to Persia, died on September 23 from a heart attack.

Mr. Geoffrey Parker has been appointed Inspector-General of Irrigation for Egypt in the Sudan, a post which he has filled in an acting capacity for some time.

The appointment of Malik Mansur Khan, son of the former Ilkhani, the Sovlet-ed-Dowleh, as Ilkhani of the lately insurgent Kashgais has been announced in Teheran.

M. Venizelos, the Greek Prime Minister, arrived in Berlin on September 29 on an official visit as the guest of the German Government.

It is stated from Constantinople that the Œcumenical Patriarch Mgr. Basil III. died in the Phanar on September 29. His All-Holiness was in his 93rd year.

A beginning has been made at Angora in the study of foreign languages with the opening, on October 1, of an English class, which is being attended by 25 students. Classes in other languages, it is stated, will be formed subsequently.

The death occurred last week of Mr. John Freeman, poet and critic. Among Mr. Freeman's publications were "Prince Absalom," published in 1925, and "Solomon and Balkis," published in 1926. These works were highly judged in the review pages of THE NEAR EAST AND INDIA.

The death occurred last week of Cardinal Dubois, a very eminent figure in the Roman Catholic world. In 1919 and 1920 Cardinal Dubois visited the Levant, going to Jerusalem, Syria, Smyrna, Constantinople, Athens, and other Balkan centres, for the purpose of investigating the effect of the War on the Catholic cause in the Levant.

THE Y.M.C.A. IN YUGOSLAVIA.

On Sunday, September 22, Mr. P. H. Sitters, National Secretary of the Y.M.C.A. in Yugoslavia, gave an Address at the Evening Service in Exeter Cathedral, taking as his subject "The Young Men's Christian Association in its relationship with the Churches and in international life." He pointed out that during the Great War Serbia had had two important contacts with the British—her soldiers had fought with our soldiers on the Salonika Front, and over three hundred of her young students, invited by Lord Davidson, then Archbishop of Canterbury, came over to England and were sheltered and educated at Oxford, Cambridge, Edinburgh, Birmingham, and elsewhere. These two groups, soldiers and students, both came across the Y.M.C.A., with the result that, when they returned to their own country, they desired to have a Y.M.C.A. of their own. The movement was started with the help of British war-workers and six years ago the call came to him to help the development of the movement. Mr. Sitters continued:—

"During those six years the Y.M.C.A. has grown considerably. There are now fifteen or sixteen Associations in Yugoslavia. Some of them, for instance the one in Belgrade, are in Serbia, amongst the people who belong to the Orthodox or Eastern Church: one in Zagreb, the capital of Croatia: some are amongst the Protestant Churches in the northern district, known as the Voivodina.

It is only since the Great War that these different provinces have been united into one country, and that the people who worship in these different Churches find themselves to be fellow-subjects. It is not easy for them, with their different languages and traditions, to understand each other all at once. The Y.M.C.A. provides them with common meeting-places: buildings where there is a welcome for all, equal trust, and love, and sympathy for all. In February last we had in Belgrade Y.M.C.A. a Training School in which Orthodox, Anglican, Lutheran, and Reformed Churchmen spent a week together in prayer, Bible study, lectures and games.

This year, on the beautiful Dalmatian coast, we organised a camp in which young people of many nationalities took part. Serb, Croat and Slovene joined with Russian, French, Greek, Hungarian and English in swimming and games, in expedition and camp fire, in Bible study circle and family prayer. As this sort of thing extends, prejudice must be overcome and old scars forgotten: each must recognise in the other the human quality, and learn to call him, and think of him as, 'Brother.'

SCOTSWOMAN'S WORK IN BELGRADE.

An appeal is made by a number of members of the British Legion who have just returned from the congress of the Inter-Allied Federation of Ex-Service Men (Fidac) at Belgrade, on behalf of the hospital established there, after much hard work, by Dr. Katherine Macphail, daughter of a well-known Scottish medical man. Dr. Katherine Macphail went to Serbia early in the Great War, and at its close, "with £25 and a bottle of aspirin," as a friend declared, set about establishing the hospital through which, in ten years, more than 100,000 children have passed. Towards a much-needed sum of £2,000, one-third has been subscribed by the Serbian Lamp Relief Fund Endowment, and the appeal is for the balance. Help should be sent to the Belgrade Children's Hospital Committee, 26, Gordon Street, W.C.1.

Members of the British Salonika Force will meet on the Horse Guards Parade on October 6 at 10.30 a.m., under Brigadier-General H. E. T. Kelly, C.B., C.M.G., President of the Salonika Reunion Association. At 11 a.m. there will be an inspection by Field-Marshal Sir George Milne, Chief of the Imperial General Staff, the Commander of the British Salonika Forces, and a short service, conducted by the Chaplain-General, will be followed by a march past the Cenotaph.

The Colonial Office announced on September 29 that the departure of the Palestine Inquiry Commission (of which Sir Walter Shaw is Chairman), fixed for to-day (Thursday) has been postponed. The Commission will probably leave London about the middle of October. This decision, it is explained, has been made in order that all the parties principally concerned in the inquiry may have ample time to make adequate arrangements for the representation of their interests during the course of the investigation.

THE WEEK AT HOME

London, Tuesday Morning.

Political Conferences.

One generally finds the political conferences of the autumn a dreary affair. The Labour Party, quite justifiably, is cock-a-hoop, but the talk of forcing a General Election within a year is apparently extravagant. At the end of two years, perhaps, when the Labour Party may have done something in the domestic as well as in the international sphere, an appeal may be made to the country, and there is no orthodox Labour man who does not think that an absolute majority is then assured.

The Liberals are sorrowful, and will prate of organisation. The electoral system, which happened to hit them so hard in the last election, is certain to be fiercely condemned. But what can they do?

The highest depression, however, has to be registered among the Tories, who really are all at sixes and sevens upon why they should have been defeated last May. Some of them are profoundly dissatisfied with the operations of the Central Office: a very bitter attack is being made on Mr. J. C. C. Davidson; and yet another section in effect demands Mr. Baldwin's head upon a charger.

Their internal organisation is the Conservatives' own affair, but it becomes increasingly apparent that on the whole they are scarcely deserving of so fine a man as Mr. Baldwin as leader. Even his action the other day in calling upon the Prime Minister just before Mr. MacDonald left for America—a very sporting and most laudable step—has been characterised as a fatal and characteristic error in a man who professes to be a party-leader. But perhaps these critics are not to be blamed. Perhaps it is all Mr. Baldwin's fault; I suspect that it is. He should never have called himself a Conservative, and is, indeed, a poor party man. For he never forgets that "the ship is more than the crew."

The Bank Rate.

How closely England's fortunes or misfortunes are now tied to those of America was made plain even to the man-in-the-street last week, when the Bank Rate was raised to six and a-half per cent. For the draining of our gold reserve could be stopped by no other means than this very unpopular method.

Speculation in stocks and shares in New York is regarded as the main cause, and until this feature becomes normal, one supposes that all Europe will suffer. The

raising of the Bank Rate is designed to safeguard the Bank's reserve of gold and at the same time to improve the value of sterling. But the "dearer money" has caused gloom in a thousand breasts. A half-hearted effort was made during the last few days to ascribe the raising of the Bank Rate to "cosmopolitan" influences at the Bank of England: as if "cosmopolitan" influences were not at work in every sphere of finance!

The Celtic Languages.

It is perhaps the habit of the Celts to dwell on the gloomy side of things, partly because they have longer memories and more poetical natures than the Sassenach who, in theory, rules over them. But their plaint, made last week at the Celtic Congress in Glasgow, that there was danger of the Celtic languages disappearing, was one which must strike a sympathetic chord even in their conquerors' hearts.

For it is undeniably a sad thing that languages such as Welsh and Gaelic should be receding before the invasion of English, whose sole reason of penetration derives from materialism—not necessarily a bad materialism, but certainly not a cultural improvement. It is unquestionably good that Scotsmen and Welshmen should remain bilingual, and the decay of such men, and their substitution by a characterless and colourless race, should be, and fortunately is, a matter of national concern.

There is immense enthusiasm in Scotland and Wales at the moment for spreading Gaelic and Welsh. More people in Scotland have a cultural knowledge of Gaelic than ever before—which does not mean much, but still is something. And the Welsh educationists are working to ensure that by 1931 every teacher in Wales will be qualified to teach Welsh.

It was by no means only sentimentality which prompted the Manx poet to write, forty-two years ago, of preserving

... whate'er is left to us
Of ancient heritage,
Of manners, speech, of humours, polity,
The limited horizon of our stage,

so that the coming age would know of their fathers—

... And, as the time-flood onward rolls,
Secure an anchor for their Keltic souls.

England's Vanishing Beauty.

Slowly but quite surely alarm is spreading at the disappearance of beauty from our countryside. The vandals, whether trippers or builders, are almost everywhere, nor is there any sign of their decrease. Chars-a-bancs discharge their motley cargoes with terrible regularity, and the jerry-builder erects his monstrous bungalow with sickening repetition. Fortunately, however, there is a greater increase in the number of people who at last are becoming aware of the menace, and what is chiefly required now is the organisation of public opinion.

Some criterion of how genuine the fear is that beauty may be wantonly destroyed is provided by the space given recently in the Press to the dangers threatening Friday Street, in Surrey, and the Lake District. Papers do not harp on exploded or stale matter, and while they exist to ventilate grievances there is yet hope. The organisation for the preservation of beauty in England is broaching on sensible, realist lines; it is acknowledged, for instance, that merely dilettante criticism is more harmful than helpful. What seems inevitable is a closer co-operation between the various societies which exist for preserving some particular aspect of the visible beauty of England. Each in its own sphere does admirable work, but often enough does not of itself command sufficient resources to ward off the blows of the Philistine. It would, one thinks, harm no one but the crank or narrow specialist if the activities of these societies were in some way more closely correlated than they are at present. The massing of culture and tradition against the purely utilitarian and ugly is almost bound, if properly done, to gain a victory.

October 3, 1929 (New Style).

September 21, 1929 (Old Style).

Rabia II., 28 A.H., of the Muslim Calendar.

Ellul 28, 5689, of the Jewish Calendar.

Annie Viscountess Cowdray left London on September 28 for Venice and Belgrade.

Sir Bernard and Lady Darley left England on September 27 in the Ranpura, on their return to Allahabad.

Captain Dimitri Papalexopoulos arrived at Claridge's Hotel last week from the Continent.

Nouri Pasha al Said, Iraqi Minister of Defence, leaves London (to-morrow) Friday, for Baghdad.

Lord and Lady Irwin arrived at Sandringham on September 26 on a few days' visit to the King and Queen.

The American Minister to Egypt and Mrs. Franklin Mott Gunther arrived last week at Claridge's Hotel.

Sir Maurice and Lady de Bunsen left 43, Ennismore Gardens on September 25 for Syria. They will be away for two months.

Field-Marshal Viscount Allenby and Viscountess Allenby arrived at 24, Wetherby Gardens on October 2, from Stanley, Perthshire.

The Raja Saheb of Dharampur, of the Presidency of Bombay, who arrived in London, is staying at the Hotel Cecil.

The Earl of Morley left London on September 27 for Egypt, sailing from Tilbury in the P. and O. s.s. Ranpura for Port Said.

Air Vice-Marshal H. C. T. Dowding, C.M.G., who arrived in Jerusalem last week to take over command of the forces, is staying at Government House.

Field-Marshal Viscount Plumer and Viscountess Plumer returned to 22, Ennismore Gardens on September 28 from Scotland.

Ex-King George, of Greece, who has been paying visits in Scotland, after a stay of about three months in England, left London on September 23 for Roumania.

Lady Brooke-Popham, who left London on September 30 for Baghdad to join Air Vice-Marshal Sir Robert Brooke-Popham, Air Officer Commanding Iraq, will be away eight months.

Sir Victor Sassoon left London on September 26 for Bombay, joining at Marseilles the s.s. Naldera, in which Sir Frank Moulden and General Sir Beauvoir and Lady de Lisle are among the passengers.

The Greek Minister, on behalf of the President of Greece, last week conferred upon Mr. James Malcolm the insignia of Commander of the Order of the Phoenix, for his long services to the Christians of the East.

Mr. and Mrs. Geoffrey Peto and Miss Pamela Peto left London on September 26 to join the s.s. Naldera at Marseilles, and will be away in India and Kenya until April.

Lady Chetwode and Miss Penelope Chetwode have left 44, Grove End Road this week on their way to Bombay to join General Sir Philip Chetwode, Chief of the General Staff, India.

THE LATE HIGH COMMISSIONER FOR IRAQ.

Sir Harry Verney (Groom-in-Waiting) represented the King at the memorial service for Sir Gilbert Clayton, which was held at St. Mark's Church, Peaslake, near Guildford, on September 27. The Rev. Sir Paget Bowman (Rector of Shere) officiated, assisted by the Rev. H. E. G. Aldridge.

Those present included Lady Clayton (widow), Major and Mrs. I. N. Clayton (brother and sister-in-law), Mrs. Lace (sister), Mrs. Thorowgood (mother-in-law), Mrs. Hunter-Blair, Mrs. Eliot-Lockhart, Mrs. R. G. Clayton, Miss Parry, Mrs. Stocker, and Miss Stocker. Others present included :—

Jaafar Pasha al Askari (the Iraq Minister), Nouri Pasha al Said (the Iraq Minister of Defence), Mr. Nevill Bland (representing the Secretary of State for Foreign Affairs and the Foreign Office), Wing-Commander R. Peel Willock (representing the Air Ministry), Air Vice-Marshal R. Clark-Hall (representing the Air Council), Squadron-Leader G. G. A. Williams (representing Sir Hugh Trenchard), Major-General Sir Alfred and Lady Edwards, Sir Edgar Bonham-Carter, Mr. and Mrs. Jennings-Bramley, the Rev. C. T. Horan, the Hon. Mrs. Victor Gibson, Mr. E. H. Keeling (representing the Central Asian Society, with which is incorporated the Persia Society), Mr. H. T. Montague Bell, Mr. Kenneth Williams, Mr. and Mrs. Sartorius, Mrs. and Miss Shrapnell-Smith, Colonel Murray, Mr. and Mrs. F. W. Chardin, Mr. Charles Woods, and the Rev. Donald and Mrs. Matheson.

Lord Passfield, Secretary of State for the Colonies, deputed Sir John Shuckburgh and Mr. Edgecumbe to represent him at the service, but owing to a motor accident they were unable to arrive at Peaslake until after the service was over.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

New Greek Ships.

Like Yugoslavia, Greece is now concentrating on the question of the development of her ports and mercantile marine. An important series of works is now being carried out at the Piræus, where, among other things, a new harbour is being developed at St. George's Bay. These developments are designed to make the Piræus a fitting port for the increased trade that awaits Greece in the new era on the threshold of which she now seems to be. As recorded recently in these columns, Yugoslavia has added a number of important vessels to her mercantile marine, and Greece is now to follow her example by giving contracts in the near future for a number of new ships. Greece's mercantile marine has always played an important part in the Mediterranean trade, but its weakness, as I have pointed out, has lain in the fact that a large proportion of the ships are old, the average age of the fleet being over twenty years. The orders now to be placed are intended to remedy this state of affairs, and if Greece adheres to her usual practice of coming to this country for her ships it will mean substantial and much-needed business for British shipyards.

Improving Conditions in the Balkans.

It is a poor summer that brings no one any good, and while the close of the best summer since 1921 finds Great Britain with a higher Bank rate and a rather uncertain outlook, some of the Balkan countries have every reason to congratulate themselves and to look forward to the next twelve months with almost whole-hearted optimism. The different outlook in these cases arises, of course, from the fact that we are wholly an industrial country while they depend on the soil for success, and this year Nature has happily been in a most beneficent mood. A year ago Yugoslavia and Roumania both had good harvests with the exception of maize, but the exception in both cases happened to be an all-important factor, while the surplus of wheat was not of the use that it should have been, because wheat harvests throughout the world were splendid and prices fell. This year both countries have had a good maize and wheat harvest, and as the wheat situation is believed to have altered though at the moment prices are low, both these crops should ultimately contribute their due yield to the export trade, improving the financial position of the countries concerned, increasing purchasing power, and last, but not least, strengthening the position of the dictatorship in the one and the Maniu Administration in the other country. If the forecasts of succeeding summers are borne out it may well prove that 1929 was the turning point in Balkan reconstruction since the War. The fact that the Balkan markets have lacked purchasing power has been an important contributing factor to the world trade depression, and if henceforward they are able to resume something of their normal trade the consequences will be all-important to their country and to the world in general. The change that may be effected by one harvest may be illustrated by a few figures. Yugoslavia's exports of maize in 1925 were valued at 2,000,000,000 dinars, but last year there was an excess of imports over exports of 180,000,000 dinars. This year it is estimated that the exports of maize will amount in value to 2,000,000,000 dinars, and when to that is added the wheat that is available for export consisting of 75,000 trucks, a third of which represents the unsold surplus of

the previous year, the change that may take place in the situation will readily be realised.

Sudan Trade Figures.

The trade of the Sudan for the first half of this year has not quite fulfilled the promise of the early months, the increase on the same period of the previous year being £E1,489,382, as compared with one of £E1,676,198 for the first five months and one of £E1,538,128 for the first four months. Still, the figures are quite satisfactory as they stand, and indicate very plainly the economic progress which is being made in the Sudan. It is worth recalling that only a few years ago it was a matter of considerable interest whether the country's trade for the year would amount to ten million pounds, but now that amount is almost reached in six months, the total for the period under review being £E9,329,802. All the chief categories show increases for the six months, the principal one being, of course, in respect of exports, which are £E1,248,342 up at £E5,765,493. Cotton was responsible for 84 per cent. of this amount, the exports of ginned cotton amounting in value to £E4,491,100, as against £E3,257,613 for the previous year, and those of cotton seed to £E354,710, as against £E316,698. These excellent figures invest with special interest the report of the Sudan Plantations Syndicate, which will be forthcoming in a few weeks' time. Imports at £E3,223,163 show an increase of £E168,300, public imports totalling £E2,184,288, an increase of £E123,020. A significant factor in the increase in public imports was the development of the trade in cotton piece-goods, the imports amounting to £E670,198, an increase of £E125,943 or 23.1 per cent. on the figures for the previous year. This speaks eloquently of the improvement in general conditions in the Sudan.

Imperial Airways.

Sir Eric Geddes was able to give a most encouraging survey of the progress made in the establishment of public air services at last week's meeting of Imperial Airways. There was an increase of 29½ per cent. in the traffic revenue on the European services, and in the three years from March 31, 1926, the turnover of these services has more than doubled. Then the traffic revenue on the Cairo-Baghdad-Basrah service, which now forms a section of the England-India route, increased by 48 per cent. On the

THE BRITISH INDUSTRIES FAIR 1930

will be held at

**OLYMPIA & CASTLE BROMWICH
LONDON BIRMINGHAM**

Every Trade
Buyer and
Merchant
should visit
the Fair!

OLYMPIA, already the finest exhibition hall in the country, is being specially enlarged to house the vast array of British manufactures shown in the London Section of the Fair, and everything possible will be done for the comfort and convenience of the world's buyers who visit the Fair year by year in increasing numbers. The heating arrangements will enable an equable temperature to be maintained in the most inclement weather. Adequate restaurant accommodation will be provided, ranging from a de luxe service to simple cheap meals.

Extensions and improvements have also been made at CASTLE BROMWICH where, as in previous years, the machinery and engineering exhibits and allied trades will be displayed.

Trade buyers should apply now for a free pass, which will entitle them to reduced fares on all railways in the United Kingdom.

Full particulars may be obtained from
The Nearest British Legation, Consulate
or Trade Commissioner

or from

The Department of Overseas Trade, 35,
Old Queen Street, London, England,

or

The Secretary, Chamber of Commerce,
Birmingham, England.

**FEBRUARY
17TH-28TH
1930**

European services the mileage flown was 94 per cent. above the minimum required to earn the subsidy, while the non-subsidised flying in Palestine and Iraq totalled 12,500 miles, or not far short of double the figures for the previous year. During the year the company's aircraft flew 1,032,842 miles, 34,757 passengers and 873 tons of baggage being carried. Dealing with the question of the subsidy, Sir Eric Geddes said that the position has been reached when aircraft can be flown without subsidy to yield a gross profit, and he explained that by gross profit he meant provided that it was not debited with full obsolescence and overhead charges. The company has ten years by its main agreement in which to reach commercial independence, and it is impossible to doubt, in view of the increasing use now being made in business of air facilities, that that goal will not be readily achieved and probably in a shorter space of time than is now anticipated.

New Air Routes.

The question of new routes was discussed in detail by Sir Eric Geddes. The company has been criticised for not providing facilities for air travel in Great Britain, but in the present stage of flying it is over long distances and in sparsely populated areas that the aeroplane is really useful. In this country communications have been brought to a very high pitch of efficiency, and for a variety of reasons, among them weather conditions, it would present an unsatisfactory field for air services at present, but Sir Eric Geddes indicated that the possibility of services here in the future is being kept in sight. The company has now in view two main projects, both of outstanding importance both from the point of view of trade and of the development of Imperial communications. The first is the extension of the India service to Australia, and the second is for a service from Egypt to South Africa. The latter service, in which the company will have associated with it the Cobham-Blackburn Air Lines, Ltd., will, of course, serve Upper Egypt and the Sudan, and it is interesting to note that the northern half of the line, which will extend as far as Northern Tanganyika, is to be brought into operation about this time next year, while it is hoped that the southern half will be begun six months later.

COMMENTATOR.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended September 21:—

Grain.—Prices on grain markets in general continued on the "slump," and the reduced figures on this side became even more favourable to "bear" grain shippers, but at the same time caused almost a complete suspension of fresh and current transactions. It may also be mentioned that the shipment on spec. of a few fairly large parcels of barley tended to aggravate the situation. Freights continued very active and a large quantity of cargo was booked for Continental and U.K. destinations, especially for spot and September boats. As a matter of fact, the supply of September tonnage has continued to be under demand, and rates therefore were easily maintained at 16s. A considerable amount of chartering has been done for October and October-November loading, mainly for Continental ports, and up to 19s. Continent has been paid. Grain stocks at shipping centres are on the increase, and arrivals by rail, river and road are good.

Timber.—There is a better demand for tonnage at increased rates, shippers now offering for Greece £7 10s. to £7 15s.; Alexandria £8 5s.; Syria £9; Sicily £11; Western Mediterranean, including North African ports, £12; but ships are very difficult to find even at these advanced rates, and business continues to stagnate for the present.

Weather and Crops.—The temperature dropped further on Sunday the 15th instant when light rains fell in most parts of the country, measuring from 10 to 12 millimeters. There was a little further light rain in southern districts

on the 18th and 19th, but in general the week has been fine and dry with a gradually increasing temperature, yesterday and to-day having been quite warm. Some of the maize still requires further ripening, but the gathering is now in active progress in many districts, and will doubtless become general during the coming week. Very little ploughing for autumn sowings appears to have taken place so far in the Galatz and Braila districts, but in some parts of central Moldavia fairly considerable work has been done.

Sulina Bar.—As anticipated, the bar depth has been improved to 24 feet. The general conditions are reported to be good, and provided normally fine weather prevails it is hoped that this depth will be maintained. The minimum depth of water in the river has dropped to 23 ft. 6 in. at the 37½ milepost.

Constantza Grain.—This week about thirteen thousand tons arrived from the interior, and about 28,600 tons were shipped, mostly to the Continent, 1,200 tons going to Hull and Leith. At the time of writing four vessels are loading 26,000 tons, and eleven other steamers are expected to load over 36,000 tons mostly for Hamburg and the Weser. Nine vessels loaded over 29,000 tons petroleum products, and three took oil fuel for bunkers.

Bulgarian Report.

Bourgas, September 14.—Business continues quiet and sunflower seed is the only commodity in which transactions of any importance have been concluded. About 3,000 tons of this seed are under loading, mostly for Rotterdam. Barley is being shipped in insignificant parcels only, and most of it is destined for Greece, a certain amount being transported to that country by rail. On the other hand, it is expected that there will be a considerable quantity of maize for export. In view of the dry weather experienced, it is expected that its condition will be good enough for shipment during the second half of October.

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK

LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.8

SALT IN BULGARIA.

Hitherto salt has not been mined in Bulgaria. The local product has been obtained by evaporation of salt springs at Provadia, near Varna, and of sea-water at Anhialo and two other places near Bourgas. The Bulgarian Government has recently had the neighbourhood of Provadia prospected, with the result that a salt mine has been discovered. Not unnaturally the syndicate responsible for the exploitation of the salt springs set up a claim to the salt mine, but the fact that it was in debt to the Bank of Agriculture to the extent of twelve million leva has enabled the Government to come to a friendly arrangement on the subject. The State reserves to itself the right to work the salt mine, but undertakes to deliver 500 tons of salt annually to the Syndicate, which will continue to produce salt from the local springs. At the same time the Government makes itself responsible for the liquidation of the Syndicate's debt to the Bank of Agriculture. This arrangement will be subject to the approval of Parliament.

LAUNCHES IN THE PERSIAN GULF.

The Department of Overseas Trade publishes the following information, asking British firms that may be interested in the matter to forward copies of their catalogues to H.M. Consul-General, Bushire, for transmission to Captain Prior:—

H.M. Consul-General at Bushire has forwarded to the Department of Overseas Trade the following information which he has received from Captain C. G. Prior, I.A., Political Agent, Bahrein:

"A very fine launch built in Kuwait and provided with a 60-65 h.p. Kelvin engine by Khalil Kanoo, made its appearance here and attracted a great deal of attention.

"I examined the launch, and noticed that it was lit by electricity, which is, in itself, an innovation, but the electric generating set, without battery, was of American origin. I would be glad if you would put me into touch, via the Department of Overseas Trade, with makers of such generating sets in England, so that I may recommend their use in launches in preference to those of American manufacture. The launch engine market is at present entirely British, and it is our duty to see that it remains so.

"Further, the installation of electric light in Bahrein is going to give rise to a large market for electrical accessories, lamp fittings, small machines driven by electricity, etc., and I should like to have full particulars of firms that deal in such articles, with catalogues, so that I can introduce them to appropriate firms, etc. This should be done as soon as possible or they will look elsewhere for their supply, and once they have become accustomed to placing orders elsewhere they will turn less readily to the United Kingdom."

The Turkish Government has denounced the existing commercial treaty with Austria as from February 12 next.

The traffic receipts of the Suez Canal Company from September 14 to 20 amounted to 22,210,000 francs.

A NEW DUNLOP TYRE.

The feature of the Dunlop programme for the season which began on October 1 is the introduction of a new Dunlop tyre. It is known as the Dunlop Clipper, and it has an effective non-skid tread and buttressed walls. "This new tyre," said a Dunlop official in an interview, "has been produced for the motorist and motor cyclist who want at a cheap price a tyre that is not 'cheap' in quality. For the motorist we are making it in a range of popular sizes in the wired, straight side high pressure, and beaded edge high pressure types, for which the prices will range from £1 3s. 6d. for a 26 x 3.50 wired type cover to £1 7s. 3d. for a 710 x 90 beaded edge cover. It is also being made in a selection of popular sizes for the motor cyclist at prices ranging from 18s. for a 24 x 2½ sized cover to £1 4s. for a 26 x 3.25 cover." No changes are announced in the prices of Dunlop car, giant and motor cycle tyres. There are general reductions in the prices of solid tyres and a few minor changes in the prices of cycle tyres. A number of reductions are also made in the prices of accessories.

SUDAN GUM ARABIC SHORTAGE.

Messrs. Boxall and Co., of Khartoum, in their report for August, state:—

Arrivals in Kordofan stations amounted during August to 80 tons, a large proportion of which was rain-damaged gum, as against 324 tons last year—a shortage of 244 tons or 75 per cent. This year's August arrivals are by far the smallest recorded for that month over the series of years from 1923 to 1928, during which period arrivals in August were from 3 to 12 times what they were this year. The shortage in Kordofan and Tendelti this season to date, as against last season, totals about 5,150 tons; with the shortage of inferior Hashab estimated at about 2,000 tons, the total shortage in Hashab gums as against last season would amount to date to about 7,150 tons.

El Obeid prices for gum free from rain damage have gone still higher during the month, having reached about 9s. per cwt. more than the closing price of July 31, but, as already pointed out, such small parcels of gum as were obtainable outside the auction markets sold at considerable premiums over the El Obeid price.

Demand has been relatively good for this time of the year; in fact, more orders were received than could be filled on a market which is, practically speaking, so bare of goods: arrivals, on the one hand, being altogether insignificant, and, on the other, stocks non-existent.

Talha.—Prices have gone up 5s. 3d. per cwt. during the month.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Glasgow, September 28; Manchester, October 4; Birkenhead, October 5). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Calcutta (Birkenhead, October 8); s.s. Manipur for Calcutta (Glasgow, October 10; Swansea, October 17; Birkenhead, October 22).

Bibby Line.—S.s. Gloucestershire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 9).

British India Line.—S.s. Mantola for Colombo, Madras, and Calcutta (London, October 19); s.s. Domala for Bombay (London, November 2).

Cunard Line.—S.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement (Glasgow, October 15; Swansea, October 17; and Liverpool, October 19); s.s. Brescia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz, if sufficient inducement (Liverpool, October 26; Swansea, October 29).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 5); s.s. Jessmore for Piræus, Syra, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 10).

P. and O. Line.—S.s. Ranchi for Bombay (London, October 11); s.s. Nagoya for Calcutta (London, October 11).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 12).

Ellerman and Papayanni Lines.—S.s. Volturro for Gibraltar, Malta, Alexandria, Jaffa, and Haifa* (October 10); s.s. Oporto for Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 12; Swansea*, October 12); s.s. Algerian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, October 12; Swansea, October 17); s.s. Lesbian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 2; Swansea*, November 2).

*Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

BRITANNIA ...	Oct. 11	ELYSIA ...	Nov. 12
CALIFORNIA ...	Oct. 22	CIRCISSIA ...	Nov. 26

*First class passengers only. Specially low fares. †Calls Port Sudan
‡First and Third class passengers.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA. 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 1.

The Stock Exchange has passed an eventful week, the developments in connexion with the Hatry affair and the methods of dealing with the situation adopted by the Committee of the Stock Exchange and the raising of Bank Rate on Thursday to the highest figure touched since the spring of 1921, being of sufficient importance to the public generally to occupy considerable space in the news pages of the daily Press. Only one failure on the Stock Exchange was announced during the week, and the fortnightly settlement passed without the disclosure of further difficulties, but settlement in the Hatry group of securities has been postponed until October 24. The rise in Bank Rate, which on this occasion is entirely unconnected with happenings on the Stock Exchange and was dictated by international monetary events, had been fairly generally anticipated and discounted in advance, and the effect on prices was comparatively small. The ending of the period of suspense, which has hung over markets for so long is, indeed, welcomed.

Bank Rate.

In accordance with general anticipations the Bank of England has at last found it impossible to avoid raising the Bank Rate from $5\frac{1}{2}$ to $6\frac{1}{2}$ per cent., the highest level for eight years. In a sense, the decision has been welcomed as ending, at least for a time, the suspense which has so depressed dealings recently. Financial circles, nevertheless, as well as industrial, regret the necessity of adding to the burden on trade, but many of the statements attributed to various industrial associations, which have been echoed in some sections of the daily Press, greatly exaggerate the adverse effects which the rise is likely to cause. It should be remembered that, broadly speaking, it is only on that portion of a business's total capital resources which is borrowed from a bank that the additional interest will be payable. Moreover, the rise is after all only one per cent. per annum. The ration of turnover to capital varies greatly, of course, from business to business, but if for the sake of argument we assume that capital is turned over four times a year, the difference made by a rise in interest costs of one per cent.—even if it were on the whole of the capital—would be only $5s$.

per £100 of turnover. Even this increase is regrettable, but clearly it would not be sufficient in itself to form a vital handicap to trade. The species of economic defeatism reflected in the statements referred to is a far more serious hindrance to the continuance of the recovery in British trade, which the advance of February last has not hindered, than is the further increase in borrowing costs.

Hatry Developments.

The crisis arising from the collapse of the Hatry group of companies has proved to be less serious and less widespread than was at first feared. It is true that the losses caused must be considerable, and must take some time to estimate, but, in the main, they will fall on shoulders well able to bear them, though one or two provincial corporation will also be affected. The fortnightly settlement on the London Stock Exchange passed with only one default, but it must be remembered that settlement in the shares principally affected has been postponed for a month. Holders of some of these must expect to face a substantial "paper" loss, for the securities had been up to quite unwarranted prices. The decline in others, however, should be quite short lived. Among those of particular interest to ordinary investors, is the Drapery Trust, in whose ordinary shares dealings have again been permitted, while those in the preference are now suspended. The concern, it is true, is owed £60,000 by Austin Friars Trust, but this is not a large sum in relation to its total resources. Recent events cannot, of course, affect the earning power of its constituent businesses, which is the factor ultimately determining the value of its shares.

Breweries and the Licensing Commission.

The full list of the appointments to the Royal Commission on Licensing, on which the brewers are represented, was published this week, and presumably the Commission will commence its investigations in the near future. In view of its wide terms of reference, however, it must necessarily be a considerable time before its conclusions can be made known, but shareholders in brewery companies should not be in a hurry to sell their shares upon fears of a report adverse to their interests. It is, perhaps, rather cynical to suggest that in the past similar reports have been somewhat inconclusive, but if in the future public opinion is this country does become unfavourable to the breweries, fair compensation for any restrictions may be expected. Nevertheless, on a long view political considerations must make the ordinary shares in these concerns somewhat speculative, but well-secured prior charge securities are available giving satisfactory returns. Recent experience suggests, however, that the bigger companies are, in general, the best for the ordinary investor, since these concerns have the resources for the improvement and rebuilding of premises which is now a feature of the industry. Bass 5 per cent. cumulative preference shares yield £6 1s. per cent., while Watney, Combe and Reid 5 per cent. cumulative first preference return £5 16s. per cent. On Meux 5 per cent. cumulative preference shares a return of £6 3s. per cent. is obtained.

The first hundred newly-enrolled police from Great Britain arrived in Palestine on September 17.

Seventy-six students left Teheran on September 15 for Europe, in accordance with the new educational policy of the Persian Government, which has just appointed 15 French teachers to Persian colleges.

From November 1 air-mail stamps valid for the air mails only will be issued through the Indian post offices, though their use will be optional and in addition to the blue air mail labels.

The total remittances from the Government of India to the Secretary of State for India in Council from April 1 to September 14, 1929, were £10,275,000, of which £2,775,000 was remitted by means of purchase of sterling in India and £7,500,000 transferred from the Paper Currency Reserve in England to the Home Treasury.

Engineering Topics

(By Our Engineering Correspondent)

Crushed Stone.

Now that road making work is likely to be considerably in evidence, it might with advantage be pointed out to municipal and county engineers that in the opinion of many contractors and civil engineers the present method of designating sizes of crushed rock and gravel is far from satisfactory. A correspondent writes to call renewed attention to this, and says that occasionally one hears crushed rock referred to as $2\frac{1}{2}$ inch rock, $\frac{3}{4}$ inch rock, screened rock and so forth. It must be admitted that these expressions are terse and concise, but they are by no means definite or uniform, as $2\frac{1}{2}$ inch rock seems to mean any mixture in which all the aggregate parts will pass through a $2\frac{1}{2}$ inch ring, whereas what is undoubtedly meant is a collection of rock fragments none of which is bigger and very few any smaller than $2\frac{1}{2}$ inches in diameter. The same remark applies to every other size so loosely mentioned, and whilst it is true that in broken rock of specified size there is not a great number of pieces considerably smaller, yet there might be, and there is, an appreciable proportion half an inch or an inch smaller, or a corresponding fraction of those amounts, as the case may be. Some commercial firms have their bins numbered and the product of the plant is referred to by the number of the bin from which it is taken. Such a number system has a significance to those acquainted with the particular plant to which it applies, but there is a lack of uniformity amongst plants, both as to screen sizes and as to the numbering of the bins, and the number system of one firm is not necessarily indicative of the products of others.

Furthermore, it does not provide for changes in screen sizes that may be made from time to time. In specifications, the customary way of expressing the size of crushed rock or gravel is by giving it the diameter of the largest and smallest stones in the mass, or rather the diameter of the holes of a screen which will just past the largest stones and the diameter of a screen which will just retain the smallest stones. The dimensions are given in inches and most frequently used fractions of an inch.

Dimensions expressed in this way are, it must be admitted, somewhat cumbersome, and every engineer will agree that it would be simpler to express them in decimals by substituting decimal fractions for the common fractions. If decimal fractions are substituted they should be carried only to the nearest tenth of an inch and the decimal point should be dropped. Two and a half inch size would then be 2.5 inch size, and could be most conveniently written and spoken of as the "25 size." In just the same way the one-inch stone would become the "10 size" and mixed stones ranging between these two sizes, with the sizes as limits would be known as "10-25" stone, the smallest size, for convenience, being given first. In practice the hyphen between the 10 and the 25 could also be dropped so that the size became known as the 1025. By this system mixed stone ranging from $\frac{1}{2}$ inch to 2 inch would be known as 520 stone and crushed run stone which would pass a 2 inch screen would be known as 020 stone. Whilst these expressions have not quite the brevity of ordinary bin numbering, they have the advantage of fixing definitely the limits of sizes, and they are sufficiently brief

in order to allow of the same designation being used in conversation as in specifications. Readers might note, also, the simplification of specifications with this system as compared with the unavoidable ambiguity of ordinary specifications.

During the period in which the suggested new method of specifying was being introduced to engineers, architects, buyers, and users, a brief general clause would, of course, be required in specifications to define the system of measurement, and this, on each reference in specifications to the size of crushed stone, would be somewhat as follows: Proposed specification: "All material shall be 1525 crushed rock." Compare that with the present form of specification which, in such a case would read: "All material shall be crushed rock which shall pass a screen with circular openings two and a half inches ($2\frac{1}{2}$ in.) in diameter and shall be retained on a screen with circular openings one and a half inches ($1\frac{1}{2}$ in.) in diameter." At any rate, the idea is well worth thinking about.

Fen Drainage.

During the past week-end I was at a Wisbech meeting of the Municipal and County Engineers, and after hearing the well-written paper on the "Drainage of the Fens," read by Captain G. E. Matthews, engineer to the Ouse Drainage Board, in the County Hall at March, was able to run over to Mepal to inspect the fine new reinforced concrete bridge which is being built across the Bedford River by Mr. R. S. W. Perkins, surveyor to the Isle of Ely County Council. The paper was the complete history of the work of fen drainage, from the days of the Romans. Perkins' bridge—well, it is sufficient to say that it is certainly the last word in civil engineering work of the kind, and combining, as it does, a massive concrete road viaduct across the western approach to the river, with the handsome bridge, it will remain for all time as a testimony to the foresight and skill of the Isle of Ely C.C. and their engineer and surveyor. Later, at Wisbech, we gathered to hear Messrs. Matthews and Perkins read papers on "Municipal Work in the Borough of Wisbech" and "Notes on the Work of the Highways Department of the Isle of Ely C.C." respectively.

An Important Combine.

I am informed that negotiations are nearing completion whereby Ruston and Hornsby, Ltd., Lincoln, manufacturers of excavating machinery, oil engines, boilers, pumps, etc., will join with the Bucyrus-Erie Co., of South Milwaukee, in the formation of a new company to be known as Ruston Bucyrus, Ltd., with works at Lincoln. The head office will also be at that place and all readers

THE EGYPTIAN HOTELS, LIMITED.

ISSUE OF NEW ORDINARY SHARES.

THE BOARD OF DIRECTORS hereby announce that pursuant to the Extraordinary Resolution of the Company dated 24th July, 1929:—

1. There will be offered on and after 1st October, 1929, for subscription by the Ordinary Shareholders of the Company 125,000 unissued Ordinary Shares in the Capital of the Company of £1 each in the proportion of one new Ordinary Share for every existing Ordinary Share of £1.
2. The price of each new Ordinary Share is fixed at £1.
3. The new Ordinary Shares will rank for dividend *pari passu* with the existing Ordinary Shares as from the 1st May, 1929.

Forms of Application and the Conditions of Issue of the New Ordinary Shares may be obtained from the Bankers to the Issue:—
 BARCLAYS BANK (DOMINION COLONIAL AND OVERSEAS),
 Cairo: Kasr-el-Nil;
 Alexandria: Rue Cherif Pasha;
 London: 29, Gracechurch Street, E.C.3.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Smyra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Rates of Freight, Insurance and other information apply to:

JOHNSTON LINE, LTD., 6 Billiter Street, London,
 86, Cross Street, Manchester.
 and FURNESS, WITTHY & CO., Ltd., Royal Liver Building, Liverpool.

interested in heavy plant of the types mentioned should write for details of the new class of business. The chief line and, I understand, the only line for the time being, will be the manufacture of excavating machinery. Both the parent firms are well known as makers of that type of appliances and Bucyrus-Erie are said to be the world's largest builders outside the British Empire. The contribution of Messrs. Ruston Horsby, Ltd., to Ruston-Bucyrus will be their excavating business, including the whole of their excavator works and organisation. Bucyrus Erie, Co., Ltd., will contribute an equivalent value in cash, and will transfer to the new company the whole of their interests in countries outside North and South America, Japan and China. I am informed officially that Mr. William W. Coleman, of Bucyrus-Erie Co., will be Chairman of the Board. Col. Ruston, who is Chairman of Ruston-Horsby, Ltd., is to be vice-Chairman and Mr. Victor Bone, who is at present director of works of Ruston-Horsby, Ltd., will be managing director of the new concern, which, I understand, will commence operations on January 1, 1930.

A Noteworthy British Contract.

Some interesting information is now available concerning a contract that has been signed by Dr. Wu Pak Liang, Commissioner of the Canton Municipal Waterworks, and the Mayor of Canton, Mr. Lam Wankoi, with the Jardine Engineering Corporation, Ltd., of Hong Kong for the installation of a "Paterson" rapid filtration plant at Canton, to deal with 10,000,000 gallons of water per 24 hours. The raw water will be taken from the Canton River at Tsang Poo, about 6 miles from the city of Canton, and pumped to the "Paterson" patent rapid sand filters, the installation in this connexion consisting of three electrically driven low-lift pumps each with a capacity of 5,000,000 gallons of water per 24 hours, one being a stand-by. There will be a battery of 16 of these sand filters, operated in conjunction with the "Chloronome" apparatus for the complete sterilisation of the water by means of a measured trace of chlorine gas, and the whole installation is on the same general lines as the Shing Mun Valley scheme for the Hong Kong Corporation, and many others of course in the Far East. Also included, for example, is coagulent treatment by means of alumina with four very large sedimentation tanks, having a total capacity of 1,200,000 gallons, allowing three hours' settling before passing to the sand filters. The total cost of the whole equipment including the pumps, pipes, and other accessories, is approximately 2½ lakhs of Hong Kong dollars, the contract having been secured for Great Britain in the face of severe foreign competition.

When the installation is completed the important city of Canton will have a water supply equal in efficiency to that of the largest cities in Europe, while the important city of Canton will have a water supply equal in efficiency to that of the largest cities in Europe, while it may be mentioned that Canton is making progress in many other directions, including for example, the introduction of a complete automatic telephone system. The general method of this scheme is to treat the raw water with lime and alumina coagulents, pass to settling tanks, and then to filter through rapid gravity sand filters constructed of ferro-concrete and filled with graded sand, through which the water circulates generally at the rate of 80 gallons per square foot of filtering surface per hour, being collected at the bottom by a large number of gun-metal nozzles. The clear water is then treated by the "Chloronome" apparatus, which as a rule adds continuously about one part of chlorine gas to 2,000,000 gallons of water, although the amount is varied, giving complete sterilisation without any trace of taste or smell, the great value of the chlorine gas being of course that it is always a 100 per cent. product irrespective of climatic conditions.

The Money Order service with Roumania was resumed on October 1. The service is limited to ordinary money orders. Telegraph money orders will not be accepted for the present. The limit of amount for a single order will be £20.

MOTOR SHOW PROSPECTS.

The first of London's autumn attractions will begin the week after next with the opening, the day after the Cesarewitch, of the Motor Show at Olympia. That this annual event will be an even greater attraction this year than ever cannot be doubted, for whether trade is depressed or is improving the ranks of motorists continue to increase, and it is probable that there is still a large reserve of purchasers in this country, while there is the large body of motorists who will be renewing their cars and will visit Olympia to see the latest developments of the manufacturers' art.

So much by way of information has been available as to the plans of firms that there is more certainty than usual regarding the lines of next season's models. A large number of small "sixes," and a further increase in straight "eights" may be looked for, and in both categories the value offered will be unsurpassed. There is also an all-round promise of improved details of the kind which car owners attach importance to and have long desired. First and foremost in this connexion may be noted improved oil cooling and filtering, and filtration of air for carburation, and automatic control of radiator temperature; details which means so much to the daily car user, who necessarily begrudges time required for de-carbonising and internal overhaul. Next there will be improved and more accessible ignition details. Battery and coil ignition, in many cases with automatic advance and retard, will be much more in evidence than hitherto. There has been a steady increase in this development since 1927, when the ratio of coil ignition to magneto ignition was 23 per cent., and rose to near 45½ per cent. at the last Show. Higher engine speeds, and a small increase of compression, and more efficient cooling are other details in the new season's engines. Assisted water circulation, which was as high as 67 per cent. at the last Show, may be looked for to have increased with the preponderance of new "sixes."

Poppet Valves.

A return to favour of the side valve engine seems assured, marking a lessening of last year's 48 per cent. of overhead valve layouts. This is traceable to improved combustion chambers and to the necessity of keeping down the overall length of cylinders and crank-case, while improving and increasing valve and port areas for the higher speeds now required.

Improved carburation and fuel feed may be looked for, the latter, however, to only a limited extent, the improvement being mainly concerned with filtering the air and silencing the suction, and in a few cases, combining induction of the air through the crankcase for cooling purposes. Dry sump lubrication is likely to find favour among more expensive models in keeping with its similar progress for marine motors and aircraft. Of detail refinements concerning engine controls, there will be some novelties, and a general improvement making for more comfortable driving, and simplification of details. A greater use of the steering post and interior of the steering wheel for grouped fittings will be seen, correspondingly reducing the number hitherto grouped on the dash panel. All round, the net result of these refinements and improvements of engines should reduce maintenance costs and increase the mileage between repair periods.

More accessible batteries will be shown and the trend seems generally towards eliminating the small series of

STEAM & HYDRAULIC ENGINE PACKING MANUFACTURERS

FLAX, ASBESTOS AND COTTON,

ATTWATER & SONS,

Hopwood St. Mills, Preston. Tel. Add.: "Attwater, Preston"

Contractors to British, American, French and Italian Admiralty.

wiring which owner-drivers have complained of in their cars' electrical equipment. Standardisation and a bulk output by a limited number of makers of electrical equipment, has contributed more than any other cause to the great improvement to be looked for in this necessary equipment. Standardisation, too, applied to the position of the clutch and other pedals, and the order of the gear changes, will be welcomed by owners. Though any marked departure from the unit type of combined engine and gear-box, or as regards the prevalent form of wet or dry plate clutch need not be anticipated, there is likely to be a further reversion to the side position of gear and brake levers.

Free Wheels and Four Speeds.

Four speed gear-boxes are firmly established in favour among British motorists. Free wheels, too, may be looked for, their development in other directions having provided a useful stimulus to a wider interest in them. It seems that the chief surprise in car construction will centre in transmission details rather than in engines or other components, with the possible exception of suspension. Independently sprung wheels and front drives may be allied in this connexion that the development of both seems to be mutually dependent. It is along these and other lines involving increased manufacturing cost that the promised development will centre, mainly in the higher priced cars.

Improved brakes and brake adjustment will be an important feature of next season's cars. A larger use of hydraulic power is being demonstrated, and there has been a general overhauling of the means of adjusting brake shoes and the tension controls. Developments in vacuum-servo control may be looked for, since it is known that practical research has been busy on developments tending to reduce the already small amount of physical effort in driving even the largest cars. Steering layouts are much improved, in fact, some cars which steer too freely have been made a trifle stiffer. The cam and roller form of steering gear has gained popularity and will be found on popular priced cars.

Lubrication by pressure injection has been improved, both in the simple "gun" form, and in the "one-shot" or centralised distribution system. About a half dozen systems are now extant, some being pedal or hand applied and others operated by vacuum in the induction manifold, or by exhaust or air pressure. Something like standardisation is being attained for these fittings, which correspondingly increases the range of their application to cheaper cars. Development of this sort aptly illustrates the attention of car makers to owner-drivers' interests.

All that concerns the appearance of cars will be found improved. The sliding roof will be featured, thus preserving the popularity of the closed body while improving the attraction of the convertible car at will. The suppression of exhaust and oil fumes from car interiors, and exclusion of floor draughts from the driving quarters; a marked increase of unsplinterable glass for screens and body lights; shock absorbers and fenders; increased use of wire wheels—this item advanced from less than 38 per cent. at the Show for 1927 to 42 per cent. at the last Show—and chromium plating, are details which will be mostly standard in the next season's cars.

Superb Coachwork.

Some specially attractive types of body may be looked for in popular priced cars; makers this year seeming to concentrate on body refinements and improved details more than ever before. The result will be found in a larger use of pneumatic and detachable upholstery, adjustable seats of the bucket type, and bright and untarnishable interior fittings. There promises to be a larger use of plywood for certain types of body, combined with improved grades of fabric for panels. This construction will be one of the alternative means for preventing drumming and providing increased body girth and internal comfort without any increase of weight.

In accessories there promises to be a corresponding trend of improved finish and an increase of utility fittings. In this group may be noted fuel economisers, improved screen wipers, ventilators, air stranglers, and head lamp controls by electric or pneumatic devices, hydraulic jacks of the compact telescoping type, and new lines in oil and carburettor air filters and oil coolers and cleansers, radiators, thermostats or temperature controllers, and a larger use of both chromium treated fittings, and others cast in one or other of the new copper-nickel aluminium alloys, which are both non-rusting and untarnishable. In short, next season's cars, especially those in the popular categories, promise to be an unprecedented combination of elegance and comfort, designed for a low cost and easy up-keep, and fitted on lines which have been made possible by the big increase of motoring.

TOBACCO CULTIVATION IN THE SUDAN.

In 1928 experiments in tobacco growing were carried out by the Agricultural Department on Government Experimental Farms at Gendutta in Berber Province and at Shambat in Khartoum Province. Four varieties of tobacco were grown in each of these stations, viz., two American—White Birley and Maryland—one Turkish, and one native. The White Birley was the most successful and the native variety was comparatively a failure. Due to inadequate and unsuitable facilities for drying and curing the leaves, the resultant product lost a great deal of its value. Samples of all four varieties were forwarded to the Imperial Institute, London, for examination, and a report and commercial valuation has just come to hand (says the August report of the Central Economic Board of the Sudan Government).

It appears that the samples had been packed in too dry a condition, with the result that the leaves had become badly broken during transit. The colour was, on the whole, poor and variable, and the leaves were in every case weak, which defect, more particularly noticeable in the samples from Shambat, was due to excessive fermentation. The samples, apart from damage caused by unsatisfactory packing, showed defects which would render them of low value in the United Kingdom. These were (1) lack of body, (2) weakness, and (3) the presence of sand. It was pointed out that the lack of body could probably be remedied by proper cultivation, greater care in curing would yield a finished leaf of better strength and elasticity, whilst proper precautions would eliminate sand.

The report states that, taking everything into consideration, the Birley and Maryland leaf may be considered as promising, their burning properties satisfactory, and the flavour of fair quality and free from objectionable features. The Birley leaf approaches the American type more than the Maryland sample. It is probable that proper curing would improve the flavour. Judging from the ash analyses the soil does not appear to possess any features rendering it unsuitable for tobacco growing under proper management. The amounts of chlorides and sulphates in the ash are satisfactorily low, whilst the potash, without being high, is sufficient to produce satisfactory burning, though subsequent crops would no doubt be benefited by the application of a potash manure.

CABLE AND WIRELESS MERGER.

Cables and Wireless, Ltd., announce that the Certificates of "Assents" deposited at the close of business on the 25th ult. were as follows:—

	Percentage of total.
Eastern Telegraph Co., Ltd.	97.86
Eastern Extension Australasia and China Telegraph Co., Ltd.	98.02
Western Telegraph Co., Ltd.	98.15
Marconi's Wireless Telegraph Co., Ltd.	92.14

The 92.14 per cent. of the shares in Marconi's Wireless Telegraph Company, Ltd., assented represents 80.5 of its nominal issued capital. Assents are still coming in. The company points out that to secure the benefit provided under the Act for the relief from capital duty amounting to approximately £40,000 it is necessary to obtain assents for 90 per cent. of the issued capital. For this purpose, only an additional £10,962 in Marconi shares is now required to be assented.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended September 25:—

Egyptian Futures.

Sakel Contract.—Values in this contract have declined substantially since we last wrote, poor Alexandria reports and the liquidation of a large stale "bull" holding realising more contracts than the market could absorb without the level being seriously affected. The weak tone shown latterly by the overseas market is due to the crop making satisfactory progress and to the commencement of hedging operations. Speculators, in view of their disastrous experiences on the "long" side last season, are not risking a repetition, and whilst trade support is improving as values work lower, the volume of business from this quarter is as yet in no way adequate to counterbalance the weight of the approaching crop movement. It rather appears that this season's values of Sakel cotton are going to be freer from manipulative operations than they have been for some time; wide differences with other varieties in the past have forced spinners to experiment with satisfactory results, and the increasing weight of outside staple cottons is now beginning to be an important factor. Trade reports continue to be more satisfactory, but there is nothing yet in the situation to cause spinners to cover more than their near-by commitments; the general idea is that at a basis in the neighbourhood of 31 dollars in Alexandria and 15½ locally, a considerable expansion in business would develop. Liverpool/Alexandria differences have closed in slightly on the week, and we consider the tendency will continue as the marketing movement matures. In the local market near cotton has depreciated somewhat in comparison with later deliveries, November/January at one time widening to 28 points; they have since closed again to 18 points, and will probably move in an erratic manner until "straddle" contracts commence to be released.

Upper Contract.—This market has shown a somewhat heavy undertone since we last wrote, and with selling against actual meeting a limited offtake, values on the week show declines of 18 to 34 points. The trade demand for spot cotton has hardly been as consistent as latterly, and new crop business continues to be moderate. Crop reports continue to be favourable, and we learn from the other side that whilst perhaps this season's grade will be slightly off in comparison with last year, the staple is rather better.

Egyptian Spot.

The better tone has been maintained, and once again we are able to report that a good business has been done in spot Egyptians. Values have eased considerably during the week, but this fact has not prevented spinners from freely entering the market, and we suspect that there is more business doing up-country than is generally believed, at all events in certain lines. We would much like to be in a position to state that the inquiry has shown signs of a general broadening, but, with the exception of Sudan Sakel, interest in which cotton has shown a progressive increase of late, this is unfortunately not the case, and the daily demand has run for the most part on the usual stereotyped lines.

Sakel has been in fair request, chiefly for cotton at from 25 to 100 points on November contracts. Lower qualities have received a certain amount of attention at from 10.50d. to 15d. As usual, the top qualities have been rather neglected.

Uppers.—A good business has again taken place in cotton at from pass to 20 points on November contracts. The combing out process continues unabated, and cotton which a week ago would have been passed over, to-day finds eager buyers. The better, and the lower qualities, have been slow of sale.

Pilion has been in moderate request at from 12d. to 13d.

Nahda, White, and Maarad.—These growths have met with very little inquiry.

Sudan Sakel has been in improved request, particularly for the lower qualities, which compare very favourably indeed with anything that can be found in the Sakel market at the same price.

Tokar Sakel.—A little more interest has been shown in this cotton, but actual sales have been isolated.

C.i.f. business has again shown some improvement, but the proportion of new crop business put through has been small. Forwardings to the trade last week were returned as 7,325 bales Egyptians and 1,181 bales Sudan. Estimated spot sales, 3,000 bales Egyptian and 1,450 bales Sudan Sakel. Quotations of Sakel show a decline of 80 points. Uppers are 40 to 50, and Pilion 40 points lower on the week. F.G.F. Sakel to-day, 16.05d. F.G.F. Upper to-day, 11.30d. F.G.F. Pilion to-day, 12.35d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended September 10:—Since our last report the futures market has again been very active, but the tone has been somewhat weak. The week's summary of price movements is as follows:—Sakel-laridis: November, 33.28 dollars, 0.52 dollars down; January, 33.69 dollars, 0.47 dollars down; March, 34.14 dollars, 0.46 dollars down; May, 34.43 dollars, 0.52 dollars down. Ashmouni: October, 20.93 dollars, 0.44 dollars down; December, 21.33 dollars, 0.38 dollars down; February, 21.85 dollars, 0.37 dollars down; April, 22.24 dollars, 0.38 dollars down; June, 22.63 dollars, 0.32 dollars down.

ECONOMIC CONDITIONS IN GREECE.

Hambros Bank, Ltd., give the following details of conditions in Greece in their current weekly market report:—

In order to stimulate private building and cope with the shortage of houses, special tax and rate remissions on varying scales for 25 years, 10 years, 8 years, and 4 years, according to the type of the building and the object, have been granted to owners of newly built houses. The Ministry of Finance have just issued a circular to the Custom House authorities according to which road making materials are to be imported free of any duty.

Imports of agricultural machinery, fertilisers, and seeds, etc., by co-operative agricultural associations are allowed to enter Greece free of any duty. Yarns which are used in the manufacture of carpets are subject to a special low tariff.

The total of silk cocoons (white and yellow) produced in Greece in 1928 reached 2,604,882 kilos, which, taken at a middle price of 47 drs. per kilo, represents a value of 122,429,454 drs. derived from this source of wealth. The total production for 1927 was 2,538,134 kilos.

The vine harvest is exceptionally good in most parts of the country. This has had a downward influence on the price of wines. Fresh grapes have been exported to Egypt and Italy (Trieste), Hungary, and other countries, and a good effort is being made to establish a regular business during the season.

Citrons are in abundant supply, and the crop is distinguished by its good quality. Tobacco prospects are very good, and the more optimistic estimates expect this year's crop to reach 75 million kilos.

A change has been notified in the rules of the Post Office Savings Bank. According to the new regulations, deposits of up to 500,000 drs. by individuals residing outside Greece are allowed, as against the 25,000 drs., which is the maximum figure for depositors residing within Greece. It is considered that this measure and the attractive rate of interest of 6 per cent. which savings bank depositors are paid will induce the inflow of emigrants' savings to Greece. Post Office Savings balances are invested in Greek loans or lent against security to Public or other Corporations.

An International Peace Congress composed of business men is to be held in Athens this month.

The exports of locust beans from Cyprus in August totalled 819 tons, reducing the stock of locust beans in the Island to 1,211 tons.

A new commercial treaty between Roumania and Czechoslovakia is in course of preparation.

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.
The Bank transacts every description of banking operations.

Company Meetings.

IMPERIAL AIRWAYS.

England-India Service.

Projected Extensions.

Sir Eric Geddes' Speech.

The fifth ordinary general meeting of the members of Imperial Airways, Ltd, was held on September 25 at the Hotel Cecil, London, W.C. The Rt. Hon. Sir Eric Geddes, G.C.B., G.B.E., chairman of the company, presided.

The Secretary (Mr. S. A. Dismore) having read the notice convening the meeting and the report of the auditors,

The Chairman, in his speech moving the adoption of the report and accounts, said:—You will notice a further substantial improvement in the position of your company, both from the balance-sheet and the trading point of view. The profit for the year amounts to nearly £79,000, almost 10 per cent. improvement over last year. This is really better than may at first appear, as before arriving at the profit figure we have not only cleared the £6,043 outstanding inauguration and survey expenses appearing on our last balance-sheet, but we have also liquidated the whole of our development expenditure incurred in the year. The abnormal expenditure under these heads was approximately £12,000; also, owing to the incidence of payment of subsidy, these accounts contain £4,500 less under that head than in 1927-28, whereas we had on the other side abnormal credits of about £6,000.

Traffic and Operations.

When we met here last year I was able to tell you that the rate of traffic increase on your European services had exceeded our estimate. I am pleased to report a still further improvement, and traffic revenue for the year under review has increased by 29½ per cent. compared with the previous year. In fact, the turnover of the European services has more than doubled during the three years commencing March 31, 1926. In the Near East the results are also satisfactory, as the traffic revenue on your Cairo-Baghdad-Basrah service has increased by 48 per cent. compared with the previous year. The service is now a part of the England-India service, of which it forms an important link.

It is interesting to see how the actual services operated compare with our minimum obligation to the British Government. In Europe, in order to earn our subsidy, we are required to fly an annual minimum mileage. Actually we have flown in 1928-29 94 per cent. more than that minimum required, so that we have carried out nearly double the services required to earn our subsidy. I think that we can safely say, therefore, that the British taxpayer is getting value for the money he pays as subsidy. It is, of course, to our advantage to fly these extra miles so long as they can be run at a gross profit, and we do not do otherwise. This means that, step by step, we are getting nearer and nearer towards being independent of subsidies.

This non-subsidised flying is not confined to Europe, and your Near East service supplemented its revenue by flying 12,500 non-subsidised miles in Palestine and Iraq, compared with 6,700 miles in the previous year.

Statistics of Operations.

To sum up the statistics of your traffic and operations for the year, your aircraft have flown 1,032,842 miles, and 34,757 paying passengers and 873 tons of mail, freight, and excess luggage have been carried. Of the capacity provided, 74½ per cent. has been filled with paying traffic in Europe and 61 per cent. in the Near East, and of the services scheduled in Europe 92.85 per cent. were completed, although the weather conditions are probably less favourable for flying in Europe than anywhere else in the world. The regularity achieved on the services in the Near East was 99.37 per cent.—we lost our goal of 100 per cent. because severe dust storms prevented us from flying to schedule on certain sections on three occasions. We must, however, expect some fluctuations in our progress.

For the fourth year in succession your regular services were free from accident involving injury of any kind, and it is with the deepest regret and sympathy that I refer to this wonderful record being marred in the fifth year. No transportation company can expect to be entirely free from accidents, but anything that skill and forethought can do is devoted to upholding our really wonderful record of safety.

We have ordered eight of the largest aircraft ever built for regular commercial services. Those of you who may have seen the full-sized model of the cabin of this aircraft in the recent Exhibition at Olympia cannot fail to have been impressed by the greatly improved standard of comfort. Some of these planes are for your European services and some are for the India service. They will be fitted with four engines with a total of 2,000 horse-power and will be capable of carrying about 40 passengers in addition to the crew.

England-India Service.

I would like now to say a few words on the subject of your service between England and India and the projected development of it. Last year I outlined to you our scheme under the new agreement with the Government. This service was inaugurated at the end of

March, 1929, in accordance with the prearranged programme, and has been working with remarkable regularity since then.

Few people, I think, appreciate fully what this line has meant in the way of organisation. It is the longest organised air route in operation in the world, its length being almost 5,000 miles, 1,800 miles of which are operated by marine aircraft across the Mediterranean Sea. The service operates over 10 different countries, speaking seven or eight different languages and utilising nine different currencies.

Turning to the commercial side of this service, the traffic to which we look to produce our most profitable and constant source of revenue is mails, not only on this India route but elsewhere. While the growth of mail traffic on the India route is steady and continuous it is not increasing as rapidly as we had hoped. We cannot help feeling that, in spite of the substantial sums that we have been judiciously spending on advertising, and the generous support of the Press, the service is still not common knowledge to the general public, and I would urge every shareholder to use his or her personal endeavours to preach as well as practise the "Air Mail" habit.

As regards passenger traffic, it is in its infancy on the route from England to India, and we cannot pretend that we have *de luxe* accommodation. The provision of good ground accommodation for passengers is a problem which can only be solved progressively. At present it is frankly not luxurious, but until our night halting places are permanently fixed and the route finally selected, with security of tenure, it would be folly to sink our capital in buildings in the desert or down the Persian Gulf or through the African Equatorial forests.

At the present time our schedule for the service from London to Karachi is 7½ days. By gradual improvements in our ground organisation this time is going to be systematically diminished until, by perhaps another year or so, we hope to have a five-day schedule to Karachi, which, with satisfactory air connexions across India, will mean a little over six days for Calcutta to be reached. The more we are supported by the public the quicker we can attain this goal.

With regard to the extensions of this India service, it is the aim of the board to continue the line all the way to Australia, and in this connexion we have been negotiating with His Majesty's Government in India for the operation of a service between Karachi, Delhi, and Calcutta.

The negotiations with the Government of India were inconclusive so far as a permanent service is concerned. We have, however, offered to charter to that Government aircraft for a service between Karachi and Delhi, and possibly on to Calcutta, on a temporary basis for a period of two years, to connect with our England-India line, and we hope that this offer will be of service while the Government of India is shaping its civil aviation policy. The board is already in correspondence with the Government of Australia and the Home Government on the subject of the continuation of the line from India to Australia.

Egypt-South Africa.

Since I spoke to you last year your board has negotiated to its concluding stages an agreement with His Majesty's Government here, acting with the Governments of South Africa, Kenya and Uganda, Tanganyika, Sudan, and Rhodesia, for the operation of a service between Egypt and South Africa. This now awaits final ratification. In this venture we are fortunate in having associated with us the Cobham-Blackburn Air Lines, Ltd., and we shall have the benefit of the counsel and experience of Sir Alan Cobham and his colleagues, who, I am happy to say, will join the board of the subsidiary company which is to be formed to operate this section of the route.

It is planned that the northern half of this line, from Egypt to

Lake Victoria Nyanza—serving Upper Egypt, Sudan, Uganda, Kenya, and Northern Tanganyika—will be commenced, all being well, about this time next year, and the southern half as far as Cape Town is planned to commence about six months after the northern section.

Comparison with Foreign Countries.

It is well nigh impossible to find out how foreign companies are progressing financially. It is indeed difficult to compare the assistance in cash or kind which is given to foreign companies; for instance, in Germany the German company receives subsidies from the German Government and a number of municipalities separately. In America there are very few, if any, direct subsidies, but mail contracts are given on tender, and the service performed is not paid for in full by the user, but by the postal authorities, who operate air mails generally at a substantial loss.

In Great Britain we have a clear-cut subsidy, and the postal authorities retain a proportion of the air mail fees paid by the public for their own purposes. On the Indian air mail this works out as follows:—

	Per pound.	s.	d.
Post Office charge to public Air Mail charge and ordinary postage charge	21	3	
Post Office pay for Air Mail services and all charges throughout Croydon Aerodrome to Karachi	14	1	
Balance retained by Post Office	7	2	
This gives the following interesting result. The Post Office will			

deliver a letter by ordinary mail to India for 1½d., but to hand it to us at Croydon Aerodrome for conveying by air they keep 2½d. a letter.

I am making no grievance about this; we knew it before we started the service. The Post Office have made it clear that they will adjust the charges so as to make no profit as soon as the figures can be examined in the light of actual experience. We are really at their mercy, and I have every hope that in their own time they will be merciful to us. I merely mention the matter here to show the different methods which different countries have adopted in helping civil aviation.

In conclusion I would say that civil aviation has proved its reliability beyond doubt as the fastest means of transport in the world. We are, as a company, meeting our obligations to the Government fully and generously. We are flying nearly twice the mileage we are obliged to fly; we have been efficient in our management, courageous and enterprising in our extensions, and conservative in our finance; but the Empire is still far behind other great countries in its flying activities. Far greater financial assistance is given to civil flying by other nations than is given by our country, and yet, what a field for the quick development of civil aviation is offered by the British Empire! Quick communications develop trade. If for a comparatively small sum of money India can be brought 11 or 12 days nearer to us, South Africa eight days nearer to us, and Australia 16 days nearer to us, does anyone doubt that a rich harvest in increased trade will follow. I therefore urge the need of increased financial support for Imperial Airways, to enable it to extend and develop on its Imperial mission. (Cheers.)

The report and accounts were unanimously adopted.

Notes of the Week.

Mohamed Pasha Mahmoud.

Alike in his resignation and throughout his tenure of office Mahmoud Pasha has set his countrymen an invaluable example of disinterestedness in the service of the State. In these democratic days it is not fashionable to eulogize the exercise of arbitrary power, but apart from embittered political opponents in Egypt no well-informed observer of Egyptian affairs has been found to challenge the value of Mahmoud Pasha's Premiership in his country's chequered history of the last decade. Until he took office, no refutation could be given of the confident assertion that honest and efficient government in Egypt was impossible without foreign stimulus. All that had been achieved previously in this direction was, rightly or wrongly, attributed to the part played by Great Britain in the country. Mahmoud Pasha's Government showed that a new element had come to the front in Egyptian politics, prepared to set store on just those things which are the essence of all progress in modern statecraft. The only charge that his enemies have been able to bring against the retiring Prime Minister is that he ruthlessly suppressed their liberty to foment disorder. As far as is known, not a single accusation has been levelled at him or at any of his Ministers that the "dictatorship" was used to further either personal or party interests. The work of the late Government in advancing the material welfare of the nation may have been of an obvious character; but the fact remains that no other Government during the last ten years was found able to take it in hand. Mahmoud Pasha would be the last person to pose as a super-Egyptian; his action in taking office, as in resigning it, was prompted by a desire to promote the interests of his country by convincing the world that Egypt was not to be judged by a handful of fanatical extremists, but could produce a sufficient number of reasonable men and enough administrative talent to justify her taking her place among the independent nations of the world. Egypt's prestige abroad stands much higher to-day than when the late Government took office; but with equal truth it must be admitted that it requires only a brief return to conditions which the "dictatorship" terminated to undo the good work done in this respect during the last fifteen months.

Egypt and the Treaty.

The formation of a Ministry by Adly Pasha with a view to holding a general election affords the best possible evidence that Egypt is resolved to profit by her experience, and that there is a reasonable prospect of a peaceful and dignified resumption of parliamentary government. It is noticeable that no one in the country appears to doubt the ability of the Wafd to obtain an overwhelming majority at the polls. Egypt, therefore, would seem to have some distance yet to travel before she can rid herself of the inferiority complex which has hitherto stood in the way of her independence. For, if the Egyptians constituted a normal electorate, the Wafd could make no appeal that would entitle it to such unquestioning support. Before July 1928 it was able to rally the country behind it by representing the British as the last and most deadly of Egypt's plagues. To-day the country is to be asked to endorse a treaty eliminating this plague, and the Wafd has lost its slogan. What has it to put in its place? Both its supporters and its opponents seem to think that there is no need for any substitute, that the electorate, having been forced to vote for the Wafd in the past, will continue to do so now. This view is not flattering to Egyptian intelligence; but those who hold it support it by pointing to the fact that between eighty and ninety per cent. of the Egyptian electorate is illiterate, that it is, therefore, incapable of forming political views of its own, and that it must needs answer to the crack of the political whip, as the fellaheen did to the lash of the *corvée* until Great Britain freed them from that particular tyranny. If this prove to be the case, when the elections are held in two months' time, it is not likely to remain so indefinitely. The spread of education must gradually alter the character of the electorate, and all parties will discover the need for a constructive programme. The indications of the last few days suggest that, if the Wafd comes into power in 1930, it will be different from the Wafd that held office in 1928. There is no reason to fear for the fate of the proposed treaty, and when the subject of Anglo-Egyptian relations has ceased to be the burning question of the day for Egypt, Egyptian politicians of whatever party will be compelled to live up to the standard of administration set by Mahmoud Pasha, which will

have been continued so long as a Government headed by Adly Pasha remains in office. Belief in the lasting value of Great Britain's work in Egypt suggests that neither the non-Wafdist parties need surrender themselves to despair at the coming election, nor foreigners view with unrelieved pessimism the possibility of a Wafd victory.

Changes in Yugoslavia.

As a definite step towards achieving unity in the Yugoslav Kingdom, King Alexander has decreed the division of the country into new administrative units. The former official designation, the Kingdom of the Serbs, Croats and Slovenes—a cumbersome title at best, which the country probably owed to Pashitch—is to be changed to that of the Kingdom of Yugoslavia, which in itself suggests a homogeneity that seemed to be denied by the former insistence upon the three major divisions of the population. Yugoslavia, it may be recalled, comprises the seven territories of Serbia, Montenegro, Bosnia and Herzegovina, Dalmatia, Croatia, Slovenia and the Voivodina, the latter embodying parts of Baranya, Batchka and the Banat. For administrative purposes, however the country was divided into thirty-three *oblasti* or counties, the whole administration being rigidly centralised in Belgrade. Under the new arrangement the country will be divided into nine administrative units to be known as *banovine*, each under a *Ban*, or Governor, with Belgrade, the capital, forming a separate administrative unit. The administration is to be decentralised by the conferring of wide powers upon the Governors, but it would appear that the intention is that the separate administrations should still remain under the control of the central Government. There will ultimately, however, be elected councils for each *banovina* and, although the funds for the provincial administrations will be provided mainly from the State Budget, a wider measure of autonomy than at present exists must result from the new system.

An Historical Revival.

King Alexander has gone to history for his nomenclature. The custom of giving the names of rivers to the territory through which they flow dates back to early Slav days, the modern Serbia having been known as Rashka, or the country of the Rash, and Montenegro as Zeta, from the small river of that name. Serbia maintained the tradition by having among her territorial divisions Moravska, Po-drinska, and Po-dunavaka, and King Alexander has now applied the system to the whole Kingdom. *Banus* is an ancient Slav title, which was retained by the Ban of Croatia under Hungarian jurisdiction, and Zhupan dates back to the earliest centuries of Serb his-

tory, Stephan Nemanya having been Veliki (Grand) Zhupan of Rashka. In other respects the reorganisation of the country into new administrative units is intended to be a break with the past, by the elimination of the old geographical titles of Serbia, Croatia, etc. In view of the keen territorial sense of the Serbs, in particular, and their great patriotic sentimentality, the changes are significant. All sections of the Yugoslavs are called upon by their Sovereign to merge their strong local attachments in a joint national patriotism, which will further the welding of the nation into a single and single-minded unit. The omission to link the public announcement of these administrative changes with some reference to a return to parliamentary government is bound to cause heart-burnings in the country. King Alexander, however, may well have decided that, if the purpose of the Dictatorship is not to be stultified, the more suitable method of procedure is to start the provincial councils first and from them to recreate a Parliament for the whole Kingdom.

Iraq's New High Commissioner.

There will, we imagine, be general pleasure at the appointment of Sir Francis Humphrys as High Commissioner of Iraq in succession to the late Sir Gilbert Clayton, for the record of Sir Francis in the East is one of which any Englishman would be proud. There is no need here to describe the dignity and efficiency with which he upheld British prestige in Kabul, to which he went as Minister in 1922: it is a matter of history. And the whole world knows of his gallantry at the critical time of the rebellion in Afghanistan, at the beginning of this year, when reputations were crumbling wholesale, and, as it must have seemed to the partisans of ex-King Amanullah, the foundations of life itself were falling. So worthy a character as Sir Francis showed himself to be possessed of at this historical moment could not long be left unused by the British Government, and Iraq is fortunate indeed in having so eminent a diplomatist to help her on to her goal of independence. Admittedly, far other qualities than those needed at Kabul will be required for Baghdad—though the bedrock virtue of patience is everywhere necessary in the East—but we doubt not that the new High Commissioner will duly exhibit them. For his brilliance is of the solid, not of the flashy, kind.

The Wailing Wall.

It is a matter for general congratulation that the ceremony at the Wailing Wall in Jerusalem on the occasion of the Jewish New Year passed off without incident. The Palestine Administration appears to have made the sensible regulation of forbidding passage by the Wall to non-worshippers between certain hours on Jewish holidays. As yet, of course, it is too early to judge whether this arrangement will suffice to keep the peace at the Wall; the Day of Atonement, which falls on October 14, will, perhaps, afford a better criterion. But at last there is a fair indication that the new restriction will justify itself. At the moment, indeed, the whole attention of the Arabs seems to be concentrated upon the Commission of Inquiry, under Sir Walter Shaw, which is due to arrive in Palestine on October 24. Both Arabs and Jews have resolved on the presentation of their respective cases in the best possible light, and are engaging counsel for their purpose. In spite of this fact, however, the Commission is not to be envied its task in disentangling the truth from all the falsehoods and propaganda which have been gushed out in the last few weeks. In the meantime, it is the course of wisdom to refrain from making premature comment. As the Bishop in Jerusalem, speaking in London the other day, said: "There had been serious and constant provocation on the one side and inexcusable violence on the other." But to gain an indication of how sentiments are shaping themselves in Palestine after the grievous disturbances, it will be well to keep a keen eye on the Wailing Wall, the touchstone, so to speak, of Jewish claims in the Holy Land, and the spark which set going the recent conflagration.

INDIAN NOTES.

Mr. Gandhi and the Congress.

The All-India Congress Committee, at their meeting at Lucknow last month, elected Pandit Jawaharlal Nehru President of the forthcoming Lahore Session of the Indian National Congress. Mr. Gandhi, although supported by a majority of the Provincial Congress Committees, definitely refused to accept office. He recommended that the honour be conferred upon Pandit Jawaharlal Nehru, and the Congress Committee acted upon his recommendation. Judging by the Indian newspapers, there seems to have been a general feeling of surprise at Mr. Gandhi's refusal; and efforts were made to persuade him to reconsider his decision. But he stood fast, expressing the opinion that he is unfit for the Presidency. He complains that he is out of touch with the younger politicians. "There is," he says "a hiatus between the younger generation and me. I feel a back-number in their company." Pandit Jawaharlal Nehru is one of the younger generation, and he holds extreme opinions. He definitely advocates independence, having no use for the British connexion. Mr. Gandhi does not go so far as this. He has, however, declared that he too will advocate independence if, by midnight on December 31, 1929, the British Government does not accede to the demands of the Nationalists as expressed in the Nehru report. In the result, therefore, there may not be any great difference between his attitude and that of the youthful Pandit. And it may be confidently anticipated that, in any case, the resolutions of the Lahore Congress will be of the most advanced type. But will anybody in India or elsewhere take any serious notice of them? We think not, for it is obvious that year by year the Congress is becoming less and less representative of the various races, creeds, and communities which make up the population of India.

An Impending Announcement.

Not only the Muslims but most of the other minorities are frankly dissatisfied with the Congress, which is becoming an almost entirely Hindu body. It has been largely supplanted by the new Legislative Councils in which the political life of the country is now really centred; and, as its influence wanes, it tends to become more extreme and more irresponsible. It has travelled a long way in that direction since the days when in its preliminary report the Indian National Union—as the Congress was originally styled—said that "the Union, so far as it has been constituted, appears to be absolutely unanimous in insisting that unswerving loyalty to the British Crown shall be the keynote of the institution . . . it holds the continued affiliation of India to Great Britain, at any rate for a period far exceeding the range of any practical political forecast, to be absolutely essential to the interests of our own national development." Meanwhile the rumour mentioned on several occasions recently by our Calcutta Correspondent as having enjoyed wide currency in India, that the British Government intends to make an important declaration of policy before the December meeting of the Congress, persists. According to the Diplomatic Correspondent of a morning contemporary Lord Irwin, who leaves London to-day on his return journey, has agreed with the Secretary of State and the Cabinet as to the form and general terms of the projected announcement. It is understood that the actual date of the issue of the statement will not be fixed until Lord Irwin has had an opportunity of considering the situation as it has developed during his absence, but that the announcement will be made in any case before the Lahore meeting of the Congress. Although speculation continues rife concerning the probable contents of this "momentous document," it may safely be said, we think, that it will do no more than indicate the procedure which the Government proposes to follow after the publication of the Simon Commission's report.

GREAT BRITAIN AND IRAQ.

In his address at the Labour Party Conference at Brighton on October 2, Mr. Arthur Henderson, Foreign Secretary, devoted some attention to Iraq. He said, in explaining the decision of the Government to dispense with the provisos (of the present rate of progress in Iraq being maintained, and all going well in the interval) attached to the promise contained in the Anglo-Iraqi Treaty of December, 1927, to support Iraq's candidature for admission to the League of Nations in 1932, that it was taken upon the advice of the late High Commissioner for Iraq.

It might be thought from this, perhaps, that a new policy had been decided upon for Iraq, that whereas her entrance into the League of Nations had hitherto been hedged about with all manner of vague conditions, now it was plain sailing for King Faisal's State. As a matter of historical fact, however, it is no new idea which the British Government has recently adopted: the justification for granting Iraq's claims to the League do not rest merely upon the advice of the late High Commissioner. For it is known that Sir Henry Dobbs, the predecessor of Sir Gilbert Clayton in Iraq, had advocated the recommendation of Iraq for membership of the League in 1928. In an article published in the *Empire Review* for September, Sir Henry himself has told the story of Anglo-Iraqi relations, and it is sufficiently clear from his essay that it was owing to no lack of arguments on his part that the entrance of Iraq into the League was postponed until 1932. This point is one very well worth remembering, particularly in view of the doubts occasionally expressed upon Iraq's fitness to govern herself; and there is little question that it will be fully remembered in the forthcoming discussions on the Anglo-Iraqi Treaty (the crux of the matter) which is to govern Iraq's entry into the League in 1932. That so experienced an administrator as Sir Henry Dobbs actually recommended such relaxation of formal British control four years before it is to be accomplished is a fact on which future historians will certainly seize, even if contemporary observers, who very largely are themselves participants in the making of the history of Iraq, are inclined sometimes to neglect it.

The popular assumption that the recommendation to end the Mandate for Iraq was a sudden departure from previous policy appears to have arisen from the almost simultaneous publication of the Report on Iraq for 1928 and of the Government's decision to end the Mandate in 1932. The inclusion of a certain passage in that Report, entitled *Al Wadha' Al Shadh*, was widely regarded as an omen that Great Britain had at last recognised the difficulties to which the situation in Iraq in 1928 gave rise; and, the advice of the late High Commissioner on the sweeping-away of the proviso regarding the recommendation of Iraq for League membership being made public about the same time, the inference was drawn that the two matters—facts relating to "the perplexing predicament," and the advice to eliminate the proviso—were supplied to the British Government by the same man. There is, however, no justification in supposing that this chapter on *Al Wadha' Al Shadh* was subsequently interpolated into the Report for 1928. That passage was a somewhat unusual and very illuminating one, and it was, presumably, after a due weighing up of the facts narrated therein, that the British Government decided to cut the Gordian Knot, accelerate the speed with which Iraq was travelling to independence, and announce 1932 as the year of elimination of formal British control in Iraq.

The story of Iraq since the War is, indeed, a tangled skein. There was at times much groping after a workable policy, but such shortcomings as there were are to be set to the blame rather of the hesitations of the British Government than of the man on the spot. The more the period is studied, however, the more of a piece does it become, and the more apparent the debt which any particular High Commissioner owed to his predecessors.

CRUCIAL DAYS FOR EGYPT.

With the resignation of Mahmoud Pasha Egypt finds herself on the threshold of a crucial period in her history. For all that happens she is now responsible herself. In the old days there was always Great Britain who could be charged with thwarting her at every turn; for the last fifteen months the country—so the world has been asked to believe—has been suffering under a "Dictatorship," with Parliament suspended and the Press muzzled. To-day all that lies between her and the realisation, so far as Great Britain can arrange for it, of the complete independence that she has so long coveted is the short space of two months, the minimum period required for the holding of a general election. In the interval the administration will be in the hands of a Government of Elder Statesmen carrying the consent of the people as a whole. There has been no interference with the Electoral Law, and the elections will be held under conditions of the country's own making. The arena is cleared for the great event, and it would be hardly any exaggeration to say that the whole of the world is looking on. What will Egypt make of her opportunity? There will be many guesses and as many confident assertions. It is obvious, however, that she has not yet made up her own mind, and for this reason the moment is ripe for any dispassionate and objective analysis of the situation that may help the Egyptians to see themselves as others see them. In Egypt, as in other lands, the thing that matters—above the interests of persons or of parties—is the welfare of the country as a whole. If this goal is not lost sight of, the political vicissitudes through which the Egyptians pass may well be found to contribute in their own way to the general advancement of Egypt. It is impossible, for instance, for any dispassionate observer to believe, for all the violent denunciations that have been showered on the "Dictatorship," that Mahmoud Pasha's period of office has been for the country anything but a time of progress and salutary discipline. When asked to decry a Prime Minister for being a Dictator, the world looks for a man made of sterner stuff than one who not only negotiates a treaty that must be the death-warrant of his own dictatorship, but also shows by his resignation that the interests of his country, which he regards as indisputably linked up with the acceptance of the treaty, are more to him than dictatorial power or office. There can be no adequate appraising of Mahmoud Pasha's services to Egypt which does not take into consideration the situation in the country when he formed his Government. Of the liberty that is usually connoted by constitutionalism there was little or none; delegates to Parliament were dragooned by extremists, constituencies, local officials and the civil service by the delegates. Of legislation there was no end, but no heed was given to honest and efficient administration, and the development and progress of the land were deliberately relegated to the background. The youth of the country was taken from its studies, the peasant from his work and the merchant from his shop for the staging of political demonstrations that achieved no other purpose than to convey the impression that Egypt was a victim of chronic disorder. Into this state of affairs Mahmoud Pasha introduced, first of all, order; the people of the country were bidden to get on with their work and the Government proceeded with its

own. If severity was exercised, it was solely in the direction of preventing any recrudescence of disorder. For the rest, the Administration set out to do what had been left undone during the previous seven years; irrigation and drainage schemes were put in hand, hospitals built, swamps filled in, villages supplied with drinking water and sanitary dwellings erected for manual workers—a satisfactory enough record for any country in so short a time.

The fifteen months of Mahmoud Pasha's administration have removed from Egypt the charge that the country is incapable of efficient government, if left to itself. That result is no small asset with which to begin the era of complete independence. The pessimists will declare that Mahmoud Pasha's achievement was a mere flash in the pan, rendered possible by the support of "British bayonets." To this charge the Liberal Constitutionalists who supported the late régime have now no opportunity to reply, and the answer, it would seem, is to be left with the Wafd. In the general exchange of views among the Egyptian political leaders and between them and the King and the British Residency one thing, it would be thought, must have been made clear, that nowhere does there exist that unreasoning hostility to the Wafdists that they themselves have shown towards the man who has proved himself a genuine patriot, and, having obtained for Egypt a better treaty with Great Britain than has even been offered her before, steps aside to let others have the credit of accepting it. So long as the Wafd knew no other slogan than "Down with the British," its leaders will hardly have expected to make a favourable impression among those who have knowledge of Egyptian affairs in Great Britain, where a hard-and-fast line is jealously observed between purely party advantages and national interests. With the offer of a treaty a veil is drawn completely over the past, and the ground is cleared for a fresh start. It is for the Wafd to indicate what it wishes its relations with Great Britain to be in the future.

The potential attitude of the Wafd, however, is of greater interest to Egypt than to Great Britain. The worst development that the British Government can contemplate is that the proposed treaty, in the offer of which it has not carried the whole nation with it, should be rejected by Egypt. It runs no risk of having to grant "better" terms, because on the points that count its concessions have already gone down to bedrock. The rejection of the proffered treaty would be an embarrassing disillusionment for Mr. Ramsay MacDonald's Cabinet, not, however, without its compensations from a political point of view. For Egypt far more is at stake. If the proposed treaty is accepted in the spirit in which it is offered, the question of Anglo-Egyptian relations will no longer figure as the main, if not the sole, pre-occupation of the Egyptian political world, and the country will be free to devote its attention to domestic politics. The proposed treaty, after all, is not the final word in Egyptian independence. It regulates the relations between Egypt and Great Britain, but the complete abolition of the capitulatory régime does not rest with the latter. Article XI. of the proposed terms states that His Britannic Majesty undertakes to use all his influence with the Powers possessing capitulatory rights in Egypt to obtain, in conditions that will safeguard the legitimate interests of foreigners, the transfer to the Mixed Tribunals of the jurisdiction of the existing Consular Courts, and the application of Egyptian legislation to foreigners. It must be obvious to the Wafd politicians, if they will allow themselves to reflect on the subject, that the attitude of the other Capitulatory Powers must be influenced by Egypt's own conception of its responsibilities. If foreign Governments are to judge the Egypt of the future by the record of the last Wafd régime, they will be impressed, not by the multiplicity of laws rushed through the legislature, but by a few outstanding features; they will picture Egypt at the mercy of student demonstrations and street mobs, or they will recall the verdict of the Egyptian majority of judges

(Continued on page 404.)

*The Near and Middle East

From Our Own Correspondents.

EGYPT.

Cairo, September 28.

Finding a Way Out.

The situation to-day is practically unchanged from what it was when I wrote last week. Wassef Ghali Pasha is still trying, on instructions from the King, to bring the Wafd into line with the other parties; Nahas Pasha has lunched at the Residency where there was no political talk; he was received to-day by the King, but has so far not sought an official interview with the High Commissioner; Adly Pasha, having found a Coalition impossible, has returned here from Alexandria; and the Treaty, or rather the political *impasse* created by the Treaty, is still everywhere the topic of the hour. So far no one seems to be able to find a way out of the present difficulty and all eyes are turned towards London, whence, as a result of the Cabinet meeting held last Wednesday, it is generally believed a decisive announcement will be made during the next few days.

San Stefano Casino.

Never before has such a situation been witnessed as that which has existed during the past week at the Casino Hotel, San Stefano, where have been congregated the leaders of all the political parties, the members of the Cabinet as well as the leading British members of the Government and of the Residency. These have, in fact, included the Premier and the Ministers for War, Justice and Communications; the Acting Financial Adviser and the Oriental Secretary at the Residency; 'Nahas Pasha and his committee, including Makram Ebeid, Nokrash, Sinnot Hanna, and Ahmed Maher; Hafez Ramadan Bey, the head of *Hisb El Watani*; and Yehia Ibrahim Pasha, President of the *Ittihad* party and Ahmed Maher Pasha, its Vice-President, who is also Minister of Finance in the present Cabinet. Each faction is accommodated in a different wing or on a different floor and, in the case of the Egyptian element, the particular portion of the hotel where they live is all day long frequented by their adherents.

All except the Wafd have accepted the situation good humouredly and observe the amenities of society, saluting when they meet and even conversing from time to time. But, as usual, the Wafd is showing itself childish in the extreme, for its leader moves about with a small retinue just as Zaghloul did, and pays not the slightest attention to any who are not of his party, passes along, in fact, as if they did not exist. It is only natural that time and again amusing *contretemps* arise in consequence of this attitude and the other guests derive intense entertainment at watching this moving round in circles. The situation

has been eased somewhat during the past day or two by the departure of some of the political leaders, but the Wafd leader and his satellites still constitute the centre of interest for those who frequent the hotel and Casino.

The Fleet.

This is the time of year when the Mediterranean Fleet pays, in the course of its autumn manœuvres, a visit to Alexandria, and active preparations are in progress to provide fitting entertainment for the officers and men. Already five ships are in harbour—H.M.S. Ceres, flying the pennant of Rear-Admiral Davies, C.B.E.; H.M.S. Caledon, H.M.S. Courageous, H.M.S. Veteran, and H.M.S. Wanderer. A fine show was organised this evening at the Belvedere, where some three hundred warrant officers and men were entertained by the R.A.F. concert parties from Aboukir, which provided one of the best programmes heard here for some time. Afterwards there was dancing, for which the band of the R.A.F. supplied the music. Similar entertainments as well as boxing competitions, football matches, and so on, will be organised during the next three weeks, the period during which the fleet visits the port, culminating in a banquet by the British community on October 14 at the San Stefano Casino to the Commander-in-Chief Admiral Fields. Visits of courtesy have been exchanged between the Rear-Admiral and the Government. A dinner was given in his honour by Sir Percy Loraine at the Residency, to which the Prime Minister and the Minister of War were invited, and on Thursday evening Mohamed Pasha Mahmoud gave an banquet at San Stefano to the Rear-Admiral, at which Sir Percy Loraine was the principal guest. It is long since the High Commissioner has attended entertainments of this description, the reason being that it is the first time since 1919 that he has been in this country during the early autumn. Usually both Lord Allenby and Lord Lloyd had not returned by this time from their summer leave, and it fell to the Acting High Commissioner to represent them.

The British Garrison.

When the details of the proposed Treaty were first published, it was stated on very good authority that, as soon as it had been accepted by Egypt, action would be taken in regard to a reduction of the British garrison. It was asserted by those who should know that the War Office would not wait until steps had been taken to provide accommodation in the Canal Zone, but would immediately reduce the strength of the British Army in Egypt to 4,000 men, at which it had stood prior to the War. The events that have in the meantime occurred in Palestine should materially alter the views of the powers that be in this respect, or at any rate in respect of the military position in this corner of the Mediterranean. It is absolutely certain that, if the outburst in Palestine had occurred after the War Office had effected its contemplated reduction of the forces in Egypt, no assist-

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

Applications are invited for the following posts in a new Educational Institute:—

1. PROFESSOR OF PSYCHOLOGY (Theoretical and Practical)
2. PROFESSOR OF THEORY OF TEACHING.

The salary offered is from £E900 to £E1,140 a year (about £922 to £1,168) according to qualifications, and the appointment will be on contract for three years.

The Professors appointed will be expected to undertake Research Work in the Library.

Applications, with copies of not more than three recent testimonials and giving the names of not more than three persons to whom reference may be made, should be addressed to The Under-Secretary of State, Ministry of Education, Cairo.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

ance could possibly have been sent from here, and so instead of reinforcements having been in Palestine within forty-eight hours of the first trouble— they could have been there within twenty-four hours if the call for assistance had gone out immediately—the Palestine authorities would have had to wait thirty-six hours, i.e., until the first ship could reach Jaffa from Malta, and the events which the first troops from Egypt just prevented at Jaffa, for instance, would have occurred.

CYPRUS.

Nicosia, September 24.

The Greek Deputation to London.

At a meeting convoked by the Archbishop, on September 15, it was decided that a telegram should be dispatched, by the Holy Synod and Greek members of the Legislative Council, to the Prime Minister, stating that, having regard to the words and lofty principles expressed by Mr. MacDonald at Geneva, before the League of Nations, regarding subject peoples, the Greek community of Cyprus trusts that they will be applied to Cyprus by the grant of Union with her mother country, Greece. Needless to say, the mission is still the principal topic of interest, and of articles in the Press. Many rumours are current, especially regarding a projected construction of a naval base at Famagusta.

The Mediterranean Squadron.

On September 13 *Courageous* and *Veteran* arrived at Famagusta, and, it is said, will remain till the 26th. At Larnaca Barham and *Calliope* are expected from October 1 to October 10. And Limassol will be visited by *Caledon* and perhaps other vessels.

Memorial to Greek Heroes.

The Greek Archbishop has requested M. S. Menardos, an Hellenic subject, and Professor at the Athens University, to compose a suitable inscription for the marble memorial which is being prepared at Athens, and is to be erected in Nicosia to the memory of Greeks killed in connexion with the war of 1821. Mr. Menardos was for some years Professor of Modern Greek at Oxford.

General News.

Not only Limassol, but the whole Island also, has suffered a real loss by the recent death of Mr. Evgenios Zeno. He was a much respected lawyer of Limassol, and for some years one of the most able members of the Legislative Council, representing the Districts of Limassol and Papho. Lately he suffered from ill-health, and

visited Vienna and Berlin for advice. His only son was called to the Bar in London a few years ago.

Reports regarding tobacco crops are favourable, the yields in the extreme east of the island are satisfactory and, it is said, of good quality.

Mr. B. Lucie Smith, Puisne Judge, will leave to take up an appointment in Trinidad.

TURKEY.

Constantinople, October 2.

Newspaper Libel Action.

For one reason or another, the bulk of the Turkish Press has been getting into hot water of late. The Editor of the *Aksham* ("Evening"), by skilful manœuvring in avoiding whirlpools, thus escaping the fate of his *confrères*, is now also in trouble, being sued for libel in the sum of 20,000 Turkish liras by a Dr. Behdjat Sabit Bey who, for some weeks past, has been experimenting with monkey glands on an elderly native ram, with a view to applying the Voronoff treatment to a score or so of Beys stricken with senile decay. The *Aksham* stated a few days ago that, probably owing to an overdose of monkey gland, the ram, since the treatment had been initiated, far from regaining its youthful sprightliness, had aged visibly and rapidly, until it had now degenerated into a decrepit and wizened old quadruped.

This piece of information appears to have so seriously alarmed the twenty odd gentlemen afflicted with senile decay, that they have unanimously declared their intention of keeping aloof from monkey glands lest they be overtaken by the alleged fate of the old ram. Dr. Sabit Bey rests his claim for damages—10,000 liras—on the damage occasioned to his professional reputation by the *Aksham's* misrepresentation of facts, and, for the balance of 10,000 liras, on the monetary loss involved in the disappearance of some twenty prospective patients, on a valuation of 500 liras per client.

The Turkish Magistrates who are called upon to decide the issue have reserved judgment, pending a reference of the technical part of the question to a veterinary surgeon, but whether for an expert opinion on the pathological history-sheet of the ram, or for a forecast on the probable effect of monkey glands on elderly gentlemen, it is not stated.

Greco-Turkish Relations.

There is still no relaxation to report in the political tension unhappily existing between Angora and Athens. The Greek Cabinet adheres to its determination to refer the whole matter to the League of Nations, and the Turkish Government unhesitatingly reject this suggestion, and take a firm stand on the integral execution of Treaty provisions as interpreted by the Mixed Commission of Exchange. Meanwhile, it is becoming evident that the Turkish Government will shortly resort to reprisals—which will take the form of a confiscation of Greek property in Constantinople, the proceeds of which, when disposed of by private treaty or by auction, will be distributed among Turkish claimants who, having immigrated from Greece, have left landed estate in that country which is now in the hands of the Greeks.

BULGARIA.

Sofia, October 1.

Mr. Sperling's Departure.

The British Government having changed its representatives in the four Balkan capitals, the Minister to Bulgaria, Mr. Sperling, recently returned from leave to present his letters of recall to King Boris, left yesterday with Mrs. Sperling for London. He was seen off at the station by M. Liaptcheff, President of the Council, M. Rushko Majaroff, Minister for Railways, the Marshal of the Court, representing the King, the senior personnel of the Minister of Foreign Affairs, the whole Diplomatic Corps, and the numerous friends whom he and his family had made during their short stay in Bulgaria.

Before the departure, M. Liaptcheff had given a farewell dinner in honour of Mr. and Mrs. Sperling, whose leaving has caused general regret in Sofia.

Slav Tourists at Sofia.

A congress was held at Sofia, from September 22 to September 25, of the representatives of all the tourist organisations of Slav countries, notably Poland, Czechoslovakia, Yugoslavia, and Bulgaria. This conference, which ended with a pilgrimage to the monastery of Rilo, one of the most picturesque spots in Bulgaria, furnished the Bulgarian and Yugoslav delegations with a chance to address to their Governments, despite the recent Yugoslav-Bulgarian tension, a request at once to suppress the passport formalities for Yugoslav tourists into Bulgaria and *vice versa*, emphasising the desire in non-politically minded folk to have as close relations as possible between the two countries.

The same spirit is manifest in the matches organised recently in the Balkans, and especially in the Balkan Olympiad which has just taken place at Athens. Sport can only bind the Balkan peoples more closely together.

The Conference at Pirot.

A work of conciliation has been accomplished at Pirot by the Serbo-Bulgarian conference, which has just ended its labours. The conference definitely laid down the text of the three rulings concerning the régime of the frontier. These regulations are concerned with: the maintenance of good order on the frontier, the formalities of movement along the frontier, and the conditions of working the bilateral properties in this region. A permanent Mixed Commission is to be appointed to intervene when the least incident occurs, and to inquire into the facts and establish responsibility.

After the work of the Pirot Conference, fresh negotiations are to be entered into at Geneva between the two Foreign Ministers, M. Marinkovitch and M. Bourroff, on the subject of the "forbidden zone" and the liquidation of the bilateral properties.

Violent Methods.

Unfortunately, at the moment when encouraging prospects of Bulgaro-Yugoslav relations are being opened up, a series of terrorist actions has come as a check to progress. The Yugoslavs have announced the discovery of infernal machines which the *komitajis* of Ivon Mihailoff are said to have placed on the Macedonian railway, in several places, all near the Bulgarian frontier. This discovery has not been taken seriously in Bulgaria, where it was first believed that the story was designed to

upset the Pirot Conference and that it was a new attempt to place the responsibility on the I.M.R.O.

But a few days ago Bulgarians were surprised to learn, quite by chance, that the famous bandit, Dotcho Ouzonoff, who had often terrorised the regions of Lovitch and Troyon, in the Department of Plevén, and had taken refuge in Yugoslavia, where he was hospitably entertained in the village of Pojarevatz, had, with the help of Yugoslav military authorities, recrossed the Bulgarian frontier at the head of a band of Agraro-Communists armed with rifles, and had proceeded to Plevén, with the intention of attacking the trains and of blowing up sections of the railway with dynamite. The bandit was betrayed by one of his men who, learning of the criminal task which had been confided to the expedition, went to the authorities and revealed the whole affair. A force was at once dispatched in pursuit of the band, but it escaped.

Inter-Macedonian Persecutions.

The crisis provoked by the assassination of the General Protogueroff is growing worse, numerous followers of the murdered chief refusing to submit to the dictatorship of Mihailoff, who has tried to suppress all those against him.

The feeling between the two rival factions has been further embittered since the death of one of the most influential men on the Protogueroff side, George Bajdaroff, who was recently assassinated at Varna by Mihailoff's emissaries. The Protogueroffists are exasperated both with the Mihailoffists and with the Government, which they accuse of not affording protection against Mihailoff. But since the police of Varna have arrested the murderers of Bajdaroff, who are two young men named Vaniliff and Chavdaroff, brother and brother-in-law of the Secretary of the National Committee of Macedonian Emigration in Bulgaria, the Mihailoffists are even more exasperated with the Government, from whom they demand that the two prisoners should be given up.

The Government, being thus between the hammer and anvil, is taking all necessary measures to prevent complications from the Macedonian side.

Political Parties.

The most important of M. Liaptcheff's difficulties arises from the desire of different sections of the Opposition for reconcentration. These sections are waging a vigorous war against him. The different Agrarian sections have just come together, the Liberals united some time ago. An impulse to the strength against the Government has been given by the Democratic Party, which, under the direction of M. Malinoff, in a clearly-worded declaration, plainly hostile to the present Government, has provided the rallying-signal for all the groups of the Opposition, with the object of obtaining changes in the Administration.

The Opposition's struggle is assisted by the persistent divisions within the Governmental group of the Democratic Entente, where the friends of M. Liaptcheff are at daggers drawn with the friends of M. Tzankoff, and are resolved to displace the latter from his presidency of the Sobranie at the next session of Parliament.

Mr. B. S. Page, of Birmingham University, has been appointed Second Librarian of the Society for the Promotion of Hellenic Studies. Mr. Page is collaborating with Mr. Stephen Mackenna in the final volume of his translation of the "Enneades" of Plotinus. Mr. Page will also act as secretary to the British School at Athens. Mr. W. R. Le Fanu, who held both these offices, has been appointed Assistant Librarian of the Royal College of Surgeons.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 19.

Jatindranath Das.

It was with feelings of grief that one heard of the death, last Friday, of Jatindranath Das, one of the accused in the Lahore Conspiracy Case, as the result of a prolonged hunger-strike. First, a life has been lost, and an example has been set to others, that they should also sacrifice their lives; secondly, the emotional state of the part of the Indian population embittered against the British has been made one of still greater bitterness. "First it was Lala Lajpat Rai," the one section will say; "then Bhagat Singh and Dutt, however misguided, and now it is Jatindranath Das." I am not thinking now of the hysteria-seekers; in this last tragedy they will find their food too, but of soberminded, capable men; such men as I have now been friends with for many years. In their minds there can now be little remembrance that Jatindranath Das was in jail because he was believed to have taken part in a conspiracy, and may really have done so; that his hunger-strike was self-inflicted, for a principle—some question whether there should or should not be a difference in the food supplied to Indians and to Europeans when under-trial prisoners—of no soul-stirring importance. No doubt, too, he had a deeper sense—that if he died, India would ring with the news, and hearts would be inflamed everywhere against the British. So the thing was to die, and anything would serve as a good enough pretext for hunger-striking. That was probably the way of it. His death was the one thing that would make governing really difficult; so he must die. So he has died.

The Difficulty of Governing.

The task of the British-Indian Government has certainly been rendered very much more difficult. Many questions that would have slumbered in a few minds are now awake and are clamouring for answers in many minds. What should have been done? Some men, most of them young men, were believed to have conspired against the Government; they had been arrested, and were under trial. They could still do something to defeat the Government—they could go on hunger-strike, and bring the proceedings of the Court to a standstill. They did that. What should Government have done? We know what they did do; they argued that, at no matter what risk, law and justice must have their way. "If, then," they said, "it is in the power of under-trial prisoners to defeat justice, we see that there is a lacuna in the criminal law of the land, and we must change the law." So the Hunger Strike Bill was introduced in the Assembly, and the Home Member, an Englishman, and the Law Member, an Indian, were put up to defend it. Was there no alternative? If there was one, was it considered?

The Alternative.

The alternative, because, of course, there was one, might have been put as a question: "What is the extreme risk that would be run, if we were to release these men, our pretext being that their hunger-strike has brought to light what an inquiry may prove to be a defect in our jail administration that does call for, and does admit of, a remedy?" Some such question ought surely to have been asked by those in whose hands the reins of government now are. There were men, and one in particular, out to defeat the Government, not for anything done, but because it is constituted as it is—partly, or largely even, of non-Indians—and they are using an article of our jail administration as a pretext. A pretext must be met by a pretext. The all-important thing for the moment is much less than that justice should have its way. The all important thing for the moment is that these men, or that one, should not defeat Government. Release them all, and you defeat him and them.

Bad Government.

It is the temperamental habit of the English not to criticise their Government at any time when the task of governing is seen to be more than usually difficult. The English say, "Those are the men responsible at the moment: they may be men who ought never to have been given power, but they have been, and we must not make things worse for them." That was the way most Englishmen thought during the years before the first Pitt was put at the helm. If Englishmen feel at the time that they must hold their tongues, those who write the history of that time, say a century later, feel under no such obligation. To the reader of English history it is a well-known fact, in consequence, that, for all that England has so great a share of political sense, she may entrust her government at any time to a group of men of exceedingly little competence. England goes to sleep. A political leader whom blind chance made a leader much more than any one's deliberate choice, a man of little capacity, gathers round him men of even less capacity, and they muddle along, while England, now awake again, holds her breath praying that nothing terrible may happen.

The Little-Competent.

One may not have had very great opportunities of judging the capacity of the governing men in British India. I for one, I must admit, have not had great opportunities. I will say no more, then, than this—I feel that I must say as much—that I have slowly gathered the impression that since Curzon's day the governing of British India has fallen more and more into the hands of men not capable enough, and that now there is a crying lack of capacity. It is really now at last time, one feels, for England to wake to a realisation of the fact that the British-Indian Empire is being muddled away. It is time to take much more thought when appointing a man to the Executive Council of the Governor-General, or when appointing a man to be the Governor of a Province; for the times are really difficult, and a bad appointment may mean peril. As I have said, I have not had very great opportunities of judging the capacity of the governing men; but I have had some. I have watched and seen what the men have done, and I have listened to men who have been brought closer than I have to those to whom it has fallen, in Simla, Delhi, Lahore, and elsewhere, to guide things. They have not seemed to those watchers to possess great enough gifts. If I raise my voice, I know it is not the only voice crying in the wilderness.

The Day's Work Again.

Just as one said, when the bombs were thrown in the Assembly, that the question of the Constitution for India in the future must be considered apart from that, so one must now say that that question must be considered apart from the death of Jatindranath Das. One was not to say, after the bomb outrage, "Well, that settles it!" So now we must not be carried away by the state of emotion natural to those who have been witnesses of the martyrdom of Jatindranath Das, into framing a Constitution for India under which power would be given to those who are not fit for it. Jatindranath Das would doubtless himself have given them that power; but it cannot be right that they should be given it. Let any who may think that they are fit for it, read the proceedings of the United Provinces Youth Conference. But let me begin a new paragraph.

The United Provinces Youth Conference.

In the proceedings of this Conference there is a picture of Indian society, drawn by Indians themselves. The resolution to which most prominence was given in my newspaper—it was moved by no less a one than Pandit Jawaharlal Nehru himself—began as follows: "The Conference is of opinion that the people of India can only attain freedom when all exploitation of one group by another and one individual by another ceases, and a new order of society is built up based on mutual co-operation."

for the public good. In order to help the building of this new social order, all antiquated social, religious and economic customs which have outlived their usefulness and at present sap the vitality of the nation and prevent its healthy growth should be put an end to." The resolution goes on with an enumeration of the particular things condemned—the exploitation of brain and manual workers, the caste system, untouchability, the legal and social disabilities of the women, and wasteful expenditure on marriages. Other resolutions dealt with unemployment, communalism, and the age of marriage. If there was no more to be said than that the masses in India have already too much to think of and to do, for it to be safe to add political problems, that could certainly be said.

THE INDIA SOCIETY.

The India Society opened its autumn programme on September 27 when Mr. George Coedes, the first Director of the recently established archaeological Survey of Siam, lectured on the Indian influence in the art of Siam. This influence, as he explained, was perhaps strongest until the seventh century A.D. at the time of the Hinduised Kingdoms, exemplified by the art of the school of Amaravati and the Gupta period. With the rise of the Siamese to political independence, the appearance of a new type of power, possibly of Chinese origin, and a new type of Buddhist images strongly influenced by the Pala art is discernible. The interplay of art influences between Siam, Ceylon, Java and Indo-China was also traceable.

On the following day there was an exhibition of Siamese textiles presented to the India Society by Prince Damrong. The Siamese Minister explained the circumstances under which the Society had been presented with the textiles. Mr. Coedes explained that in his opinion they were above a hundred and fifty years old. He did not think that they were made in Siam, as no blocks with the beautiful and subtle designs had ever been found there. Mr. Boushan then spoke on the Indian art of making printed cottons, which had been noted for many centuries. The old wooden blocks, carved with much skill and intricate designs, had become very rare. He added that he had never seen such beautiful designs and that he considered them fine specimens of the art. Mr. Percy Brown said that the process of hand-printed cottons from blocks had been used from the earliest times; some of the costumes worn by the figures in the Ajanta frescoes were apparently done with this process. The women of Tibet were known to have worn block printed cottons in the ninth century.

Mr. Lanchester said that the hand looms used in Southern India were considerably wider than those used in other parts, and he suggested that the cloth might have been woven in Southern India and sent back to Siam to be printed, in the same way as the Thibetans made their own fabrics but sent them to Peking to be embroidered. He suggested, as another possibility, that they might have been done by skilled Indian craftsmen working in Siam. He thought that a thorough investigation should be made in Southern India to see if any blocks could be found to correspond at all with the fine workmanship of these Siamese fabrics.

In winding up the discussion, Mr. John de La Valette, who, in the unavoidable absence of Sir Francis Younghusband, acted as Chairman, said that there was so much uncertainty among the experts as to the country in, and the technical process by, which these textiles had been produced, he could not be expected to venture any opinion on the subject. Reference has been made to the process of dyeing known in Java as "batik." All he could assert was that there appeared to be no similarity whatsoever between the batiked cloths of Java, Sumatra, or Bali and the present specimens, either technically or as to colour or design.

THE ROYAL EMPIRE SOCIETY.

In order to extend its scope in the East, the Royal Empire Society has invited Commander R. M. Reynolds, R.N.R., who on several previous occasions has acted as its Special Commissioner in the Empire overseas, to undertake a tour on its behalf in Egypt, India, and Malaya.

Commander Reynolds, who left London last week, and will be travelling for the next six months, will spend a week in Egypt, visiting in turn Port Said, Cairo, and Alexandria. From there he goes on to Bombay. In the course of his tour in India, Commander Reynolds will address Rotary Clubs, Chambers of Commerce, and similar associations in such representative centres as Bombay, Lahore, Delhi, Agra, Cawnpore, Calcutta, Dacca, and Rangoon.

Increasing interest is being taken in the Royal Empire Society in India as well as in Indian circles in London. Last July members of the Indian Central Committee, of which Sir Sankaran Nair is Chairman, and which was then in London to consult with the Simon Commission, were entertained to luncheon by the Society, and after the reception, which was attended by Lord Reading, the Under-Secretary for India, and a large number of others interested in Indian affairs, Sir Sankaran Nair and several of his colleagues joined the Society.

THE STATUTORY COMMISSION.

The Provincial Reports.

(Continued from page 372.)

In previous issues we have dealt with the reports framed respectively by the Madras, Bengal, Bombay, United Provinces, Burma, and Punjab Legislatures. The Central Provinces Legislative Council did not appoint a Committee as, following the example of the Legislative Assembly, it declined to co-operate with the Statutory Commission. The reports of the Assam and Bihar and Orissa Committees are thus all that remain to be considered.

The Assam Committee recommend the complete abolition of dyarchy; and the administration of all provincial subjects by a Cabinet of four Ministers. One of these would be the Chief Minister, and he would be appointed by the Governor, but on the advice of the Chief Minister. The members of the Cabinet would be jointly responsible to the provincial Legislature. They could hold office for five years, unless the Ministry should be dissolved earlier by the Governor. It is not proposed to fix any special majority for a vote of "no confidence" in the Ministry. The Legislative Council would consist of 95 elected members; and the Governor would be empowered to add five nominated members. The territories known as the backward tracts would be represented in the Council by one of the five nominated members, if, as is suggested by the Committee, the legislative and financial control in respect of these tracts should continue as at present.

Of recent years there has been some discussion of the question of whether it would not be advisable to transfer one of the Surma Valley districts, namely, Sylhet, to Bengal. The Committee are against this proposal, as they are also against a like proposal in regard to Goalpara—one of the Assam Valley districts. They recommend universal suffrage for all persons of twenty-five years of age and upwards, with open voting for the illiterate. As an alternative they would favour universal suffrage, that is to say, a vote for each occupied house. They would leave it to the Legislature to decide as between these two proposals. They do not favour the creation of a second Chamber, as its utility would not, they fear, justify its cost.

No fewer than three reports have been issued by the members of the Bihar and Orissa Committee. The majority report recommends provincial autonomy with a Cabinet responsible to a Legislature of two Houses. It is not proposed to extend the existing franchise; but the Upper House would be elected on a franchise higher than that in force for the Lower. Minorities are to be adequately represented in the Legislature; and the qualification for the franchise would be higher in respect of proprietors than it would be for tenants. The abolition of the official *bloc* is recommended, as is also the abolition of the system of nominating members. The Cabinet would consist of from five to seven Ministers of whom the Governor of the Province would be President. One seat in the Cabinet would be reserved for Muslims, and one for Orissa. The Governor would be vested with discretionary powers to be exercised in the event of the peace and tranquillity of the province being in danger. The Governor would also be empowered to certify sufficient sums of money to enable the Government to be carried on in the event of the Legislature refusing to vote supplies.

LORD IRWIN'S RETURN.

Lord Irwin, Governor-General of India, and Sir George Stanley, Governor-designate of Madras, and their parties will leave Victoria Station for India at 11.4 a.m. this morning (Thursday, October 10).

THE MICA PROBLEM.

(From a Correspondent.)

Among the mica-producing countries of the world India takes the first place. The Koderma field, in the province of Bihar and Orissa, is the most important mica deposit which has been so far discovered anywhere. The mineral is also found in some of the other British provinces and in several of the Indian States. Practically the whole of the Indian production is exported, Great Britain, the United States, Germany and France being the principal buyers. Of recent years the value of the exports has averaged more than a crore of rupees annually, as with the rapid development of electrical machinery and apparatus the demand for mica has greatly increased. The mica mining industry in Bihar and Orissa ought, therefore, to be prosperous, seeing that it produces the best mica in the world for which it easily finds a ready market. But, strange to say, the industry does not prosper. In fact, only two years ago the official representative of the Government of Behar and Orissa in the provincial Legislative Council said that it was in a most unhealthy state.

The reason is that the conditions under which the mica is won are such as to make it peculiarly liable to become the prey of thieves and receivers. It occurs in small pockets very near to, or actually on, the surface. The country is very hilly, with dense jungle, and with nothing much in the way of communications or population. A thief can go into the jungle and, without difficulty, find a pocket and make off with mica worth several hundreds of rupees. And he is fairly safe from the law, as mica is not, of course, an identifiable product. It is practically impossible for anybody to come forward and to claim that a certain piece of mica is his property and that it has been stolen. And, in the absence of a complainant, there obviously cannot be a prosecution for theft, or for the receiving of stolen goods. Mica is also stolen in the actual mines by thieves working as labourers. For, as has been indicated, the mineral is sporadic in its occurrence; and the whole of the deposits being worked in any mine area cannot be therefore effectively guarded.

The proportion of mica stolen is astonishingly high. The highest figure which has been mentioned, namely, 50 per cent., must surely be an over-estimate. But there seems to be a general agreement that from 25 per cent. to 30 per cent. of the quantity exported is stolen. It is easy to understand what robbery on this scale must mean to the mine owner, who has expended money on sinking shafts and on equipment and so forth. The evil has been in existence for many years, but no active preventive measures have been taken. Firms who have attempted to develop the industry on a large scale have found that the thefts have made their efforts unprofitable. The Government of Bihar and Orissa have for a long time recognised their responsibility in the matter; and in 1927 they proposed that, in order to check the thefts, special legislation should be undertaken. They accordingly framed a Bill and circulated it for approval. It was welcomed by many mine owners, but some sections of the trade objected to it on the ground that it would work to the detriment of the poor but honest miner. There did not at the time, and there does not now, appear to be much substance in this objection, as the poor but honest miner is unlikely to be seriously affected. The point is that there does not seem to be any possibility of checking the activities of the thieves and receivers except by legislation. The Bill seeks to effect the object in view, namely, the prevention of theft, by placing upon the individual the onus of proving that any mica found on him when he is in the neighbourhood of a mine is owned by him legitimately.

The Bill has been under discussion during the past two years; and it has now been introduced in the

Provincial Legislative Council, by which it was re-mitted last month, by a narrow majority, to a Select Committee. Its text has been published in the local *Gazette*, and in an explanatory note the need for legislation is made clear. The thefts have now reached such a scale, the Government state, as to be a serious hindrance to the adequate employment of capital, the efficient working of the mines, and the proper development of an industry which is really of vital importance. It is proposed by the Bill that every mica miner, and every mica dealer, shall trade under a licence. Every licensee will be required to keep accounts of all mica won, possessed, stored, or sold by him. The accounts so kept will be subject to inspection by an officer specially authorised by the Government for the purpose. The Bill also contemplates the regulation of the movement of mica within a mining area. For this purpose it provides that no mica shall be moved from a mine, or from the premises of a licensee, without a pass, or document, signed by the licensee or his accredited agent. This pass will show the place from which the mica is moved, and likewise its quantity and destination. By these various provisions it is sought to ensure that dealing in mica shall be carried on in such a way as to preclude as far as possible transactions in mica which has been obtained in an illicit manner; and to make the movement of stolen mica more readily susceptible of detection. The Bill also contains further provisions making the movement of mica without the necessary pass a criminal offence. Police officers will be empowered to stop and to seize any consignment which is not accompanied by a pass, and to detain it until its ownership is established to the satisfaction of the prescribed authority.

Active interference by the State in the working of an industry is seldom welcomed by those engaged in it. Nor is it usually considered to be desirable that legislation should create new criminal offences. But the evil in the mica industry has gone so far that something must be done. The existing law has failed to give the necessary protection. More stringent provisions must therefore be enacted, even though they may mean State interference. And it has to be noted that special provisions have been included in the Bill with the object of ensuring that there shall be no unnecessary interference with the working of the industry.

ARMY APPOINTMENTS.

Major-General B. R. Kirwan, C.B., C.M.G., has been appointed Master-General of the Ordnance in India, in succession to Lieutenant-General Sir Edwin H. de V. Atkinson, K.C.B., K.B.E., C.M.G., C.I.E., whose tenure of the appointment expires on April 1, 1930.

Major-General Kirwan entered the Army in 1890, and attained his present rank in 1925. He served at the War Office for some time, and immediately prior to the War was a First Class Instructor in Gunnery. He was a Staff Officer to the Major-General, Royal Artillery, at General Headquarters in France for the first two years of the War, and then became a Brigadier-General. For his War service he was mentioned in dispatches six times, and awarded a number of decorations. Later he was appointed Director of Artillery at the War Office, and President of the Ordnance Committee. In April last he was gazetted to the Royal Artillery, Army Headquarters in India.

Lieutenant-Colonel Christopher Alexander, M.C., has assumed command of the 1st Battalion, The Corps of Bombay Pioneers, in succession to Lieutenant-Colonel W. B. P. Tugwell, who completed his tenure recently. The new commander, late of the 1st Battalion, 3rd Sikh Pioneers, includes in his war services the operations in five areas of East Africa, and Afghanistan, 1910, and Waziristan, 1920. He first joined the old 81st Pioneers of Madras, and became an acting lieutenant-colonel after 13 years' service while holding the rank of captain.

Four Indian artists have arrived in London for training to take part in the decoration of the new India House, the erection of which, on the Aldwych site, is nearing completion. The artists, Messrs. L. M. Sen, D. K. Deb Barma, Sudhansu Chowdhury, and Ranade Ukil, were chosen by the Government of India Selection Committee in an All India competition for the purpose of interior decoration of India House. Before taking up this work they will undergo a year's training at the Royal College of Art, South Kensington, under Professor W. Rothenstein, and spend six months in further study in Italy.

PERSONAL AND GENERAL

TO-DAY

October 10, 1929 (New Style).
 September 28, 1929 (Old Style).
 Jumada I. 6, 1348 A.H., of the Muslim Calendar.
 Tishri 6, 5690, of the Jewish Calendar.

The High Commissioner for India left London on October 2 for Geneva.

Vice-Admiral Sir Herbert W. Richmond has been promoted to the rank of Admiral.

The Maharaja of Kapurthala arrived last week in New York on his way to Washington.

Lady Loraine left Highcliff Castle last week for Athens. She will arrive in Egypt towards the end of October.

Dr. Drag. Protitch has been appointed Secretary to the Yugoslav Legation in London.

The Maharaja of Alwar arrived in London on October 2 from Scotland.

Sir Chimanlal Setalvad left London on October 1 on his return to India.

The Turkish Ambassador returned to London last week from the Continent.

Princess Xenia of Greece left Southampton on October 5 in the Mauretania for New York.

Lady Schuster arrived at Marseilles on October 4 on her return from Bombay.

Lady Alston left London on October 3 to join Sir Charles Alston in Allahabad.

Lady Strickland left London on October 4 for Port Said, sailing from Tilbury in the P. and O. liner Moldavia.

Dr. Pavle Karovitch, Counsellor of the Yugoslav Legation, has returned to London from the Continent.

A Memorial Service for the late Ecumenical Patriarch Basil was held in the Cathedral, Moscow Road, Bayswater, W., on October 6.

General Sir Alexander Cobbe, V.C., accompanied by Lady Cobbe and Miss Cobbe, left London on October 2 to resume his command of the Northern Army, India.

The Great Archimandrite of the Greek Cathedral, the Rev. Michael Constantinidis, left England on October 7 for Greece. He will be absent several weeks.

Field-Marshal Viscount Allenby and Viscountess Allenby arrived at 24, Wetherby Gardens on October 2 on their return from Stanley, Perthshire.

Sir Oswald Bosanquet and Sir Alexander and Lady Roger left London on October 3 to join the P. and O. s.s. Ranpura at Marseilles for Bombay.

Field-Marshal Sir Claud and Lady Jacob have moved from Culford Gardens to 36, Ashley Gardens, S.W.1, which will be their address until the end of April.

The Earl of Inchcape left London on October 6 for Paris to attend the Suez Canal meeting, and returned to London the following day.

A reception to Sir Flinders and Lady Petrie prior to their return to Palestine to resume excavations at Beth-Pelet, will take place at the World's Evangelical Alliance Headquarters, at 19, Russell Square, W.C.1, on October 17, at 4 p.m.

Lady Gridley left for India on October 5 for the wedding of her daughter, Miss Joan Gridley, and Mr. G. Collingwood, which will take place in Madras Cathedral on November 5.

Mr. K. A. C. Cresswell will lecture to the Royal Asiatic Society (74, Grosvenor Street, W.1) on October 24, at 4.45 p.m., upon "The Aqsa Mosque and the Church of Justinian."

We understand that Sir Ernest Dowson is leaving shortly for Iraq, where he is to investigate the problem of land tenure. It will be remembered that a few years ago Sir Ernest inaugurated a cadastral survey of Palestine.

Abdel Malek Hamza Bey, Egyptian Chargé d'Affaires in London, held a reception at the Royal Egyptian Legation yesterday (Wednesday) to celebrate the anniversary of the accession of King Fuad I.

The Colonial Office states that the King has approved the appointment of Sir Francis Henry Humphrys to be High Commissioner for Iraq in succession to the late Sir Gilbert Clayton.

The Prince of Wales received at St. James's Palace on October 2, on behalf of the King, General Sir John Shea (General Officer Commanding-in-Chief, Eastern Command, India), and invested him with the Insignia of a Knight Grand Cross of the Most Honourable Order of the Bath.

 Golf, Tennis and Excursions.

THE WOMAN MOVEMENT IN IRAQ.

By E. S. STEVENS.

It may be said that the War, which, endorsed by the powerful hand of Mustapha Kemal, brought the Turkish woman her charter of freedom, did nothing to ameliorate the position of Muslim women in Iraq. Disabilities and prejudices, against which she was powerless, kept the women of the countries of the Middle East in the place which long custom had assigned them, and, for the most part, they themselves remained undesirous of progress. Some, though not all, women of the wealthy classes received elementary education—reading, writing, and perhaps a smattering of French and English in convent or missionary schools, but education of girls in the true sense of the word was entirely lacking. Women of the lower and middle classes were, almost without exception, illiterate, and not only unable to read or write, but also ignorant of elementary laws of health and hygiene. It followed that a woman had no standing as an individual; she was part of that complicated Oriental machine, the family, and if she failed to please or to produce children, she was liable to be discarded as useless. No man looked to his wife for companionship, and in the cases where a woman, by means of native acumen and common sense, established complete rule over her household, it was often to exercise a tyranny over the other women of the family.

The women of Iraq, until the War, considered the Turkish women representative of all progress and enlightenment. Many Iraqi men married Turkish wives, and there are Turkish women in Iraq to-day, with Arabic-speaking husbands, children and grand-children, who have never troubled to learn the tongue of what they consider to be an uncivilised race. But these imported Turkish women, including the wives of Government officials, did little but introduce a taste for European clothes and Western specialities, and the outlook of the Iraqi woman remained unchanged. The War brought her for the first time into direct contact with the outside world, and the rapid development of the country, with its enormous increase of means of communication with other countries by car, aeroplane, train and shipping, roused her to a sense of her backwardness. Moreover, the wholesale reforms with regard to the status of women in Turkey were bound to have their repercussion in Iraq, and the introduction of women teachers, Christian and Muslim, for no women in Iraq were qualified to teach, in girls' schools from such comparatively advanced countries as Syria, worked greatly upon public opinion.

When Government schools for girls were first opened in Baghdad, I saw women of advanced middle age sitting in the class-rooms poring over elementary reading books. In spite of their years, these plucky and intelligent women were trying to avail themselves of new opportunities. During the last few years there have been great advances in the education of girls in Iraq, though the proportion of utterly illiterate women is still enormous. Such institutions as the enthusiastically-directed Central Girls' School in Baghdad, for instance, and the Teachers' Training College in connexion with it, are furnishing a nucleus of girls aware of the shortcomings of the country and its attitude towards women, and awaking the spirit of progress amongst the younger generation.

Meanwhile, feminism in Iraq has its pioneers. About five years ago, a number of ladies in Baghdad, the majority of whom were Muslim, met together and decided to form a club for the purpose of raising the status of women in Iraq. The moving spirit was the unmarried sister of the well-known Iraq poet Jemil Zahawi; a woman well-versed in Arab and Persian literature, whose intelligence, learning, and force of character placed her by common consent at the head of the movement.

The objects of the club were vague and ill-defined; it had no programme beyond the intention of listening to a few speeches delivered by women. It extended a welcome to the friends of progress whether Muslim, Christ-

ian, or Jew, and its inception was notified in the local Press. There was an immediate outcry. Reactionaries fulminated against it in the newspapers, die-hards appealed to Government to scotch the movement in its infancy. *Sufur* (unveiling) was impending, they said, and Muslim homes were threatened by Western abominations. The accusation was ludicrously untrue. Not one amongst the Muslim Iraqi members wore anything but the thick veil which custom prescribes in Baghdad, and many of them were old-fashioned enough to wear as well the national indoor garb, consisting of a plain, long garment reaching to the feet, the hair being completely concealed by black bandages, except for two plaits falling on either side of the face. Nor was there any intention of unveiling, though many of the women longed to do so, on account of the symbol which the veil has arrived at being. The members of the projected club defended themselves, and declared that their immediate projects were the education of some female orphans and the meeting together of a few women bent on self-improvement. Grudging consent was then given to the registration of the club, which took the name of the *Nadi al Nahidha an Nissaiya* ("Club for the Elevation of Women"), rented a house, and occupied itself with the care of a few orphans. As is not uncommon in these countries, enthusiasm waned. The promised lectures were few and far between, subscriptions (five rupees monthly) fell away, attendance became rare, and though there was a nominal committee, it did not do, nor know how to do, its work completely. Slowly but inevitably the ambitiously named club dwindled into an occasional tea-party, the house was given up, and the orphans were all but abandoned.

It had been dead for more than two years when stimulus came from the outside in the shape of a letter from a Druze lady, Nur Hamadi, foundress of the Muhammadan Women's League in Syria. About the activities of this, and other leagues, I will write in another article, but the letter, which reached Esma Khanum Zahawi, president of the now defunct club, was to invite the leaders of the feminist movement in Iraq to co-operate, not only with the Muhammadan Women's League in Syria, but also to participate in the feminist movement all over the world. It was suggested that Iraq feminists might care to send a representative to yearly conferences of the Muhammadan Women's League to be held alternately in Egypt, Palestine, Syria and Iraq.

The letter gave Esma Khanum the excuse for gathering together as many of the old members of the Club as she could; a meeting was held in Nouri Pasha as-Said's house, enthusiastic speeches were made, the local Press gave the affair leading articles and long reports, and again the movement was launched. It was resolved that the club must not this time end in words only, and at the present moment its members are anxiously debating what form their activities and efforts will take. Unveiling is certainly not on their programme, nor would it be politic or necessary to contemplate it for many years to come, and it remains to be seen what will result from their reawakened zeal.

In Egypt, the feminist movement, though nominally unpolitical, has been very largely captured by those with a political axe to grind, and in Syria a certain section of the feminists are decidedly anti-foreign in tone. The more clear-sighted among the women see that it would be fatal for the movement to be committed to any political creed. They realise that feminism in the East can only gain strength by making common cause with feminism all over the world, independent of race or creed, and especially to the women of England and America, who have fought and gained their battle, they look for encouragement and practical assistance. In such a cause as this there can be no petty feelings of national jealousy or hatred, and it would be a fine gesture if the women of England were to think out some way of aiding the women of Iraq in the task which they have set themselves.

So far they have fought their battle alone. Not a man

in Iraq has come forward to offer them the building that they need or has contributed to their funds. Those in high places have held aloof for fear of offending the fanatically-minded. A Syrian partisan, Jemil Bey Beyhum, known as the *Nasir al Marra* ("Defender of Women") on account of his zeal in the cause of feminism, came to Baghdad and announced his intention of making a speech about the rights of Muslim women to freedom. There was an immediate cry of horror. At last, a progressivist section amongst the men said, "You, as a foreigner, might—we Iraqis could not possibly speak in public on such a subject." He gave his lecture, and the hall was more than half full of women.

A notable exception to this general timidity is the poet Jemil Zahawi, who is never tired of proclaiming that Islam was intended to bring woman her charter of freedom, not her sentence of perpetual confinement, and that seclusion is not of Arab, but of foreign origin. He is right, but as yet, very few of his own countrymen have the courage or wish to support him.

THE NEW EGYPTIAN CABINET.

The new Egyptian Cabinet which was formed on October 4 has been constituted as follows:—

Premier and Interior	...	...	Adly Pasha Yeghen.
Foreign Affairs	...	...	Midhat Pasha Yeghen.
Waqfs (Religious Endowments)	...	...	Ahmed Pasha Aly.
Justice	...	...	Hussein Pasha Darwish.
Communications	...	...	Abdel Rahim Pasha Sabry.
Finance	...	...	Mustapha Pasha Maher.
Public Works	...	...	Hussein Pasha Massif.
Agriculture	...	...	Wassif Pasha Semeika.
Education	...	...	Hafez Pasha Hussein.
War	...	...	Mohammed Aflatoun Pasha.

THE "BRITH SHALOM" ON PALESTINE.

[We have received from the *Brith Shalom* Society in Jerusalem a statement of its views upon the recent events in Palestine, which we publish herewith as written.—Ed.]

"1. What we feared has come to pass. During a few days, a peaceful land, developing culturally and economically, was transformed into a battlefield. Innocent blood has been shed and a considerable part of the constructive achievements, won by the sweat of the brow, has been destroyed. All relations between the two races living in Palestine were interrupted in the twinkling of an eye; enmity and hate lurk in every corner; security of life and property ceased; and, only thanks to Jewish self-defence the extent of the disaster was limited and a great catastrophe was averted. There is reason to hope that, as a result of the efforts of Government, belated as they were, tranquillity and order will be restored to the country.

"2. An examination of the history of the riots indicates a three-fold breakdown: of the British administration in Palestine; of Arab policy; and of Zionist policy.

"The British administration in Palestine broke down by reason of its narrow colonial policy and of its aloofness, in large part, from the spirit of Great Britain's historic mission in Palestine. On the other hand, the Administration showed neither desire nor initiative in drawing the two races together or in awakening them to co-operation for the good of the whole country on the basis of absolute equality of the political rights of the two peoples. The Administration broke down, too, by allowing the riots to break out and in not succeeding in stopping them immediately at the outset.

"The Arab policy that broke down is that which regarded the

efforts of Jews to re-establish themselves in their homeland as if they did not exist; which still believes that it is possible to close the gates of the homeland of Israel to the children of Israel; and which sees in encouragement of bloodshed a solution to the problem of the Jewish National Home. The sacrifices that Jews have made for their establishment in this country should alone prove the strength of their attachment to it.

"Zionist policy, too, has broken down in so far as it has not appreciated or understood the Arab question, nor recognised its vital importance to the development and future of the country; and has failed to take advantage of any opportunity in previous years to initiate an active policy of explaining and settling the differences that exist between the two peoples, in accordance with the numerous declarations made from Zionist platforms on many occasions.

"All citizens of the country have been guilty of neglecting the elementary duty of introducing an atmosphere of mutual understanding into the education of all the inhabitants. The results of this failure have been brought home to all of us in these days.

"3. What shall be done? With regard to the past, let us hope that the Commission of Inquiry will explore the matter to its depths; will expose all the causes of these lamentable events and will bring to justice all those responsible.

"We will remember with gratitude those Arabs, both individuals and bodies, who resisted the wave of propaganda and who defended Jews against crowds of rioters of their own race. This phenomenon encourages us in the belief that the day will not be long in coming when the feelings of peace and concord that are now to be found only in a small part of the Arab community will take root in the hearts of all Arabs who care for the good of their race.

"It may be said openly, even to-day, that the responsibility chiefly lies, not on this or that individual, but on the failure to understand that it is impossible to solve the Palestine question by rioting and acts of violence and only possible to solve it by means of mutual understanding in taking into consideration the equitable demands of Jews and Arabs. It is particularly through this belief that we are brought to express the following policy.

"The *Brith Shalom* Society was originally founded through fear lest discussion and polemics between the two communities living in Palestine should result in domination by uncontrolled and destructive passions. It is clearly impossible for either Jews or Arabs to live in this small country as on isolated islands. We have always sought to discover the path towards unity and co-operation. And even now, in the midst of hatred and desolation, we invite all the inhabitants of Palestine, and, in particular, responsible men and institutions, to surmount all the difficulties caused by their personal feelings (feelings which we understand at this moment); to do everything in their power to put an end to hostile relations; to initiate measures for explaining and discussing the problems; and to prepare the ground for direct and active negotiation to be carried out, at a favourable moment, between authorised representatives of the two communities, with regard to the conditions of joint existence in the future of Palestine; a land belonging and dear to both peoples, on the ground not only of the bonds of history and tradition, but also on the ground of aspirations for development and construction in the future. Each community should weigh its past actions and policies in the hope that it may learn the way to bring speedily to our country better times, times of peace."

M. Venizelos, the Greek Prime Minister, arrived in Belgrade on October 6 in order to make, as he explained, personal contact with the Yugoslav authorities. He left the following day on his return to Athens.

Riza Shah Pahlavi is visiting Tabriz, the town which, it will be recalled, recently suffered severely from floods. It is hoped by Azarbaijanis that this Royal visit will result in improvements for the whole province, particularly in the construction of safeguards against floods.

It is stated from Rome that King Zogu of Albania, who has never been recognised by Turkey, has finally withdrawn his Legation from Angora. The Turkish Minister at Tirana was recalled after Ahmed Zogu's assumption of the Crown, and later Kemal Pasha also withdrew the *Chargé d'Affaires*.

Political Hopes.

The political situation at the moment is amusing. So well—superficially, at any rate—have the Government done that the Opposition can find comfort only in the supposition that it is all too good to be true! The efficiency of the "Socialists" has proved so amazing that there must be a flaw somewhere in the house of popularity which they have built up. But where is that flaw? That is the question which the Conservative Party, in particular, is asking.

The Conservatives, who are trying hard to remember the old tag that the duty of an Opposition is to oppose, are in perplexity. Where, how, and when shall they attack the Government? The Liberal partlet under Mr. Lloyd George can attack no "progressive" measure; and Mr. Baldwin, for the Conservatives, has promised in advance that there shall be no factious opposition.

As far as one can see at the moment, it is the unemployment plans of Mr. J. H. Thomas which will be selected as the point of failure on the part of the Government. Foreign matters, such as Egypt and Russia, are not likely to cause the downfall of the Government: as almost always, the domestic issue will be the determining one. Critics of the Government are a little gropingly forecasting this feature of unemployment as the point to breach, though it is a little difficult to see, even if Mr. Thomas's Canadian tour proves to have been the fizzle which his opponents try to make out, how those who, when they had the opportunity, or, to speak more accurately, the occasion, to do something spectacular, failed to achieve very much, can decently make such a failure a *causa belli*. What satisfaction is there for one who believes that no Government can radically touch the problem of unemployment to note that those who asserted the opposite have been proved to be wrong? "I told you so" wins few votes nowadays.

But if the Conservative Party is in the doldrums, the Liberals are in the dumps. True, Mr. Lloyd George the other day attempted to instil some fire into his supporters, who had been gathered together at Nottingham, but he did not tell them much beyond warning them to be on the look out for the Socialists' having an early trial with a General Election. It has been made public, moreover, that Sir Herbert Samuel is resigning his post as organiser of the Party—a sensible decision, one supposes, because it is one thing to organise hope and quite another to counteract disillusionment.

The End of Summer.

Summer ended officially last Sunday, when everyone, except babies and cows and other creatures whose habits do not depend on any mechanical contrivance, gratefully accepted an extra hour's sleep. The winter, now that the dark evenings have come, is once more with us. And the old men, tax-payers, rate-payers, bill-payers in general, demand fires, drawn curtains, easy chairs, and so on.

But actually it is only glorious autumn as yet—that wild, swirling, coloured time which is the best of all England's seasons. The recent rains and winds have so blessed and cleansed the countryside that to the stranger's view it is one long delight. This month of natural decadence inspires communion with the eloquent earth, as it inspires friendship with mankind. As you ride or stride along, how you exult in "the roaring boast of autumn weather"!

A Crossword Puzzle.

Considerable hilarity was caused over the week-end among busy people, but dismay among that strange folk which still indulges in the game of "crosswords" by the action, published in the *Observer* and the *Sunday Times*, of the Procurator-Fiscal of Glasgow in describing the system of awarding prizes followed for many months by these two papers as a contravention of the Lotteries Act. Those prizes (guineas or books) have been awarded to the successful candidates whose letters were the first to be opened—which was obviously a matter of pure chance.

But the amusing thing to notice is, that whereas the *Sunday Times* has crumpled up before the Procurator-Fiscal's warning, and has withdrawn its offer of prizes, the *Observer* seeks to get over the difficulty by withholding prizes only from its readers in Scotland. This is a most ingenious difference, and will be chuckled over by all those who follow the weekly rivalry between these two organs. If only the rivalry, say, between the *Daily Mail* and the *Daily Express*, could be denoted in such a way!

Seriously speaking, however, crossword puzzles are an utter waste of time—utter, because they teach you nothing (unless it is such rare words that they need never be used, or such uncorrelated scraps of information as to be of no cultural value). The explanation of their continued popularity lies, of course, in the necessity under which so many people are of "passing the time." But time was meant to be spent recreatively, if not creatively, not merely "passed."

The Progress of London.

The London Telephone Directory has long been a cumbersome and over-weighted book, but the latest edition will make Sandows of us all. Twelve thousand names have been added since last March—with the result that the book now weighs five pounds and has 1,500 pages.

It is, of course, much more difficult than it used to be to find anyone's number, at any rate if the person desired happens to possess a common name. There are, for instance, eighteen columns of Brown, seventeen of Jones, fifteen of Williams, twelve and a-half of White, and so on. But to see who are the real rulers of London (or is it merely the greatest talkers in London?) you must turn to the Macs: they spread out over forty-nine columns.

But in return for further inconvenience in telephonic matters, we are to have greater convenience in transport. For the London General Omnibus Company are building some new buses—to be known as the L type—to take the place of the existing K's. These buses are to be more like the touring coach. The seats—thirty on the upper deck, twenty-four on the lower—are not only to be upholstered in moquette but will also give more room to passengers sitting side by side.

There are to be better lighting, better engines, and smoother riding. In short, from the point of view both of comfort and efficiency, there is progress to be made. One heartily welcomes the prospect, and only wonders whether the roads will be prepared in time for the new luxury!

Book Reviews

A REGRETTABLE INCIDENT.

"THE WHITE MUTINY." By Sir Alexander Cardew. Illustrated (London: Constable and Co. Ltd. 12s. 6d. net).

It is improbable that many of the readers of THE NEAR EAST AND INDIA have anything but the haziest recollections of the events narrated in this volume, and there is some excuse for them, for, though they must have formed the one topic of conversation in India one hundred and twenty years ago, the very threatening clouds soon blew over, leaving little trace behind them, so that the episode naturally does not now occupy much space in histories of India. It was, none the less, an interesting one and Sir Alexander has done well in diving into the old records with a view to giving us a lively picture of its genesis, progress and final fizzle. He has also put us into his debt by collecting excellent portraits of the chief actors.

In the beginning of the nineteenth century administration in the Madras Presidency was extraordinarily slack in all its branches, as the first three of Sir Alexander's most interesting and long appendices make very clear. Discipline seems to have been non-existent, and the highest officials gave the worst possible example to their subordinates. As a whole series of occurrences had, quite independently, led to much dissatisfaction among the English officers of the Company's regiments in that Presidency, it was little wonder that the flying sparks of insubordination found ready fuel among them. Indeed, the actual conflagration was definitely started by the amazing insubordinate and self-seeking folly of the Commander-in-Chief, General Hay Macdowell, a conceited and unbalanced officer, who was smarting under what he conceived to be personal injuries. He was dismissed (and was drowned on his way home), but the seeds he had sown quickly grew in the congenial soil. It was not long before nearly every young officer (these were very greatly in the majority) and many of the senior ones, who ought to have known better, were in open mutiny. The chief interest of this book consists in its account of the measures taken to quell it, a task which took a very short time. To this extent, perhaps, Sir Alexander Cardew is justified in claiming credit for Sir George Barlow, the new Governor. Whether Sir Alexander will succeed in securing from his readers the whole-hearted admiration which he himself feels for Sir George Barlow is perhaps doubtful. To us it seems pretty clear that Barlow was what is known in India as a "good office man," with the defects usually found in such a person, viz., frigid nature bound up in red tape and considerable ignorance of human nature. Many of our readers will have had personal experience of the bull-in-a-china shop tendencies of such an official when placed in a high administrative position. Had this not been the case, it is hardly likely that the deplorable mutiny would have come to a head at all, while the measures taken to break it, though effectual, were quite unnecessarily harsh. It is a pity that the author gives us no account of the part taken by Lord Minto in finally settling matters, but it seems clear that it was due to his subsequent action that the whole disreputable affair left so little mark behind.

The whole story was well worth telling and taking some pains to tell well. Sir Alexander Cardew has succeeded in doing so and for his scholarly labours students of Indian history (and especially of that of its armies) will be duly grateful. If we disagree with his conclusions, it is only right to mention that such disagreement is promoted by the facts stated by him with exemplary judicial fairness.

C. S-W.

JAFFA.

"JAFFA: 'BEAUTY OF THE SEAS.'" By Sybil Cust. (Windor: Oxley and Sons. 6d.)

It was a most happy thought of the Hon. Lady Cust to produce this little pamphlet on what is certainly one

of the most attractive ports in Asia. Port, however, is scarcely now the correct word for Jaffa, for as Mr. Tolkowsky, author of "The Gateway of Palestine," has discovered, the town and ancient harbour of Jaffa were destroyed in the middle of the fourteenth century. Nor is there any prospect of its becoming in full measure what it was in the past, the key to Palestine, for the choice as gateway of Palestine has fallen on Jaffa's northern neighbour, Haifa.

But for its past alone, Jaffa, with its memories of Solomon and Hiram, Cleopatra and Herod, Godfrey de Bouillon, Richard the Lion-Heart, and Saladin, the Turks and Napoleon, is infinitely well worth study. Many visitors to Palestine rush from Egypt to Jerusalem without so much as a thought of this little time-soaked town on the shore. Excuse for such Philistinism will be lacking now that this charming pamphlet has been published. Lady Cust obviously loves every stone of the storied past of Jaffa, and succeeds well in communicating her enthusiasm to the reader, who, though he may be tired of guide and hand-books, will certainly be refreshed, and resolved to visit or revisit the town whose history began with Japhet, son of Noah, and of whose future it is possible to say only one thing: that glories different perhaps in kind but not less in degree will be its lot.

LETTERS OF A PATRIOT.

"RABINDRANATH TAGORE'S 'LETTERS TO A FRIEND.'" Edited and with two introductory Essays by C. F. Andrews. (London: George Allen and Unwin. 7s. 6d. net.)

These letters, written by Sir Rabindranath Tagore between 1913 and 1922, most of them during a long tour in Europe and America, do not add anything to the impression of him which will already have been made on those who have read his essays and poems. They show us a poet, a mystic and an idealist, an ecstatic lover of beauty. We recognise very clearly, on reading this collection of letters, how deep is his devotion to his country. We are shown something also of his valiant struggles against depression and disappointment, his power to draw strength and comfort from the highest spiritual sources. The selection of these letters has obviously been a labour of love, and they should prove of interest to all admirers of the work of this poet and patriot. The book contains three portraits, one from a dry point by Muirhead Bone and two from dry points by Mukul Dey.

CRUCIAL DAYS FOR EGYPT.

(Continued from page 392.)

at the trial of Sir Lee Stack's murderers. The British Government, influenced by Egypt's record under Mahmoud Pasha, has acted in the belief that those old bad days will never recur, and that the Wafd, restored to power, will be free, as a result of the treaty, from its former anti-British obsession and will settle down to normal administration on the lines laid down during the last fifteen months. If the Wafd confirms this belief, there may well be compelling force in the "influence" that the British Government brings to bear on the other Capitulatory Powers, and in due course the independence of Egypt will be rounded off as desired. If, on the other hand, the Wafd allows its policy to be dictated by extremists, it is difficult to see how the independence of Egypt can be advanced.

EDUCATION IN PERSIA.

We learn from the *Shafagh Sorkh* that Mirza Issa Khan Sadig, Director of Public Education in the Persian Ministry of Education, who attended the adult Education Conference recently held at Cambridge, returned to Teheran on September 16. On September 18 he was received by the Minister of the Court and the Minister for Public Instruction, to whom he explained that he had engaged the services of a Professor of Geology for the Higher Normal School and of nine other professors (three for mathematics, two for teaching French, and three for physics and chemistry) for the secondary schools of Teheran and the provinces. Four other professors from France were due to arrive at the end of September. M. Sadig-Aalam has also ordered, for use in Persian schools, 5,000 wall maps of Persia and 160,000 smaller maps.

NEWS IN BRIEF.

The International Congress on Criminal Law was opened in Bucharest on October 7.

Shaikh Maraghi, Rector of the University of Al Azhar, Cairo, last week tendered his resignation on the ground that it was impossible for him to continue to work under present conditions.

The 27th International Peace Congress was inaugurated in Athens on October 6 and will terminate to-day. The main subjects for discussion were the Kellogg Pact and the federation of European nations.

It has been decided by the Turkish Government to transfer to Angora the University of Stamboul. The Faculties of Letters and Theology will probably be moved this year.

Traces of dwellings of 2000 B.C. and domestic utensils, bone idols, carved vases, and small arms in copper of the same period have been discovered at Magurs Jilavei, near Bucharest.

M. Carton de Wiart, Belgian ex-Minister for Foreign Affairs, during a visit to Greece was last week entertained to a banquet by the Greek Foreign Minister.

Colonel Cecil Coke, the new chief of the British Police Mission in Greece, was received in Athens by the Greek Minister of the Interior on October 3 and took over the direction of the town's police.

The Lord Mayor of London and the Lady Mayoress have issued invitations for a reception to be held at the Mansion House next Wednesday (October 16), on behalf of the Jewish National Fund, when the Lord Mayor will receive a letter of congratulation, written in Hebrew, from the Mayor of Tel-Aviv, the only all-Jewish city in Palestine.

It is announced in the *London Gazette* that the King's Police Medal has been awarded to the following officers of police in recognition of services rendered during the recent disturbances in Palestine:—

Alan Saunders, M.C., Deputy Commandant, Palestine Police.

Raymond Oswald Cafferata, Assistant District Superintendent, Palestine Police.

The Balkan Sports, held in Athens at the invitation of the Hellenic Athletic Union, came to an end on September 20. Of the 21 events, Greece won 15, Yugoslavia two, Roumania two, and Bulgaria two. The Balkan Sports will be held annually in future, and, pending preparation by other Balkan nations, will be held in Athens for the next four years. Turkey and Albania are to be invited to send teams of competitors.

DEATH OF A ROUMANIAN REGENT.

We regret to have to record the death of M. Gheorghe V. Buzdugan, a member of the Roumanian Council of Regency. M. Buzdugan, who was sixty-two years of age, was an eminent jurist and had been President of the Court of Cassation before he was appointed, on the death of King Ferdinand in July, 1927, to form with Prince Nicholas and the Patriarch Miron the Council of Regency, during the minority of King Michael. His personal reputation and official record made his selection for the high post a popular one.

The appointment of a successor will be made by the Roumanian Parliament. Article 83 of the Roumanian Constitution gives the King authority during his lifetime to nominate a Regency to exercise the royal powers during the minority of his successor to the Throne. The nomination requires the approval of the "National Representation," consisting of the two Assemblies in joint session, and if the King shall not have exercised his prerogative of nomination, the two Assemblies in joint session appoint the three Regents. Accordingly, in the absence of any more specific regulation, the same course has to be adopted for the filling of the vacancy in the Regency caused by the death of M. Buzdugan. The omission of Queen Marie from the Council of Regency in the first instance gave rise to regret in many quarters; but it does not seem likely that two members of the Royal House will be included together in the Council of three Regents, even if the special provision in Article 77 of the Constitution for "the perpetual exclusion of women" from the Roumanian Throne is not interpreted as a bar to the presence of one in the Council of Regency.

THE KINGDOM OF YUGOSLAVIA.

MAP OF YUGOSLAVIA, SHOWING THE NEW ADMINISTRATIVE DIVISIONS, KNOWN AS BANATS (*Banovine*).

The new Administrative Law of the Yugoslav Government, which has received the assent of King Alexander, divides the Kingdom of Yugoslavia into the following administrative units—*banovine* (banats or counties):—

BANOVINE	CAPITAL	AREA: SQ. KMS.	POPULATION
Sava ...	Zagreb ...	36,897 ...	2,320,000
Danube ...	Novi Sad ...	28,160 ...	2,100,000
Varda ...	Skoplye ...	39,566 ...	1,000,000
Drina ...	Sarayevo ...	29,273 ...	1,400,000
Morava ...	Nish ...	25,721 ...	1,200,000
Drava ...	Liubliana ...	15,936 ...	1,040,000
Vrbas ...	Banya Luka ...	20,558 ...	850,000
Primorje*	Split ...	19,417 ...	800,000
Zeta ...	Cetigne ...	32,322 ...	740,000

Belgrade is constituted a separate administrative unit, which incorporates Zemun (Semlin) and Panchévo.

*Primorje signifies coast land, or littoral.

Commercial and Financial Section.

NOTES AND NEWS

Tuesday Morning.

Near East Tobacco Surplus.

It looks as if the tobacco-growing countries of the Near East will be faced this year with a serious crisis due to over-production. Tobacco has the merit of being a product for which, so far as can be seen, there will be a constantly expanding market so long as the world population increases, but between the provision of gradually increasing supplies and unrestricted production there is a wide gulf, and it is to be feared that some Near East countries are likely to suffer from the consequences of having too plentiful a harvest this year. The estimated figures for Bulgaria's production have already been given in these columns, but it may be recalled here that the production is expected to amount to from 30 to 32 million kilograms, or more than double the yield of the previous year. The production of Greece is now estimated at roughly 70,000,000 kilograms, or nearly 30,000,000 kilograms more than last year, so that for these two countries alone we have an increase of about 50,000,000 kilograms. The stocks of the previous year for these countries and Turkey are placed at about 40,000,000 kilograms, and according to a Greek estimate that total will represent the surplus which the markets at present will not be able to absorb. It is interesting to note that Yugoslavia alone in recent years has kept her production within reasonable limits, and this country has also been specially fortunate in disposing of stocks to foreign Régies. It is to be hoped that the experience of this year will prove a lesson to the tobacco producers of the East, and that they will henceforward endeavour to bring production into a closer relation to the probable demand. Ultimately no doubt there will be an opening for all the tobacco the East can produce, but that time is not yet.

The New Turkish Tariff.

October 1 duly saw the introduction of the new Turkish Tariff, which constitutes a most bold experiment by the Angora authorities in Protection, and emphasises, it may be added, the hopeless task in present circumstances of bringing about anything like a general agreement as regards the reduction of tariffs. Not that it is to be assumed that the Angora authorities in this action are really inspired by the idea that through Protection by itself it will be possible to fashion a Turkey which will be self-contained. That idea would do scanty justice to the rulers of the new Turkey, for it is only too obvious that not for very many years, if ever, will Turkey be able to produce any considerable proportion of the commodities which she now imports. It is believed, as I have already indicated, that the object of the new Tariff is to give Turkey a weapon which will enable her to obtain concessions from other countries, and support for this view is forthcoming in the fact that she is taking steps to negotiate commercial treaties with various countries. Of the details of the Tariff there is little fresh to say. While the all-round increase is about 33½ per cent. the duty on pure woollen goods is increased by up to 400 per cent., and another heavy increase is in the case of certain types of motor cars. As is well known it has been necessary for the last few years for Turkey to import wheat, and as conditions in Angora have again been unfavourable this year this step will again be necessary, and it is surprising in the circumstances that the duty on wheat should be substantially increased. But as the whole effect of the

Tariff must be to raise prices in Turkey this particular feature must be regarded as simply being in keeping with the rest of the duties.

Wheat and the Near East.

It is ironical that in a year of excellent harvests in the Balkans the ruling prices of grain should make it doubtful whether the surplus of the crop available for export will be the assistance that it should be in replenishing the purchasing power of one of the most seriously devastated regions of Europe. A year ago the world's wheat crops were universally good with the result that prices fell and the Balkan countries suffered. This year, until recently, it was believed that the wheat crops of the United States and Canada, which dominate the world markets, would show a distinct falling off, but this expectation is apparently not to be realised, hence the present low prices. Of course the position may change, but if it does not it means that Roumania, for instance, will not be able to obtain the return on her harvest that was expected. It is suggested that the two great wheat producers are keeping off the market until other supplies are exhausted with a view to price regulation, so the Balkan wheat producers may yet find it possible to dispose of their surplus stocks towards the end of the year at much better prices than those ruling at present.

Russian Eastern Air Routes.

It is significant of the constancy of Russian foreign policy that in the development of air routes the Soviet Union is paying particular attention to the Middle East. There is, for instance, the line to Persia via Baku which terminates at present at Pahlavi. Then there is a line from Tashkent via Samarkand to Dushambe, and Kabul, which the Soviet Union regards as most important for the development of its interests in Central Asia. The line from Tashkent to Kabul was inaugurated in 1927, and the line is being linked up with Moscow to give through air communication to Afghanistan. The areas which the Soviet Union is now reaching by air routes present some of the most difficult terrain in Europe, and it says a good deal for the imagination of Russia's rulers that air services are thus being used to solve the problem of communications. She is certainly setting an example to other countries, who, knowing the habitual trend of Russia towards the East, may not improbably regard this steady

development of air services with a certain measure of anxiety, for not even the strongest winds which may be encountered in the sky could succeed in blowing the zest for propaganda out of the Russian zealots, and a pamphlet is the same whether it comes by post or through the air.

Mr. Waugh's Retirement.

The British community at Constantinople will shortly lose one of its most notable figures through the forthcoming retirement of Mr. A. T. Waugh, C.M.G., who has been Consul-General there for the past nine years. His long tenure of that office has been far from an uneventful period, as all who are familiar with recent developments in Turkey will be aware, and his success in carrying out the work of protecting British interests is therefore specially significant. Popular with all sections he will leave a gap in the British ranks at Constantinople which will not easily be filled. Mr. Waugh, who was born in 1865, entered the Levant Consular Service in 1885, becoming Vice-Consul in 1890 and Consul in 1903. In 1915 he was appointed Commercial Attache to H.M. Legation at Athens, and from 1918-20 was attached to the British High Commission at Constantinople.

City of Constantinople Bonds.

When in May last a settlement was reached over the City of Constantinople Five per Cent. Loan of 1909, it was naturally concluded that the question was settled, and that the payments would begin on the date arranged. The first payment was to be made on September 15, but that date passed without anything happening, the explanation for this being, it is understood, that the agreement had not been signed by the Mixed Arbitral Tribunal Judges. The signatures were obtained on September 26, and it was to be expected that the payment would then be expedited, but so far as is known no steps have been taken. In view of the prolonged delays over the Turkish debt settlement it cannot be said that this fresh example of Turkish procrastination is very surprising, but it is naturally excessively irritating for the bondholders who made the settlement possible by extending generous concessions.

COMMENTATOR.

NOTES FROM TURKEY.

(From Our Own Correspondent.)

Constantinople, October 2.

The Smyrna Fruit Crop.

It is distressing that, whilst on the one hand, certain highland districts in Anatolia are suffering from the effects of a severe drought, parts of the lowland area should, on the other, be so afflicted by an almost unprecedented deluge of rain that the sultanias drying on the ground in the sunshine have been seriously attacked by blight and mildew. The fig crop also would appear to be well below average in both quantity and quality. This has necessitated the closing down of four of the largest manipulating warehouses in Smyrna, whereby numerous graders and packers have been suddenly deprived of their livelihood.

With the addition of the foregoing of the loss of almost the entire hazel-nut crop on the Black Sea littoral, the economic outlook cannot be regarded as particularly hopeful. The hazel nut growers, who had disposed of their prospective crop on the bush by forward contract to Continental buyers, have disclaimed liability for non-delivery of the goods.

It is noteworthy that the only region where the menace of Communism has shown its head in Turkish territory should be the Smyrna Vilayet where unemployment on a fairly extensive scale among the labouring classes may

possibly have provided that fallow field for which the agents of the Third International are for ever on the look-out.

HIGH PRICES FOR SULTANAS AND FIGS.

Messrs. J. C. Houghton and Co., of Liverpool, in their dried fruit report dated September 30, state:—

Currants.

Old Crop.—The position with regard to Greek currants during September showed no particular alteration from the conditions prevailing during the previous month. Trade was concentrated mainly on Australian fruit.

New Crop.—Reports of the adverse climatic conditions prevailing in Greece, which interfered with the drying process, had a restraining effect, and this was further accentuated when overland samples came to hand. With the exception of some of Vostizza growth, these advance samples showed unmistakable signs of the effects of the unfavourable weather, and engendered a disinclination to make forward contracts. The consequence is that practically no trade is reported, the exceptions being in a little cleaned Pyrgos at 34s. 9d. to 35s. c.i.f.

The 1929 season was inaugurated by the arrival of s.s. Bothnia on the 23rd inst., but the romance of the season's opening has become a thing of the past. In former times it was the event of the year in the dried fruit trade, marking the clearly declined transition from a period of absolute calm to one of bustling activity, but since the advent of Australian and South African fruits we glide almost imperceptibly into the new Greek season. It was hoped that the scarcity of bold fruit of the old crop would have stimulated demand for the good grocery fruit, but unfortunately the reception accorded to it can only be described as disappointing. This may perhaps be attributable to the lack of that bright colour attractive appearance usually associated with early arrivals. Nevertheless, the fact cannot be gainsaid that a contributing factor to this apathy was the increased interest which was given to Australian fruit during the latter part of the month. Business in Vostizza growth is fully up to the usual standard, but with this exception the movement is discouraging so far. Hope is, however, entertained that once operators settle down to normal trading they will realise that, even though colour is somewhat deficient, this season's produce is excellent in all other respects, well fed and matured. When they become convinced that quality is all that can be wished for, trade will no doubt follow its usual course, and a satisfactory volume of purchases be recorded. Sales were:—Pyrgos, none; Amalias and Patras, 42s. to 43s.; Gulf, 44s. to 47s.; Vostizza, 58s. to 70s.

Sultanias.

Smyrna.—In a general sense the month opened with the situation unsatisfactory, and the outlook afforded no encouragement to purchase on a forward basis or to anticipate autumn requirements. Good average quality was offered for September shipment at 26s. to 27s. c.i.f., and met a very poor response from the trade. Before the arrival of the first steamer with early shipments of 1929 harvest a sharp upward movement developed owing to the widespread damage from rainstorms. Reports were that out of the 60,000 ton crop only 30,000 tons were harvested, and it was estimated that of the remainder of the crop that was exposed at the time of the storm, 5,000 tons were destroyed and 10,000 tons were damaged. Later reports were to the effect that further extensive rains over the Smyrna district had caused more damage to fruit on the vines. The prices demanded for the arrival ex s.s. Siptah checked business and very little progress has been made with her cargo. Sales were:—Good qualities 54s. to 55s. 6d., and fine 60s. to 65s.

Cretans.—A fair business was done in fine fruit on tin samples for arrival per s.s. Bothnia, prices ranging from 48s. c.i.f. to 80s. duty paid. Spot sales were 80s. to 82s. 6d.

Figs.

Siptah brought the first new figs, and these were mostly disposed of before arrival: Layer boxes, 56s. to 76s.; small boxes, 73s. 6d.; Locoums, 110s.. Sales on the spot were: Layer boxes, 65s. to 90s.; small boxes, 80s.; Locoums, 115s. S.s. Bothnia arrived with further supplies and business was done at unchanged rates. Genuines were sold afloat per s.s. Bothnia at 31s. to 32s. c.i.f.

The Metropolitan Cammell Carriage, Wagon, and Finance Company, Birmingham, have been given a contract for 60 goods brake-vans for the East Indian Railway.

During archaeological excavations in the Chersonese—an ancient Greek colony near the modern Sevastopol—remains of towers of the fourth and fifth centuries B.C. were found.

The directors of the London and Lancashire Insurance Company have appointed Lord Burghley as branch manager to succeed Sir Francis Astley-Corbett, who has retired on pension, at the company's West End office, 59, Pall Mall, S.W.1.

ROUMANIAN MARKET CONDITIONS.

Messrs. Watson and Youell report as follows from Galatz for the week ended September 28:—

Grain.—Business this week has been restricted owing to the continued drop in grain prices abroad. With the exception of a few fresh transactions due to the temporary low prices at which barley was offered here, practically all activity was confined to the fulfilment of old sales on which fair profits appear to have been realised. German ports lost slightly in importance this week, whilst the demand for Antwerp and Rotterdam improved. The freight market continued brisk, and spot tonnage berthed at the quay obtained up to 16s. For October-November, parcels were booked at 15s. 6d. to 15s. 9d. The number of fixtures was maintained for October-November loading at almost the same rates as last week. At Constantza the position remains unchanged, but berth rates are inclined to be weaker.

Timber.—Owing to the increasing volume of grain movements on the railways and the consequent decrease in the number of wagons available for timber, arrivals of this commodity here have fallen off. However, there is only a limited demand for shipments to Mediterranean ports, for which moreover tonnage is scarce. There has been some inquiry for Continental ports for which space is still more difficult to obtain owing to preference being given to grain, but parcels of about 100 wagons have been placed for Rotterdam, shipment end October, at £12 per wagon of 22 cubic metres. A similar rate is offered for shipments to Antwerp. For Mediterranean destinations the following rates are quoted: Greece £7 15s.; Syria and Palestine £9 to £9 5s.; Sicily £11 5s.; South France £11 10s.

Weather and Crops.—The drought during the second half of August and at the beginning of September appears to have had a more detrimental effect on the maize than was anticipated; and according to new estimates there will be an exportable surplus of maize of 1,410,000 tons only whilst on the other hand there is an increase in the estimate for the surplus of straw crops to 3,220,000 tons according to the same authority, making a total of 4,630,000 tons of all the principal grains, instead of the total of 5,255,000 indicated previously.

Fairly abundant rain fell in the north and north west at the beginning of the week, extending on Tuesday over the greater part of the country. There were light rains in most districts on Wednesday and in parts of Moldavia and North Bessarabia on Thursday, but in general the second half of the week has been dry though the sky has been frequently overcast. The thermometer continued to fall early in the week, and though the days became somewhat warmer with the subsequent brighter weather, the temperature continues to be rather abnormally low and at night has been down to near freezing point, even in the southern plains. The gathering of the maize is now getting into full swing, whilst the moister condition of the ground should greatly facilitate ploughing for the autumn sowings.

Sulina Bar.—The 24 feet depth has been maintained without difficulty, and intensive dredging is being continued to obtain a margin of reserve and avoid as much as possible any change which might arise through boisterous weather and other elements beyond human control. One suction dredger and one bucket dredger are at present being employed. The last official advices show that there are two shallows with a minimum depth of 22 ft. 6 in. in the river, but one of the suction dredgers, which was also employed for a time on the bar, has been put to work to restore the depth.

Bulgarian Report.

Constantza.—Grain arrivals this week amounted to about 12,000 tons and apparently the same quantity was shipped, most of it for Hamburg, smaller quantities going to Hull and Trieste. At the time of writing three steamers are loading at the elevators, three are waiting

for berths, and eleven others are expected for full cargoes or completions after loading in the Danube. Seven vessels loaded over 30,000 tons petroleum products and two took oil fuel for bunkers.

September 21.—The market has been somewhat livelier. About 2,000 tons sunflower seed have been booked at 18s. per ton, prompt shipment, for Rotterdam, and it is reported that for about 1,000 tons maize, second half October shipment, 11s. 6d. per unit has been accepted. Maize is beginning to make its appearance at shipping centres, but it is not expected that important quantities will be available before the middle of October.

Weather and Crops.—There was heavy rain here from Sunday midnight till Monday morning, after which the weather remained mostly cloudy and cool and warm. The preparation of the ground for autumn sowing is progressing satisfactorily.

THE CINEMATOGRAPH IN EGYPT.

According to an American Consular report, although Egypt is at present a relatively small market for motion pictures, the future possibilities are considerable. American films are said to be very popular, and it has been estimated by several distributors that they constitute 70 per cent. of the films imported. The social film is the best liked in Egypt, and there is a distinct demand for comics. Western dramas are not popular in the cities of Cairo and Alexandria, but find a good market in the provinces.

Egypt's only studio is located at Helipolis. Films thus far produced in Egypt have not been marketed abroad, except in the Sudan, Syria, and Palestine. They find a market in the 50 motion-picture theatres operating in Egypt. Six have a seating capacity of 1,000 or over, while 11 seat from 700 to 1,000, the seating capacity of the rest being from 300 to 700. Eighteen houses exhibit first-run pictures.

In Cairo and Alexandria and in the larger provincial towns all theatres give two performances daily and an additional matinee on Sunday. The programmes average from 3,000 to 4,000 metres, only one or two theatres running over that amount. The programmes are made up of the usual short subjects and the feature—first and second run houses usually running their programmes one week, the third and fourth run houses changing twice weekly.

Rentals for films used in these theatres vary widely, according to the importance of the film and the actors. There are three common methods of renting films in Egypt—outright, fixed price per foot, and the percentage basis. Of the above, the first-run theatres customarily use the latter arrangement. The percentage varies in different theatres for rentals of normal films and up to 60 per cent. for films featuring certain artists who are most popular.

The Egyptian State Railways have given a contract for white metal for metallic packing to the Anti-Attrition Metal Company, London.

The total export movement of petroleum products from Roumania during July amounted to 285,992 tons, made up of 91,007 tons of motor spirit, 61,884 tons of illuminating oil, 33,526 tons of gas oil, 93,249 tons of mazout, and 6,326 tons of other oils. For the seven months of the present year Roumania has exported 1,594,690 tons of petroleum products.

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, October 1.

The Reparations Question.

The matter which is occasioning the most serious anxiety in both Government and Opposition circles is the problem of Eastern Reparations which a decision of The Hague Conference has brought to the foreground. The problem is being studied by a committee of experts in Paris who are to present a report to the Conference. This committee has already heard the evidence of Bulgarian experts, and notably of M. Danailoff, the Deputy and former Minister, Professor of Political Economy at Sofia University, and its decision is now awaited. The imminence of a decision and the dangers of a consolidation of Bulgarian Reparations, as they were fixed by the Treaty of Neuilly and the later agreement of 1923, have aroused general apprehension, and the view is taken that it would be preferable for Bulgaria to refuse to take part in the committee and the Conference rather than accept a ruling which would make her a country materially ruined and enslaved. Bulgaria's Reparations were originally fixed by the Treaty of Neuilly at the relatively colossal sum of 2,250,000,000 gold francs; the creditors soon appreciated that this sum could never be paid by Bulgaria, and in March, 1923, by an agreement between the Bulgarian Government and the Inter-Allied Commission at Sofia two categories were arranged, of which one of 550,000,000 was immediately exigible and was payable in fixed annuities at 5 per cent. interest up to 1982, while the other was 1,700,000,000, which would not be payable before April 1, 1953, which was equivalent to saying that it would never be paid. However, it became clear subsequently, especially when the interest was added, that even the reduced amount of 550,000,000 exceeded Bulgaria's capacity to pay, and the Bulgarians hope that the Allies will take this situation into account when within three years Bulgaria has to face the full annuities of 43,395,336 gold francs, or about 1,200,000,000 leva on a Budget of 7,000,000,000 leva, already hampered by more than a milliard and a half leva for the service abroad of pre-War and post-War loans.

Bulgaria pays at present on account of Reparations an annuity of ten million gold francs. It can only be believed that the negotiations which are now in progress not only will not result in increasing this amount for the annuities to come, but will reduce it to the level of the country's capacity, if it is not desired to perpetrate a crying injustice on the Bulgarian people.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

BULGARIA.

Locomotives.—The Ministry of Railways invites tenders for the supply of 3 locomotives (type 282). October 28. (D.O.T.)

EGYPT.

Architectural Ironwork.—The International Quarantine Board of Egypt are inviting tenders for the supply of wrought iron doors, grilles, balustrades, etc., for the Board's new headquarters at Alexandria. January 1. (D.O.T.)

160-h.p. Diesel-driven Generating Set.—The Ministry of the Interior invites tenders for the supply and delivery of one Diesel electric generating set for the Manfalout Power Station. November 19. (D.O.T.)

Water Tower, Etc.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of a steel water tank on a steel framework tower, to be complete with necessary piping and fittings and an electric water level indicator. November 2. (D.O.T.)

Pumping Plant.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of two Diesel pumping units and accessories at Khattara Pumping Station (Aswan Province). November 25. (D.O.T.)

Tartar Emetic and Carbon Tetrachloride.—The Department of Public Health, Cairo, invites tenders for the supply of 760 kilos of tartar emetic and 6,800 kilos of carbon tetrachloride. December 7. (D.O.T.)

Fire Extinguishers, etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of fire extinguishers and accessories required for the schools during the year 1929-1930. November 11.

GREECE.

Box Nailing Machines.—A firm in Patras is desirous of receiving quotations for the supply of box nailing machines for nailing up currant boxes. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. California for Bombay (Glasgow, October 15; Birkenhead, October 21). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahrona for Calcutta (Birkenhead, October 22); s.s. Circassia for Calcutta (Glasgow, October 24; Birkenhead, October 31).

Bibby Line.—S.s. Lancashire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 16).

British India Line.—S.s. Mantola for Colombo, Madras, and Calcutta (London, October 19); s.s. Domala for Bombay (London, November 2).

Cunard Line.—S.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement (Glasgow, October 15; Swansea, October 17; and Liverpool, October 19); s.s. Brescia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz, if sufficient inducement (Glasgow, October 14; Liverpool, October 26; and Swansea, October 29).

Johnston Line.—S.s. Jessmore for Piræus, Syra, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 19); s.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 8). (This steamer will be the last sailing of the season to the ports of Galatz and Braila, and sailing November 9.)

P. and O. Line.—S.s. Morea for Bombay (London, October 25); s.s. Padua for Calcutta (London, October 25).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 12); s.s. Sicilian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, October 23).

Ellerman and Papayanni Lines.—S.s. Mardinian for Algiers*, Oran*, Piræus, Syra, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 12; Swansea*, October 12); s.s. Algerian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, October 12; Swansea, October 17); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 24; Swansea, October 19); s.s. Lesbian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 2; Swansea*, November 2); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 7). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.
MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

†BRITANNIA ...	Oct. 11	*ELYSIA ...	Nov. 12
†CALIFORNIA ...	Oct. 22	*MASSILIA ...	Nov. 26

*First class passengers only. Specially low fares. †Calls Port Sudan.

† First and Third class passengers.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 8.

The Stock Exchange has experienced another difficult week. At the opening there was a continuance of the liquidation engendered by the Hatry crisis and the rise in Bank Rate, and this was accentuated by rumours of restriction of carry over facilities at the end of the present account. Later in the week a better tone gradually made itself evident following signs of improvement in the monetary situation. The dollar and mark exchanges had risen well above gold point early in the week, and later the franc exchange at last showed signs of reacting to the higher Bank Rate, so that considerably more confidence was felt in the monetary outlook and gilt-edged stocks responded, while some interest was taken in Home Rails. Some industrial shares, and particularly the newspaper group, fluctuated widely, but the industrial market as a whole has been appreciably better than in the previous week. Rubber and tin shares reacted on a setback in the price of the respective commodities.

Some Sound Investments.

In difficult markets such as those which have existed for some time past, and which will continue in view of the many obscurities in the financial outlook, it is particularly advisable for the investor who is not in close touch with the markets to give chief attention to securities of unimpeachable soundness. It is true that it is at times when prices are low that bargains can be picked up in the speculative sections, but as a general rule the ordinary investor is not in a position to exploit such possibilities. Those who have money to invest in the near future should therefore aim at safety above all other considerations. There are obtainable, however, sound investments giving a very fair income, some examples of which may be helpfully given. We have referred before to the issues of 6 per cent. bonds of the French railways made just after the War, triply secured by the revenue of the company in question, the joint fund of the French railways, and the French Government. Among these the Nord bonds can be bought to yield £6 1s. per cent. The strong position of

the Union Cold Storage Company is well known. The dividend of its 6 per cent. cumulative preference shares is the first charge on its profits, which have been remarkably steady in recent years. These shares return just £6 per cent. The profits of Pinchin Johnson and Company, the paint manufacturers, have grown rapidly, and the dividend on the 6 per cent. cumulative preference shares, which yield £5 15s. per cent. is very well-secured. Last year it was covered some ten times by earnings.

Rubber Outlook.

There has been a considerable fall in the price of rubber this week, and prices continue to show more likelihood of declining than of recovering. The immediate cause of the sharp decline in the price of raw rubber may be attributed to the report of a volume of production in Malay well above that predicted by reliable estimators. The increased output from Malaya is apparently due to the better yields obtained from trees which were rested during the rubber restriction period for British territories which lasted up to November of last year. The question now is whether the maximum yield has now been reached or whether the high output will continue, but the benefit of resting is hardly like to continue far beyond the next twelve months. On the consumption side of the rubber price problem the outstanding fact is that the United States consumption for the year is likely to be lower than expected, but with the present low prices, which the American statistics more accurately predicted, some increased buying is likely to occur in the near future. In the rest of the world consumption is likely to increase steadily as it may truly be said that in many countries motor transport is now entering upon a development such as occurred in the United States during the last seven years. Prices therefore will largely depend on American consumption and Malayan production which are the two factors to be watched.

Newspaper Share Values.

Considerable attention has been directed this week to the market in newspaper shares following upon the widespread advertisement of a reassuring statement by Lord Rothermere as to the position of shareholders in the companies of what is known as the Rothermere group. The decline in the shares, which, in fact, this broadcast statement has not checked, has arisen from fears that the intensive competition now being seen in the provincial newspaper world must adversely affect profits, while the rise in the cost of newsprint is another unfavourable factor. Moreover, as we have mentioned before, in recent years the size of newspapers has often been increased to a greater extent than has the space devoted to advertising matter, which indicates increasing costs without a compensating advance in revenue. These factors must affect profits in the immediate future, but, in the provinces at any rate there is still scope for expansion in circulations. Many of the leading companies have built up sound positions, and are believed to have substantial hidden reserves. While the provincial newspaper war may prove expensive to the companies for a time, in most cases this will not seriously affect the distribution to shareholders. Newspaper shares are necessarily a somewhat speculative holding, but, though prices may yet go lower, we should advise holders to consider the position carefully before being frightened by the recent decline into selling out at a loss.

Representatives of a Turkish shipping company arrived at the Piræus at the end of last month to negotiate the purchase of cargo boats.

Standard Telephones and Cables, Ltd., London, have received orders from the Egyptian Telephone Administration for 31,000 miles of rotary automatic exchange equipment.

The traffic receipts of the Egyptian Delta Light Railways, Ltd. for the ten days ended September 10 amounted to £E8,450, making the total from April 1 £E131,083, as against £E114,870 for the corresponding period of the previous year.

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches. The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of *Roses* is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives. The Bank transacts every description of banking operations.

Motors and Motoring.

(By Our Motoring Correspondent)

New Models at the Motor Show.

There is a good deal of speculation in the minds of private motorists as to what the forthcoming Motor Show, which this year is being held from October 17 to 27 at Olympia, will bring forth in the way of new models. This year there has not been quite as much forecasting as usual, and the reason for that is that actually there is comparatively little to forecast. The industry has settled down, rightly or wrongly, to a condition of steadiness, and it is fairly safe to say that we shall see very little that is new or startling at Olympia this year. One writer says that as makers announce particulars of new models earlier and earlier each year, we already know about most of the treats that are in store for us. In that case, we may as well admit at once that the "treats" are very few and of relatively small importance.

We are all glad to have the Show with us again; we are more or less optimistic about the prospects of trade for next season; we are all talking about this, that, or the other firm's great schemes for production and there are very few of us who dare say openly what is in our minds. Being one who never was afraid to say what he thought, I may as well say openly what a good many of us are thinking, and that is that the motor trade is about at its zenith and that there are no great prospects for any big increase in business. I may go further and say that not only does it seem unlikely that there will be any big increase in the numbers of private car owners, but that the present number is likely to show a decrease. There are, and always will be, a number of people who talk wildly about the coming motor age and foresee a time when everyone will own a car, but their prophecies need not be taken seriously. The cold-drawn fact—and we may as well face it—is that practically everyone who wants to own a motor car to-day has one, and in that case all that makers will be able to do in the future will be to keep pace with requirements and put enough new cars on the market each year to balance the number that go on the scrap heap, either here or abroad. For some time to come the trade will remain at its present level, as second-hand, re-conditioned cars will be shipped abroad, and the output of new cars will have to balance the number that are sent out of the country plus those that go to the scrap dealers. As an offset against this must be reckoned the number of cars that come into the country, and so, taking everything into consideration, we can arrive at the probable demand for cars in the future. There is, of course, another factor to

be taken into account, which is the desire of many car owners to have something new and more powerful. The horse-power tax is losing its terrors, and few motorists now regard it as a serious matter. They realise that after all there is not much difference between a tax of £12 per annum and one of, say, £15 or £20 per annum when spread over a year. So makers will probably put rather more powerful engines in future models. Not that the day of the light car is done, by any means; I believe the "seven" will always retain its popularity.

But the chief thing that will tell on the industry, and that is already beginning to make itself felt, is that there is no new public to tap in this country. The instalment system of paying stimulated demand, and a good many people seem to have failed to recognise that the demand thus stimulated was largely artificial and could not be maintained. Practically everyone who felt he would like a car is now satisfied, and it may be taken that those who are not motorists now are never likely to be. Most non-motorists of the present day would not take a car as a gift; they do not want to be saddled with the risk and responsibility; the pleasure of crawling home on a Sunday evening along any crowded main road does not appeal to them. They do not like the noise and inconvenience of motoring in towns; they regard a good many motorists as little better than hooligans; they are beginning to query whether the country as a whole is not paying far too highly, in life and limb and cash, for the gratification of those who want to rush, purposeless and objectless, along our main roads. Whatever may be the future of private motoring, and my view that it has reached its zenith may quite possibly be wrong, it is certain that commercial motors will steadily increase; nothing that I have said applies to that side of the industry, but the private car side is going to enter on lean years in the near future unless I am very much mistaken. I am not alone in that opinion.

Some Improvements.

I foreshadowed some time ago that makers were going to give greater attention to chassis lubrication, and in the new models it is only necessary to depress a plunger to lubricate every part of the chassis from a central reservoir. Silent rubber shackles which will require no lubrication will be fitted to a number of the new models, and most of the cars of the enclosed type will have lower roof lines, the change being effected by either making a well in the floor boards for the feet of the passengers or by swinging the body below the side members of the chassis frame.

THE P.G. MACRIS TRADING & INDUSTRIAL CO. Ltd.

CAPITAL AND RESERVES ... Drs. 51,250,000.

18, LYCOURGOU STREET, ATHENS, GREECE.

Telegraphic Address: "Pimacricia," Athens.

Branch at Piræus: Miaoulis Str. 40

GENERAL MERCHANTS & COMMISSION AGENTS

General Agents for the Shell Company (Hellas) Ltd.

Over 100 Agencies throughout Greece.

Special Branch for Commission Business.

Contractors to the Greek Government for the construction of a Complete System of Roads throughout the Country.

Certain models will have the ends of the chassis frame inclined upwards so as to give a low centre for the body mounting. Silencing, still far from perfect on some of the cheaper models, will be found to have received attention, and silencers themselves have been considerably improved, so much so that in most there is practically no back pressure for the engine to contend against.

I have received, as every motor journalist has, innumerable catalogues, lists, and booklets relating to new Show models, but truth compels one to say that there is nothing much that is new in any of them. The new Rolls-Royce models are perhaps most worthy of notice, and regarding them I can say that on the stand of that firm will be two of the new 40/50 h.p. Phantom II. models, one fitted with Windover Sendanca de Ville body finished with cellulose black, fine lined ivory and soft black leather, and the other fitted with a Hooper enclosed limousine body, finished with cellulose mulberry and black and soft black leather. There will also be a chassis of the same type, fitted with Barker saloon, finished with cellulose old ivory and Havana brown, with soft leather upholstery. On the stand will also be a 20 h.p. chassis fitted with Thrupp and Maberly fixed head coupe, finished with cellulose Verona red and black and brown upholstery. Twelve other Rolls-Royce cars will be shown at Olympia on the stands of various coach-builders, and all models will be fitted with, amongst other improvements, a centralised system of lubrication.

Traffic.

It has been my province, in another place, to have a good deal to do in connexion with mechanical traffic signals, and having had to observe them in use in many places, I have nothing but praise for them. It is complained by some that they are by no means easy to see, and although there appears to be little in that complaint, it is being taken into consideration by the authorities concerned and some improvement may, and probably will, be made. The only drawback to them that I have noticed has been a tendency on the part of some drivers to ignore them and to take their chance in getting across, with luck. It is always possible, with automatic signals, for a driver to ignore them and then, should anything untoward occur, protest that he did not notice the signal; but although that is done in America, I feel it will never be done in this country, where motorists are far too conscientious. I am, however, quite in agreement with those who urge that in towns where automatic traffic signals are in use, warning notices to that effect should be prominently displayed at all entrances to the town, so that car drivers will know what to expect. There is no difficulty about that; signs of an inexpensive nature can easily be erected, and so made that they are illuminated at night, and I certainly agree that should be done.

Arterial Roads.

It is to be hoped that the Ministry of Transport scheme for constructing an arterial road over Exmoor will not be carried out. No one wants an arterial road over the moor; as a matter of fact, motorists go to places like Minehead and Dulverton and the little villages under the shadow of Dunkery Beacon to get away from that sort of thing. I hear that the people of Winsford are up in arms against the idea. Well, good luck to them. I sincerely

hope they succeed in their efforts to get the scheme squashed.

INCREASED CYPRUS IMPORTS.

The report on Cyprus trade for August shows that the value of imports during the month was £195,984, or £58,716 above that for August, 1928, and £73,953 more than the quinquennial average. Exports at £103,682 were £6,119 less than in August last year, but £4,103 above the quinquennial average. For the eight months January to August the following are the values of imports and exports, as compared with the same period last year:—

		Imports.	Exports.
1929	...	£3,304,959	£1,082,917
1928	...	1,138,954	941,101
Increase	...	£166,005	£141,816

The following figures are those of the principal increases over imports for August, 1928:—Cotton goods, £2,532; machinery, £15,637; chemical manures, £8,822; petrol and benzine, £6,759; petroleum, £2,078; tobacco, £4,036; cement, £7,060; iron and steel, £4,702. The only appreciable decrease was flour (£12,467).

The slight decrease in exports as compared with August, 1928, is due to a fall in shipments of asbestos (£10,067), pyrites (£3,557), potatoes (£3,662), and raisins (£2,365). Other products of the Colony showed increases, especially barley, mules, spices, and hides and skins.

Twenty-three steamers called at Larnaca, 34 at Limassol, and 20 at Famagusta, as against an average of 27, 28, and 20, respectively.

CYPRUS CROPS.

The report on Cyprus crops for September states:—

Threshing of wheat is practically completed; the crop has been normal. Prices are fluctuating between 6s. and 7s. 6d. per bushel. Large quantities are being purchased for export to Greece and Asia Minor for seed.

Threshing of barley is completed, and the grain is stored. As predicted in previous reports, production is above the average. Exports to the United Kingdom, Egypt, Syria, and Greece have taken place during the month. Prices are from 2s. 3d. to 2s. 5d. per bushel. Offers are good, and the demand is fair.

The production of oats is poor, and well below normal. Offers and demand are weak.

The conditions of the new crop of potatoes is very satisfactory. Offers and demand for the old crop are rather poor. Many damaged tubers are in store. The price is £6 10s. per ton.

Good reports are forthcoming from all the cotton areas. The estimated production will exceed that of the previous season by 15 per cent. Picking is in full progress. The demand is good but offers are poor. The price is 2s. 6d. per stone for seed cotton.

The development of the orange plantations is normal. The prospects of production are better than that of the last two seasons.

The export of green lemons is now in progress. Over 150,000 have already been exported to various destinations. Prices are 15s. to 20s. per 1,000. Offers and demand are fair.

The export of pomegranates to Egypt has started. The production is fair, and the price is 7d. per stone. Offers are good, but the demand is poor.

The carob crop is now in store. The production is below the average. Prices are fluctuating between 22s. and 24s. per kantar.

The production of onions is very good. Offers are good, but the demand is poor. The price is £4 10s. per ton.

The export of grapes to Egypt is in progress. Raisin making is practically over and the general vintage has started. Prices are: Red dry wine, 23s. to 24s. per load; raisins, 1s. 5d. per stone.

The directors of the General Accident Fire and Life Assurance Corporation have declared an interim dividend of 5s. 6d. per share, less tax (22 per cent.), compared with 5s. (or 20 per cent.) last year, on the ordinary shares. The dividend and that on the preference shares are payable on November 1.

DEVELOPMENT OF SYRIAN TEXTILE INDUSTRY.

Until recently textile manufacturing in Syria was primitive. During 1928, however, a considerable quantity of textile machinery was imported from abroad and modern methods are being adopted, particularly in the weaving industry (says the American Consul-General at Beyrout in a recent report). The production of silk cocoons in Syria increased from 2,960,000 kilos (a kilo equals 2.2046 lb.) in 1926 to 3,185,000 in 1927 and 3,350,000 in 1928. At the end of 1928 the price of Syrian raw silk was about 18s. 11d. a pound, compared with 16s. 4½d. at the close of 1927. During 1928 the Syrian Government aided silk growers by the free distribution of 10,000 mulberry trees. During 1928 Syria exported 185,482 kilos of raw silk, with a value of £274,609, of which 171,368 kilos, valued at £259,316, went to France. Lebanon has approximately 90 silk-reeling establishments, of which four have over 100 basins. Efforts are being made to improve and modernise their equipment.

Cotton growing on a large scale is regarded as practicable in Syria, but as yet the quantity produced averages only about 10,000 bales annually. During the last quarter of 1928 a cotton spinning mill was built near Tripoli and equipped with American machinery. The mill is capitalised at £100,000, and its owners expect to use Syrian cotton to spin about 1,600 lb. of yarn per 10-hour day. The mill plans to begin operations with 70 to 80 people and hopes to expand production until it employs about 450.

Textile weaving in the Damascus district has been given a fresh impetus by the production of native cotton and the introduction of rayon. Of the mills weaving silk goods and silk and cotton materials, five substituted modern equipment for their old hand looms in 1928, at a combined cost of 9,600 Turkish gold pounds. A sixth textile firm, which formerly operated a small factory equipped with hand looms, built a mill and installed new machinery worth 1,700 Turkish gold pounds. This concern has a capitalisation of 20,000 Turkish pounds, and expects to employ 100 weavers. The machinery imported during 1928 by the aforementioned plants was about 60 per cent. of French origin and 40 per cent. Swiss. Raw silk is obtained mainly from Lebanon, and rayon chiefly from Italy. The market for the finished materials is found mainly in Syria, Palestine, Egypt, Turkey, Iraq, and Persia.

A mill for the manufacture of such materials as wool broadcloth, serge, gabardine, and cheviot was also opened in Damascus during the year. Syrian wool is not suitable for such materials, and, therefore, the mill uses imported yarns as well as foreign dyes. New electric machinery to equip this mill was purchased from Germany. The capitalisation of this plant is reported at about 20,000 Turkish pounds. When operating at capacity, fifty employees will be needed.

A silk spinning mill has been established at Broussa with the co-operation of Japanese capital.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for September was 78,790 tons.

Mr. Charles S. B. Wentworth Stanley has been elected a director of Forbes, Forbes, Campbell and Co., East India merchants, as from October 1.

The traffic receipts of the South Indian Railway Company for the week ended September 7 amounted to Rs.13,45,083, making the total from April 1 Rs.2,94,61,412, as against Rs.2,68,84,661 for the corresponding period of the previous year.

The crude oil production of the Roumanian oilfields during August amounted to about 430,000 tons, an increase of 30,000 tons over the figures for July and June. The production of the principal companies during the month was as follows (in tons):—Astra Romana, 88,112; Steaua-Romana, 83,481; Phoenix Oil, 44,271; Rom.-Americana, 42,408; Creditul Miner, 35,431; Sirius, 34,958; Concordia, 22,575; D.R.D.P., 15,101; and Colombia, 13,778.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 2:—

Egyptian Futures.

Sakel Contract.—During the sessions intervening between our last report and the week-end, this market continued to meet pressure, poor Alexandria reports and restricted support from both trade and speculative quarters influencing values gradually to still lower levels. At the turn of the week, a change in sentiment in the American departments began to be apparent, and whilst this had no immediate price effect on our market, it created a better undertone and led to the development of sufficient buying power to absorb offerings. Since this, a sharp upward move has been experienced, the overseas market recovering over 1 dollar per kantar during the last two sessions, with local values, stimulated by short covering and a moderate amount of trade purchases, showing an equivalent advance. The net result of the week's trading is a loss of 5 to 16 points for near positions and a gain of 3 to 9 points for more distant options. The rise in the Bank rate has come at a most inopportune time for Lancashire; business was just beginning to develop on more satisfactory lines, and the results of this further handicap have been reflected during the past few days in the policy of all sections to reduce stocks; thus both the turnover in cotton and yarns has been adversely affected. Reviewing the supply side of the situation, it would appear that present stocks and prospective yields of Egyptian and Sudan Sakels are going to prove ample for all requirements, and, with this in view, consumers here and abroad will probably only work on close lines unless we run down to a closer difference with other varieties. In the meantime, the accumulation of new crop arrivals should keep the contract markets in check or even cause a decline, unless more outside support develops as a result of a further "bull movement in the American markets."

Upper Contract.—Only a limited amount of business has transpired in this market during the past week; in the earlier trading an easy undertone was in evidence and differences with American again narrowed. More recently a better off-take has been in evidence and the market has shown a firmer tendency. New crop samples confirm previous reports regarding quality and staple; the latter is very satisfactory in comparison to the old crop, whilst the grade is somewhat lower. This in our opinion is rather a "bull" point for the contract, especially so as reports of the American staple yield are not so satisfactory, and the basis has commenced to appreciate. Taking a long view, we consider that purchases, should the market react again to the neighbourhood of 11d., are to be recommended; it also appears probable that at a later date our premium over the American contract will widen.

Egyptian Spot.

Values have fluctuated in a somewhat uncertain manner during the past week, and this has resulted in some falling off in the

For Rates of Freight, Insurance and other information apply to:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 86, Cross Street, Manchester, and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool.

recently improved conditions here. Spinners have lately acquired the habit of buying on declines, and this week the tendency of the market has been towards higher levels. Buyers, for the moment, appear to be rather nonplussed at the turn which events have taken. It is, of course, no secret that the local stock, both of Sakel and Upper, has been thoroughly combed out, in so far as the medium qualities are concerned, and there are still several weeks to pass before any marked alleviation can take place by means of new crop shipments. Taken in combination with the prospect of a "bullish" Bureau report next Monday (and sentiment appears to be veering that way), the situation cannot be exactly a happy one for those who are really short of the raw material. Except for Uppers, in which the customary steady offtake has continued, the daily spot inquiry has been quieter.

Sakels.—A fair demand has been in evidence for cotton at from pass to 75 on, but other qualities have suffered from neglect.

Uppers.—A steady trade has continued for cotton at from 10 to 35 points on November contracts, and the inquiry for the lower and the top grades has shown signs of broadening. New crop arrivals are eagerly awaited.

Pilion has been in moderate request only.

Nahda, White, Maarad, and Fouadi.—Very little interest has been evinced in these growths, with the exception of the last, of which some odd sales have been reported.

Sudan Sakel.—A fair business has been done at steady rates, but once again it has been the lower qualities which have attracted attention.

Tokar Sakel has been almost entirely neglected.

C.i.f. Business.—More interest has been shown, but spinners so far have been contented with near-by shipments. Forwardings to the trade last week were returned as 5,807 bales Egyptians and 1,362 bales Sudans. Estimated spot sales for the week, 1,800 bales Egyptians and 1,250 bales Sudan Sakel. Quotations of Sakel are 15 points lower for the finer grades, but other qualities are unchanged to 10 points higher. Uppers are 18 points, and Pilion 20 points higher. F.G.F. Sakel to-day, 16.75d. F.G.F. Upper to-day, 11.48d. F.G.F. Pilion to-day, 12.55d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended September 26, state:—

Since our last report the futures market has been very active, but the tendency once again has been rather weak. The week's summary of price movements is as follows:—Sakellaridis: November, 32.25 dollars, 1.03 dollars down; January, 32.77 dollars, 0.92 dollars down; March, 33.30 dollars, 0.84 dollars down; May, 33.70 dollars, 0.73 dollars down. Ashmouni: October, 20.62 dollars, 0.31 dollars down; December, 21.15 dollars, 0.18 dollars down; February, 21.60 dollars, 0.25 dollars down; April, 22.00 dollars, 0.24 dollars down; June, 22.40 dollars, 0.23 dollars down.

The Turkish military authorities have given an order to the Ariel Motor Cycle Company, Wolverhampton, for 46 motor-cycles.

Notes of the Week.

The Naval Visit to Turkey.

The visit to Constantinople waters of a British naval squadron under the Commander-in-Chief in the Mediterranean is of good augury for the re-establishment of cordial relations between Turkey and Great Britain. A few days previously Constantinople had officially celebrated the sixth anniversary of its "happy deliverance" from the occupation of the Allies. It has been the fashion in official circles in Turkey to represent Great Britain as the villain of the piece in connexion with the post-War settlement, and other Powers have not been slow to derive what advantage they could from this state of affairs. There is no reason to suppose, however, that Anglo-Turkish relations will suffer any permanent injury from this passing phase or from Great Britain's omission to join in an international scramble for Turkey's good graces. In the old days the two peoples experienced no difficulty in understanding one another, and during the period of estrangement the naval element in Turkey has been a rallying point for whatever friendly feeling towards Great Britain has lingered behind an official anti-foreign façade. The visit of Admiral Sir Frederick Field to Angora, and the festivities that will mark the stay of the squadron in Constantinople waters should help to clear away past misunderstandings and strengthen Great Britain's position as an advocate of peace and the promoter of material progress in the Near East. If any ulterior motive lies behind the visits paid by the British fleet indiscriminately to the maritime countries of the Mediterranean, it is to convey to all concerned that no one country may count on Great Britain's traditional friendship as an encouragement for a hostile or provocative policy against its neighbours. Possibly, moreover, a better appreciation of the difference that there is between a minor Power's fleet and the big navies of the Great Powers will serve to act as a deterrent to naval competition between States whose fleets could hope to make no showing, if they should find themselves matched against those of the Great Powers.

The Roumanian Regency.

The vacancy in the Roumanian Council of Regency, caused by the death of M. Buzdugan, has been filled by the election of another jurist, M. Constantine Saratzeanu, who was, like his predecessor, a member of the Court of Cassation. M. Saratzeanu's election would seem to have taken most Roumanians by surprise, as his name had not been previously mentioned in connexion with the Regency. On October 9 the two Houses of the Legislature met in joint session to elect the new Regent. After tributes had been made to the late M. Buzdugan, the sitting was adjourned for a quarter of an hour, and in this interval M. Maniu informed a meeting of the Government's followers that the National-Peasant Party's choice had fallen upon M. Saratzeanu, whose candidature was supported by the two existing Regents. When the joint session was resumed, an overwhelming majority of the Deputies and Senators voted for M. Saratzeanu. The National-Liberal Party, which had previously found occasion to withdraw from Parliament, refused also to participate in the election of a new Regent, on the ground that the Government had been guilty of a breach of the Constitution in assuming the Royal Prerogative pending the choice of a third Regent. Legal opinion on the subject may possibly be divided. The Constitution does not deal with this actual point; but Article 81 stipulates that from the time of the death of the King until the taking of the Oath by his successor on the Throne the constitutional powers of the King are exercised by the Ministers united in council. This provision was presumably regarded by the Cabinet as sufficient justification for its action. The Liberals, on the other hand, who have repeatedly tried to influence the Council of Regency against the present Government, may have thought that, if sufficient time elapsed before the appointment of a third Regent, the Council would prove more amenable to their advice, now that M. Buzdugan was no more. The controversy is of interest only in so far as it illustrates the bitterness with which party politics are conducted in Roumania. The Transylvanian National Party in its time refused to attend

the coronation of King Ferdinand, because it was held under the auspices of the Liberal Party; to-day the Liberals carry on the tradition by refusing to identify themselves with the election of a Regent.

Roumania and Great Britain.

The new British Government is responsible for many innovations in matters of diplomacy and policy, but it is to be hoped that Mr. Snowden's speech at a luncheon given last week by the Government to M. Madgearu, Roumania's Minister of Industry and Commerce, will not serve as a precedent for a general departure from the excellent international tradition that one country avoids the taking of sides in the internal politics of another. Stripped of very little oratorical circumlocution, the remarks of the Acting Prime Minister were to the effect that the British Government was thankful to see the National-Peasant Party of Dr. Maniu installed in the place of M. Bratianu's Liberals; and, thereupon, Mr. Snowden held out, as it were, his hat in M. Madgearu's direction, and asked him to place some substantial Roumanian orders in it. In referring to Dr. Maniu's Government it may be as difficult for the ordinary person to avoid reflexions on the bad, uncomfortable days that preceded it in Roumania, as to form a wish when seeing a piebald horse, without thinking of its tail; but the spokesmen of the British Government hardly need to be reminded that any official partisanship in such cases is apt to complicate relations between countries when the inevitable swing of the political pendulum takes place. M. Madgearu was guarded in his reply, for all the satisfaction that he must have felt in being able to throw the British Government on to the Roumanian political scales to the discomfiture of the Opposition. He hinted that Great Britain had allowed herself to be attracted from the right path in neglecting Roumania for other markets, and he contented himself with pointing out that Roumania offered numerous opportunities for profitable work on the part of British trade, finance and industry, which would be enabled to contribute to the economic advance of Roumania and to the prosperity of Great Britain. A few days later, as if to remove any disappointment at the way in which Mr. Snowden's "hat" had been ignored, it was announced that the Roumanian Government had placed an order in this country for the minting of coins, and the grant to a British firm of a concession for the construction of roads, as previously announced in these pages, was revived to amplify the results of the Roumanian Minister's visit to London. Orders for British firms are not to be expected, unless the requisite preliminary work is undertaken through the media of publicity and agents, while the British Government can play its part by seeing that its diplomatic representatives do not ignore the value to Great Britain of the extension of British trade and financial interests in the country to which they are accredited.

The Lull in Egypt.

Under the guidance of Adly Pasha the reversion to parliamentary government in Egypt is being conducted so far with exemplary smoothness. As a preliminary step, the number of electoral constituencies has been raised from 214 to 235, in keeping with the increase in population, and in due course a Proclamation will be issued fixing the date of the general election, which it should be possible to hold towards the end of November. With the opening of the electoral campaign it is almost inevitable that party feeling should run high once more; but there are signs that all sections of the Egyptian people are beginning to discover various features in the situation that engender reflexion. The proposed treaty may be the minimum that Egypt can accept; but it is equally certain—or more so—that it is the maximum that Great Britain can give. A change in the Egyptian electorate may also assert itself, to the discomfiture of candidates who, lacking all personality of their own, have in the past trusted wholly to a party backing. The

moment is ripe for every man of parts in Egypt to make his own contribution to the advancement of the country by offering himself as a candidate for the suffrages of the people, with an appeal not to their ignorance or cupidity, but to the best that is in them. If Egypt is to prove herself worthy of parliamentary government, she must see to it that in the new Parliament brains and not merely numbers are the determining factor.

Decorum at the Wailing Wall.

As we indicated last week, the Government of Palestine has put into temporary operation some new regulations concerning the Wailing Wall, pending the determination by a body to be appointed by the Secretary of State for the Colonies upon the whole question of Muslim and Jewish "rights" in this area. Such a step, which, of course, in no way prejudices the justice of any claim, Muslim or Jewish, was absolutely necessary in the interest of order and decorum, and it is a tribute to the common sense of both Arabs and Jews, who may both have been disappointed by the nature of the new restrictions, that this provisional solution has so far been allowed free play. All the objects of devotional use which the Jews are to be permitted on certain occasions to bring to the Wall are removable, have to conform to specified measurements, and are, except the Ark of the Covenant, to be officially sealed. It is interesting to note that the screen which was erected on the Day of Atonement in 1928, to divide male from female worshippers, was this year forbidden. It would seem, therefore, that the authorities have resolved, at any rate, not to allow to the Jews any additional privileges—privileges in excess, that is, of what, as far as can be made out, customary usage permitted. To the Muslims, on the other hand, access to the Wall by the new passage at the southern end is on Jewish Sabbaths and other Jewish holy days absolutely barred. This restriction must appeal to the unbiased observer as a quite fair one. The legal rights of the Muslims to the area are in no wise violated by it, for as far as was immediately practicable the *status quo* has been restored. Whether the Commission which is finally to resolve this knotty question will make any fundamental alterations in these new rulings remains to be seen, but it would seem improbable, so well-founded are they in a desire to be fair to both sides, at the same time ensuring, which is the paramount necessity, good order and decorum at the Wailing Wall.

The Commission of Inquiry.

The Commission which is to inquire into the recent disturbances in Palestine has left London, and very soon will be earnestly engaged on what is probably one of the most difficult tasks ever imposed on a Commission—the sifting of truth from falsehood in a land teeming with propaganda and lies. It is instructive in this connexion to note that this Commission, unlike that appointed to inquire into the riot of 1921, is allowing interested parties to be represented by counsel. The advantage of this step, which was not at first approved by the Commission itself, is not obvious, but it has been stated that the decision to hear witnesses direct was not acceptable in Palestine. Whether the Arabs were as anxious as the Jews to be represented by counsel is not clear, but it is perhaps significant that, whereas the fact that Sir Boyd Merriman, Solicitor-General in the last Conservative Government, and Viscount Erleigh were to represent the Jewish Agency before the Commission, has been known for some time, it has only just been made public that Mr. W. Stoker is to represent the Arab side of the case. From the point of view of the general public, which after all is anxious only to know the truth, it is perhaps to be regretted that this permission to employ counsel has been granted. The Haycraft Commission of 1921 heard over ninety witnesses, and there seems little reason to suppose that its report was not an admirable model to follow. Are the issues at stake before the present Commission so very

different from those confronting the Commission in 1921? The official answer must be presumed, from the narrow terms of reference, to be in the affirmative. It will, however, be profoundly interesting to see whether the Commission decides that the present Arab grievances are entirely new, or merely variations on an old theme.

Zionists' Anxiety.

If there is one thing which the Arabs may envy the Jews at the present time, it is the success of the publicity efforts which are attending the people to whom the Balfour Declaration was made in 1917. Despite all their efforts, the Arabs are sometimes inclined to think, the world in general is apt to overlook the fact that other promises were made in 1915. We are not concerned at the moment with what those promises to the Arabs in 1915 really meant, any more than with what the Balfour Declaration two years later really meant: suffice it to say that the two peoples to whom these respective pledges were given regard them as equally inviolable, and as containing more than the British Government meant them to contain. However the MacMahon pledge may be explained away, the Palestinian Arabs believe that they, with their brethren in Iraq, Trans-Jordan, and elsewhere, were promised self-government. It is, therefore, with some dismay that they may see the attention given by the Prime Minister of England, just before he leaves for America, to Zionist representatives, and, again, when he lands in America, to such influential leaders of Jewish opinion as Mr. Felix Warburg. They may conclude however, on reflexion, that these visits of Zionists (and of non-Zionist Jews) to high places are a measure rather of Jewish anxiety on the future of Palestine than of Jewish influence upon the shaping of future policy. For undeniably the Zionists are very anxious. Even so enlightened a man as Professor Einstein does not conceal his alarm at the apparent indifference of Great Britain to the Jewish cause in Palestine. "Is it not bewildering," he asks in a letter to the *Manchester Guardian* of October 12, "that, after all this, (the post-War Jewish effort in Palestine) brutal massacres by a fanaticised mob can destroy all appreciation of the Jewish effort in Palestine and lead to a demand for the repeal of the solemn pledges of official support and protection?" The answer is, first, that the withdrawal of official protection for a "Jewish National Home" has never for a moment been considered by the British Government, but that, as for public opinion, the expression of which is not monopolised by Lord Rothermere's papers, that is waiting for the Commission of Inquiry to report. British public opinion on the whole is well aware of the vast effort made by Jewish colonists in Palestine. That such a progressive work, it says to itself, could in itself have been responsible for Arab hostility, is incredible. What, then, is the cause? It is over the answer to this question, not over any possible ignorance of the world at large on the often heroic efforts made by Jewish colonists to redeem and to develop the Holy Land, that Zionists are really anxious. As Dr. Einstein says, a decade ago the policy of the establishment of a Jewish National Home in Palestine received "the almost unanimous support of the entire British Press." What, then, has happened in the interval? Can it be that certain Jews themselves are responsible for the growth of a previously unsuspected Arab antagonism? Or are the Arabs, the gaining of whose friendship was, and is, one of the Zionists' main professions, solely to blame for the recent disturbances? It is a suspicion that a definite affirmative may not be supplied by the Commission of Inquiry to this last question that is so much troubling British public opinion, which still endeavours to be fair, and which, now that it has more knowledge on Palestine, is certainly not likely to be less fair than it was "a decade ago."

The Stuart Memorial College.

We commend to the earnest notice of our readers a letter which appears on another page concerning the endowment of the Stuart Memorial College at Isfahan. The preservation of this outpost of English culture, to be placed at the service of young Persians, we regard as an urgent necessity. It is no disparagement of the native educationists now making such successful efforts in Persia to awaken the country to the desirability of new ideas and new methods to say that there is still need for such an institution as the Stuart Memorial College has abundantly proved itself to be. The College, it may be recalled, was founded in 1913, had to be closed during the War, and was re-opened in 1921. The value of the work it has done has been recognised by the Persian Government itself, which would, we are sure, be the first to lament its disappearance. It is not too much to say, in short, that the establishment of this College on an unassailable basis is at once a privilege and an obligation for those Englishmen who fain would see Persia great, and conceive that in the making of that greatness English methods may play no inconsiderable part.

THE CYPRUS DELEGATION.

A Delegation from Cyprus has arrived in London to urge once more upon the British Government the wish of the Greek-speaking inhabitants for union with Greece. The members of the Delegation are the Most Reverend Bishop Nicodemus of Kitium and Mr. St. Savrinakis, with Mr. Zenon Rossides as Secretary. The Delegation has been received by Sir John Shuckburgh at the Colonial Office, with a view to the arranging of a meeting with Lord Passfield, Secretary of State for the Colonies.

KING FUAD'S ACCESSION DAY.

On October 9, the anniversary of King Fuad's accession to the Throne, a Reception was held at the Egyptian Legation by Abdel Malek Hamza Bey, Chargé d'Affaires. As is usual on such occasions, a very large number of guests participated in the hospitality of the Legation, which has become a feature of London life. One of the many reception rooms was reserved for dancing, which was kept up until a late hour.

[We regret that owing to pressure on our space we are unable to publish in this issue the list of the principal guests.—Ed.]

THE AFGHAN SEE-SAW.

After an uneasy occupation of the Kabul throne for eight months the Am'r Habibullah, who may now have to revert to his former name of Bacha-i-Saqao, has had to admit defeat at the hands of General Nadir Khan's forces, and is variously reported as having surrendered, as being besieged in the citadel of Kabul, or as having fled to the mountains, north of the capital, from which he emerged at the beginning of the year. The secret of such success as he gained is to be found in the poor showing of King Amanullah. Arriving hot-foot from his European tour, the latter lost no time in enforcing upon a slow-moving country reforms at a pace to which a much more enlightened population would have had difficulty in accommodating itself. So long as the opposition was confined to words, King Amanullah was more than a match for those who disapproved of his methods of reform, and the world heard of the various repartees with which mullahs and wiser folk, urging moderation on their Sovereign, had been silenced. At the first threat of force, however, both the reforming zeal and the courage of King Amanullah evaporated. On former occasions he had shown all the resolution necessary to quell unruly tribes; but, when Bacha-i-Saqao pressed his attack on Kabul, the King made good his escape, leaving it to others to fight his battles for him. His brother, whom he nominated as his successor, proved equally reluctant to sustain his part, and the way was clear for the bandit chief who had challenged the wisdom and orthodoxy of King Amanullah's reform measures to mount the vacant throne. As far as is known, Bacha-i-Saqao made a brave attempt to prove equal to the greatness that had devolved upon him, and, if he had had to deal only with ex-King Amanullah, his star might still have been in the ascendant. The ex-King fled to Kandahar, and for a time there was stalemate in Afghanistan. Then almost as soon as King Amanullah had decided to attempt to regain his lost position, a single defeat sufficed to urge him again to flight, and he left Afghanistan, seemingly content with the lot of an exile in Europe, which entailed no risks for the amenities of home-life.

The new figure on the scene was General Nadir Khan, a former Commander-in-Chief and subsequently Afghan Minister in Paris, who returned from his retirement in France to his native country to re-establish Afghan prestige, which was liable to be gravely compromised by the King's incontinent abdication. Nadir Khan disclaimed all intention of fighting for his own hand. He had, undoubtedly, started on his mission with the idea of supporting King Amanullah, but the latter's actions suggested to him, when he arrived in Afghanistan, that it would be more politic to champion the cause of ordered government than to identify himself with any particular claimant to the throne. He must have decided at an early

stage that the Amir Habibullah had little chance of uniting the country as a whole under his rule. Even if his success in the field served to remove the reproach of his humble origin, there was the obstacle that he was not a Pathan, but a Tajik, and Southern Afghanistan showed no sign of accepting him. Before he could have established his sway over the whole country, Afghanistan would have had to face many years of civil strife. Nadir Khan, accordingly, resolved, when ex-King Amanullah finally left for Europe, to continue the struggle against the Kabul Amir. For several months the advantage of the situation lay with the latter, who made full use of his shorter lines of communication to forestall all attempts at concentration on the part of his enemies. Time, however, was fighting for General Nadir Khan. Bacha-i-Saqao's difficulties increased as his exchequer and ammunition diminished. At no time were considerable forces engaged, for neither side seemed able to count on the permanent allegiance of tribes at any great distance from headquarters. Early in September the tide set more definitely against the Amir Habibullah. A Durani *lashkar* captured Kandahar, and the Shinwaris, who had been divided in their sympathies or were inclined to play a waiting game, showed readiness to throw in their lot with Nadir Khan. The latter's brother suffered defeat and had to cross the frontier into India, but with this success the Kabul Amir seemed to have shot his bolt. General Nadir Khan concentrated his forces for an advance on Kabul from the south-east and south, while leaving a small force to guard his rear against possible attack from Gardez, still held on behalf of the Amir Habibullah. In the meantime the tribesmen in the Jalalabad region joined forces to eject the Amir's troops. When Nadir Khan's columns advanced, they appear to have encountered less opposition from the local tribes than had been expected. The Amir Habibullah led his army against them a few miles out of Kabul, but was defeated, and the way to the capital was open.

With the capture of Kabul, if the report of this event prove true, it is hardly to be supposed that peace will be immediately restored to Afghanistan, and that Nadir Khan's authority will at once be recognised throughout the country. The disinterestedness of his actions will be confirmed, if he carries out the intention, with which he is credited, of consulting the tribes regarding the future government of Afghanistan. It will be strange if he is not invited, almost unanimously, to take the throne himself. He has displayed not only military prowess, but also a wise moderation in all his actions. A country like Afghanistan appreciates strength in its ruler, and Nadir Khan must have won for himself as great a reputation among his own countrymen as he has abroad, where his masterly handling of a difficult situation has gained general admiration. It would be contrary to what is known of the Afghan character, that the people should display enthusiasm for the return of ex-King Amanullah. He could reoccupy the throne only by undertaking to renounce his cherished reforms, and, in addition, he would have to live down the humiliation of his premature withdrawal both from the capital and, shortly afterwards, from the country. The Afghans, it would be thought, require their Sovereign to be cast in a more heroic mould. The future, however, will be largely in Nadir Khan's hands. If he decides that it is in the interests of Afghanistan that he should occupy the throne, there can be little doubt that he will meet with the necessary support. If, on the other hand, he sets his face against any change of dynasty and recommends the Afghans to restore King Amanullah to the throne, his advice may well meet with acceptance, lest the country finds itself again at the mercy of a mere adventurer. Afghanistan's fate is in her own hands. With a situation complicated externally as well as internally, she needs more than ever an experienced and strong ruler.

'The Near and Middle East

From Our Own Correspondents.

EGYPT.

Cairo, October 5.

Parliament Again.

The fiat has gone forth that political matters must follow their normal course, so to speak, and that parliamentary life must be resumed without delay so as to bring into existence at the earliest possible moment a representative body to consider the question of the Treaty. So the Mahmoud Cabinet has gone, and its place has been taken by a neutral Ministry, whose first preoccupation will be the removal of all restrictive legislation and the enunciation of new decrees, bringing back parliamentary life as it was when the *coup d'état* took place sixteen months ago.

The New Cabinet.

The fears of the effect on the country in general and on the Treaty in particular, which such a decision might have had, have been modified by the composition of the new Cabinet, and notably by the personality of its leader. Adly Pasha once more is at the helm, at a time of supreme national crisis, and, as usual, his presence has introduced a note of confidence into the situation which no other man in the country could so fully inspire. He has, moreover, called to his assistance a body of men whose record, position and personality constitute a guarantee that neutrality shall be maintained until Parliament can assemble, and that the administration of the country shall meanwhile continue placidly and in accordance with the best interests of the population, be they Egyptians or Europeans.

No better choice, indeed, could possibly have been made of a team to carry on during a critical period like the present. Every one of the members of the new Cabinet has seen considerable service in one or other of the Administrations of the State. Most of them have had more than one term of Cabinet work. None of them has identified himself in any way with any of the political parties, and all, in the retirement from which the supreme need of their country has now called them, were enjoying the high respect and deep esteem of their fellow countrymen. Adly Pasha is to be congratulated on having made a selection, and it is not surprising that a *détente* is everywhere noticeable in the situation as a consequence of the announcement of the composition of the new Cabinet.

The Mahmoud Cabinet.

At the same time the Mahmoud Cabinet cannot be allowed to pass without its receiving the tribute that is undoubtedly its due. Whether the decision to suspend the parliamentary régime last summer was justified by the situation must be left to the historian of the future to decide. But there can be no doubt whatever that in

general the country has benefited by the period of exceptional administration it has had during the interval. In the light of the experience of what went on in the past it is certain that the agreement in regard to the water question could never have been negotiated under the parliamentary régime as it existed a year and a half ago, and that in consequence Egypt would still have been wondering to-day when she was to get the extra summer water, which is going to be supplied to her by the Gebel Aulia Dam for which tenders will soon be called, and by the heightening of the Aswan Dam for which the adjudication will shortly be announced. Likewise, if the administration had not been liberated, as it was by the *coup d'état*, from the blighting effect of the constant intervention of deputies and senators, no progress could have been made with the schemes for the economic and social development of the country, which the Mahmoud Cabinet very rightly made the principal point of its programme. These schemes have, fortunately, all reached a point now where it is very doubtful whether a return to parliamentary life, even if it proves as obstructive to progress as it has done in the past, could now really affect their future completion. In any case the choice of the members of the Adly Cabinet, who are all men interested in such schemes, is a satisfactory guarantee of continuity. Finally, it is incontestable that, if Parliament had still been sitting, nothing like the terms which Mohamed Mahmoud Pasha brought back with him from London could have been secured. Whatever his political opponents may say about the Mahmoud Administration, and naturally they have much adverse criticism to make, cannot alter the fact that it, itself, and Mahmoud Pasha in particular, will take a very prominent place in the national history, as having done more than any of their predecessors to advance the condition of their country internationally, economically and socially.

Elections.

How soon elections can be held will depend on the extent to which the constituencies must be regrouped as a result of the recent census, and the legal periods can be curtailed. It is almost certain, however, that elections will not be possible until the end of November, and that Parliament cannot reassemble until the first part of December at the earliest. This would mean that the Treaty proposals could not be considered until the middle of that month, as there are certain very necessary preliminaries, connected with the organisation to be carried out after Parliament has reassembled, before any ordinary business can be proceeded with. Even then it does not mean that a debate of any description could take place until near the end of the year for, according to the Constitution, the proposal must be referred to, and reported on, by a special committee of the Chamber.

The elections, which will give about thirty more members owing to the fact that the former distribution of constituencies was based on the old census, will be only for the Chamber, and not for the Senate as well. It has been decided that, whether the Chamber is dissolved or not, the mandate of Senators continues for the full length

of their constitutional term. This puts an end to a controversy that has been going on recently in the Press on the subject.

It is currently affirmed, even in Wafdist circles, that after the elections it will be the present Cabinet which will present the Treaty proposals to Parliament, and that it is not improbable, in order to inspire confidence, that, if the Wafd obtains a majority in the Chamber—it is expected that after its success in getting rid of the Mahmoud Cabinet it will have an overwhelming majority—Adly Pasha will lead a Wafdist Cabinet. In this event Nahas Pasha would again become President of the Chamber. It is also currently affirmed, and again Wafd circles do not deny it, that very soon an announcement may be expected from the Wafd on the question of the Treaty as a result of certain undertakings given by Nahas Pasha to the Residency prior to the acceptance by the King of the resignation of Mohamed Mahmoud Pasha. This should greatly facilitate the Treaty question.

Belgrade, October 10.

The Administrative Changes.

Despite persistent rumours that great changes were soon to be expected in the organisation of the State, the people of Yugoslavia were surprised last week, when it was announced that the King had signed a decree by which the official name of the Serb, Croat, Slovene Kingdom was changed to the Kingdom of Yugoslavia, and the number of administrative districts was decreased from 33 to 9. The change in the official name will meet with very general approval. Everywhere outside the Kingdom it has always been known as Yugoslavia, and the disappearance of the cumbersome triune title makes it easier for foreigners, bewildered by the multitude of new names created by the Peace Treaties, to follow its development. It is understood that no attempt will be made to coerce people into calling themselves Yugoslavs, and the distinction Serb, Croat, and Slovene will probably persist in Yugoslavia as that between English, Scots, and Welsh remains in Great Britain.

The division of the country into nine *Banovine*, however, cuts across all the old traditions, and the historical names of Serbia, Croatia, Dalmatia, Montenegro, etc., will disappear from the official maps of the country. This will be of some service, if it only kills the belief, most obstinately held by many foreign visitors to this country, that the Dalmatians, Montenegrins, Bosnians, Croats, and Serbs are different nations with different languages and blood. A visitor recently asked whether it was true that the Serbs were closing Croatian schools and opening Serb schools in their place, and when asked what difference there was between Serb and Croat schools, he answered, "Why, language, of course," quite ignorant of the fact that the Serbian and Croatian languages are one and the same.

The new provinces are to be called after the great rivers flowing through them. Thus Slovenia becomes the Dravska Banovina, with its centre in Liubliana, Croatia and part of Slavonia are now the Savska Banovina, centred in Zagreb, the greater part of Bosnia becomes the Vrbaska Banovina, with Banya Luka as its capital, Dalmatia and part of Herzegovina form the Primorska

(Maritime) Banovina, parts of Bosnia, Herzegovina, and Serbia are united in the Drinska Banovina, with its centre in Sarayevo, Montenegro, very considerably enlarged by the addition of parts of Dalmatia, including an island or two, of Herzegovina, of Serbia, and of South Serbia (Kosova) is known as the Zetska Banovina and has its capital in Cetigne, the Voivodina and parts of North Serbia form the Dunavska (Danubian) Banovina, centred in Novi Sad, Eastern Serbia is now called the Moravska Banovina, with Nish as its capital, while South Serbia (Macedonia) forms the Vardarska Banovina, centred on Skoplye. While older people tend to regret the disappearance of the old names, the younger set regard the change as an essential step in the right direction, which will allow of the complete unification of the South Slav peoples and the elimination of the petty differences which caused dissension among them. A Bulgarian, M. Sefan Kuroff, President of the Bulgarian Peace Association, who was visiting Skoplye, where he was amazed and delighted at the enormous progress which has been made since the War, at the time when the changes were announced, was so enthusiastic that he declared that the Bulgarian people would never be satisfied, until they too are included in the great Yugoslav nation, which will then rule from the Adriatic to the Black Sea. In the speech with which General Peter Zhivkovitch introduced this new act to the Council of Ministers he stated that the divisions had been made so as to preserve old boundaries where possible, but also with regard to convenience of administration, lines of communication, relations with the respective centres, and economy. Belgrade, with Zemun and Pancevo, which are rapidly becoming suburbs of the capital, forms a special district not included in any of the Banovine.

The First Governors.

The Banovina will have a very considerable degree of autonomy, from an administrative point of view, especially in regards to agricultural matters, public works, roads, forest administration, education and the many local matters which have long been held up by the obligation to refer everything to the competent Ministry in Belgrade before action could be taken. The Bans (Governors of provinces) have already been appointed by Royal Decree. They are for the most part men born in the district which they are to administer and likely to be well received there. The Ban in Liubliana is to be M. Serbetz, a Slovene of Dr. Koroshetz' Party, who occupied Cabinet rank during Uzounovitch's sixth administration. In Zagreb the Ban is to be Dr. Josip Shilovitch, a very highly respected Croat University professor, whose name was much to the fore last year, when the possibility of forming a non-party Government was being discussed. In Banya Luka General Svetislav Milosavlyevitch, the former General who became Minister of Communications, will be Ban; in Split, the Dalmatian Dr. Tartal, lawyer and assistant mayor of the town of Split; in Sarayevo, the ex-Minister M. Velya Popovitch; in Montenegro, M. Krsta Smilyanitch, a retired General; in Novi Sad, the ex-Minister M. Daka Popovitch; in Nish, a lawyer, M. Nestoravitch, member of the Chief Legislative Council, once a Democrat Party leader, is to be Ban; and in Skoplye, M. Zhika Lazitch, who was for many years head of that section of the Ministry of Interior which deals specially with Macedonian matters.

The Elsie Inglis Memorial Hospital.

To-day the Elsie Inglis Memorial Hospital for Women at Dedinye, near Belgrade, was opened by Annie, Viscountess Cowdray, Chairman of the London Section of the Scottish Women's Hospitals Committee. The funds for completing this very modern and well-equipped hospital were provided jointly by the London and Scottish Committees of the Scottish Women's Hospitals. The funds were to have been used, at the wish of Dr. Elsie Inglis, who gave her life in the service of the Serbian troops, for the establishment of a Medical Faculty in the

Belgrade University. When, after the War, the Serbs established a medical faculty with their own funds a commission under Lady Cowdray came to Belgrade to find in what way the funds could most profitably be employed. Struck by the capability, efficiency, and dependability of the Federation of Serbian Medical Women, they decided that the funds could not be better employed than in the completion of this Women's Hospital, and the hospital opened to-day and handed over to the Federation is the result of British funds and Serbian pluck and endurance. The surplus funds not needed for the hospital have been employed in fitting a Physiological Laboratory in Belgrade University and in providing for publications and research work.

ROUMANIA.

Bucharest, October 9.

Death of M. Gheorghe Buzdugan.

Roumania has once more been plunged into mourning by the death of the most active member of the Regency, M. Gheorghe Buzdugan. A fortnight ago fears were expressed for the health of the Patriarch, another member of the Council of Regency, but these proved to be more or

less unfounded. No sooner had the public been reassured on this point than M. Buzdugan, President of the Regency Council, suddenly fell seriously ill and, in spite of the efforts of French specialists, called hurriedly from Paris, to save him, he died after a few days' illness. His death caused great consternation in the country; it immediately opened the question of the succession and gave rise to active party intrigues. Before being appointed to the Regency, M. Buzdugan had been President of the Supreme Court of Justice (since August, 1924) and various high members of the judicature were suggested as his successor. The choice has finally fallen on M. Saratzeanu, whose appointment has just been announced.

The mortal remains of the late Regent were laid in state in the round hall of the Athénée yesterday, and hundreds of people streamed past all day to render him their last homage. The funeral service was held to-day with all the pomp due to the high position of the late statesman, and was attended by the members of the Government, high State officials, and by the Diplomatic Corps. All shops and offices were closed after one o'clock; the funeral procession left the Athénée about 4 p.m. and passed through thronged streets to the Gare du Nord, where the coffin was placed on board a train for Bacau, thence to be carried to the family vault at Faraoni.

The new Regent, M. Constantin Saratzeanu, was born in the district of Buzau in 1862, of a family which for two generations already had produced distinguished judges. M. Saratzeanu himself has had a long legal career and was finally appointed Counsellor to the High Court of Cassation, a post that he lays down on his appointment to the Council of Regency.

The Royal Aero Club has awarded its Gold Medal to Captain C. D. Barnard, and an address of congratulation to the Duchess of Bedford in recognition of their flight to India and back. Captain Barnard, accompanied by the Duchess, accomplished this 10,000-mile flight in eight days—from August 2 to 9 last.

PALESTINE RAILWAYS

TRAIN SERVICES

BETWEEN
EGYPT AND PALESTINE AND VICE VERSA

To Palestine (Daily)		To Egypt (Daily)

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 26.

A Political Exhibition.

I have been to a *khadi* and *swadeshi* Exhibition. I studied the audience rather than listened to the speeches, which were in Urdu and their substance has been said many times already. I am thinking now, not of the Exhibition, but of the opening ceremony. The first eye in the audience that my eye caught was that of an almost naked little boy from the street. I looked hard into his eyes; then I smiled, and he smiled, showing very small white teeth. Very soon afterwards he decided that, as it was a very dull *tamasha*, he would return to the street. The next person to leave from near that spot was the young father of a girl, a girl little more than an infant. He went out with an impassive face. The speaker by this time was Mrs. Naidu, returned from her travelling in America, and to London, Vienna, Prague, Buda Pest, etc. Did she really think, was my question, that any movement that gathered only such audiences—there were two leading men of the town present, but only two, that I could see, and it is a town, up-country, crowded with leading men—was being rightly led? But something in the faces of those nearer me told me that their question was probably how Sreemati Sarojini Devi Naidu, for so we call her in her own country, dare address an audience in Urdu. It is not her mother-tongue, of course. When we all got away, I said to one: "Was her Urdu full of mistakes?" He answered: "Oh, of course, but it was very good considering; she used a few Persian words, and even a few Arabic." That, I felt, had interested that man more than anything that Sreemati Sarojini Devi had said. Far more in fact, and he is fuller of enthusiasm than most of them for this *khadi*, *swadeshi* movement.

The Exhibition.

The Exhibition, which was of *khadi*, the hand-woven cloth that the Mahatma wants them all to wear, and a few other things, was laid out in a few rooms in a private house. Say five rooms. There was so very little of it, the air of everything so suggested the simple thoughts of children, and their so small means of making a display, that one might have called it "Mary's Meadow" or "Six to Sixteen," after the books, just as, remembering the boy who smiled at me, I now think of the audience as "Jackanapes" after that other of Mrs. Ewing's books. It was so very small an Exhibition, that to anyone who has not seen such another the very words "exhibition," "five rooms," for they were ever so small, must be misleading. And all this is inspired by and is the teaching of the foremost political leader in India, Mr. Gandhi. He is one who observes every Monday as a fast, abstaining that day from drink as well as food, and on that day he maintains an unbroken silence. And that too, he thinks, will help to solve India's political problem.

Non-Co-operation.

Mr. Gandhi was the author of the non-co-operation movement, and if he is allowed his way, he will revive it. It was a movement to wrest self-government for India by making the existing Government no longer possible. No boy or young man was to go to a Government school or college; all the holders of Government posts were to resign them; no honorary magistrate was to sit in Court; no barrister or *vakil* was to attend a Court; everything was to be brought to a stop. I was in charge of a Government institution at the time. Not a member of the staff resigned. There was never for a moment the least probability that any of them would think of taking that self-destructive step. None of their neighbours blamed them, for none of their neighbours had ever expected them to resign. Had one resigned, there would have been so

many applications for his post as to give the impression that one had all India to choose a successor from. The movement was a total failure. Yet its sponsor was the leading political leader in India. He thought it would succeed. He would revive it. Imagine a Cavour or a Bismarck, those builders of empire, coming to a meeting of their chief followers, and saying: "The time has come for a united Italy, a united Germany; so I have brought this bottle;" and on their asking him what was in it, replying: "Moonshine, brother; bottled moonshine!"

The Right Tactics.

That non-co-operation movement was the extreme instance of these men's tactics being hopelessly wrong; but their tactics are always wrong. They never do the right thing. What they should have done in 1927, after the Statutory Commission was appointed, was to choose their best, and give them a mandate to decide what they thought would be a constitution under which India might have had hope of progressing. They would all have spoken with the same voice before the Statutory Commission. No matter what this or that more cautious official might have said *in camera* against any political advance, with all the leading Indians saying the same thing, Sir John and his colleagues would have had to turn deaf ears to the official. If the Indian leaders had all said the same thing, and, having said it, had refused to open their mouths further and argue about it, the constitution that was to be would have been precisely what they had said it was to be. No British Cabinet would ever have wanted to take the risk of picking the thing to pieces. To begin with, what British Cabinet was likely to know enough about India to feel that it was competent to pick the thing to pieces? Nothing strikes those of us more, who return to England after years spent in India, than the ignorance of everyone in England about India.

The Nawab of Bhopal.

An interesting comparison could be instituted between the capacities of Mr. Gandhi and one with an inherited gift for government, say the Nawab of Bhopal, as evidenced by speeches made by the Nawab and the Mahatma this week. Mr. Gandhi was addressing a joint gathering of the students of Cawnpore; he was addressing them as a politician, speaking on politics. The speech as a whole shows that. The part I wish to quote is reported in these words: "Mr. Gandhi pleaded for the control of the senses and told the students that Western books coming to this country did not teach the control of the senses." The Nawab meanwhile was saying such things as these to his Legislative Council: "The fact is that the people's ignorance of modern and progressive ideas makes them an easy prey to bigoted conservatism, which leads to most deplorable communal strife, and creates a feeling of aversion in their minds to the initiation of elementary and social and other reforms. Their opposition to their education, and their obstinacy against the adoption of modern medical, sanitary, and scientific methods, stand in the way of their political progress. You cannot alter these conditions by a wave of the magic wand. You need centuries of persistent and honest work, and I think that it would not be practical politics to aspire to rule with any success a medieval people by twentieth century methods."

Miscellaneous.

I have written fully on the subject of Mr. Sarda's Child Marriage Bill and the feeling in India against it, a feeling to be deplored; so I need say no more this week than that the Bill was read a third time by the Assembly on Monday, the voting being 67 for and 14 against. What remains is to prevent the die-hards fomenting a revolution in India. There are ominous signs of their determination to try it.

To those specially interested in the question of land revenue attention may be called to the answers given by Sir Frank Noyce in the Assembly on the same day.

INDIAN NOTE.

Lord Irwin's Task.

Few among those present at Victoria Station last week to bid God-speed to the returning Governor-General can have wished that their rôles were reversed. The office which Lord Irwin occupies—we may be sure through no effort of his own—remains still, perhaps now more than ever, the greatest administrative position in the gift of the Crown. It is certainly at the present moment one of the most important and responsible, and the burden of responsibility which rests upon its present occupant is a weighty one and likely to become progressively heavier as the momentous developments of the next few months unfold themselves. Meanwhile Lord Irwin's task is not made any easier by the persistency with which a section of the Press in this country, notoriously inaccurate in its forecasts in Indian affairs, continues to hint at, if not a change, at least a new orientation of policy in respect to the constitutional problem. Sir John Simon and his colleagues have been a model of discretion and have let nothing escape that would give the remotest ground for the rumours circulating concerning the Statutory Commission's intentions. The facts in any case are simple. The Commission's report is expected to be ready in February and it may be said at once that there is no intention of interfering with the work of the inquiry set up with the approval and support of all three political parties by any prejudgment of the issues, whether in the shape of an early pronouncement upon a particular aspect of the problem or through an obviously untimely visit by the Secretary of State to the scene of next year's operations. The time is coming, no doubt, when, as we suggested last week, the general procedure to follow the report must be defined and announced, but to suggest that Lord Irwin's recent conversations with Mr. Wedgwood Benn and prominent members of all parties have any more significance than the implementing of his undertaking "faithfully to represent to his Majesty's Government the different standpoints of Indian political opinion" is unfair both to the new Government and to Lord Irwin himself. It also ignores the purpose for which the Statutory Commission was appointed.

INDIANS IN EAST AFRICA.

The publication last week of Sir Samuel Wilson's report on his recent mission to East Africa invests with particular interest the following expression of the Government of India's tentative views on the recommendations of the Hilton Young Commission. The despatch was sent to the Secretary of State on March 19, but its text was only made available last week.

After expressing their earnest hope that the basic principles of "an eminently fair document," will be accepted by H.M. Government, the Government of India proceed to sum up their provisional conclusions as follow:—

"Closer Union.—The numbers and influence of European settlers in Kenya create apprehension that in any scheme of closer union their political ideals will profoundly affect the policy of the central authority established to co-ordinate administration and policy in matters of common interest. For this reason any plan of political coalescence, immediate or future, which should reduce the three territories of Kenya, Uganda, and Tanganyika to the provinces of a unified State, exercising both executive and legislative powers, is open to objection from the Indian standpoint, but we are not opposed to the appointment of a Governor-General to co-ordinate native policy and the administrative services like Customs and Transport, on the understanding that it is recognised:—

"(1) That such a step is not the prelude to full-fledged political federation; (2) that Indians are adequately represented on the General Advisory Council which the Commission recommend should be set up in East Africa; and (3) that the headquarters of the Governor-General are

located at a centre free from racial animosities. Further, if the Governor-General is appointed, his instrument of instruction should lay due emphasis on the duty to enforce inter-racial justice in an impartial spirit, and with a firm hand.

It is also suggested that the Indian point of view be represented on the Advisory Council which it is proposed should be set up in London, and that unofficial Indian representatives be asked to participate in the periodical conferences which the Commission suggests should be held.

"Native Policy.—We gladly accept the principle of the paramountcy of native interests, subject to the condition that in practice the principle should not be interpreted or applied to discriminate against the immigrants of any particular race.

"Land Settlement.—Indian settlers should be free to share on equal terms with Europeans in any scheme of land settlement that may be inaugurated by the Government of Tanganyika, after setting apart land to meet the requirements of the natives. Whatever the position may have been in the past, in future the Indian demand for land settlement in Tanganyika and probably also in the lowlands of Kenya is bound to be substantial. It is not suggested that the financial facilities offered by his Majesty's Government to settlers from Great Britain should be extended to Indians.

"The association of immigrant communities in the responsibilities and trusteeship of government should not be confined to representatives of the European settlers only, but should include representatives of all immigrant communities.

"Kenya Legislative Council.—The chairman's proposals are not acceptable to us, but we welcome the majority report as opening the door to the satisfactory settlement of the vexed question of a common versus a communal electoral roll. The civilisation test is also approved in principle. On the question of replacing four officials by four members nominated to represent native interests, stress should, we think, be laid on the need for treating Indians as eligible to represent natives."

Recent telegraphic advices from Simla state that on the publication of Sir Samuel Wilson's report the Government of India summoned a meeting of the Emigration Committee of the Central Legislature to consider the report which is regarded with some suspicion and considered as likely to worsen rather than improve the political status of Indians in Kenya. A number of additional members of both Houses of the Legislature, including Pandit Motilal Nehru, Pandit Madan Mohan Malaviya, Mr. Jinnah and Mr. Rangaswami Iyengar, were invited to attend the meeting but were not able to be present. Sir Purshotamdas Thakurdas and General Gidney, both members of the Emigration Committee, were also prevented from attending, but sent their views by letter, and the Committee, of which the only non-official members present were Sir D'Arcy Lindsay and Rai Bahadur Lala Ram Saran Das, a member of the Council of State, also had before it a memorandum by the Indian delegation from East Africa now in India.

A *communiqué* issued on October 11 states that the Committee considered Sir Samuel Wilson's report at length, and expressed views coinciding with the opinions voiced at recent meetings of the Committee. This somewhat inconclusive pronouncement is perhaps intended as a cloak to the general consensus of opinion that the Government of India is handling a difficult and delicate problem in the best possible way and is enjoying the support of all parties, although for the moment their leaders prefer to adopt in public a strictly non-committal attitude.

Owing to the earlier departure, during the winter months, of the aeroplane conveying the England-India Air Mail, the latest time of posting at the General Post Office, London, has been altered from 7 a.m. to 6 a.m.; and the arrangements for late posting at the Charles Street Post Office, Haymarket, S.W.1, have been suspended. The latest times of posting outside London to connect with the India Air Mail will, in general, remain undisturbed.

INDIAN STATES AND THE EMPIRE.

Addressing the fifth session of the Bhopal Legislative Council, on September 21, His Highness the Nawab of Bhopal said that the Princes were prepared wholeheartedly to co-operate and to bring their States into line with British India "in any honourable, fair and just settlement which will conduce to the welfare of the country and the good of the Empire. We fully realise our obligations to our country, and I have no hesitation in saying that we regard it to be our foremost duty to see that we are not a drag on her. To ensure this we, who are already self-governed, must endeavour to the extreme limit of our capacity to secure, where it does not already exist in the States, that peace, contentment and prosperity of the people for which British India is struggling. But, at the same time, we must also work for the preservation of our own identity and integrity, and our rights and privileges, as internally independent and sovereign States.

"Again, whatever be the differences of opinion, in certain matters, between us and the Government of India, we must not forget that we are under a heavy debt of gratitude to the British for all that they have done for the good of our States, and we must never ignore our treaty obligations to them. After all, they proved to be our staunchest friends at a time when the one or the other of us was being battered to pieces by our own countrymen. In any new arrangement, therefore, it will be only right if we ask for guarantees to ensure that a similar fate shall not be in store for us in the future, and that our rights and interests shall be fully preserved and maintained. For these reasons, and many others, I should like to make it clear that we shall not be a party to any proposals which may aim at India's going outside the British Empire. Within that Empire we wish to remain as honourable partners, and for that end we shall strive to the utmost of our capacity."

Discussing the question of internal organisation and reform, the Nawab proceeded: "I would like to point out, at the outset, that as far as I know, the Princes are by no means opposed to the principles of democracy. Why should they be? After all, the true aims and objects of all forms of government are the same, be they on the lines of Indian kingship or the American Republic. In the former the final authority is vested in a Ruler, in the latter in a small group of politicians, but the goal of both is identical, namely government for the benefit and uplift of the people. Both can serve the best interests of a country and be a blessing to humanity; and both are open to temptation and can be a menace to a people. Why then quarrel about reforms? Why initiate methods of administration so far unknown to the country? Instead, why not reform ourselves where reforms are needed, and yet retain our indigenous system which has stood the test of centuries?

"Let nobody for a moment suspect that when we hold views against an immediate change to democracy, we are opposed to its principles. We do so because we believe that a fully democratic government can only be successful in a country where a very large number of the people know what is best for them. An honest examination of our conditions, I am afraid, reveals that at the present stage of our moral, mental and physical development, this is not the case with us

"The fact is that the people's ignorance of modern and progressive ideas makes them an easy prey to bigoted conservatism, which leads to most deplorable communal strifes, and creates a feeling of aversion in their minds to the initiation of elementary, social and other reforms. Their opposition to their education, and their obstinacy against the adoption of modern medical, sanitary and scientific methods, stands in the way of their political progress. You cannot alter these conditions by, so to say, a wave of the magic wand. You need centuries of persistent and honest work, and I think that it would not be

practical politics to aspire to rule with any success a medieval people by the 20th century methods.

"After all, one cannot lose sight of the fact that an ignorant and irresponsible democracy is, and can be, the greatest danger to a country, and, thereby, to the peace of the whole world. I am convinced that the success of an Oriental people lies in their remaining Oriental. I am afraid, we have already had too many Western ideas forced on our Eastern minds, and that too at the expense of our own culture, and to the detriment of our civilisation. There is no more room left for any further additions to these—at least not till we feel sure that this process will not lead us to become completely oblivious of India's own greater past.

"My earnest advice to all true sons of the country," His Highness concluded, "is that they should fully consider and weigh the pros and cons before they think of demolishing an existing edifice."

LORD IRWIN'S DEPARTURE.

Whatever room there may be for occasional differences of opinion on particular phases of his official policy the present Viceroy's popularity as an individual is beyond dispute. The high regard and warm esteem in which Lord Irwin is held by Indians and Europeans alike, of all ranks and parties, has recently been demonstrated in an unusual manner by the number of letters to *The Times* from prominent Indians of different schools of political thought already urging that Lord Irwin's period of office should be extended, in spite of the fact that his five years' tenure does not expire until April, 1931.

A further manifestation of the same feeling was given by the small but distinguished company which assembled at Victoria Station on Thursday to bid him farewell on the conclusion of his three months' visit to this country. The informality of the proceedings, contrasting vividly with the elaborate ceremonial procedure usually associated with official leave-takings, added to the warmth and evident sincerity of the good wishes of friends and colleagues.

Lord Irwin, who was accompanied by Lady Irwin, travelled by the P. and O. special to Marseilles, where he embarked the following day in the mail steamer *Rawalpindi* for Bombay. Other passengers by the same train were Sir George Stanley, the Governor-designate of Madras, accompanied by Lady Beatrix Stanley and Miss Stanley, and the Maharajahdhiraj of Burdwan. The Vice-regal party included Lady Worsley, Colonel C. O. Harvey (Military Secretary), Lieutenant-Colonel H. H. Thorburn, I.M.S. (Surgeon to the Viceroy), and Captain A. G. S. Alexander, Central India Horse (A.D.C.). With Sir George Stanley were Mr. I. Green, I.C.S. (Private Secretary), and two A.D.C.'s—Captain H. C. W. Eastman, R.H.A., and Captain R. F. Craster, 18th Gahrwal Rifles.

Sir George Stanley succeeds Lord Goschen, who as senior Presidency Governor, has been Viceroy and Acting Governor-General during the four months to which the leave of Viceroys and Governors is limited by statute. Lord Goschen's own term of office, it will be recalled, was extended in order that he might officiate during Lord Irwin's absence, and on making over charge to the latter he will return to this country at once.

The Government were represented by Mr. Wedgwood Benn, Secretary of State for India, Dr. Drummond Shiels, Parliamentary Under-Secretary, and Mr. George Lansbury, First Commissioner for Works.

EAST INDIA ASSOCIATION.

A meeting of the East India Association will be held on Monday, October 21, at the Caxton Hall, Westminster, when a paper will be read by Mr. S. K. Ratcliffe on "America and India." Mr. H. Wickham Steed will preside and a discussion will follow.

Arrangements have been made for the reading of a paper at a meeting early in November by Mr. Waris Ameer-Ali, I.C.S., on "Preservation of Indian Fauna." The Chair will be taken by Lord Lloyd, a former Governor of Bombay.

PERSONAL AND GENERAL

TO-DAY

October 17, 1929 (New Style).

October 4, 1929 (Old Style).

Jumada I. 13, 1348 A.H., of the Muslim Calendar.

Tishri 13, 5690, of the Jewish Calendar.

Lady Chetwode has left London for India. She will be away for six months.

The Maharajadhiraja Bahadur of Burdwan left London on October 10 for Bombay.

M. K. A. Collas, Counsellor to the Greek Legation, left London last week for Switzerland.

Field-Marshal Viscount Allenby has consented to unveil Belfast's war memorial on Armistice Day.

Mrs. Alec Tweedie returned to Devonshire House last week from a motoring trip in Czechoslovakia.

Lord Hyde left London on October 10 for Marseilles, and embarked in the Rawalpindi for Bombay.

M. Georges Cattaui has returned to the Egyptian Legation from the Continent.

Mr. Franklin Mott Gunther left London on October 7, to resume his post of American Minister to Egypt.

M. Sibe J. Milichitch, the newly-appointed Secretary to the Yugoslav Legation, arrived last week in London and has taken up his duties.

Lord Ebury and the Hon. Betty Grosvenor left London on October 10 to join the P. and O. s.s. Razmak at Marseilles for Bombay.

M. Madgearu, Roumanian Minister of Industry and Commerce, who has been paying a visit to this country, left London on October 13 for Paris.

Viscount Goschen, Governor of Madras, who has been acting as Governor-General of India during Lord Irwin's visit to England, will arrive in London about November 12. Viscountess Goschen is accompanying him.

A meeting of the Near and Middle East Association will be held at 8.30 p.m. on October 18, when Mr. Frederick W. Ryan will speak on "Malta: Its People and its Rulers." It will take place by kind permission of Mrs. L. Cobham, at 14, Hans Crescent, S.W.1, and Rear-Admiral E. A. Taylor will preside.

Colonel E. S. St. John, C.M.G., D.S.O., late Royal Artillery, who has been appointed A.A.G. in Egypt in succession to Col. E. G. Jury, C.M.G., D.S.O., is expected in Egypt towards the end of October.

Mr. Sterling, formerly Professor of English Literature in Calcutta University, arrived in Cairo at the beginning of this month to take up a similar post in the Egyptian University, rendered vacant by the departure of Prof. Bonomy Dobrée.

The Chairman and members of the Palestine Commission of Inquiry, with the exception of Sir Henry Betterton, M.P., who travelled overland, left Tilbury on October 12 for Palestine. Lt.-Col. H. Y. de Satgé represented the Secretary of State for the Colonies at their departure.

Prince and Princess Peter of Montenegro are paying a short visit to London. Prince Peter, who is the youngest son of the late King Nicholas of Montenegro, studied medicine at Heidelberg University and retains his interest in medical work. His tours of sight seeing in this country include visits to various hospitals.

Sir Arthur and Lady Hirtzel left London on October 10 for a holiday in Italy.

The third Annual General Meeting of the Friends of the Hebrew University of Jerusalem is being held to-day (Thursday) at 8.30 p.m., at the Swedenborg Hall, Hart Street, W.C.1., Sir Matthew Natham will preside. At 9.0 p.m., a lecture will be given, by Lord Melchett, on "Palestine and the Hebrew University."

Mr. A. T. Waugh, the retiring British Consul-General in Constantinople, was entertained at a farewell luncheon on October 10 by the members of the British Chamber of Commerce in Constantinople. Mr. James Morgan, British Consul-General at Smyrna, has been appointed to succeed Mr. Waugh in Constantinople.

The King has approved the appointment of Mr. Neville Meyrick Henderson, his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Paris, to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Belgrade. Mr. N. M. Henderson, who was educated at Eton, was appointed Attaché in the Diplomatic Service in 1905. After appointments in St. Petersburg, Tokyo, Rome, and Nish, he was appointed First Secretary at Paris in 1916. He has acted as H.M. Minister Plenipotentiary at the Paris Embassy since 1928.

YUGOSLAV VISITORS.

A party of a hundred doctors and medical students from the Universities of Yugoslavia arrives to-day (October 17), on a brief visit to London, and leaves again for Paris on October 22. The Yugoslav Society of Great Britain, who are welcoming the visitors, have arranged—with the help of the Fellowship of Medicine—visits to representative medical institutions in London, and have prepared a general programme which includes visits to the British Museum and other places of interest, and an evening reception at Crosby Hall. The Lord Mayor and the Lady Mayoress have kindly invited the party to tea at the Mansion House on Saturday, October 19.

PROBLEMS FOR THE LEAGUE OF NATIONS.

Lord Meston, who spoke on "The League and India," Sir George Paish, who gave an address on "The League and World Economic Progress," and Lady Muir, who lectured on "Bulgaria: Its History and Relation to the League," were the principal speakers at the Autumn School of the Scottish National Council of the League of Nations Union, which was held at Dunblane at the end of last week. Referring to the problem of Minorities, Lady Muir suggested that a practical solution would be for the League of Nations to send out Commissions to the danger spots once a year. Their inquiries would help to prevent frontier incidents. Cultural rights of language, Church and school—equality in the exercise of civic rights—should be advocated by the League for the minorities of Central and Eastern Europe.

Where to stay in the East

THE WOMAN MOVEMENT IN SYRIA.*

BY E. S. STEVENS.

In Iraq the veil of the Muslim lady is always opaque; in Syria it is often transparent. Clothes, and above all the head-dress, being symbols all over the Near East, this partial concealment betokens that Islam in Syria is inclined to liberalism in its views on the seclusion of women.

Damascus is the centre of Muslim society in Syria, and to Damascus, rather than Beyrout, I went for my first impressions of feminism in Syria. I found that women of the propertied classes had almost without exception adopted Western dress, the black Muslim street garb covering a frock modelled according to the latest fashion from Paris. The Muslim ladies of Damascus are charming. Well-bred, lightly built, animated, they afford a contrast with the more heavily shaped women of the coast. It may be said that as a whole, though few take an active part in politics, their general feeling is definitely, often vindictively, anti-French; indeed, considering that many of their men folk were concerned in the rebellion of 1925 and 1926, and that much family property was destroyed in the bombardment which followed, this can hardly be wondered at.

Syria is at least fifty years ahead of Iraq in the matter of women's education, thought this education has proceeded almost entirely from foreign sources. At present, in Damascus alone there are twenty girls' schools, including a teachers' training college, and a school for midwives. Of these twenty, some are schools kept by religious orders, and in these, education is carried on in the French language, whereas in the Government schools, education is in Arabic. To show how quickly education marches in Syria, in 1927 the number of girl-pupils was 16,159, and in 1928, 17,716; an increase of 1,557 in one year. Aleppo is well-provided with girls' schools, having five elementary and one secondary. Beyrout has practically no Government schools, for the simple reason that foreign missions and private enterprise have provided so many girls' schools that the Lebanese authorities considered that to spend money in this direction was superfluous! Amongst the foreign institutions may be mentioned the *Mission Laïque*, where girl students and boy students work together, (these are, of course, not Muslims), and the American College, which provides for women medical students as well as men.

In spite of these opportunities throughout the country, the proportion of women unable to read or write is still 84 per cent. Education of girls is so far largely confined to large towns and Christian villages, as Muslim girls who become teachers will not leave the shelter of their families and go into villages to teach. Here is a case where the seclusion of the Muslim girl seriously injures her utility.

Feminism in Damascus has taken a very practical and useful form. The ladies of better family have formed a club known as the *Jam'aiyat Ya'qazat al marra ash Shamiya* ("Association for the Awakening of the Syrian Woman"), to which I was invited one day to discuss feminism in the East with its members. It was characteristic that the only language spoken on the occasion was Arabic, for Damascus takes pride in not being polyglot, like Bey-

rouit. The object of the club is the improvement of the social and intellectual life of women and the encouragement of its members to interest their minds and occupy their fingers. In the old days a Muslim lady of rank considered all forms of work derogatory, and would not even employ her needle. The club aims especially at destroying this idea, and one of the members, a young woman of great decision of character, has edited a paper, and is now engaged most successfully in farming her own land. National arts and crafts are encouraged, and every week native-woven materials are distributed amongst the members for embroidery and stitchery. At intervals the work of the members are exhibited for sale, the proceeds going to the upkeep of the club.

The association has rented a pleasant house in the Salahiyyeh quarter, paved, like most Damascus, with marble; its small garden is gladdened by a fountain of running water. It has a lecture hall, a reading-room, a library, an assembly-room and a committee-room, and hopes soon to acquire a tennis court. The rules show the club to be run on practical and business-like lines. Members may drop in when they wish to meet their friends, read the papers and attend meetings. Lectures are given once a month, not only by women, but also by men lecturers, and concerts are sometimes added to the programme of events. The club accepts members of all nationalities and faiths, though at present the members are mostly Muslim Damascenes. Politics and religion are debarred from discussion. The subscription is moderate—one gold lira a year for original members, and half that sum for other members, but the funds of the club are assisted by those rich enough to help. All this does not sound very exciting, but in fact the club represents such a revolution of thought and attitude that its mere existence justifies its name.

Another association of women in Damascus, entitled "Expansion of Culture for Women," is collecting money to found a school for girls in which Arab culture, traditions and literature are especially to be studied, Syrian arts and crafts encouraged, and a feeling of national unity fostered. The objects, therefore, are educational and nationalist rather than feminist, but the effort is interesting as showing how far the women of Syria are capable of concerted action. I attended a sitting of the committee, and was struck by the feverish enthusiasm the ladies showed and the whole-hearted way in which they had thrown themselves into the arduous work which such a scheme demands, though I was not convinced of the necessity of such a school at the present moment.

Beyrout has no fewer than twenty-seven women's associations. Some of these concern themselves with charities, others with self-improvement, but all of them in greater or lesser degrees with what Americans call "uplift." The most outstanding personality amongst the feminists in Beyrout, however, is, perhaps, Nur Khanum Hamada, a Druze lady, whose home is in Baaklin, in the mountains, near the stronghold built at the end of the eighteenth century by the famous Amir Bashir at Bteddin. Her grandfather, Shaikh Husain Hamada, was the Amir's right-hand man, and the religious chief of the Lebanon Druzes. He was known as The Great Shaikh (Shaikh Al Kabir). Her father held the same position for fifty years, and her brother, who bears his grandfather's name, now rules in his stead. Nur Hamada is a zealous worker in the cause of feminism, and not long ago conceived the idea of a league formed of delegates from all the women's societies in Greater Syria, so that a representative body might be formed to unite in itself the activities of feminism in the country. Not only that, but she endeavoured to link her league with the feminist movements in Iraq, Palestine and Egypt, and wrote to the heads of associations of women in those countries suggesting affiliation and a yearly conference to take place in Cairo, Beyrout, Baghdad, and Jerusalem in rotation, and that the countries of the Near East should associate themselves with the activities of European feminists.

The idea of uniting with European feminists was an

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

excellent one, and it was a pity that two women delegates, one from Damascus and one from Beyrout, chosen to represent Syrian feminism at a large international feminist conference taking place this summer in Berlin, were unable to leave their homes owing to mourning in their respective families. The death of a relative prohibits a Muslim woman from taking part in social life for some time, and the daring project of making a pilgrimage to Europe was, therefore, abandoned until another year.

The connexion with Egypt of the "Arab Woman's League of Culture" (*Majma'a an Nissai al Aadabi al 'Arabi*) as Nur Hamada's association is named, is, however, not without danger. I have not come into direct contact with the feminists in Egypt, but I understand that the movement has become largely identified with one political party—the Nationalists. One of the most prominent spirits there is a lady of wealth and influence, who edits a feminist newspaper and subsidises many activities amongst the women in Egypt. Her father was the friend of Arabi Pasha and later of Zaghloul Pasha. There is nothing reprehensible in the fact that the feminist movement in Egypt is Nationalist in colour; indeed, it is to be expected that it should be so; nevertheless, it would be regrettable if the surge towards freedom on the part of the women of the Near East were to spend its force and dissipate its strength among the bogs of local politics. If feminism in these countries is really to achieve its aims, it must concentrate with a single mind at achieving social independence and freedom from those bonds of custom which have kept woman shackled for long and humiliating centuries. She can consider her political position when she has freed herself socially, and not till then; else her efforts will end in mere talk.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

A PUBLIC SCHOOL IN PERSIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Persia, once the most powerful empire in the world, has long stood isolated and aloof from the main stream of progress. To-day we are watching what can only be described as a national renaissance under the wise and energetic leadership of Reza Shah Pahlavi. It finds its natural and most creative outlet in a new eagerness for education.

The Persian Government is already developing a wide and comprehensive educational scheme for boys and girls, and scores of students are being sent annually to foreign countries for higher education.

The Stuart Memorial College, Isfahan, was re-opened by the Church Missionary Society after the War, in memory of Bishop Stuart. It is the only English institution in Persia which offers education on the lines of an English Public School. The Persian Government officially recognise and strongly approve of the school. The fostering of games and athletics and the introduction of the Prefect and House system have worked wonders in the development of sound character among the boys, of whom fifty are boarders. The Headmaster, who is a Cambridge man, is supported by five other English University men in addition to Persian masters; and the boys are prepared not only for the Persian Government Examinations, but also for the London Matriculation.

In addition to the fees which are charged to all boys, the expenses of the College are partly met by grants from the Church Missionary Society. For the past six years the Anglo-Persian Oil Company and the Imperial Bank of Persia have also very generously supported the College by grants amounting to £750 per annum (the A.P.O.C. having given a further sum of £3,000 for capital expenditure on new buildings in 1923). These latter grants

have enabled the College to reach a standard of efficiency and education which would otherwise have been impossible. They are now, however, being withdrawn, the A.P.O.C. being obliged to confine their educational expenditure to their own area in Khuzistan, where they are developing new schools.

We share the opinion which has been expressed by many of the leading Persians and Europeans now resident in Persia, that the closing down of this school would be a very grave handicap to the country at this critical stage in her history. Yet, expenditure cannot be reduced; and the only alternative is the raising of an Endowment Fund of at least £15,000 to enable the college to continue its valuable work. This is the only College in Central or Southern Persia where, through the medium of the English language, a sympathetic understanding of Western science and knowledge and Western literature is being encouraged, and experience all over the world shows that such literary and cultural connexions have an important repercussion upon international relationships.

We venture, Sir, to appeal to your readers, and especially to those who are interested in the great and ancient country of Persia, or indeed in India and the Middle East as a whole, to contribute generously to this fund. An account has been opened at the Imperial Bank of Persia, King William Street, E.C.4. Contributions, payable to the S.M.C. Endowment Fund, may be sent direct to the Bank, or to the Headmaster, the Rev. W. J. Thompson, M.A., at 6, Salisbury Square, E.C.4, who will be pleased to answer any requests for further information about the College.—We are, etc.,

THE INHABITANTS OF PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I point out that to call the majority of the inhabitants of this country Arabs is a misnomer, though this practice of so doing has of late years becoming very general?

They are certainly not Arabs by race, being essentially a North Semitic people, and to every Arab-speaking native here and of whatever religion, an "Arab" means, and rightly, a Bedouin, who really has a large amount of Arab blood. It may seem immaterial what we call a people as long as we all know whom we mean, but this is not invariably so. Certainly nine out of every ten people who have read in some London morning journals about the gratitude due to the Arabs for helping us to conquer Palestine have been under the impression that Palestinians, and not this real Arab contingent under Col. Lawrence, are meant.

This is unfortunate. For, instead of helping us, the so-called Arabs of Palestine were either fighting against us in the Turkish Army or were most persistent looters of our wounded and dead, especially of arms and ammunition, with the result that a large proportion of the rifles taken from fellaheen prisoners or found in their villages during the recent outbreak have been the No. 15, used by the E.E.F.—I am, etc.,

Jerusalem, September 26.

J. A. GRANE.

[Ethnographical considerations are not the only factors. To limit the term "Arab" to the *Badawin*, as our Correspondent suggests should be done, would, in our opinion, have much more "unfortunate" effects than has the possible confusion of the inhabitants of Palestine with the tribesmen who fought with Colonel Lawrence.—ED.]

THE WEEK AT HOME

London, Tuesday Morning.

Preserving the Countryside.

Those superior people who are wont to assert that all these societies for "keeping England as it always was" are composed of cranks should read the report of the National Conference for the Preservation of the Countryside which met last week in Manchester. For that conference was composed in the main of men of affairs, practical men who realise that of necessity the face of England must be transformed, but who plead that the change may be made decently and harmoniously.

Building of houses, must, of course, go on. But let it be in keeping with the countryside. So many parts of England are now being spoiled by those very people who, wishing to escape from the crowdedness of the suburbs, go farther afield into the country and there repeat precisely the mistakes which have been made nearer the big towns. New roads must be built, but why beribbon them with villas and bungalows that fill only the speculative builder with satisfaction?

Beauty and harmony with the landscape can be achieved without great difficulty: it is a matter of sensibility and a willingness to fall in with the fitness of things. That fitness cannot be demonstrated by Parliament—no further legislation is needed for preserving England's beauty—but it can be supplied by local authorities. During a tramp that I took at the week-end in north-western Hertfordshire and Bedfordshire, I encountered some most terrible examples of hideous disfigurement of landscape by advertisement and bungalows, but I also saw new buildings of dignity, natural growths, as it were, from the soil around. The matter is not, as has been suggested, one of economics, for the jerry-builder is not always the cheapest builder: it is one for education, and primarily for vigilant local opinion.

Mob Hysteria.

Many wise heads were shaken last week over the conduct of the mob in the Reading murder case. That our educated democracy should be capable of such a crazy outburst had scarcely been thought possible, for though hero-worship in decent circumstances may be a virtue, in the peculiar circumstances at Reading it was

revolting. As *The Times* suggested, the flowers which women brought to garland Mr. Drew, the actor who occupied so prominent a place in the proceedings, had more fitly been placed on the murdered man's grave.

Largely, of course, this display of mass emotion was the result of Press publicity. That the public of Reading should get it into their heads that the man whom some witnesses identified as being outside the theatre at the time of the murder was being unfairly treated was comprehensible enough, but resentment of this treatment could not alone account for the quite remarkable outburst of hysteria.

It is even easier now than ever, it seems, for the hysterical feelings of large masses of people to be stirred, and this fact has grave national dangers in it. It means that electorates can be handled and cajoled in a manner that lends an easy excuse for corruption. Certainly few crimes have attracted wider attention than this Reading affair, and certainly never before has such nausea been created among decent-minded folk by the attitude of the extra-mural mob.

One good thing, however, may result from this coroner's inquest at Reading, and that is a change in the regulations governing such proceedings. There is little doubt that certain recent events in Coroners' Courts have shocked public opinion, which will insist on alterations in practice. This determination arises, however, rather in spite of the improper conduct of the Reading mob than because of it; one could see it in process of forming long before certain citizens of Reading disgraced that town's reputation for sobriety and moderation in judgment.

The Delius Festival.

Thanks to the man who is sometimes, but quite erroneously, supposed to be the least practical of our musicians—Sir Thomas Beecham—there is being held in London a festival of the works of Delius. Delius cannot, of course, be claimed absolutely as an Englishman, though he was born at Bradford, but England may take just and peculiar pride in the fact that he is indubitably a world figure.

One cannot describe the works of Delius in other than technical language. For, intangible, they touch one as closely as any music can; non-intellectual, they move one to thoughts more deep than tears; unemotional, they catch the breath, or make the heart-strings quiver. His best works is of ethereal beauty, a beauty that bewitches, sometimes beguiles, but never merely bemuses.

It is good that England has so handsomely recognised the genius of this blind composer, and for those who will have heard the festival that began last Saturday the memory of it will be cherished late and long.

London's Theatres.

The production of a new play by Mr. Sean O'Casey is now recognised by the discerning as something on no account to be missed, for it is generally agreed that there is genius in this Irish playwright. There have been in London since the War few things richer or more imaginative than "Juno and the Paycock" and "The Plough and the Stars"; and "The Silver Tassie," which was produced for the first time last week, appears to contain many of those marks of originality which distinguished the two earlier plays. As an example of what serious people are saying about Mr. O'Casey, the utterance by one of our best critics may be quoted. Mr. Agate has just written that in this young Irishman we have the biggest playwright in the making for the last three hundred years.

London is particularly happy at the moment in plays of worth. Apart from Mr. Sherriff's "Journey's End," which has achieved the success it deserves, there is Mr. Bernard Shaw's "The Apple Cart," which contains most entertaining and shrewd comment upon our democratic times. And of the ordinary entertainments, which pleasantly while away a few spare hours, there is at least the usual number.

Book Reviews

A FINE OLD INDIAN GENTLEMAN.

"ZAKA ULLAH OF DELHI." By C. F. Andrews. (Cambridge: W. Heffer and Sons, Ltd., 7s. 6d. net.)

All who know and love India will be grateful to Mr. Andrews for putting on record this sketch of his old friend's life and character. This record is doubly welcome, both because it is a picture of an Indian Muslim of a type which, we trust, will never die out, and because of the circumstances in which Zaka Ullah's character developed. We are apt to forget that the frothy politician is not truly representative of India, and we are also apt to forget the Mutiny and the years immediately preceding it.

The subject of this book was a scion of a family which had been for generations hereditary tutors at the Imperial Palace of Delhi, and for the poor relics of the Imperial family he ever retained affection and attachment. He was brought up in the old Delhi College during the period of the "English Peace," where he had the advantage of association with some very remarkable men, both as teachers and as fellow-students. He lived through the terrible times of the Mutiny and the worse times which immediately succeeded it, remaining undisturbed in his serenity and loyalty, though sorely tried. He emerged as a very sincere admirer of Queen Victoria, to whom he seems to have transferred his devotion as a righteous Ruler of India. He filled important educational appointments under Government, and was specially conspicuous as a lover of the Urdu language, that legacy of the late Moghul Empire in the knowledge and study of which he had grown up. His knowledge of English, though he scarcely ever spoke it, was profound, and he used this knowledge in translating very numerous scientific and other educational works into his own pure Urdu. It is sad to think that he was fighting a losing battle—he recognised this himself—for the advocates of English as a *lingua franca* for the Indian Intelligentsia won the fight, a result which many of us deeply deplore. He was a deeply religious man and a devout Mussulman, but his heart was full of charity, and bigotry was far from him. Indeed, he was full of love for his fellow beings and of humility as regards himself. He was the kind of man whom it was not possible to know without loving him. His very defects, which were mainly shyness, undue modesty and diffidence were, as between friends, positive virtues.

We urgently exhort those of our readers who are wearied of reading of the unrealities of Indian politics to study this book and so refresh themselves with the realities which lie far above them and permit of no one who has known the like of Zaka Ullah to despair of India's future.

C. S-W.

INDIA IN THE SEVENTEENTH CENTURY.

"OVINGTON'S VOYAGE TO SURAT" Edited by H. G. Rawlinson (Oxford University Press: Humphrey Milford. 12s. 6d. net.)

It is somewhat remarkable, as the Editor points out, that this book of travel to India has never been reprinted since its first publication in 1696. It clearly attracted considerable attention at the time, since it is freely referred to by the author, probably Burnell, of the anonymous account of Bombay published in 1710, and by Alexander Hamilton in his "New Account," which appeared in 1727. It was translated into French, and received the laudation of a Poet Laureate in the person of Nahum Tate. Perhaps a certain lack of raciness in the book as compared with that of John Fryer, like Ovington, a chaplain, or with the entertaining if scandalous pages of Hamilton, accounts for the book never having been re-issued. Perhaps also it was too much of a compilation based on other people's reports rather than on Ovington's own observations except as regards Bombay and Surat. But the book was well worthy of re-issue since the description of

the condition of affairs at Bombay and Surat at an interesting if very troubled time was certainly first hand.

When Ovington visited Bombay it was almost at the lowest point of its fortunes. The incompetence and miserliness of the "General," Sir John Child, had a few years previously driven the garrison and an excellent officer, Keigwin, into rebellion, and had led to the siege of the Fort of Bombay by the Sidi, which was only terminated by an ignominious compromise. Moreover, Bombay was more than ever a charnel house for Europeans, who ably assisted the climate in disposing of them by heavy drinking. Compared with Bombay, the Factory at Surat with its President and Chaplain, and its regularly ordered banquets and prayers, on both of which Ovington dilates with unction, was the essence of respectability. In spite of the pomp and circumstances of the Factors, however, they were liable at any time to be seized and imprisoned by the Moguls on the pretext of the activities of European pirates, and this had already led to the decision to transfer the seat of the Company's trade to Bombay. The real value of Ovington's book lies in his account of the habits, not only of the English in India of his time, but also of the Indian inhabitants, and particularly of the Banias and Parsis. It is wonderful how many of the customs and habits have persisted to our day: among them, let us hope, is the extreme kindness of the European husbands to their wives which Ovington admiringly observes. The revered author was obviously a safe man, whose behaviour earned the commendation of the Factors in India, and of the Company at home. He should, therefore, be read along with his contemporary, that unrepentant old interloper, Alexander Hamilton. But Ovington's account has much value to the student of Indian History, and Mr. Rawlinson is once more deserving of our thanks for bringing an old book within our reach. One may not agree in every case with Mr. Rawlinson's annotations, but the editing has been adequately done, and Ovington's own life history has for the first time been traced.

TRAVELS AND REFLECTIONS.

"TRAVELS AND REFLECTIONS." By Noel Buxton. Illustrated. (George Allen and Unwin, Ltd. 10s. net.)

There will be many who, like ourselves, gratefully hear of an addition to Mr. Buxton's interesting works on the Near East. This time he has, in a bundle of gathered sketches, given us glimpses of Japan, Persia, Kurdistan, Armenia and the Sahara in addition. It is in the Near East, however, that he is most at home, though we would not willingly have dispensed with his chapters on the Kurds and their Armenian neighbours. If, in some cases, the sketches are too "sketchy" to allow of much in the way of "reflections," we cannot say so of the quietly drawn but hideously gruesome chapters dealing with the human sufferings consequent on the Balkan war of 1912. In these chapters Mr. Buxton is a very efficient advocate of peace, none the less so because he carefully avoids any appearance of desiring to pose as such. He has a gift of getting well under the surface in a few words, as where he tells us that "Bulgarian feeling runs deep—so deep that some think it non-existent."

The book is, as it deserves, delightfully produced, and its illustrations are an additional pleasure.

Tuesday Morning.

Developments in Egypt.

Mr. Turner's report on Egypt, extracts from which will be found elsewhere in these columns, throws a vivid light on the efforts that are being made to improve the economic position of Egypt. The major works of development, in progress or on the tapis, as, for instance, the heightening of the Aswan Dam, for which tenders have just been received, are well known, but the projects that are being undertaken, or are contemplated, cover almost every aspect of the country's life. They range from the major question of electrification schemes and drainage projects to the construction of 150 hospitals (this programme is spread over five years), the creation of a Cereals Exchange, and the establishment of various factories. The complete programme provides a clear illustration of the scope of the Government's activities. Financially, it may be pointed out, Egypt is well situated to carry out comprehensive works of development. Last year there was a substantial trade balance in favour of the country, while the Reserve Fund of the State amounts to about £E40,000,000, but even so a programme of the nature indicated will entail the expenditure of larger sums than are available, and the question of new sources of revenue is therefore being considered. In the case of many, one might say most, of the projects, the expenditure will be of a directly productive character, as, for example, in the case of the irrigation works, and that fact is an ample justification for undertaking the necessary expenditure.

Roumania and Great Britain.

It is to be hoped that it is an earnest of greatly improved economic relations between Roumania and Great Britain that an important road contract should have been given to this country and also one for the coinage of 50,000,000 twenty-lei and 60,000,000 five-lei pieces. The two countries are in the position of being able to supply each other's requirements to some extent. On the one hand, Roumania has her grain to export, while Great Britain is able to supply manufactured goods and to carry out development works, such as the projected canal which is to link Bucharest with the Danube and thus with ocean traffic. The handicaps to developments since 1918 have been the impoverished state of Roumania and the fact that the Government has been unwilling to embark on schemes involving considerable expenditure. Under the Maniu Administration conditions have steadily improved, and if only world conditions were favourable the country could count this year on greatly replenishing its purchasing power through grain exports. The adverse conditions that have obtained are not likely to be repeated, so it may be taken for granted that before long the Roumanian market will be showing signs of recuperation. The desire of Roumania to develop economic relations with this country has been the subject of strong emphasis by M. Madgearu during his visit here, and he has expressed the hope that a commercial treaty between the two countries will be one of the first to be arranged by Roumania and that Great Britain will be able to make use of the minimum tariff. Our manufacturers, therefore, have every reason now for beginning to pay more attention to this market than they have in the past.

A New Palestine Company.

It is obviously sound policy for Palestine in the present stage of her development to concentrate chiefly on the expansion of her staple product, the Jaffa orange, which

has been for so long the mainstay of the country's export trade. Between the years 1924 and 1928 the area under orange plantations was more than doubled, and the rate of planting has been steadily on the increase. The latest development is the formation in Palestine of "Palestine Plantations, Ltd.," with a capital of £P300,000, under the auspices of Lord Melchett, who holds a controlling interest in it, among others interested in the company being the well-known fruit brokers, Messrs. White and Son, Ltd. The company possesses large areas of land in Palestine, and its objects are the cultivation of citrus fruit and other agricultural produce, but I understand that orange growing will constitute the principal activity of the company. It is proposed to set aside part of the company's estate for disposal as orange groves on the instalment system with a view to promote the participation of small investors in the important orange industry. The directors include Mr. A. I. Kastelianski, chairman and managing director, Mr. C. Weizman, Palestine manager of Imperial Chemical Industries, Mr. P. A. Batty, director of White and Son (Levant), Ltd., Sir Frederick Keeble, and Mr. Michael Naamani.

The Question of Tariffs.

In the course of his speech at the meeting of the Prince Line Sir Frederick Lewis referred to the question of tariffs, and it is symptomatic of the changing views with regard to the possibilities of any great removal of tariffs that he said that while from the shipping point of view they would like nothing better than the complete abolition of tariffs, probably the most to be hoped for was that matters would not get much worse than they are. The recommendations of the recent conference at Geneva, as a matter of fact, seem to have had no effect at all. To take the most recent instance, Turkey has just imposed a tariff framed on prohibitive lines, while Egypt is preparing a new tariff one of the objects of which will be to raise the revenue from Customs duties, and there are other examples which could be cited to show that the present is not a favourable time for a campaign for tariff reduction. The fact of the matter is that the subject is so fraught with difficulties that it is impossible to visualise a general agreement on it. Emphatically only the individual country can gauge the need or otherwise for tariffs, and if in particular instances the duties are framed on too high a scale the operation of the economic laws will certainly bring about their reduction sooner or later. COMMENTATOR.

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfers on all its Branches, at the exchange of the day. The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon. Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches. The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives. The Bank transacts every description of banking operations.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, October 9.

The Financial Situation.

The *Argus*, in its weekly French edition, publishes the report of an interview with M. Charles Rist, Foreign Adviser to the National Bank, in which the latter reviews the present situation of the currency with gratifying optimism. M. Rist confidently states that the stabilisation of the currency is now an accomplished fact, and that there need no longer be any fear of fluctuations. This is extremely satisfactory, and it is further encouraging to read that the increase of the grain export trade and influx of foreign exchange, consequent upon the abundant harvest of this year, has justified the Bank in issuing fresh currency to the amount of 2½ milliard lei (between June 15 and September 21). Thus while the fiduciary currency in circulation amounted to about 20 milliard lei on June 15, it had been increased to 22.65 milliards by September 21. The sale and export of grain brought foreign bills into the National Bank and the Bank paid these in gold lei. Thus the increase in the currency in circulation is not in the nature of a dangerous inflation for the needs of the State Treasury, but an issue covered by foreign capital flowing into the country.

The favourable effect of the new issue upon the market was immediately noticeable, and indeed M. Rist is of opinion that conditions generally have already begun to improve. He comments with satisfaction on the action of the State Railway Administration in drawing up a programme for the systematic payment of all its outstanding debts both at home and abroad, beginning on October 1. These payments will give a welcome impetus to the home industries on the one hand, while on the other they will serve to raise the credit of Roumania abroad.

The Roumanian Banking Company.

An important event in the financial world was the inauguration on October 1 of a new large Roumanian bank bearing the above title. Its President is M. Argetoianu, a former Minister in several Cabinets, and among the Roumanian members of the Board are Prince Nicolas Cantacuzino, and M. Garoflid, M. Manoilescu and M. Mitileneu—all former Ministers. The new Bank has been founded on the initiative of the Bucharest branch of the Dresdner Bank of Berlin, which it will henceforth replace, the premises and staff of the Dresdner Bank branch having been taken over by the Roumanian Banking Company. The Dresdner Bank is one of the principal shareholders, while among other foreign subscribers are the Amsterdamsche Bank of Amsterdam, Messrs. Japhet and Co., of London, the Commerz und Privat Bank of Berlin, etc. The principal object of the Bank is to facilitate commercial operations with a view to improving economic conditions in Roumania, and it is hoped that important transactions with the State will also be carried out. The formation of this bank is viewed with considerable displeasure by the Liberals, who control several of the most important banking institutions in the country, and the participation of M. Argetoianu has made him extremely unpopular with the leader of his party.

The Oilfields.

The petroleum industry continues to progress, though slowly, in spite of the commercial and industrial depression through which the country is passing. On September 2 seven perimetres of State oil lands were sold by public auction to various companies, the Astra Romana obtaining 3 at a price of 164,876,000 lei. Seven more perimetres are to be offered for sale on October 20. The total production of crude oil during the first six months of this year was 2,240,000 metric tons as against 2,004,000 metric tons for the same period of 1928. The refineries are said to be working at about 73 per cent. of their capacity, and during the first six months of this year

they are said to have refined 2,160,000 tons of crude oil, as compared with 1,900,000 tons in the first half of 1928. Over the same period the internal consumption has risen from 625,940 tons in 1928 to 750,240 tons in 1929, while the exports amounted to 1,308,700 tons, being an increase of 283,500 tons over those of last year.

TURKISH CUSTOMS STATISTICS.

(From Our Own Correspondent.)

Constantinople, October 2.

A serious controversy, which has found an echo in the daily papers and which turns on the sustained depreciation of Turkish currency, has lately divided the official and administrative milieux of Constantinople into two hostile camps. M. Jacquart, the Belgian specialist, who entered the services of Turkey in order to carry out the census of her population, started the ball rolling by declaring that Turkish Customs statistics are not to be relied upon, and that the adverse Turkish trade balance which, for years past, these tabulated statements have denoted, is no more than a myth. Turkish exports, M. Jacquart seems to think, if they do not exceed imports, at least equal them in volume, and he can see therefore no serious impediment to the gradual rise in value of the Turkish circulating medium, measured in terms of foreign exchange.

The Turkish Customs authorities, as might be anticipated, have joined issue with M. Jacquart and have expressed much concern at the slur he has cast on their statistical service. Their returns, they maintain, reflect a true picture of the situation, and they consider that nothing is to be gained by blinking at obvious though unpleasant facts. Turkey's trade balance, the Customs authorities aver, is a distinctly adverse one, and the debased value of the lira must be attributed solely to this circumstance.

The Secretary-General of the Constantinople Chamber of Commerce, who sees eye to eye with the Belgian specialist in respect to the unreliability of the Customs returns, goes further afield however in his investigations into the causes underlying the weakness of the lira. This official seems to think that a careful scrutiny of the balance sheets of certain Constantinople banking establishments would immediately reveal the fact that the mercantile community of this city has been over-indulged in the matter of credit—in other words, that the depreciation of the currency medium has gone hand in hand with over-inflation of credit. The Secretary-General's thesis has been met by a rejoinder from the Commissary of the Bourse to the effect that, as the supervision of bank credits lies within his particular province, the Chamber of Commerce may take it for granted that, far from inflation, the controlled policy of the banks has tended, particularly of late, towards curtailment and restriction.

There would seem to be one or two essential factors in this vital problem which all parties to the controversy have apparently overlooked. One is that, granted the adverse trade balance, the effect produced on the somewhat exiguous exchange market of Constantinople by the activities of the Turkish Treasury itself must inevitably tend towards a shortage in the supply of foreign bills wherewith to meet the Treasury's foreign commitments in connexion with railway construction and other enterprises. Account must also be taken of the Government's demand for bills to finance the service of Turkey's External Debt. Last but not least, there is the sustained demand for foreign exchange from the mercantile community of Constantinople during the past few months as a result of the increase in the import of European and American commodities arising out of the forthcoming application of the new Turkish Customs tariff.

CORRESPONDENCE

TRADE AND CUSTOMS FORMALITIES.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Through the medium of the Press the business world is being constantly reminded that the solution of unemployment lies in increased trade overseas; it is therefore exceedingly vexing to find that one's efforts to put this exhortation into practice are frequently stultified or hampered by official attitude and action. The prevailing indifference in certain Government Departments is strikingly illustrated by the following facts relating to the procedure of H.M. Customs.

Annually a large number of fractured motor car and machinery parts are expressly sent to this country for repairs which cannot be executed elsewhere. We have at this moment 13 cases of fractured parts from Persia held up at the docks pending the completion of Customs formalities. These parts are so urgently required by the owners that, to save time, all correspondence relative thereto is being transmitted by Air Mail.

The Customs authorities have asked for the name of the vessel upon which the goods were originally shipped, and the date of its sailing. But, most absurd of all, they require us to declare the value of the goods when new. Now, manifestly we cannot possibly supply this information, as we do not know where the parts were made. Moreover, they were not sold as separate units, but as parts of a complete machine or motor vehicle.

We have offered to pay a deposit of duty, or, alternatively, to give bond pending the re-exportation of the goods but in spite of this, the goods remain at the docks—apparently because the Customs authorities cannot make up their minds as to the value of them. Actually, until they are repaired, the value of the contents of these cases is that of scrap metal. It does not need an expert

to see that these broken parts are absolutely useless in their present state.

We admit that the Customs must see that proper duty is paid on all dutiable goods imported into this country, but we feel very strongly that in the execution of their duties, they should endeavour to assist business firms, especially when documentary evidence exists to prove that damaged goods are being sent to reputable firms for the sole purpose of reconstruction. In placing obstacles in the way of prompt clearance the authorities are actually destroying the chance of extended business, by making prompt delivery of the repaired goods to the owners a sheer impossibility.—I am, etc., C. W. BRETT.

Barimar, Ltd., 14-18, Lamb's Conduit St., Theobald's Road, London, W.C.1., October 11.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

BULGARIA.

Locomotives.—Tenders are invited for the construction and supply of three shunting locomotives D-1, in conformity with the tender conditions and plans. November 8. (D.O.T.)

Rails and Fittings.—The Ministry of Railways invites tenders for the supply of rails and fittings. Tenders are called for in three lots and are due in Sofia on November 6, 11, and 14, respectively. (D.O.T.)

EGYPT.

Medicinal Oils.—The Egyptian Department of Public Health invites tenders for the supply of medicinal oils required during the year commencing May 1, 1930. December 7. (D.O.T.)

Disinfectants.—The Egyptian Department of Public Health invites tenders for the supply of disinfectants for medical and general purposes required during the year ending April 30, 1931. December 7. (D.O.T.)

Sewage Mains.—The Egyptian Ministry of Public Works, Main Drainage Department, invites tenders, to be presented in Cairo by November 13, for (1) supplying, laying, jointing, and testing approximately 16,300 metres lineal of 30 inches diameter cast-iron pipes; (2) supply and laying of 16,300 metres lineal of 0.60 metre gauge light railway; (3) supplying, laying, jointing, and testing 15,000 metres lineal of cast-iron sealed sewage and air mains; (4) supplying special castings, spare parts and materials at the site of the Giza Pumping Station. (D.O.T.)

Electric Refrigerators.—The Egyptian Department of Public Health invites tenders for the supply and delivery of 31 electric refrigerators, small and large sizes, with white porcelain panelling. November 5. (D.O.T.)

Microscopes and Accessories.—The Department of Public Health, Cairo, invites tenders for the supply and delivery of microscopes and accessories required during the year 1930-1931. December 7. (D.O.T.)

GREECE.

Exploitation of Waterfalls.—The Minister of Communications invites tenders for the exploitation of the waterfalls of Verria, Voden, Vladovo, Acheloos, and Aliakmon, for use in generating electricity for industrial and chemical purposes.

IRAQ.

Welded Steel Tubes.—The Department of Overseas Trade has received a communication from a distributor of engineering products in Baghdad, who is desirous of forming a connexion with British firms in a position to supply light welded steel tubes with welded-on flanges suitable for pump suction and discharge, in the following sizes: 8, 10, 12, 14, 16, and 20 in. internal diameter in lengths 2, 3, 4, 6, and 9 ft., together with bends.

INDIA.

House Service Meters.—The Indian Stores Department, New Delhi, invites tenders for the supply and delivery of house service meters required during the period October 20, 1930, to January 19, 1931. October 28. (D.O.T.)

Crude Oil Engine Generating and Motor Generator Set.—The Indian Stores Department, New Delhi, invites tenders for the supply, delivery, and erection of a crude oil engine driven D.C. generating set, and a motor generator set complete with switchgear and all accessories for the Military Engineering Services, Razmak. November 14. (D.O.T.)

Pelton Wheels.—The Indian Stores Department invites tenders for the supply of 2 Pelton wheels, 2 three-throw ram pumps, steel piping, etc. November 8. (D.O.T.)

TURKEY.

Irrigation Works.—The Turkish Government invites tenders for irrigation works, etc. The dates for the submission of tenders vary, the latest being November 2. (D.O.T.)

A call for tenders for the supply of 285 kilometres of rails and accessory material has been issued by the Administration Générale des Chemins de fer et des Ports d'Etat. October 22. (D.O.T.)

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK
LIMITED

Engineering Topics

(By Our Engineering Correspondent)

The Sarda Canal Barrage Scheme.

For a considerable time past one of the most important sections of engineering has been the construction of barrages for irrigation work, of which there are a large number of installations in the Near East and in India and the Far East. In this latter connexion highly interesting is that of the great Sarda Canals Irrigation Barrage, on the Nepal-United Provinces frontier, commenced in 1923 and recently completed. This steel sluice gate installation is a fine example of modern British engineering, and the object of the scheme is to provide sufficient reserve of water to eliminate the serious danger of famine in the Province of Oudh and to a lesser extent in the adjoining Agra Province, now partly supplied by the Ganges, Tumna, and Agra Canals.

The main barrage is situated across the Eastern Channel of the River Sarda at Banbasa, at the foot of the Himalayas, practically the whole of the Sarda River being in the independent State of Nepal, representing a drainage area of something like 6,400,000 acres. At this point the river is comparatively shallow and of low velocity, although having a normal flow in the cold season of 5,560 cubic feet of water per second. The barrage is nearly 2,000 feet long, being controlled by a series of sluice gates, impounding the water just as it enters the plains of India, and discharging as required in the dry season through a complete system of feeder canals controlled by subsidiary barrages with sluice gates.

Ever since 1870 numerous schemes have been drawn up for utilising the Sarda River, and the total cost of the present scheme is about $7\frac{1}{2}$ crores of rupees representing approximately £5,000,000, while the area of land in Agra and Oudh being irrigated is not less than 1,382,400 acres and it is calculated that the revenue will pay 7.9 per cent. interest on the capital as against 7.4 per cent. for the average irrigation scheme in India. The steel sluice gate equipment for the different barrages representing over 2,200 tons dead weight of steel, has been designed, supplied and erected by Messrs. Glenfield and Kennedy, Ltd., of Kilmarnock, Scotland, and the contract included 30 mild steel sluice gates 50 ft. span by 10 ft. and four mild steel sluice gates 50 ft. span and 13 ft. deep, complete with free rollers, rocking paths, staunching tubes, lifting attachments, and adjustable plates on the bottom of each of the gates, together with the necessary gearing, and other appliances for operating the same, as well as 16 gates 20 ft. span and 6 ft. 4 in. deep, all complete as before with the necessary operating gear and accessories for the intake to the main irrigation canal.

The scheme further includes the utilisation of part of the Deoha River bed as a canal, and for this purpose a subsidiary barrage is situated just North of Bareilly on the United Provinces frontier, about 160 miles north of Lucknow. The length of the barrage necessary for the river between the extreme abutments is 530 ft., and 11 Glenfield steel sluice gates are installed, each 40 ft. span, by 12 ft. deep, of the free roller type, operated by hand control gear from the steel superstructure above.

Generation of Electricity.

The work of the Electricity Board has drawn renewed attention to the question of suitable prime movers for power for generating electricity on a large scale, and the supporters of the steam turbine are finding their position, so far as numbers are concerned, rather threatened by those who still feel that the reciprocating engine is quite a good proposition. The general public seem to have an idea that the latter is practically obsolete and that for heavy duty its place has been taken, for good, by the turbine, but engineers are aware that is not the case. Each has to be regarded on its merits, and there is no doubt that a good steam engine is not only reliable but efficient and economical. It will operate either at high pressure or with a simple condenser, and most designs give the best results, taking everything into consideration, at a moderate steam pressure; but the chief drawback to their use for electric power generation, as compared with the turbine, is their slow speed. The turbine, on the other hand, occupies far less space for a given output, is compact, operates at high speed, which can be geared down, if necessary, without appreciable loss of power and consumes rather less steam per horse-power. The general view is that the turbine has the advantage where steam is produced at suitably high pressures, so far as the generation of electric energy is concerned, especially in situations where there is so ample a supply of water as to eliminate all difficulties connected with condensation. There is very little in it; makers of each kind of plant are prepared to turn out a prime mover that will meet any requirements. The turbine shows to advantage in medium power units, small turbines being rather wasteful and turbines of big output being but little if any more economical than reciprocating engines of a similar horse-power.

Inspecting Concrete.

The intensive use of concrete has had the effect of practically standardising such matters as proportions and kinds of sand and aggregates, sizes of aggregates, water content, and so on, and in connexion with this standardisation the need has arisen for a closer inspection than was considered necessary in those days when every contractor and engineer was a law unto himself, and concrete was mixed and used in a very haphazard manner. It is true that the aggregate for the concrete and the quality of the concrete are always laid down within narrow limits in the specifications, but it is as well, from time to time, to see that they are up to sample and that proper gauging boxes are being used. It goes without saying that wherever possible concrete should be machine mixed, as in that way a far more evenly mixed material results; but if for any reason machine mixing is not possible, and hand mixing has to be done, it should be seen that the cement is spread well over the measured aggregate and turned over twice in the dry and twice in the wet state. One thing the competent inspector will never allow is the use of a hose for watering concrete, and the throwing on of water by

LIVERPOOL

MANCHESTER

GLASGOW

means of buckets is equally wrong. Nothing but rose sprinkling should be allowed, as otherwise the cement and sand content is washed out of one part of the aggregate into another and a concrete of weak and uneven character results.

A good deal has been written about the amount of water that may be permitted in concrete, and it is certain that, all other things being equal, the drier the concrete, the stronger it is at all periods. At the same time, no hard and fast rule can be laid down about it and the inspector will be called upon frequently to exercise his own judgment as to the quantity he should allow. The aggregate or the sand may be bone dry or of any degree of wetness; the weather may be bakingly hot or it may be drizzling with rain. All such factors make a difference, but concrete should be sufficiently wet to allow it to be properly rammed into place, but should not show any superfluous moisture on its surface until it has been well rammed down. Care should also be taken to see that enough water is used to allow all parts of the mixture to be wetted through.

Another point the inspector should watch is the way in which the concrete is put in place. If it is thrown violently, particularly from a height, the proportions of aggregate get disturbed; the large portions are driven to the bottom and the centre and top layers are robbed. Where concrete has to be deposited into deep pits or trenches, a trimmer pipe or an approved form of chute should be used. If concrete has to be laid under water, as is frequently the case in certain classes of work, sealed trimmer pipes must be used or else depositing boxes of approved type. On no account must the concrete be dumped so that it has to sink through the water, or else the proportions of aggregate will become altered and the mixture will be robbed of cement.

One thing the inspector will often have to deal with is the leaving about of batches of concrete which are not needed at the time owing to the completion of some portion of the work before the shuttering or trenching for some other portion is ready. At meal times and at the close of work there is a tendency for the men to leave a batch or part of a batch, but this should not be permitted. Great importance attaches to this, as breaks in the depositing lead to interstices in the concrete and consequent weakness. Another point which may seem to some to be of minor importance is nevertheless of great moment in the foundationing of heavy buildings, and that is the getting out of the foundations trenches. As everyone knows, where these trenches are deep the ground is got out in two or more operations, but where the trench is wet and water may seep, the second or third spit should not be got out until the concrete is ready to be laid, as otherwise there will be a good deal of mud about and this is certain to get mixed up with the concrete, weakening it and making it unreliable.

COMPANY NOTES AND REPORTS.

ASSAM RAILWAYS.

The total net revenue of the Assam Railways and Trading Company for the year ended March 31, 1929, was £155,846, as against £157,513 for the previous year. Railway revenue amounted to £68,320, and that from general trading £75,864. After deducting debenture interest and preference dividends and transferring £15,000 to the reserve for renewals and depreciation, there remains £112,231. The service of the "A" stock requires £50,400, and the directors recommend a final dividend of $7\frac{1}{2}$ per cent. on the "B" stock, making $12\frac{1}{2}$ per cent., writing £11,000 off discount on debentures, and leaving £13,331 to be carried forward.

LAKE COPAIS.

The report of the Lake Copais Company for 1928 shows a net profit in Greece of £36,131. Adding interest and other receipts in London, deducting London expenses, making provision for taxation and transferring £5,000 to capital reserve, the balance is £25,614. This sum is carried to the credit of "A" and "B" debenture stockholders' interest accounts. In order to provide funds to complete gravitation drainage works and for other capital expenditure, separate class meetings of "A" and "B" debenture stockholders are convened to permit the issue of a further £50,000 "A" debenture stock, in addition to £12,756 of this stock at present unissued, making a total authorised issue of £350,000 "A" debenture stock. "B" debenture stockholders are asked to accept, at the price of 80, up to £42,756 "A" debenture stock in lieu of cash in payment of interest which may become due to them from time to time. This includes the unissued balance of "A" debenture stock which would otherwise be issuable to them at par in respect of "B" debenture stock interest. The directors propose to pay in cash interest, less tax, at the rate of 5 per cent. per annum on "A" debenture stock to December 31, 1928, amounting to £13,897. The balance to credit of "B" debenture stockholders' interest account is £11,717, which, with £187 brought forward, makes £11,904. The directors recommend, subject to the passing of the above-mentioned resolutions, the distribution from interest at the rate of 5 per cent. per annum, less tax, on "B" debenture stock in respect of the year 1928, payable in fully-paid Five per Cent. "A" debenture stock taken at 80, and ranking for interest as from July 1, 1929. This will leave a balance of £54 at credit of "B" debenture stockholders' interest account to be carried forward.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. California for Bombay (Glasgow, October 15; Birkenhead, October 21); s.s. Elysia for Bombay (Glasgow, October 30; Manchester, November 4; Birkenhead, November 5). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahrona for Calcutta (Birkenhead, October 22); s.s. Circassia for Calcutta (Glasgow, October 24; Birkenhead, October 31).

Bibby Line.—S.s. Cheshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 30).

British India Line.—S.s. Mantola for Colombo, Madras, and Calcutta (London, October 19); s.s. Domala for Bombay (London, November 2).

Cunard Line.—S.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement (Liverpool, October 19); s.s. Brescia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz, if sufficient inducement (Liverpool, October 26; and Swansea, October 29).

Johnston Line.—S.s. Jessmore for Piræus, Syra, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 19); s.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 8). (This steamer will be the last sailing of the season to the ports of Galatz and Braila, and sailing November 9.)

P. and O. Line.—S.s. Morea for Bombay (London, October 25); s.s. Padua for Calcutta (London, October 25).

Prince Line.—S.s. Sicilian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, October 23); s.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 26).

Ellerman and Papayanni Lines.—S.s. Andalusian for Malta, Alexandria, Jaffa, and Haifa* (Liverpool, October 24; Swansea, October 19); s.s. Lesbian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 2; Swansea*, November 2); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 7). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 15.

The fortnightly settlement on the Stock Exchange passed off without the disclosure of any serious difficulties, but the monetary situation, the unsettlement caused by the Hatry position, and the uncertain tone of Wall Street still conspire to produce a feeling of general disquiet, and the new account opened under unsettled conditions. Gilt-edged stocks and home rails have made a little headway, but fresh liquidation in various directions has disturbed the industrial section. The decision come to by the Stock Exchange Committee to postpone the "Hatry" Settlement to an indefinite date serves as a reminder of the unusual influences which must affect markets for some time to come. A glance at the yields obtainable on many prominent industrial stocks shows that, in spite of the recent deflation of values, the necessary evil of dear money has not yet been fully discounted in speculative markets.

Important Iron and Steel Merger.

The long-drawn-out negotiations for the amalgamation of the two important iron and steel firms of Dorman, Long and Co. and Bolckow, Vaughan and Co. have at last been brought to a successful conclusion and the scheme of the merger was officially notified over the week-end. The terms of the merger, drawn up by Sir William McLintock, who investigated the position on behalf of both companies and approved by Sir William Plender and Sir William B. Peat acting in the interests of Bolckow, Vaughan and Dorman Long respectively, arrange that Dorman Long should buy up the other company by the process of an exchange of shares, and this will result in the merger firm having a capital of £5,855,773 in debentures and £11,248,146 in preference and ordinary shares, the debenture and share capital thus amounting to £17,103,919. The exchange of shares will be in the following ratio: each 100 of £1 Bolckow Vaughan ordinary will receive 46 £1 ordinary and 11 £1 eight per cent. non-cumulative preferred ordinary shares of Dorman Long; and each 10 five per cent. £20 cumulative preference shares will receive 155 £1 six per cent. cumulative preference shares of Dorman Long, who will pay all odd amounts for fractions on the basis of the prices quoted for

the shares of the respective companies. The exchange appears to be on an equitable basis and should be acceptable to shareholders. Of the merger itself they will no doubt approve as considerable economy in workshop expenses and future capital developments now become possible.

H.M.V. Expansion.

The accounts of the Gramophone Company, the makers of His Master's Voice records and gramophones, for the year ended June 30, 1929, show that profits further advanced even on the record level of last year. Net profit amounted to £1,146,508, compared with £1,099,099 last year. A final dividend of 50 per cent. is to be paid, which will make a total for the year of 60 per cent., compared with 55 per cent. a year ago, which represented an increase of 15 per cent. on the previous distribution. This year's results did not fully realise the market's hopes, and a decline in prices was seen after their publication. They are regarded as evidence that the phenomenal rate of expansion recently experienced has now ended, but it could not be expected to continue for ever. That any appreciable advance should be recorded is, in fact, satisfactory in view of the considerable competition the success of this great company has encouraged, and it will be remembered that at the last general meeting the chairman stated that he would be satisfied if last year's results were maintained. A policy of conservative distributions has been pursued and the reserves and carry forward at June 30, 1929, amounted to £1,450,216. The outlook for the ordinary shares is complicated by the fact that the recently created capital will receive a dividend next year, but it is certainly promising in view of the expanding sales and the heavy expenditure on extensions last year. The 5 per cent. cumulative preference shares, whose dividend requires only £5,000, yield £5 3s. per cent.

Snowden on Savings.

In welcoming the delegates of 29 nations assembled in London for the Second International Thrift Congress, Mr. Philip Snowden gave some interesting statistics of the progress made by thrift organisations in this country in recent times. Deposits in the Post Office Savings Bank at the end of 1928 amounted to over £288,000,000, while those of the trustee savings bank were £160,000,000, an increase of £9,000,000. A relatively greater advance is shown by the deposits and shares of building societies, which at £250,000,000 were £37,000,000 more than in the previous year. At the same time National Savings Certificates retain their popularity, and the amount outstanding including accrued interest is £500,000,000. When the depressed industrial conditions of the last year are borne in mind, the size of these figures, which represent after all only a part of the savings of small investors, is very satisfactory. As Mr. Snowden pointed out, however, for many reasons there has been a decline in the aggregate accumulation of new capital compared with pre-War days, and the need for further encouraging thrift on economic, apart altogether from ethical, grounds is undiminished.

The Eastern Telegraph Company, Ltd., announce the payment by warrants on November 1 of interest for the half-year ending October 31 on their four per cent. mortgage debenture stock. The transfer books of the debenture stock will be closed from October 26 to 31, both days inclusive.

Mr. H. L. Kenward, sales manager of the Dunlop Rubber Company, has been elected President of the Institute of the Motor Trade for the current year, and Sir Herbert Austin, Sir George Beharrell, Earl Howe, Mr. George Lucas, and Sir Edward Manville have been re-elected vice-presidents.

The directors of the Burmah Oil Company have declared an interim dividend at the rate of 10 per cent. per annum (2s. per share), less tax. Dividends on the Six per Cent. Preference, the Six per Cent. Second Preference, and the Eight per Cent. Preference shares for the half-year to June 30, 1929, less 2s. 7½d. in the £, being the amount of British tax, less relief in respect of Dominion income-tax, are payable on October 31.

ROUMANIAN MARKET CONDITIONS.

Messrs. Watson and Youell report as follows from Galatz for the week ended October 5:—

Grain.—Markets were characterised this week by sudden rises and falls in the price of grain, with the result that attempts to effect fresh business were seriously interfered with and frequently broke down altogether. In fulfilment of old sales, however, large shipments of grain, especially barley, continued to be made, the principal destinations being Weser and Hamburg, with Rotterdam a good follower. The freight market continued to be very active and a considerable amount of tonnage has been chartered both from the Danube and from Constantza at rates varying from 18s. 9d. to 19s. and 13s. to 13s. 6d., respectively, basis Continent, full London terms. Spot vessels have been able to obtain cargo up to 16s. 3d., but in the case of later positions and for large parcels less than 16s. has been accepted. The position at Constantza has been adversely affected by the congestion of tonnage, and although the elevators have been shipping at full pressure there is an appreciable turn for berth. There is, however, no lack of cargo there, since in spite of the heavy shipments, arrivals by rail have been coming forward in such quantities that the silos have been unable to receive the full quantities offering, and for several days the railways had to stop delivery of waggons at Constantza. Rates of from 9s. 6d. to 10s. have been current.

Timber.—The deficiency in available rolling stock, aggravated by some congestion in the handling of grain trucks at railway junctions and sidings, has become more acute, so that arrivals of timber continue on a reduced scale. There is consequently no pressing demand for space, but freight rates have remained steady and in some cases have hardened on account of the limited tonnage offering. A moderate activity is being maintained for Italy, and a full cargo of about 140 waggons has been closed at about £11. A parcel of 70 waggons to Cyprus paid £10 per waggon prompt loading. For Greece, up to about £8 is quoted; other rates unchanged.

Weather and Crops.—The temperature has risen steadily during the week and the present summer-like weather, even the nights being very mild, is in great contrast to the almost wintry weather which prevailed recently. In the Northern districts the sky was more or less cloudy during the earlier part of the week, and some light local rains were reported; but generally the weather has been dry, bright, and warm in the greater part of the country, and the slowly rising barometer appears to indicate a continuation of these genial conditions. Notwithstanding the favourable conditions, there is an absence of encouraging news as to the progress of ploughing and autumn sowings, and some fears are entertained that severe winter weather may set in before the young seedlings have been able to get sufficiently established to withstand hard frosts. It is to be hoped, however, that better progress is now being made, and that reassuring news will be received during the coming week.

Sulina.—Bar depth, 24 feet.—Although dredging was interrupted several days by heavy seas, the depth of 24 feet has been maintained without difficulty, and in the absence of bad storms no reduction is feared in the near future. River depth.—The minimum is now 23 feet at the 57th milepost, and two dredgers are working to restore normal conditions.

Constantza.—Arrivals from the interior during the week amounted to about 11,500 tons, and about 9,500 tons were shipped, mostly to Antwerp/Hamburg range. Two steamers of 9,10,000 tons capacity are loading at the elevators at the time of writing, and two others are waiting for berths. Eight vessels loaded over 25,600 tons petroleum products and two took oil fuel for bunkers. About 4,500 tons constructional timber were shipped to Buenos Aires, this business having been closed some time ago when the Danube Bar was in a less satisfactory condition than it is to-day.

Bulgarian Report.

Bourgas, September 28.—Arrivals of new maize are increasing and about 1,500 tons have been booked for Antwerp or Rotterdam at rates from 11s. to 11s. 6d. per unit, October shipment. About 1,000 tons of sunflower seed have also been engaged at 18s. per ton. To Mediterranean destinations about 700/800 tons maize and 500/600 tons sunflower seed, together with small quantities of barley and other cereals, have been shipped during the week.

The weather has been mostly cloudy and cold. Except in the mountains surrounding Sofia, where rain and light falls of snow are reported, there have been no precipitations, and from several parts of the country there are complaints that autumn ploughing is progressing with difficulty owing to the dryness of the ground.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, in their report for the week ended September 28, state:—

Sultanas.

The sales this week amount to 3,780 tons, while the estimated sales to date total 2,1750. Closing prices, Smyrna, per cwt. c.i.f. London: Type 11, 23s. 6d.; type 12, 27s.; type 13, 32s. 6d.; type 14, 36s.; type 15, 41s. 6d.; type 16, 50s.; type 17, 61s.; type 1, 62s.; type 3, 50s.; type 5, 36s. C.i.f. Liverpool: Type 11, 25s.; type 12, 28s. 6d.; type 13, 34s.; type 14, 37s. 6d.; type 15, 43s.; type 16, 51s. 6d.; type 17, 62s. 6d.; type 1, 63s. 6d.; type 3, 51s. 6d.; type 5, 37s. 6d. Prices remain irregular and values cannot yet be accurately fixed for each grade. Market, however, is gradually assuming a more normal aspect.

Again this week rain was general for a spell of about 24 hours and a further quantity of fruit exposed on the drying sheds will be damaged. The market shows an easier tendency generally, but, on a comparison between this and last week's closing prices, it will be observed that it is on the lower grades that the reaction is more apparent. Good qualities are in relatively small supply and dealers show no disposition to make any material concessions in price for same.

We have been busy collating the reports reaching us from our agents in the various vine districts since the rains, and, on the information given us, we are inclined to revise our earlier estimates of the yield. While a large quantity of fruit, probably some 15,000 tons, was destroyed as a result of the continued wet weather, it is apparent at the same time that the yielding capacity of the vines has been increased through the branches retaining their sap and bringing to maturity the top crop of grapes. Moreover, with the actual gathering of the fruit, more accurate figures are available of the yields per district, and the latest estimates would indicate the following distribution:—Sound undamaged fruit, about 31,35,000 tons; rain-damaged fruit, about 27,30,000 tons; destroyed fruit, about 12/15,000 tons; total, about 70,80,000 tons. Rain-damaged sorts, dark in colour but otherwise of bold and meaty berry, show good value at actual prices, and a strong demand for same is developing.

For the week ended September 28 Messrs. Giraud report that the sales of sultanas amounted to 3,570 tons, the total sales to date being 25,320 tons. Closing prices, Smyrna, c.i.f. London: Type 11, 24s. 6d.; type 12, 27s. 6d.; type 13, 32s.; type 14, 35s.; type 15, 41s.; type 16, 50s.; type 17, 61s.; type 1, 62s.; type 3, 50s.; type 5, 36s.; type 31, 22s. 6d.; type 32, 28s. C.i.f. Liverpool: Type, 26s.; type 12, 20s.; type 13, 33s. 6d.; type 14, 36s. 6d.; type 15, 42s. 6d.; type 16, 51s. 6d.; type 17, 62s. 6d.; type 1, 63s. 6d.; type 3, 51s. 6d.; type 5, 37s. 6d.; type 31, 24s.; type 32, 20s. 6d.

The market throughout the week has ruled very steady. Demand has been running mostly on rain-damaged fruit, of which a marked increase in supply has been available. Business has been active for these sorts for both the United Kingdom and the Continent. Prices for rain-damaged sorts opened at about a shilling (1 florin) below last week's close, but moved up gradually under the heavy purchases effected and have closed at about 2s. over bottom level. Demand from abroad for sound, undamaged qualities remains inactive, but, in face of this, the firmness of prices on spot is noteworthy. The supply on offer shows a material reduction compared with the quantity available a fortnight back, and this factor, coupled with the stability in prices in spite of slow demand, would indicate that the hidden stock remaining in the interior would be light.

The weather continues very unfavourable for drying operations. Throughout the week it has been cold and bleak, with intermittent showers, resulting in the probable loss of the little fruit that still remained on the vines and the rotting of a considerable quantity of fruit exposed on the drying sheds, which cannot dry out under existing wintry conditions. The estimates of production given in our last report will undoubtedly be affected as a consequence.

Figs.

The arrivals on the Smyrna market since the opening of the season amount to 13,218 tons, and the sales to date are put at 10,940 tons.

The weather, more than ever before, constitutes the barometer of the market and the position can be readily understood when we state that wintry conditions have obtained throughout this week, with low temperatures, bleak skies, and intermittent rain over the whole country. The reports from the fig belt are very disheartening and give little hope of supplies of sound figs being available henceforward, even granted an improvement in weather conditions. We regard the position as so serious that we have sent principals on our staff on tour over the whole fig belt to investigate, at first hand, the conditions obtaining in the fig orchards. Packing for the United States has ceased in most packing stores as a result of the heavy rejections of figs ex the first shipment of the season in New York per s.s. River Tigris.

The directors of the London and Lancashire Insurance Company have decided to pay on November 1 an interim dividend of 9s. per share, less tax, to shareholders registered on October 19.

British Consular Reports

V.—EGYPT.

The outstanding feature of the economic position of Egypt at the present time is the attention that is being paid to works of development of various kinds. In his report on the "Economic and Financial Situation of Egypt" as at June last, Mr. R. M. Turner, O.B.E., British Commercial Secretary at Cairo, devotes considerable attention to this aspect. We give the following extracts from the report:—

The reserves of the Egyptian Government are now estimated to amount to some £40,000,000, while in 1928 Egypt had an active trade balance of some £5,500,000. So far, therefore, the financial position of the country may be regarded as excellent. The distribution of wealth is, however, very unequal and the improvement in the spending capacity of the fellah as compared with pre-War times is stated to be scarcely noticeable. This is due, among other things, to the rent system and to other, largely traditional, factors, as a result of which the small agriculturist, who constitutes some nine-tenths of the population, is in practice always in debt to his landlord, and in many cases to the village usurer also. Time, supplemented by the various Government measures already introduced and contemplated, should eventually improve this state of affairs, but progress will be slow.

The very extensive Government programme for the increase of cultivable land will do much to relieve congestion in the provinces, while the efforts to build up local industries, of which the Banque Misr is one of the leading protagonists, will in time also provide employment for the surplus population, the rapid increase in which is regarded with misgiving by some Egyptian national economists. The Government programme of social legislation, particularly as regards hygiene and education, will in course of time also materially improve the standard of health of the population and decrease the percentage of illiterates. On the other hand, in some quarters anxiety is expressed lest, if these improvements proceed more quickly than the economic development of the country, the impetus given to the normal increase in the population, coupled with the improved standard of education, may produce a surplus of educated persons for whom no suitable employment will be available. Even to-day there are complaints that "the professions" are overcrowded.

It is, however, possible and indeed probable that these difficulties will be automatically counteracted as the general development of the country proceeds. At the present moment, although the great majority of the population live in comparative poverty—though as a result of their frugality definitely removed from the hunger line—Egypt is as a whole a prosperous country. Her natural wealth, as represented by the important Government undertakings and constructions, is steadily increasing; private building continues, often on an extensive scale; while the quantity of Egyptian securities held in the country is constantly augmented. The high price level maintained by these securities on the world's market is, moreover, evidence of the good credit enjoyed by the country. At the same time the amenities of life in the principal towns are being constantly improved and modernised, and compare favourably with those in many towns in Europe.

Side by side with this "Europeanisation" of the towns has proceeded a sophistication of the commercial life of the country. This has its good sides, for example, in the development of the use of banks, with a consequent reduction of "hoarding" and increased use of cheques (a clearing house for Cairo was opened in November, 1928, and for Alexandria in May last), and a close contact with the majority of European and oversea markets. On the other hand, it has led to a very great increase in the number of people engaged in business and consequently

to greater competition. The phenomenon of the entry into business in post-War years of young men with no experience, and some little capital which is often soon lost, is not indeed peculiar to Egypt, but it would appear to be continuing longer in this country than in most. Concurrent with this increase in the number of men engaged in business locally is increased competition on the market by foreign shippers, the inter-reaction of the two resulting in price-cutting, failures and realisation of stock at under cost price, with consequent disorganisation of the market.

Financial conditions in Egypt were comparatively favourable during 1928. A steady cotton market was, of course, mostly responsible for the improved conditions, with the result that, despite minor fluctuations in cotton prices, the 1928 market can be regarded as having completed the general recovery from the so-called slump in 1926. In 1927 the majority of cultivators delayed fixing the price of cotton, thus receiving no benefit from the good prices ruling during the early part of that year, but in 1928 actual prices ruling at the time of delivery seemed attractive, and a large proportion of the crop was fixed. During the year the banks who specialise in the cotton industry carried out a cautious policy in regard to credits to growers, with the result that a healthier situation now exists. Furthermore, the fact that the 1929 cotton crop is estimated at 7,500,000 kantars and has, on the whole, sold freely at prices which are remunerative to growers, would seem to indicate that the satisfactory conditions will continue during the present year. On the other hand, wages in the provinces remain low, viz., Pt.4 and Pt.5 for men and Pt.2 and Pt.3 for boys and girls per day.

The total imports into Egypt increased by some three and a half million pounds Egyptian as compared with 1927 and total domestic exports increased by about seven and three quarter million pounds Egyptian. Exports of cotton during 1928 were 7,433,000 kantars valued at £45,137,000, as against 7,383,000 kantars worth £39,000,000 in 1927.

There was some increase in postal savings figures and in Agricultural Bank returns, while banking conditions generally were comparatively favourable during the year. The average Egyptian Government bank note issue for 1928 was about £27,700,000 against £28,600,000 in 1927, but this figure is affected by the withdrawal during the later year of Egyptian bank notes from circulation in Palestine.

In spite of the apparently improved conditions of the market during the year under review, bankruptcies (mostly in the textile business) in many cases involving considerable losses to manufacturers, were more prevalent than in 1927. On the whole it may be said that the general situation is such as to warrant no small degree of optimism in regard to the economic development of the country. In many quarters Egyptians are becoming more generally alive to their country's potentialities, and while there is always some risk of such new-born enthusiasm over-running itself, yet there are grounds for the belief that, given political stability and wise guidance, the progress which of recent years has manifested itself in Egyptian economic life should continue and indeed be accelerated.

State Finance and New Works Projects.

The State budget for 1929-30 provides for expenditure of £E47,410,000, while revenue is estimated at £E38,950,000, the deficit of £E8,460,000 being charged to the Reserve Fund, which amounts to some £E40,000,000. This large reserve is the result mainly of underspending, in previous years, of sanctioned credits.

In justification of the contemplated heavy draft upon the Reserve Fund, viz., £E8,460,000, the Egyptian Government advances the necessity, in the interests of the country, of the execution of major works, particularly in respect of irrigation, drainage, communications, public health, roads, buildings, etc., many of which must ultimately become productive not only from the point of view of the well-being of the nation but also as revenue producers. Thus, in the Irrigation Department's budget appears a credit for £E3,900,000 in respect of works required for assuring sufficient Nile water during the low-water period, and the Ministry of the Interior is granted a credit to the amount of £E654,000 to be devoted to advances to municipalities and local commissions for purposes of water, lighting and sewage installations. Also the Egyptian State railways budget includes a credit of £E404,000 for the laying of new lines and the conversion to double track of certain existing single lines.

With the object of meeting the increased expenditure necessitated by the proposed creation of a cotton reserve and of the vast expenditure required for the public works, the Egyptian Government is seriously exploring ways and means of increasing the State revenue, not the least important of which is the proposed change in the customs tariffs to come into operation when the last commercial treaty expires in February, 1930. It is understood that, roughly speaking, it is hoped to double the revenue from customs duties.

Among the items of expenditure, interesting from the manufacturer's point of view, are the following:—

Ministry of Public Works.—Total grant £E9,737,635, of which the Irrigation Department takes £E4,664,000 for new works, as compared with £E2,538,000 in 1928. The credits for new works provide for £E648,000 to be spent on the heightening project for the Assuan Dam, for which the total cost is estimated at £E3,800,000; £E1,480,000 in respect of the continuation of the works on, and connected with, the Nag Hamadi Barrage; and £E405,000 for the White Nile projects, including £E40,000 for aerial survey. In all, the large credit of £E3,000,000 has been sanctioned in the 1929-30 Budget in respect of works destined to augment the supply of Nile water during the low water season. The total final cost of these projects, the completion of which will take several years, is estimated to amount to no less than £E21,000,000.

Works to be executed include the installation of Diesel four-stroke plant, high or low compression, mechanical or air injection, viz.:—1 of 166 h.p. and 1 of 110 h.p., required for Giza and Gezira Water-works; 2 of 100 h.p., required for Amria Conversion Project. Instead of installing Diesel engine plant in Upper Egypt, it is proposed to erect water turbine generating sets at Nag Hamadi with a number of motor-driven pumping stations north and south. Ten motor-driven pumping stations will be required for Esna.

The initial expenditure for the installation of two 3-phase transmission lines for feeding 14 subsidiary stations of powers varying from 10 to 15 cubic metres per second with central switch gear for drainage purposes is also included in the Budget estimates of the Ministry of Public Works. It is estimated the ultimate cost of the transmission cables for this project will amount to some £E500,000, but it must always be realised that actual expenditure usually comes well within the estimates. It may be assumed that similar transmission equipment will later be required for the Upper Egypt projects, the power for which would be provided by Seru Station, but no provision has yet been made for these projects.

Total credits allocated to the Main Drainage Department for the current financial year amount to £E492,748, of which £E411,500 is in respect of New Works. The heading "New Works" comprises £E173,000 in respect of advances to municipalities for drainage works at Demanhour, Port Said, and Zagazig, and £E75,000 for

various works which the Department undertakes each year with the object of gradually completing the drainage system of the capital. The remaining credits comprise the execution of new works, expenditure for which is spread over more than one year, for example the construction of a second collector and drains and improvements of existing water flushes in Cairo; £E80,000 for the establishment of a drainage system on Rhoda Island, at Zamalek and to the west of the Nile between Guizeh and Embabeh; and £E12,000 for the purchase and installation of a fifth pump and auxiliary steam engine at Kafr-el-Gamous.

As the existing drainage system of Cairo was only laid with the object of functioning for 25 years, it was appreciated that important projects would soon have to be devised for replacement and improvement. Of course, the Amria station will take up the outlying drainage, but as the population of Cairo has increased by some 15 per cent. above the increase foreseen when the system was laid out and as water requirements have reached an unexpected level, it is to be anticipated that in the near future the Egyptian Government will have to contemplate considerable expenditure in this direction. It is satisfactory, however, to feel that a start has been made with the project for the installation of drainage at Guizeh and Rodah, estimated at £E217,000, which was approved by the Council of Ministers on August 23, 1928, and is intended to form an integral part of the Cairo system, and will form a welcome addition to the works in operation and under consideration. The pump and steam engine for the Kafr-el-Gamous station, the cost of which is estimated at £E22,412, are required to prevent water from invading dwelling houses on occasions of heavy rainfall in the winter or when Nile levels are very high.

The Mechanical Department receives a credit of £E259,252, of which £E51,574 is to be devoted to new works, but as the Irrigation Department bears the lion's share of expenditure in connexion with the major works, the Mechanical Department's budget remains more normal. It is expected that the pumping station at Maghagha will begin to function by the end of November, and that the power pumping station at Seru will be ready for work by December.

State Buildings Department received £E1,506,938, of which £E1,200,000 is allocated to New Works, which include £E408,000 for the construction of hospitals in the Provinces, and £E459,000 for the Ministry of Education and the Egyptian University. This figure includes a credit for £E73,000 in respect of three new primary schools at Damietta, Beni Suef, and Assiout, and two new industrial schools at Damietta and Minieh for the 1929-30 financial year, the total cost of which will ultimately amount to £E203,000.

It should be observed that the procedure in regard to new buildings is for the Ministry concerned to send its proposals with the budget to the Ministry of Finance, and at the same time to notify the State Buildings Department of its proposals, placing them in order of priority. The Department is responsible for placing the contracts for the construction of the buildings, but only a certain number of the proposals reach this stage during the year, with the result that many credits have to be carried over to the next year's Budget. For example, in the Budget of 1928-29 appears a credit for £E60,000 towards the building of a new Arts and Crafts School at Abbassieh, but as only a portion of that credit was expended during that year it has been necessary to carry over the required expenditure to the budget of 1929-30.

Of the total budget allotted to the Ministry of Education amounting to £E3,137,007, only £E279,271 is in respect of new works (the Antiquities Department taking £E20,500 for this purpose), but it must be remembered that all that Ministry's new building projects are included under the budget of the State Buildings Department.

The Cairo Tanzim Department receives £E1,007,624, of which £E356,411 is to be devoted to new works mostly comprising macadamisation and widening of roads, construction of a tunnel, etc. The sum of £E285,000 is to be devoted to the continuation of new works, credits for which had been opened in the 1928-29 budget.

The Physical Department receives £E61,918, of which £E2,340 is to be devoted to the participation of the Egyptian Government in the cost of administration of the proposed East African Meteorological Observatory.

Ministry of Communications.—The expenditure budget of the Ministry of Communications amounts to £E0,789,180, of which the Egyptian State Railways receive £E6,318,588. This is £E430,248 above that of 1928-29, but £E40,700 of this amount is destined for the erection of workmen's cottages.

Railway credits for new works are estimated at £E1,730,430, as compared with £E1,365,400 in the previous budget. This grant comprises, among other projects, the sum of £E880,000 in respect of the continuation of works approved in 1928 and £E297,930 for the execution of new projects of which the following are the most important:—Construction of a workmen's hospital, £E11,000; inland water transport in Upper Egypt, £E50,000; motor bus service, £E45,000; enlargement of the electric power station at Gabbari, £E77,000; construction of an hotel at Cairo Station (total estimated cost, £E100,000), £30,000; laying of a line between Cairo and Suez (total estimated cost, £E180,000), £20,000. The sum of £E30,000 is also included in the budget as a first contribution towards the £E190,000 which it is estimated will ultimately be spent on the electrification of the Matarieh line, if or when this project is put into execution.

Having invited international tenders for the electrification of the Helouan line, in connexion with which the services of an eminent consultant engineer had been engaged, the Egyptian Government later decided to postpone the execution of the project, to which reference was made in discussing the budget of 1928-29. Other projects, partly included in the 1929-30 and partly to be carried over to the 1930-31 budget, are the following:—(1) Construction of the

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Rates of Freight, Insurance and other information apply to:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 88, Cross Street, Manchester.

and FURNESS, WITBY & CO., Ltd., Royal Liver Building, Liverpool.

new Kossair line (two-thirds of this expenditure is borne by the 1929-30 budget and one-third to be carried over to 1930-31. (2) Construction of Mersah-Matruh line (one-fifth to be charged to the 1929-30 budget and the remainder to the 1930-31.

As before stated, the estimated cost of the new lines, conversion to double track of existing single lines, etc., will amount to some £E404,000. Provision has also been made for the purchase of the following material:—Six river steamers and 20 barges, £E50,000; 20 steam rail cars (estimated cost, £E12,000), £E2,000; 20 side tank locomotives, £E160,000. Rolling stock (normal renewals and new works). Egyptian State Railway projects also include the removal of the existing locomotive workshops to another site, which was foreseen in the 1928-29 budget. A credit of £E2,640,797 in respect of general and normal expenditure provides for ordinary maintenance and renewals of existing equipment for which important orders are placed during the year.

The Egyptian State Telegraphs and Telephones Department receives a credit of £E1,335,085, of which £E616,500 is in respect of new works. The grant allotted to "General Expenses," viz., £E196,980, while mostly required for works in service, also contributes a certain amount towards new works. Of the grant for new works £E93,000 is in respect of works which continue from year to year; £E366,350 for the continuation of works in hand, and £E150,150 for new projects. The very important increase in expenditure on works already begun compared with the previous budget allowance is due to the fact that it includes the sum of £E200,000 in respect of the underground telephone line between Cairo and Alexandria, and another £E90,100 for different automatic exchanges against £E29,000 in the previous budget. Of these projects, one of the most important is that for the proposed 15,000 line exchanges at Alexandria, which in future years will probably be extended by a further 5,000.

The credits asked for new projects are the following:—Telegraphs: Purchase of 4 portable wireless installations for use in the desert, £E10,000; installations of wireless stations in the oases, £E8,000. Telephones: Laying of new underground lines at Cairo (£E27,000), Alexandria (£E12,000), and Heliopolis (£E11,000), £E50,000; installation of a cable to connect the Central Exchange at Cairo with Helouan and Meadi in place of the existing overhead wires, £E18,600; metallic casings for Provincial lines, £E10,000.

The Egyptian Postal Administration receives £E721,440.

The Ports and Lights Administration's budget of £E608,437 includes £E406,155 for new works, of which £E367,155 is to be devoted to the execution of works for which credits had been opened in the budget of 1928-29, and £E39,000 to new projects. The credits under the first category are destined notably for the construction of a lighthouse at Abu-el-Kizan (£E42,700); two depôts for the Port of Alexandria (£E62,000); landing wharves for the pilgrim traffic at El Tor (£E30,000); and towards the construction of a petroleum basin and nitrate quay in the port of Alexandria (£E80,500).

Of the credits allocated to new works the most important are the following:—Enlargement of the Port of Montazah, £E15,000; construction in the Port of Alexandria of a new quay for coal and quarantine service, £E20,000.

The various credits for improvements of Alexandria Harbour mentioned above are, of course, comprised in the general Alexandria Harbour development projects submitted by an International Committee of Experts in 1926, in connexion with which the Egyptian Government have recently engaged the services of an eminent consulting engineer. The total final cost of these works is estimated to amount to some £E2,000,000.

Main Roads and Bridges Department.—The total grant for this Department amounts to £E535,849, of which £E317,930 is for new works. Of this last, £E169,730 is to be devoted to works already begun and to those which are renewed from year to year, and £E138,200 to new projects. The first category comprises mostly construction of bridges for the Municipalities and repairs of unsafe bridges (£E45,000); the construction of a Nile bridge at Benha (£E40,000), and the macadamisation of the road from Kafr-el-Dawar to Abu Hommos (£E15,000).

New works include the following:—Repair of Kasr-el-Nil Bridge (total cost estimated at £E400,000), £E20,000; widening of the Cairo-Alexandria road (total cost estimated at £E70,000), £E20,000; widening of the Cairo-Luxor road, £E35,000; macadamisation of the Giza-Bahrashein road, £E13,000; widening and improvement of the Aboukir road, £E10,000. Moreover, the credit in respect of the widening and improvement of roads has been increased from £E7,500 to £E15,000 as a result of the decision to charge to that credit the expenditure for road works of which the cost does not exceed £E5,000, instead of charging such amounts to new works.

The total credit of the Ministry of War and Marine amounts to £E2,072,545, of which £E149,848 is allotted to new works, which are mostly to be devoted to the construction and modification of barracks, stables, and other buildings.

£E9,165 is allocated to the Frontier Districts Administration for the construction of hospitals, and provision is also made for the erection of a condenser at Sollum.

The total grant to the Ministry of Finance amounts to £E3,553,783, of which the following items of expenditure are perhaps the most interesting from the manufacturer's point of view:—

Survey Department.—Total credits, £E634,914. New works receive £E110,000.

Government Press receives £E124,777, of which only £E2,950 is allotted to new works. The only matter of particular interest in connexion with this Department's operations is the decision of the Egyptian Government to have all official envelopes manufactured by the Government Press instead, as hitherto, of importing such stationery from abroad.

State Domains Administration.—This Department, whose total grant is £E434,917, is an important purchaser of agricultural machinery and fertilisers.

Coast Guards and Fisheries Administration.—This Department's total grant is £E386,128, of which £E105,131 is in respect of new works. The more important items of expenditure are the following:—A credit of £E66,331 for the remainder of the amount sanctioned in December, 1928, for the purchase of a troop transport. £E19,440 in respect of the purchase of a vessel destined for fisheries research work. £E17,500 in respect of the 1929-30 contribution to the cost of a training ship in connexion with the projected naval school. The necessary credits for the vessels above mentioned were opened in the 1928-29 budget.

Department of Commerce and Industry.—Total grant £E190,156, compared with only £E35,454 in 1928-29. A wide programme has been elaborated for this Department, of which the following proposals are indicative of the intention of the Egyptian Government considerably to enlarge the scope of the Department's activities:—(1) Collaboration of technical experts to study different industries such as marble, pottery, glass-work, furniture, chemicals, canning, etc., and to institute measures with a view to the development of such industries. (2) Creation of a Cereals Exchange and an office for the control of exports. (3) Creation of a tannery, dyeworks, and shoe factory. (4) Subventions to chambers of commerce. (5) Amelioration of the rice industry (hulling). (6) Purchase of materials to be sold on credit terms to small manufacturers.

The services of British experts have already been engaged in connexion with projects for rice hulling, tanning, and dyeing, to which reference is made elsewhere in this report. It has further been decided to appoint as head of this Department an official with the rank of Director-General in place of the former less elevated grade of Controller. The Director-General will, it is understood, be assisted by a Consultant Adviser.

Ministry of Interior.—The item of most interest in the budget of the Ministry of the Interior is a credit of £E481,000 in respect of advances to Municipalities and Local Commissions for purposes of lighting and water installations. The Department of Municipalities and Local Commissions purchases most of its requirements on the Continent, but it engaged the services of a British consultant engineer in 1928 to advise on the question of domestic water supply in the provinces. It is understood that this consultant has already submitted his report on this important question.

Department of Public Health.—The Department of Public Health has elaborated a programme for the construction over five years in the Provinces of 150 hospitals and to add a clinic to each provincial hospital for treatment of out-patients for ophthalmia, bilharzia, etc. Credits under the above Department's budget of £E1,614,257 provide for the execution of the first section of the new hospitals project. Estimates are also included at £E200,000, £E45,000, and £E10,000, respectively, for marsh reclamation, malaria campaign, and destruction of mosquitos responsible for dengue fever and yellow fever. Provision is also made for the establishment of four dispensaries for infant welfare, two clinics for the treatment of leprosy, three Cantonal hospitals, six sanitary offices, and for the purchase of 104 beds for provincial ophthalmic hospitals. A credit of £E10,000 is included for disinfection services.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 9:—

Egyptian Futures.

Sakel Contract.—One of the chief features of the week has been the publication of the first Government estimate; this was issued on the 7th inst. and showed an anticipated yield of 2,502,992 kantars, against final totals of 2,533,307 and 2,520,332 kantars for the two preceding seasons. The initial effect on the estimate was to cause only a slight decline, the advancing tendency of the American markets at that time being rather encouraging to those holding contracts. Since this we have had to face the after-effects of the American Bureau report and, with the development of a more widespread acknowledgment that supplies of fine stapled cottons are going to prove ample, probably more than ample, to meet the season's requirements, a weak tone has supervened. The action of near cotton has proved particularly disconcerting to those working for higher prices; liquidation has concentrated mainly on the November position, with the result that this month has widened to 36 points below January. A certain amount of trade calling has been noticeable throughout the week, particularly during to-day's session; at the time of writing, however, it appears improbable that the offtake from this quarter is going to develop on lines sufficient to counterbalance other factors, amongst the most prominent of which is the increasing pressure of the crop movement. To-night's closing rates show declines of 70 points for near and 60 to 48 points for more distant positions on the week.

Upper Contract.—Only a moderate amount of interest has been shown in this contract during the past week, and fluctuations have been mainly governed by the action of the American markets. The preliminary official estimate of Egyptian varieties (apart from Sakels) is given as 5,341,877 kantars, against the two previous seasons' totals of 5,313,843 and 3,512,167 kantars, respectively. Whilst the probable supply is undoubtedly large, it must be remembered that we

are starting the season with values at a much closer basis with other varieties than in past seasons, and on this account consumption will probably be well maintained. Two factors that rather temper operations on the long side have cropped up during the week: the first is the satisfactory showing in the Mississippi and Delta portions of Arkansas and Louisiana in yesterday's Bureau report, and the second concerns the rather pessimistic advices from mills producing tyre fabrics in the U.S.A.

Egyptian Spot.

Spot business has been quite brisk during the past week. It appears evident that Egyptian values are attractive at current levels, and each drop of 10 to 15 points has brought buyers into the market. Sakels have been particularly weak and quotations show a substantial fall on the week, but Uppers, everything considered, have maintained a fairly steady front.

Sakel has been in improved request for practically all qualities, and sellers have been disposed to lighten their holdings.

Uppers.—The inquiry has continued good, and buyers have shown a tendency to purchase better cotton, the reason being presumably that the stock of 15 to 20 on cotton no longer contains anything attractive. With the new crop so close at hand, buyers have had rather the best of it.

Pilion has been in moderate request only.

Nahda.—Owing to the shortage of the medium qualities of Sakel, this cotton has met with a much improved inquiry. Prices have been very irregular and sales have been somewhat disappointing on the whole.

White, Maarad, etc., have been neglected.

Sudan Sakel.—A large business has taken place, principally in the lower qualities.

Tokar Sakel.—Rather more inquiry has been in evidence, but buyers are slow to bid, and actual sales have been few.

C.i.f. Business.—Less activity has been witnessed in spite of the somewhat improved conditions up country. Forwardings to the trade last week were returned as 5,931 bales Egyptians and 1,480 bales Sudan. Estimated spot sales for the week, 2,400 bales Egyptians and 3,350 bales Sudan Sakel. Quotations of Sakel have been reduced 85 to 50 points, those of Upper 18 points, and those of Pilion 12 points. F.G.F. Sakel to-day, 15.90d. F.G.E. Upper to-day, 11.15d. F.G.F. Pilion to-day, 12.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 3, state:—

Since our last report the futures market has again shown considerable activity, with fairly wide fluctuations. The week's summary of price movements is as follows:—Sakellaridis: November, 32.76 dollars, 0.49 dollars down; January, 32.28 dollars, 0.49 dollars down; March, 32.86 dollars, 0.44 dollars down; May, 33.34 dollars, 0.36 dollars down. Ashmouni: October, 20.50 dollars, 0.12 dollars down; December, 20.88 dollars, 0.28 dollars down; February, 21.35 dollars, 0.25 dollars down; April, 21.77 dollars, 0.23 dollars down; June, 22.15 dollars, 0.25 dollars down.

Notes of the Week.

King Nadir of Afghanistan.

There can be little doubt that the army under Nadir Khan which was responsible for the defeat of the Amir Habibullah's forces and the capture of Kabul has done well in brushing aside its leader's reluctance to assume the Crown and in acclaiming him King of Afghanistan. A hiatus in the succession to the Throne is not a good thing for a primitive people, and the East as a whole is more impressed by a ruler who has won his position by his own prowess or whose character bespeaks his capacity to govern, than by one who has to be summoned from obscurity or a hiding place to mount the Throne by a method of selection. The loyalty of General Nadir Khan to the former dynasty was above question; but King Amanullah had so gravely compromised his own position and the succession of other members of his family that the Afghans would need to be far more constitutionally-minded than they are to allow the claims of the hero of the moment to be overlooked. It is hardly to be supposed however, that King Nadir's troubles have ended with the occupation of the capital. He commands as much support in the country as any other possible Sovereign, but the Afghans make no pretence of being willing, law-abiding subjects of any ruler. Amir Habibullah has made good his escape, as far as is known at present; and it remains to be seen whether he can rally to his standard a sufficient following to challenge the course of events. Such opposition as there may be to King Nadir is more likely to arise from the traditional lack of cohesion among the tribes of Afghanistan than from excess of devotion to the cause of any particular claimant to the Throne. The best that could happen to the country would seem to be that King Nadir should be able to establish his authority gradually and introduce an enlightened form of government free from the impetuous irresponsibility that characterized King Amanullah's reign. The latter's efforts at reform may have been well meant, but their method of introduction betrayed the ill-balanced mind that had been responsible

a few years previously for the launching of an attack that aimed at the conquest of India. The desire of Amanullah Khan to become a member of the Diplomatic Corps in Rome should relieve King Nadir of one embarrassment.

Verbum Sapienti in Egypt.

The new High Commissioner in Egypt has done well to make a statement on British policy in Egypt, and it is to be hoped that certain Egyptian politicians will not only study the wording carefully, but will also be able to read here and there between the lines. It goes without saying that a treaty of the nature contemplated for the settlement of Anglo-Egyptian relations, to be effective, must have the Egyptian nation behind its own Government's signature. The difficulty in a country where four-fifths of the adult population are illiterate is to ensure that the people understand what it is asked to vote upon and is under no dictation in recording its opinion. No other method of reaching this end seems to have commended itself to Egypt than the holding of a general election, and it is not to be expected that even the most doctrinaire Government in Great Britain will want to examine the election address of each successful parliamentary candidate in Egypt, to make quite sure that he laid sufficient emphasis on his unqualified support of the proposed Treaty. We may suppose, therefore, that the stress laid by Sir Percy Loraine on the Egyptian nation's being behind its Government does not look beyond the ordinary acceptance of the Treaty by a suitable majority in Parliament, whether individual members were returned to support the Treaty or because their constituents were too cowed to vote for anyone else. If the British Government desired only to place on record that the existence of a parliament is, in its opinion, the hall-mark of a "free" country, Sir Percy Loraine need hardly have spoken. He was on much more important ground when he stated that "the will to apply the Treaty must exist alongside the will to sign, and that will can fructify only in a spirit of mutual regard and mutual confidence, and with a common understanding of the common aims which the Treaty consecrates." Without mutual respect there can be no satisfactory relationship between the Egyptian and

British peoples. Such respect on the part of the Egyptians would be impossible, if, after the signature of the Treaty, Great Britain tried to restore in Egypt conditions prevailing before 1922. The British equally could have no respect for a people who, before the ink on the Treaty is dry, proceed to clamour for "better terms." If the Treaty is not to consecrate "the common aims" of the two nations, no good will come of its signature; and those Egyptians who propose to use it at once as a basis for further agitation will be playing a braver and more honest part, if they come out into the open and denounce the proffered terms now.

The Political Trend in Roumania.

Public life in Roumania has been not a little disturbed by a series of incidents following the death of M. Buzdugan, President of the Council of Regency. The appointment of M. Saratzeanu to the vacancy in the Council has caused the Minister of Finance, in deference to the outcry raised over his relationship to the new Regent, to resign his Portfolio, and a change in this particular Ministry at this moment can hardly fail to be an embarrassment to the Government. A more serious development is the open hostility shown towards the new Regent by the Liberal Party, whose deputies had absented themselves from the joint session of Parliament summoned to fill the vacancy in the Regency. How high feeling is on the subject may be gauged by the fact that a Liberal organ published a statement which it put into the mouth of Queen Marie, attacking the Government for its refusal to appoint Her Majesty to the Council of Regency. This uncompromising statement was worded in the first person and undoubtedly bore on the face of it a sufficient semblance of authenticity to serve as a bombshell for the Roumanian public. As the inevitable repudiation could not follow for a day or two, it says much for the strength of the Government's position that it was not more seriously inconvenienced by its opponents' tactics. In the opinion of Professor N. Yorga, who is an historian first and a politician afterwards, an important change is taking place in the political situation of the country, as a result of the attitude of the Liberal Party. The country, he considers, is on the threshold of a far more serious struggle than any that it has experienced before. The poverty of the Liberals in men animated by real love for their country and able to understand its needs makes the Party a manifest peril to the peace of the State and its future development. Its present leaders have allowed themselves to be carried away by their political passions and are arousing ambitions that will prove beyond their control. In order to prevent actions which may bring about "the irreparable" Professor Yorga wants to see a mobilisation of all thoughtful people to interpose a sufficiently strong barrier against all agitation and every attempt to destroy the national unity.

M. Venizelos in Greece.

Time was when Germany's three Emperors were facetiously known respectively as *Der Greise*, *Der Weise*, and *Der Reise-Kaiser*, the last from his weakness for foreign travel. All three qualifications are united in the person of Greece's Prime Minister, who has now returned to Athens after a ten weeks' tour of Europe. To judge by the frequency with which the expression has been used during his absence, the *dossier* of subjects put on one side "to await M. Venizelos's return" must by now assume formidable proportions. It is a tribute to the peculiar position which he holds in the country that so many matters have to be postponed until the Prime Minister's return; but from the point of view of national progress the reluctance of other Ministers to take decisions must be as embarrassing to the people as a whole as it may well prove to M. Venizelos himself. To the outside world it appears as if Greece, having concluded a pact with Italy and Yugoslavia, could set her mind at rest in regard to her relations with all foreign countries, with the one ex-

ception of Turkey. It is, however, on Turkey alone that M. Venizelos omits to bring to bear the persuasiveness of his personality, to which most European countries can testify. His visit to Angora was promised a year ago, but has so far not taken place. Relations between the two countries have materially deteriorated during the interval; yet, while both Governments protest their readiness to reach a settlement, the one step that might lead to the desired goal is not taken. Apart from the constant tension with Turkey, which, after all, need not be taken too seriously in view of the detachment with which M. Venizelos himself regards it, Greece's major preoccupations at this time, it would be thought, must be of an economic character rather than in the realm of foreign affairs. It is, however, for the most part economic questions that have had to be put aside to await M. Venizelos's return. If, therefore, Greece is able to keep her peripatetic Prime Minister long enough in the country to deal with some of the more pressing economic problems, which range from the issue of loan bonds to the grant of a minor contract, a fresh accession of confidence in the future of Greece may materialise abroad.

Peace in Palestine?

It is beyond doubt that the military measures taken in Palestine have completely stifled all prospects of any major operations on the part of those who wished to disturb the peace. So long as the troops remain in Palestine, in fact, there is scarcely a remote possibility of further complications involving life and death. But those who find consolation in this fact are easy to please. For it is perfectly obvious that the keenest resentment still exists. The regulations regarding the Wailing Wall have, as was in all probability foreseen, caused fresh annoyance to the Muslims—a fact illustrated by the general strike ordered on October 16; the boycott still continues; and the sentences upon those Arabs involved in the recent riots are causing considerable anger. That the Government has to do its duty, that crime must be punished, goes without saying—but this should not blind one to the truth that the situation is still ugly in the Holy Land. The attempt made to represent the anti-Zionist sentiments of the Arabs as consisting merely of the hostility of the effendi class is not convincing, for what was taken by observers who believed that material advantage would always silence the Semitic Muslim's mouth to be tolerance of the new settlers, is now being interpreted as resignation, or fatalism, that on any major provocation can convert itself into active antagonism. Only by a change in psychological attitude, indeed, can the Zionists hope to win the good will of the Arab majority. To judge by a recent remark made by so eminent and so intelligent a Zionist as Dr. M. D. Eder, who said that a final solution of the Arab question could be achieved only when there was a Jewish majority in Palestine, the prospects of real peace in Palestine are doleful, unless considerable changes are made in the lines of administration in the country.

Different Prescriptions.

In the last few weeks prominence has been given to two diagnoses of the situation in Palestine, by the *Brith Shalom* Society of Jerusalem, and by the Seventh Dominion League respectively. The *Brith Shalom* Society, despite that it is much frowned upon by both Jew and Arab, appears to contain an essentially reasonable idea, the idea of fostering unity and co-operation in Palestine as between Arab and Jew. Perhaps its weakness lies in its vagueness, particularly upon the ultimate size of the Jewish population in Palestine. The fact that it does not seem very precisely to have defined its conception of a Jewish "homeland" in Palestine has given a handle to Arabs to say that it is but the ordinary Zionism presented in the guise of a sweet reasonableness. From a psychological point of view, however, this Society marks a considerable advance upon other institutions, or schools of

thought in Palestine. But of the other idea which has recently received fresh publicity it is impossible to write so favourably. The conception of Palestine as a seventh dominion of the British Empire may or may not be sound, but certainly the method by which its sponsors hope to make the Holy Land a dominion will not help towards the establishment of peace and good will in Palestine. The first and immediate object of this League, as was explained by Colonel Wedgwood last week, is to promote the progress of Palestine as the national home of the Jewish people and to secure the co-operation in this endeavour both of the British people and the British Administration. But from this statement it will be seen that the crux of the matter is ignored. Not a word, be it noted, of securing the co-operation of the Arab majority. Presumably it is taken for granted. But is it not in essence the main problem of Palestine: to secure Arab good will for whatever the Jews do? Is it not, in fact, a *sine qua non* for the permanence of Jewish enterprise in Palestine? It will be retorted, of course, that no antagonism to the Arabs of Palestine is implied in this Seventh Dominion idea, that the development and the progress of the Arabs are, on the contrary, ardently desired by its sponsors. Possibly; but of what use is that desire when it is not mated with, but preceded by, a desire for the establishment of a Jewish majority in Palestine? This idea has, in fine, not the slightest chance of making any appeal to the better nature of the Arabs, and, as such, must be dismissed as both undesirable and unpracticable.

Iraq and the League.

There appears to exist very considerable misapprehension upon the justice of the claims of Iraq to membership of the League of Nations, particularly among those who imagine that, because the frontiers of Iraq are so long and vulnerable, and because she might never be strong enough to withstand, say, an invasion by Turkey or Persia, to talk of granting her independence is so much sentimentality. Critics who fasten on the military weakness of Iraq at the present time—weakness, that is, when non-Iraqi forces in Iraq are left out of account—are apt to forget that the League already contains as members some States which certainly are not in a position to defend themselves. Without suggesting that such countries as Haiti or Cuba may be taken as a necessary model for Iraq, we may remind such critics that in these two States, which are members of the League, the United States maintains permanent officials. Panama, again, which is a member of the League, similarly allows America to station forces on her territory. There is, indeed, no inexorable obligation on Iraq to accept British support or advice. But it is not to be thought that with the entrance of Iraq into the League in 1932 will be witnessed the complete disappearance of the Royal Air Force from Iraq, for even if public opinion in Great Britain wished it, the Iraqis themselves might well ask for the continuance of the air arm. Great Britain and Iraq are friends, and it is on the basis of friendship that their relations, whether military, commercial or political, will persist. Misunderstanding has been largely cleared away, and the ground is now ready for a frank discussion of the most desirable and most practicable course to be taken. Iraqis in authority are not unmindful of the realities of the situation, and we look forward with confidence to seeing the negotiations that are about to begin for a new Anglo-Iraqi Treaty crowned with an agreement eminently satisfactory to both the desires and the needs of Iraq and of Great Britain.

INDIAN NOTE.

The Export Duty on Indian Hides.

The Indian Fiscal Commission of 1921 condemned the export duty on Indian hides as being wrong in principle and dangerous in its effects. A majority of the members of the Taxation Inquiry Committee of 1924-25 endorsed

this condemnation. The Government of India agreed that the duty ought to be removed; and in the Indian Finance Bill of 1927 they provided accordingly. But the Legislative Assembly vetoed the proposal by the casting vote of the President. The duty is consequently still in existence. It is not so onerous an impost as it was, as it has been reduced to 5 per cent ad valorem. But there is really nothing that can be said in its favour. It was originally designed to protect the Indian tanning industry, and to divert the tanning of Indian hides from Germany to the British Empire. It failed, of course, to achieve either object. If the Indian tanning industry needed protection, such should have given, as the Fiscal Commission pointed out, by an import duty on leather. India has no monopoly of hides in the markets of the world. It follows, therefore, that Indian hides ought not to be made to bear an export duty. And as the production is enormously in excess of the requirements of the Indian tanners such a duty is indefensible. In these circumstances we are glad to see that the Government of India are still trying to get rid of the duty; and that with this object in view they have now appointed a Committee of Inquiry. They think that the voting in the Assembly reflected a definite well-balanced conflict of interests. And they are disposed to believe that a satisfactory solution of the difficulty may perhaps be found in the replacement of the export duty by an export cess. The proceeds of this cess would be expended—under the direction of an administrative Committee for the benefit of the industry as a whole. The Inquiry Committee have accordingly been asked to investigate the matter and to advise the Government regarding: (a) the articles on which the cess might be levied and the rate of cess on each article; (b) the constitution and personnel of the administrative Committee; and (c) the functions of the Committee and the objects upon which the cess might be expended. Dr. D. B. Meek, Director-General of Commercial Intelligence, has been appointed Chairman of the Inquiry Committee; and the members, six in number, represent the various sections of the industry. We hope that the Government may have thus at last found a way out of the difficulty. But Indian opinion has a curious way of clinging to theories that are discredited in other parts of the world, and there may be, therefore, still further delay before this objectionable tax is finally removed.

Mr. H. N. Krunzu, member of the Indian Legislative Assembly and Vice-President of the Servants of India Society, has arrived in London as the representative of the Indians of East Africa to lay their case in connexion with the Report of the Hilton Young Commission and of Sir Samuel Wilson before the Government, the leaders of the political parties and the general public.

PROGRESS IN THE SUDAN.

Great Britain's task in the Sudan is of a three-fold character—to place the country on a sound financial and economic basis, to provide for the social and cultural improvement of the native population, and to promote the material development of this land of far-reaching distances. The Governor-General's Report for 1928—the transmission of which to the Secretary of State for Foreign Affairs was one of the last acts of Lord Lloyd's High Commissionership—throws into strong relief the conscientiousness and thoroughness with which this three-fold task is being carried out. That the maintenance of peace and order is the basis of all constructive administration goes without saying, but it is not to be expected that a country of the size of the Sudan, with its multiplicity of native races and tribes, should always be free from disturbances or unrest. Over many tribal sections occupying the more remote parts of the country no form of control has yet been established, and their good behaviour is conditioned more by a shadowy respect for the distant arm of British law and their own interpretation of their own interests than by any enforcement of order on the spot. The generally pacific nature of the country threw the Nuer outbreak of 1927, which was responsible for the murder of Captain V. H. Fergusson, into strong relief: unrest spread throughout the numerous tribal divisions of the Nuer, and in spite of punitive measures the year under review passed without a final pacification, as a result of the ease with which the more rebellious spirits could take refuge in inaccessible territory. The experience of this outbreak has served to stress the need for a much larger programme of road construction, to enable regular contact between the Government and the tribes to be maintained. At the same time, the policy of strengthening the authority of chiefs will be extended, as occasion offers, over a wider area, with a view to paving the way to an administration based on native custom and in harmony with tribal institutions. Already in some of the more advanced regions native courts administering tribal or customary law under chiefs have been established, as a further stage of the policy laid down a few years ago for the native administration.

The work of placing an agricultural country on a sound financial and economic basis must necessarily be subject to many fluctuations. Lean seasons inevitably occur and tend to eat up the accumulated benefits of normal or good seasons. The Sudan bids fair to have found salvation in the great Gezira scheme, which already provides some fourteen per cent. of the country's revenue, apart from the indirect contributions for which it is responsible. The Gezira radiates wealth far beyond the actual area that it comprises. If a close analysis of the distribution of money earned in the Gezira could be made, the Report points out, it would probably be found that most of the central area of the country has derived benefit from it in greater or lesser degree, and that it is the Gezira scheme which has kept native trade solvent during the last few years of drought and misfortune, by providing employment and putting money into the home market. It is not, however, a wise policy to keep all the country's eggs in one basket,

and the furtherance of schemes to widen the basis of prosperity must always be a preoccupation of the Government. For the moment the considered opinion of the authorities is that the financial position may be described as on the whole satisfactory, but not yet stable. Two not unimportant factors in the situation are the call for a reduction in taxation and the question of Egypt's contribution to the Sudan Budget. The policy of tax reduction was not lost sight of during 1928, and further reductions of direct taxation have been possible in the 1929 Budget. An interesting note in the Report states that a careful inquiry into the standard of taxation in the various provinces showed that in certain cases taxation was above the general standards aimed at and was possibly hampering development. Reductions were accordingly made in such cases, and it is thought that the stage has now been reached where further reductions will have to be general and not local. When the proposed treaty between Egypt and Great Britain is signed one of the first steps to be taken is an examination of the question of the indebtedness of the Sudan to Egypt with a view to a settlement "on fair and equitable lines." Even if the present contribution is not disturbed, it may be expected that the settlement will add to the annual loan charges. Apart, however, from such considerations the normal development of the country must continually raise the question of adjustments in the manner of obtaining revenue, with the object of distributing equitably the incidence of taxation.

Not the least interesting feature of the 1928 Report is the emphasis laid on the construction of roads. The railway was a determining factor in the conquest of the country, and it was inevitable in the earlier period of settled administration in a territory as vast as the Sudan that the railway system should be regarded as the backbone of the country. Supported by river navigation, it provided not only the chief means of communication, but also a convenient source of revenue. Conditions, however, in the Sudan are undergoing a rapid change; there is the need for more effective control of the remoter regions with a view to the inculcation of law and order among the more primitive tribes, as well as for their provisioning in times of dearth, and the position of the country on the high road between the north and East and South Africa, with the now unlimited range and capacity of mechanical transport, calls for a forward policy in road construction. With the necessarily restricted funds at its disposal it is unlikely that the Sudan Government will be able to satisfy at any one time all the demands on its exchequer in regard to both railways and roads; it will be enough, perhaps, if it succeeds in avoiding the charge of neglecting one for the other. The salient point of the history of the year 1928, the Report points out, is undoubtedly the development in transport and communications in respect of roads, railways and motor transport all over the country. The native motor-bus now plies between Khartoum and Wad Medani (110 miles) and the Abyssinian frontier, four hundred miles away, can be reached by the same means for sixteen shillings. The Kassala railway is now completed from Port Sudan to Makwar, and it may well be that the Government Railways will be more concerned in the immediate future to deal with the accrued liability for depreciation of assets than to embark on new schemes of construction. Thousands of miles of dry-weather road are now open to motor transport, but the construction of all-weather roads in various parts of the country is still in an initial stage. The most important from the point of view of through traffic is the road from Juba, the new southern port of the steamers on the Nile, to Nimule, the northern terminus of the Kenya and Uganda railways and steamers system. This road at present, over a hundred miles in length, is only a dry-weather thoroughfare: but it is inevitable that, as soon as it has been made usable for all seasons of the year, there will be a demand to extend it northward towards Khartoum, in order that motor transport may more fully take the place of a railway from Cairo to the Cape.

*The Near and Middle East

From Our Own Correspondents.

EGYPT.

Cairo, October 12.

Accession Day Celebrations.

The usual Accession Day reception was held at Ras el Tin Palace on October 9 by King Fuad, and it was noticeable that among those who attended were a large number of prominent Wafdists. In view of the proximity of the anniversary to the arrival from Europe of King Fuad, when a grand reception was held at the Municipality, it was decided to dispense on this occasion with the usual afternoon function, but the customary garden-party was given in the Antoniades Gardens by the Governor, while in the evening there was a banquet of over 250 covers at San Stefano, and the City was brilliantly illuminated. To-day the King gave a luncheon party in honour of the Second in Command of the Mediterranean Fleet, Vice-Admiral Kelly, to which the High Commissioner and the Ministers were also invited. There is as yet no news on the return of the Court to the capital, and it is believed that no move will be made until next month. The King and the Queen are thoroughly happy at Montaza, which agrees well with the Royal children, and it is quite understandable that His Majesty should wish to wait until the last moment to return to Cairo.

Electoral Preliminaries.

Meanwhile, Adly Pasha, who, in addition to being Premier, is also Minister for the Interior, is working hard at getting the preliminaries completed so that the election decree can be issued. It is anticipated that it will be promulgated towards the end of the coming week; this would mean elections in the first week of December. Every effort is being made by the Cabinet to ensure that those elections shall be as "free" as it is possible for elections to be in a country like this. The presence of the Mudirs for the Accession Receptions was taken as a good opportunity by Adly Pasha to impress upon them the necessity for maintaining public order and for preserving an absolutely neutral attitude during the electoral period. At the same time one cannot say that the Wafdist Press is contributing much towards the control of public feeling at the present moment. It is doing its utmost to make the public believe that the Adly Cabinet is pro-Wafd, and, in fact, under the influence of the Wafd, and to this quite naturally the organs of the other parties are replying—with the result that Egypt can expect to be treated to another of those political polemics between party organs, which in the past have done so much to obscure real vital issues and make impossible the furtherance of the true interests of the country. To make matters worse, the European organ of the Wafd has now started a series of articles attacking in the most gross manner both Lord

Lloyd and Mohamed Mahmoud Pasha—another illustration of the inability of the Wafd and those who serve it to appreciate their responsibilities and how such tactics do not conduce to the existence of those good relations which they profess to have so much at heart.

A Conflict of Jurisdiction.

A serious conflict of jurisdiction between the Italian Consular Court and the Mixed Tribunals has just been averted. The subject was the estate of the late Countess Marie Kahil Pasha, who died recently. A dispute arose over the will, which, as the deceased was an Italian subject, was handed to the Italian Consulate by her secretary. The other heirs took the matter to the Mixed Courts, which, deciding that it had jurisdiction in the matter, ordered the sequestration of the estate and the appointment of administrators to administer it until the Courts could deal with the dispute. The Italian Consular Court itself also took action, appointed another person as administrator and had its seals placed on articles included in the estate on which the seal of the Mixed Tribunals had already been opposed. The Mixed Court, which had given the decision, on being appealed to by its nominees, upheld its judgment, and ordered the seals of the Italian Consular Court to be removed—*manu militari* if necessary. Recourse was had by both parties to the Egyptian Government, which replied that, faced with an order of the Mixed Tribunals, it could not do otherwise than carry it out in virtue of the international agreement to which, it pointed out, Italy had been a party. The conflict thus threatened to develop into an international dispute, but fortunately the Italian Consulate, recognising that it had made a mistake in taking action in a matter which was before the Mixed Courts, and on which a decision had been taken by those Courts, removed its seals before the Egyptian authorities could intervene. Thus the incident is closed until the Mixed Court of Appeal, which assembles next month, can deal with the case and decide whether the lower court was correct in claiming jurisdiction.

Al Azhar.

The approval by the Council of Ministers of a law reforming Al Azhar and converting it into a theological university organised on the most modern lines, has been followed by the resignation of the Rector, Shaikh Meraghi, who was mainly responsible for the elaboration of this most important reform. Exactly what the cause of this unexpected development is cannot be discovered, but, as in his letter of resignation the Shaikh states that he finds it impossible to continue working under existing conditions, it can only be assumed that he is referring to the delay in promulgating the new law, which, it is stated, is due to the objection of the Palace to certain of its provisions, including those for the appointment of the Rector and the Grand Ulama. The retirement of Shaikh Meraghi is most regrettable, for, even though his successor, the head of the Tanta seminary, might be the most enlightened of men, it would obviously have been preferable for the new reforms to be introduced under the direction of the man who had inspired and elaborated them. Shaikh Meraghi is regarded as the greatest

Islamic reformer since the days of Gamel Eddine El Afghani, who was responsible for the starting of reform movements in many Muslim lands a quarter of a century ago, particularly for that headed in Egypt by the celebrated Shaikh Mohamed Abdu, and his retirement is considered to be a great blow to the cause of religious reform in this country.

CYPRUS.

Nicosia, October 9.

The Greek Deputation.

The Greek petition for union with Greece is by no means endorsed by all sections of the population. Not only the Turks, but the Armenians, and Maronites also, are protesting strongly by memorials submitted through the Governor, against the present movement. Their numbers are comparatively small, but the Greek leaders and Press are, of course, annoyed over the fact that these committees have no desire to exchange British for Hellenic rule. The Greeks must have been aware that the Turks were sure to oppose their fresh efforts, as they have consistently opposed all such movements during the 50 years of British occupation and rule. The two Greek delegates and secretary, arrived in London on September 27, and

took up residence at Brown's Hotel, Dover Street, as reported by telegram.

Destruction of Rats.

It is announced, in the useful Agricultural Supplement to the last *Cyprus Gazette*, that a specialist in rat destruction, Mr. H. E. Cayley, is to visit the Island in October "to organise an intensive campaign in the Island," extending probably over two months. Very considerable damage is caused to products by rats, especially to carob (locust bean) trees, which yield one of the principal articles of export. War against these pests has been carried out on some former occasions, the Government paying various rates for rats brought in to different centres, as is done for locusts and queen hornets. But conditions are such that only very partial and transitory success can be hoped for. Carob trees are widely scattered over extensive areas; and when certain numbers are destroyed, their places are soon taken by others. It will, however, be interesting to watch the results of Mr. Cayley's methods and plan of campaign.

General News.

Mr. Herbert Henniker-Heaton, C.M.G., the new Colonial Secretary, arrived on September 27, and has taken over the duties of his office at Nicosia.

It is stated that ex-King Husain will shortly leave the Island, and that he will establish his abode at Baghdad early in November. He recently took tea at Government House with Sir Ronald and Lady Storrs.

Dr. E. S. Corsellis, O.B.E., Director of Health, is retiring on September 19, after a service of many years in the Island, as District Medical Officer and Chief Medical Officer. He is at present on leave in England. He is succeeded by Mr. R. E. Hopton, C.M.G. Mr. A. S. Millard is Assistant Director of Health.

Once more Cypriot youths are being warned by the Press to avoid the serious risks of emigration to Britain and the United States. Many who have done so in recent years fail to find employment, and are in a bad plight.

A Russian vessel arrived at Famagusta recently, with a cargo of cement. After strict examination the crew were allowed to land.

A French hydroplane, bound from Syria to Marseilles, was obliged last week to put into Famagusta harbour owing to engine trouble; but after repairs was able to resume its course the following day.

TURKEY.

Constantinople, October 14.

Visit of British Squadron.

On October 12, amid the booming of saluting batteries both ashore and afloat, there anchored in the Bosphorus the first British naval units to visit Turkish territorial waters since the Armistice. A detached squadron of the Mediterranean Fleet, consisting of the Fleet Flagship Queen Elizabeth, flying the flag of Admiral Sir Reginald Field, the aircraft-carrier Courageous, and four destroyers cast anchor partly off Dolma-baghtche Palace (the Queen Elizabeth and two destroyers) and partly off Moda Point (Courageous and two destroyers). The squadron.

was followed at a short distance by H.M.S. Bryony, the Admiral's yacht.

The official visits, scheduled to take place, according to a two-column programme published by the whole local Press, began as soon as the flagship had cast anchor, the Admiral receiving in succession the Acting-Governor of Constantinople, the Commander-in-Chief of the Third Army Corps, the Turkish Senior Naval Officer, the Judicial Bench and the British Diplomatic and Consular authorities. Admiral Field returned the visits the same day, being received on the steps of Dolma-baghtche Palace, where he disembarked from his barge, by a detachment of Military Cadets, a picked platoon from the Third Army Corps and a contingent of Turkish marines who rendered military honours and were inspected by the Admiral.

At a later stage the Admiral received a representative body of Turkish journalists, headed by the Correspondent of *The Times*, who translated the Admiral's observations into the French language while the reporters discussed British naval cocktails of becoming potency. Whether the cocktails may be held to account for the hilarity which distinguished this function, it is not for the writer to say, but certain it is that the Press representatives went over the side *in corpore* much invigorated by the Admiral's remarks. Sir Frederick Field explained to his guests that the primary object of his visit was to rekindle and to reaffirm the secular relations which had ever subsisted between the British and Turkish navies. No one would be happier than he if the diplomatic relations between the two countries could be invested with the same spirit of cordiality, when there might be a return to that *camaraderie* which distinguished Anglo-Turkish relations during the Crimean War.

On the morning of October 13, the Admiral, in the name of the British Navy, was to have deposited a wreath at the foot of the Monument to the Republic at Taxim. Every preparation had been made—the street had been sanded, Persian rugs had been laid down, a guard of honour had been drawn up—when it came on to rain without interruption, and the ceremony had to be postponed until the Admiral's return from Angora.

On October 14, Sir Frederick Field, in the company of the British Ambassador, proceeded to Angora, where, after calling on the Foreign Minister and the Minister of National Defence, he was received in audience by the President of the Republic, who cordially welcomed the Admiral to Turkey, holding him in conversation for an hour and a half. The Ghazi expressed the view that, in the realm of international relations, an hour of personal contact was worth years of diplomatic effort.

The social amenities usually attendant upon a visit of this sort have not been wanting on this occasion. Sir George Clerk gave a ball at the Embassy on October 12, the Admiral being the principal guest at a banquet given the following day by the acting Governor of Constantinople. The British community was entertained in the flagship on the afternoon of the 15th, whilst the Captain and officers of the *Courageous* entertained a large party at a ball given last night. From the taking-off deck of the latter vessel, a display of solo and group flying will take place to-morrow at which a number of senior Turkish officers and officials will be present. In the afternoon a fleet team will meet Galata Serai Club on the football field.

Constantinople Guides and Interpreters.

The Constantinople guides and interpreters, among whom are to be found a number of ex-officers, have protested in the local Press against the wearing of the uniform which the Prefecture of the City is trying to make them don. The cicerone complain that they look like so many hall-porters and that the treatment meted out to them by tourists is consequently off-hand and offensive. The Prefect has promised to look into the matter and to remove the source of the trouble if it is possible to do so.

Agricultural Credit Scheme.

The General Manager of the Agricultural Bank has arrived in Constantinople in order to discuss with the local authorities the details of a scheme for extending credits to the agricultural community through co-operative societies. Henceforth all agricultural credits granted by this establishment will pass through the channels of the co-operatives, and it is hoped in this way to obtain more detailed and reliable information on the status and requirements of individual farmers than it was possible to collect in the past. It is anticipated also that the agricultural community will take a practical interest in the societies by subscribing towards their working capital, individual subscriptions being limited to 300 liras for villagers and 500 liras for townsmen.

Loans are to be granted without collateral, the signature of the borrower and two guarantors being taken as sufficient security. It is hoped that the co-operatives will be of assistance to farmers in disposing of their produce.

THE BRITISH SCHOOL OF ARCHÆOLOGY IN IRAQ.

A meeting will be held on November 8, at 3 p.m., at the Central Hall, Westminster (the small hall), in support of the scheme to found a British School of Archæology in Iraq (Gertrude Bell Memorial). Major-General Sir Percy Cox will preside, and the speakers will include the Archbishop of Canterbury, the Prime Minister, the Viscountess Acton, and Sir Frederic Kenyon. Mr. H. R. Hall, of the British Museum, will exhibit lantern slides illustrative of recent discoveries in Iraq.

THE CENTRAL ASIAN "JOURNAL."

The *Journal* of the Central Asian Society (in which is incorporated the Persia Society), Vol. XV., Part IV., is a full number. In addition to the text of lectures of which summaries have appeared in *THE NEAR EAST AND INDIA* at the time of their delivery, there are interesting articles on "Some Hitherto Unpublished Dispatches of Sir John Malcolm"—which throw a most valuable light on Anglo-Persian relations at the beginning of last century—and on the "Duzdab-Baghdad Motor Route." The review section is marked by refreshing originality.

NEAR AND MIDDLE EAST ASSOCIATION.

"Malta: Its People and Its Rulers" was the subject of the lecture given by Mr. Frederick W. Ryan at the first meeting of the autumn session of the Near and Middle East Association, held on October 18 at 14, Hans Crescent, by kind permission of Mrs. L. Cobham. Mr. Ryan traced the history of Malta through the ages and pointed out that in the traditions and institutions of the Island are to be found many elements which, if investigated scientifically and properly exploited, would prove of great international interest, and might well be useful in furthering the common causes of the East and the West.

The discussion that followed the lecture was opened by Lord Strickland. Rear-Admiral E. T. Taylor presided, and among those present were Admiral Sir Frederick Fisher, Baroness de Goldsmid, the Hon. Lady White-Thomson, Lady Eckstein and Miss Eckstein, Lady Royds, Lady Connolly, Sir William Clark, Lady Tighe, Lady Hewitt, Dr. and Mrs. Gert Feine, Colonel and Mrs. St. John Cooke, Colonel and Mrs. Hawkes, Captain Semini, Mrs. P. H. Row, Mrs. Wesley Watson, Major and Mrs. Hamer, Miss Brunner, Commander and Mrs. Hare, Captain Gordon Canning, Mrs. Margaret Hasluck, Dr. Kapadia, Mrs. Gibson-Smith, Mrs. Sherwood-Kelly, Mr. Scott Duckers, Miss Gertrude Lonsdale, the Rev. G. Henniker-Gotley, Mr. T. P. Gill, Miss Toynbee, and Mrs. James Wilson.

The opportunity which is being taken of the visit of the Mediterranean Fleet to Corfu to send letters by air, as it is a port of call of the England-India Air Mail, is the first of its kind. The ships which are visiting Corfu from October 23 to 30 are:—Queen Elizabeth, *Revenge*, *Malaya*, *Warspite*, *Royal Sovereign*, *Resolution*, *Courageous*, *Veteran*, *Wanderer*, *Eagle*, *Woolston*, *Witherington*, *London*, *Sussex*, *Curacoa*, *Caledon*, *Calliope*, *Cairo*, *Mackay*, *Vampire*, *Vivacious*, *Vendetta*, *Voyager*, *Wryneck*, *Whitley*, *Walrus*, *Vimiera*, *Keppel*, *Wild Swan*, *Wishart*, *Wolverine*, *Broke*, *Sandhurst*, *Bryony*, *Maine*, and *Assistance*.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 3.

The Statutory Commission.

A cablegram from London this week concerning the proceedings of the Indian Central Committee has made one think again about the ill-conceived Statutory Commission. "Ill-conceived," one says, and it was so; and as the Indian Constitution problem still has no actuality, why one thinks the Statutory Commission was ill-conceived to deal with it has also an actuality. It might have been composed of Sir John Simon and two of his present colleagues, three Indians, say Mr. Gandhi, Pandit Motilal Nehru, and Sir Tej Bahadur Sapru, and one of the Governors, Sir Malcolm Hailey for choice, and an Indian Army man, and a medico-psychologist. The Cabinet should have said to it: "Propose a Constitution for India, giving as much authority and power of initiative as possible to the peoples of India; but do not forget to have regard to their capacity: lest you should forget that, we have made a medico-psychologist one of your number. He will tell you, but indeed you partly know it already, that great capacity is very rare among the Indians; he will tell you that, and why it is so. It is because factors in India make unceasingly against men having capacity, that India since Alexander the Great's time and before it has been a prey to invaders from other countries."

The Central Committee.

A proof of the wrongness of conception of the Statutory Commission, if one is wanted, is that it has brought us to that cablegram I have mentioned concerning the proceedings of the Indian Central Committee, and the comedy of that. I happened to be present when Pandit Motilal Nehru received his newspaper that day. He read the cablegram aloud to us; then laughed—a laugh of contempt. The cablegram said such things as this: "The report drafted by the Secretary was then read para by para. The four members, constituting a majority of those present, expressed disapproval of every para. They characterised the report as inadequate and not fully conveying the intentions of the Committee. Finally the Chairman declared that he would not put the report, or any portion of it, to the vote of the Committee, but merely ruled it as having been passed." Things are done so in those operas we recall of Gilbert and Sullivan. There was already a great point to make against the Statutory Commission, and any validity that its report might be put forward as having, that none of the leading Indians had appeared as witnesses before it. There is now the point that the proceedings of the Committee of the Central Indian Legislature appointed to co-operate with it ended in such a manner.

The Congress Presidentship.

As it happened, as if to heighten the effect, when that cablegram of comedy came, the Indian leaders who despise the Central Committee most, were all together, or most of them—Mr. Gandhi, Pandits Motilal Nehru and Jawaharlal Nehru, and Mrs. Sarojini Naidu. They had come together to decide finally who should preside over the Lahore sessions of the Indian National Congress. It is to be Pandit Jawaharlal Nehru, Mr. Gandhi having persisted in his refusal. Many regret that; but if your Prime Minister is wise in time, and so far sets aside the Statutory Commission as to send invitations to a Round Table Conference to the Indian leaders—if he sends them before Christmas—the Lahore Congress will not be the historic gathering that it threatens to be, and it will not much matter who is the President. If the British Cabinet is unbending, and says it must abide by Sir John Simon's report, and introduces legislation without consulting the Indian leaders, then the Lahore Congress will need keeping in hand, if not half India too, and Pandit Jawaharlal Nehru is not the man for that. Not from lack of strength

of character, but from not believing in such measures. One has but to look in his face to know how ready he would be to go to prison, or to hunger-strike and die as a protest.

Royal Commission on Labour.

Another cablegram of the week summarised a leading article on the subject of the task of the Royal Commission on Labour in India. A natural wish of any Englishman long resident in India is that the publicists in England should know more of the facts of India. To any one of you who have never been in India it must sound dreadful to hear that men in India, in the Hot Weather, sleep in hundreds on the pavements of such cities as Calcutta; but one who has walked night after night homewards by the sleeping rows will know that the men sleep soundly, and that their women who are shut up wish they could sleep on the pavements too. Just as a man, after lying awake for two or three nights, because he has taken lodging in the dark, and finds that his new bedroom looks on a great railway shunting yard in London—just as he cannot sleep for the first two or three nights because of the noise, but sleeps ever afterwards as sound as a top, so any of us would learn to sleep soundly on pavements.

Poverty in India.

It is a mistake to write things like this: "The industrial and agricultural workers of India form a majority of the inhabitants of the whole of the British Empire and of all people on the face of the earth the poorest and the most miserable are in India." It is true that India is full of the very poorest of the poor, but you must not think that poverty in India brings the same misery in its train that poverty does in your slums. This country is warm. That alone makes an enormous difference. It is pleasant even to a hungry man to lie in the sun. Food is scarce among classes in India; most of them have only one meal a day; but few miss that meal, and it is eaten in peace. There is very little of that anxiety that gnaws into your poor. I would far rather be very poor in India than just ordinarily poor in London. The worst misery in India comes from disease to those who die, and to the survivors from being left behind. But men here do not fight against disease, but give in easily, and the survivors must find the wherewithal to satisfy their hunger, and are therefore too busy to grieve much.

The Practical Remedy.

Let the conditions of labour, industrial especially, be looked into carefully, but do not imagine that anything that could be done will make any great difference to the lives of the masses in India. The leading article ended with: "Drastic evils call for drastic remedies. We trust the work of the Commission is a prelude to further reforms to put an end to a condition of affairs which is a black disgrace to everyone of us, who is, however indirectly, responsible for its perpetuation." Don't think like that: it does no one any good. There are no drastic remedies possible. The remedy will come from a growth among the Indians of a desire for comfort and healthier lives, when they will seek that limitation of their numbers which would make possible a life of greater comfort and health for each one. The present condition of affairs cannot conceivably be put an end to by any conceivable reforms, such as the work of a Commission might be the prelude to. Suppose you were to try to secure twice as much food and twice as much new clothing for each person in India. You would have to provide as much money as now pays for the food and clothing of over one hundred and fifty million people. And wealthy England has been hard put to deal with one quarter of one million out-of-work miners. Let us not forget our arithmetic.

Postscript.

I have just seen another cablegram. It quotes the *Daily Telegraph* as saying—but only what the *Pioneer's* Special Correspondent said nearly a month ago, and what

I have said myself, more than once, ought to be done—that the Prime Minister ought to take matters into his own hands—after all the Indian question is more pressing than disarmament—and summon the Indian leaders to confer with him. The *Daily Telegraph* says that will be done. The point is to do it soon, to get down to real things at once.

SIR ATUL CHATTERJEE'S EXTENSION OF OFFICE.

Sir Atul Chatterjee, High Commissioner for India, returned to London last week after attending the September session of the League of Nations. It is learned that while he was at Geneva Sir Atul was invited by the Government of India to accept an extension of his tenure of office, which he would ordinarily be vacating at the beginning of next year, until April 1931. The invitation, which was warmly supported by the Secretary of State, Mr. Wedgwood Benn, and will be cordially endorsed by Sir Atul's wide circle of friends and official acquaintances in this country, has, it is understood, been accepted.

Apart from being a well-deserved tribute to the signal services which Sir Atul has rendered during his term in a variety of important directions, the extension possesses the additional advantage of enabling the present High Commissioner to instal all departments of his office, other than that of the stores department, which is separately housed in Lambeth, in the new India House, Aldwych, the construction of which is now nearing completion. It is expected that the formal opening of the building, which has cost approximately £300,000, will take place next summer.

INDIAN CENTRAL COMMITTEE.

The members of the Indian Central Committee, which has been co-operating with the Statutory Commission, held their final meeting on October 18. Sir Sankaran Nair, Chairman of the Committee, presided and it is understood that the Committee's report was signed by the eight members who are still in this country, but in most cases subject to notes and minutes of dissent on specific points.

One member of the Committee, Mr. Kikabhai Premchand, as already announced in THE NEAR EAST AND INDIA, left England in the middle of September after writing a separate report. Sir Sankaran Nair leaves London this week for the Continent and is expected to sail for India early next month.

SIR MICHAEL O'DWYER ON THE FUTURE GOVERNMENT OF INDIA.

The future government of India was the theme of an interesting address by Sir Michael O'Dwyer, a former Lieutenant-Governor of the Punjab, at the Oxford Luncheon Club on October 18. The vast majority of the population of India who had no vote, he said, wanted peace and security and progress, and realised that they were more likely to find those conditions under the British Administration than under Swarajist rule.

In India at present, Sir Michael proceeded, there were no foundations for responsible government as we understand it and, assuming that we accepted the Swarajist plan, could such a Government be trusted to give fair play to minorities? Even if they wished to give fair play to the "under dog," they would not be able to do so. Again, would the Indian Princes listen for a moment to the fiat of the Parliaments of lawyers and journalists in Delhi, Calcutta, or anywhere else? India would become a prey to foreign invasion and internal disorder. The Indian Muhammadans made no secret of the fact that, if they were placed under such a Government, they would invite the Afghans and the frontier tribes to come to their assistance. Several of them had told him so.

It was essential, in the present circumstances, to have

a strong Central Government containing a substantial Indian element, but responsible to the British Parliament. It must be in a position to repel foreign invasion, to repress internal disorders, and to ensure fair play for minorities. It could not discharge those functions, unless it had a substantial British element.

THE EDUCATION OF INDIAN WOMEN.

The appeal of the Four and a Half Indian Colleges Fund was strongly pressed at the meeting which was held at the Mansion House on October 14, and at which the Lord Mayor presided. The aim of the Fund is to promote the higher education of Indian women—an object the importance of which it would be almost impossible to overestimate. Indeed, Lord Lytton was entirely right when, in addressing the Conference of Educational Associations some months ago, he said that there is nothing else which comes anywhere near it in importance, or which will have such far-reaching and incalculable results.

The four colleges in question are the Kinnaid College for Women at Lahore; St. Christopher's Training College, Madras; the Women's Christian College, Madras; and the Women's Medical College, Vellore. The so-called "Half" is the Missionary Settlement for University Women at Bombay. All these institutions are doing a great deal for the cause of the higher education of Indian Women. The Kinnaid College prepares candidates for the Arts Degrees at the Punjab University. It has fifty-five students, and it needs an additional hostel and other new buildings to enable it to meet the educational demands which have recently become so urgent in Lahore. St. Christopher's Training College trains women to be teachers in the villages. It admits women matriculates and graduates; and it has sixty-seven students. It wants money for the purchase of the property wherein it is housed, and for an endowment. The Women's Christian College at Madras, which is affiliated to the Madras University, has 137 women students reading for the degrees conferred by that University. It is reported to be one of the finest of the Women's Colleges in India; but it badly needs an endowment fund, as its income is very low in proportion to running costs. The Women's Medical College at Vellore has 83 Indian women studying for medical degrees. Since it was started, in 1918, as many as ninety-five doctors have graduated from it. Like the other colleges it also needs an endowment, the lack of which greatly handicaps its work. The Missionary Settlement for University Women at Bombay is not a college. It provides a hostel for thirty-five University women students. In Bombay there is no women's college and the Settlement plays a considerable part in focussing the activities of educated women of all communities.

The object of the Mansion House meeting was to help the Fund in the effort which it is making to raise a sum of £50,000. Lord Meston, the Honorary Treasurer, said that the needs of the institutions had been most carefully scrutinised, and it had been found that this amount was urgently wanted for building extensions, endowments, etc. In opening the meeting the Lord Mayor emphasised the point that the progress of India was bound to be hampered so long as one half of the population is unable to take any practical part in it. A great extension of education among the women of India was therefore an urgent necessity; and the Four and a Half Colleges were making a far-reaching effort to meet that need. Mrs. Rama Rau, Lord Lytton, Lady Simon, and Miss M. D. Brock spoke strongly in support of the appeal. Lord Lytton referred to the fact that Indians who acquire Western culture exercise surprisingly little influence on the Indian social system. To him the explanation seems to be that in the Indian home the influence of the women is supreme, and that their outlook is essentially Eastern. In his opinion it is therefore imperative, if the ambitions of India's young men are ever to be realised, that the

women, as well as the men, should be educated. Miss Brock announced that the Headmistresses' Association had collected for the Fund a sum of £1,481. Other donations amounting to nearly £1,000 were also reported, and Lord Meston announced that prior to the meeting a sum of £2,525 had been collected.

It may be added that the vital importance of the education of the women of India is also insisted upon in the report, which has been issued since the Mansion House meeting, of the Simon Commission's Auxiliary Committee on the growth of education. It is pointed out in this report that the middle and higher classes of India have long suffered from the dualism of an educated manhood and an ignorant womanhood; and that this dualism lowers the whole level of the home and domestic life, and has its reaction on personal and national character. The education of women, especially in the higher stages, will make available to the country a wealth of capacity that is now wasted. The Committee go on to say: "We believe that the difficulties in the way of women's education are beginning to lose their force, and that the opportunity has arrived for a great new advance. We are definitely of opinion that in the interest of the advance of Indian education as a whole priority should now be given to the claims of girls' education in every scheme of expansion."

REVIEW OF THE GROWTH OF EDUCATION IN BRITISH INDIA.

Many points of fundamental interest for the political future of India are revealed in the report of the Auxiliary Committee appointed by the Statutory Commission to review the growth of education in British India. The report, which was published last week (Cmd. 3407) is signed by the Chairman, Sir Philip Hartog, and the five members of the Committee. The signature of Sir Amherst Selby-Bigge is, however, subject to certain reservations and qualifications on particular points and a minute of dissent is appended by Raja Narendranath, objecting to the proposals relating to (1) the introduction of religious education in public schools, and (2) the reservation of seats in schools for Muhammadans and other communities, if necessary. Separate notes are also submitted by the Chairman and Sir George Anderson on the relation of the Government of India to Universities, which was not discussed by the Committee; by the Chairman and Dr. Muthulakshmi Reddi on Boards and Committees for women's education; and by Dr. Muthulakshmi on women's education generally. The review is issued in the form of an interim report by the Statutory Commission, the Chairman and members of which state that they will derive great assistance from the result of the Auxiliary Committee's inquiries.

The Auxiliary Committee, it should be borne in mind, was required to prepare a review within moderate compass, limited by the general scope of the broad inquiry with which the Statutory Commission was charged, rather than a general survey of the whole field of education in all its branches and aspects throughout British India. It was therefore instructed to regard itself "as primarily concerned with education and its organisation in British India in relation to political and constitutional conditions and potentialities of progress." The Committee, while keeping in mind limitations which were not altogether easy to define or to observe, has, however, wisely tried to present a general picture of the aims and present condition of the progress of educational institutions rather than to confine itself to the strict letter of an inquiry which must otherwise have been so narrow as to defeat its own purpose. The Committee's conclusions are summarised in the final chapter of the report, the text of which is reproduced below:—

"Our Review of the growth of education reveals many points of fundamental interest for the political future of India. The largely increased enrolment in primary schools indicates that the old time apathy of the masses is breaking down. There has been a social and political awakening of the women of India and an expressed demand on their behalf for education and social reform. There has been rapid progress in the numbers of Muhammadans receiving instruction. Efforts have been made to improve the condition of the depressed classes and those classes are beginning to respond to that effort and to assert their right to education. On all sides there has been a desire on the part of leaders of public opinion to understand and to grapple with the complex and difficult problems of education; and large additional expenditure has been proposed by Education Ministers and willingly voted by the Legislative Councils. That is one side of the picture, but there is another.

"Throughout the whole educational system there is waste and ineffectiveness. In the primary system, which from our point of view should be designed to produce literacy and the capacity to exercise an intelligent vote, the waste is appalling. So far as we can judge, the vast increase in numbers in primary schools produces no commensurate increase in literacy, for only a small proportion of those who are at the primary stage reach Class IV., in which the attainment of literacy may be expected. In one province, despite

a very large increase in the number of primary schools and pupils and in the expenditure, the number of pupils who reached Class IV. was actually less by nearly 30,000 in 1927 than it was ten years previously. It is to be remembered that under present conditions of rural life, and with the lack of suitable vernacular literature, a child has very little chance of attaining literacy after leaving school; and, indeed, even for the literate, there are many chances of relapse into illiteracy.

"The wastage in the case of girls is even more serious than in the case of boys. The disparity in education and literacy between women and men, so far from decreasing by the effort made, is actually increasing. The disparity between the wealthier parts of the country and the poorer parts also tends to increase.

"In the sphere of secondary education there has been an advance in some respects, notably in the average capacity of the body of teachers, in their improved conditions of service and training, and in the attempt to widen the general activities of school life. But here again there are grave defects of organisation. The whole system of secondary education is still dominated by the ideal that every boy who enters a secondary school should prepare himself for the university; and the immense numbers of failures at matriculation and in the university examinations indicate a great waste of effort. Such attempts as have been made to provide vocational and industrial training have little contact with the educational system and are therefore largely infructuous. Many of the universities and colleges showed marked improvements in their methods of teaching and in the amount of original work which they have produced; and in some of them there is undoubtedly a better training for corporate life than formerly. But the theory that a university exists mainly, if not solely, to pass students through examinations still finds too large acceptance in India; and we wish that there were more signs that the universities regarded the training of broad-minded, tolerant and self-reliant citizens as one of their primary functions. They have been hampered in their work by being overcrowded with students who are not fitted by capacity for university education and of whom many would be far more likely to succeed in other careers.

"We have no doubt that more and more money will be gladly voted for education by the legislatures of India but, as we have shown, the improvement and expansion of education do not depend merely on money. Money is no doubt essential, but even more essential is a well-directed policy carried out by effective and competent agencies, determined to eliminate waste of all kinds. We were asked to report on the organisation of education. At almost every point that organisation needs reconsideration and strengthening; and the relations of the bodies responsible for the organisation of education need readjustment.

"We are of opinion that the divorce of the Government of India from education has been unfortunate; and, holding as we do that education is essentially a national service, we are of opinion that steps should be taken to consider anew the relation of the central Government with this subject. We have suggested that the Government of India should serve as a centre of educational information for the whole of India and as a means of co-ordinating the educational experience of the different provinces. But we regard the duties of the central Government as going beyond that. We cannot accept the view that it should be entirely relieved of all responsibility for the attainment of universal primary education. It may be that some of the provinces, in spite of all efforts, will be unable to provide the funds necessary for that purpose, and the Government of India should therefore be constitutionally enabled to make good such financial deficiencies, in the interests of India as a whole.

"We have not suggested, nor do we suggest, that the responsibilities of Ministers in the provinces should be reduced. On the contrary, we are of opinion that they have been reduced too much already by a devolution on local bodies which has taken the control of primary education to a large extent out of their hands, with unfortunate results. The relations between provincial Governments and local bodies demand further consideration and adjustment. The formation of an educated electorate is a matter for the nation. Under recent legislation, powers have been devolved on local bodies in such a way that the Ministers responsible to the legislatures have no effective control of the expenditure of money voted for mass education; and in some cases, owing to inadequate inspection, they have little information as to the results of that expenditure. It is clear that the new factor of ministerial responsibility has not been taken sufficiently into account.

"The Directors of Public Instruction have been loyal and enthusiastic, but they are grappling with immense responsibilities, without sufficient support. The headquarters staffs of provinces should be largely increased, so that important schemes of development may be considered with greater care and the ordinary work of education supervised more effectively. An increase in the inspecting staffs should lead to economy and not to extravagance. The reconstitution of the provincial educational services can suffer no further delay.

"Despite the growing increase in girls' education, the measures taken to promote it have been inadequate. The education of the girl is the education of the mother. The school-education of each additional girl counts more towards the future than the school-education of an additional boy. We are definitely of opinion that, in the interests of the advance of Indian education as a whole, priority should now be given to the claims of girls' education in every scheme of expansion.

"India has reached a critical stage in the development of her education, and the decisions to be made are of vital importance. It will be for those in authority to consider what shall be the next step. If we have taken a broad view of our reference, it is in the hope that our suggestions may be of some assistance to those responsible for the great task that lies before them."

LIBRARIES IN THE NEAR EAST.

On October 16, at the School of Oriental Studies, the Director, Sir E. Denison Ross, delivered the first of a series of public lectures which are to be given during the present term. His subject was "Libraries in the Near East," and it will, we understand, be published in full in the School's *Bulletin*.

Sir Denison spoke first of the Khedivial, or (as it was now called) the Royal Library at Cairo, which possessed one of the finest collections of Arabic, Persian, and Turkish MSS., and had, moreover, the advantage, rare in the East, of being able to boast a complete catalogue. It was founded by Ismail in 1869. The excellence of its organisation was largely due to the fact that it had at its head a succession of eminent German scholars, such as Spitta, Vollers, and Moritz. Spitta devoted seven years to the cataloguing of the MSS. The first volume of the Catalogue in Arabic appeared in 1884 under the name of Hasanayn. The library was now being run by Egyptians, and great improvements had been made. Several former students of the School were now employed in this library at Cairo, and it was Isa, who took a Librarianship Diploma in London and studied epigraphy under Sir Thomas Arnold and the lecturer himself, who recently showed Sir Denison over the buildings. The MS. treasures of this library included old Qurans and a number of Arabic letters written on papyrus or paper, dating from the first and second centuries of the Hijra. It was a point worth remembering that Egypt alone in the Islamic world had been able to preserve some MSS. unravaged by the Mongol invaders of Muslim lands. Sir Denison said that he wished to see two books in particular in Cairo: a Quran written for the last of the Mamluk Sultans named Qansauh al-Ghuri (this Sultan, who at the age of eighty, perished in battle against the conquering Turk in 1517, had usually been called Qansuh al-Ghuri, but the dedication on this MS. settled that the former reading was correct), and the famous Uighur book, called *Kudatku Bilik*, which was written in the Arabic *naskh* character, whereas all the other known MSS. of this Turkish work dating from the XIIth century were in the old Uighur character.

After mentioning the private collections in Cairo, the most famous of which belonged to Timur Pasha, the lecturer deplored the ease with which Islamic MSS. had been obtained by dealers from their owners. One famous European library, in fact, had obtained many priceless treasures through exchanging sugar-cane for MSS.!

Turning to Tunisia, Sir Denison spoke first of the private library of Baron Rudolf d'Erlanger, who, as is well known, is devoting his life to the study of Arabic music. The results of his profound studies, both practical and theoretical, would shortly be published in Paris. And then the lecturer told the pitiful story of the remnants of what was once a great library in the old Mosque at Qayrawan. Despite the pillaging which this library had suffered, however, it still contained a large number of Qurans written on parchment and dating from the third, fourth, fifth, and sixth centuries of the Hijra. Many of them, incidentally, had been written by women. The library—access to which was difficult for a non-Muslim—was situated behind the great pulpit in a room about twenty feet square. At one end was a bookcase reaching to the ceiling, protected only by wire-caging, in which were stowed away without method or order bundles of parchment documents in cardboard boxes, where they were slowly but surely crumbling to pieces. On the other walls were a few glass cases in which selected Qurans were once preserved—but very little was left of them now. In a separate part of the Mosque enclosure the lecturer had found two large lead bins full of parchment bearing writing—indicating that a quantity of old MSS. had been allowed to perish for want of care.

Of the new Hebrew University at Jerusalem, Sir Denison said that no University had a fairer site than this

one on Mount Scopus, overlooking the Dead Sea. An Arabic Department had been established here, and the nucleus of the library for it was the library of the great Islamic scholar, Dr. Goldzier, of Budapest. The scholars employed in this Department were now employed on making a concordance of Arabic poetry from the beginning down to the end of the Ummayyad period, and an edition of the work of the historian Baladhuri.

In Damascus the best collection of MSS. existed in the Bibiothèque Royale, which occupied the buildings round the Mosque and tomb of the Sultan Baybars, who was the first Muslim to withstand the invading Mongols in the thirteenth century. One of the most important MSS. here was the only complete copy of Ibn al-Asakir's "History of Damascus." This library also possessed the only complete copy of Sakhawi's "Biographical Dictionary of Famous Men" belonging to the ninth century of Hijra. This MS. ought to be reproduced by photography.

The chief library in Baghdad was that of the Marjaniyya Mosque. The main bulk of this collection was bequeathed by the Alusi family, and about two years ago the collection of Shukri Effendi was added. (This library, however, as was explained by H.E. Jaafar Pasha, who was in the audience, had fallen into decay, like that at Qarawyan.)

Passing to Persia, Sir Denison said that Teheran teemed with precious MSS. The four most important libraries of Teheran were the Gulistan, or Royal Palace Library; the Library of the Sipah Salar and the Marvi Mosques; the Library of the Ministry of Education; and the Library of the Majlis. The Gulistan Library contained thousands of volumes, closely packed together in shelves, apparently without any order. In the short time that he had, the lecturer was able to examine half a dozen MSS. Among them he found an album containing examples of Persian miniature painting of the fifteenth, sixteenth, and seventeenth centuries, which belonged once to Nadir Shah. This collection contained some of the most beautiful specimens he had ever seen. The lecturer then described the Peacock Throne and the jewelled globe of the world which were in the long Durbar room adjoining the library.

The Majlis library was the only one in the Middle East to be compared, in arrangement and convenience, with that at Cairo. Members of Parliament, however, had not yet learned to appreciate it: the average attendance was one a day! It had a fine collection of European printed books on Oriental subjects, including the leading journals (something quite new this, for Persians to want to know what Europeans thought of them), and about 300 important MSS. Two of these MSS. were especially interesting: a copy of *Khulasat ul-Ash'ar*, by Taqi Kashi, one of the most important of the biographies and anthologies of Persian poetry, and a copy of the *Munis ul-Ahrar*, a very valuable anthology of Persian poetry.

Of the private libraries in Teheran, Sir Denison visited only four. Of these, by far the most important belonged to Hajji Husayn Aga Malik. Another interesting one was that of Mirza Mahmud Khan Mahmudi (whose name used to be Pahlavi, but had been changed into Mahmudi in deference to the reigning dynasty), and yet another, that of Vahid ul Mulk.

The lecturer then devoted attention to the subject of preservation, cataloguing, and photographing of MSS.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY

in the East. He mentioned first the deficiencies existing in our knowledge of Islamic literature in general. There were thousands of Arabic works known to us by name only; there were also the books of which all trace had been lost until they turned up, as it were, from nowhere. The development of Islamic study was comparatively recent—as an example of which fact he mentioned the Congress of Orientalists held in London in 1874, when not a single Islamic subject was touched, Egyptology and Sanskrit monopolising attention. But advancement of Islamic knowledge should not come about through the removing of MSS. from suitable homes in the East—a step to which he was strongly opposed in principle. Countries such as Persia and Egypt, which were now on the right lines, should be encouraged to retain their own treasures of literature and art. The greatest service that could be rendered to scholarship lay in the cataloguing of the contents of all collections and making those catalogues known. Individual rare books should be photographed.

Sir Denison, after protesting strongly against the barbaric destruction of MSS. by dealers who, owing to the fabulous prices now paid for Persian miniatures and even for title-pages of old MSS., would tear a precious book to pieces, suggested the lines on which future development might take place. Professor Brockelmann some thirty years ago published his invaluable "History of Arabic Literature," but a new edition was a crying need. A similar book was in course of preparation by Mr. Storey, of the India Office. In both these books, which were arranged according to subject, after the author came the titles of his various works, and if they had been printed, where and when, and if they had not been printed, in which libraries copies were to be found.

After the lecture, Sir Thomas Arnold gave some amusing examples of the carelessness with which libraries were sometimes supervised. He suggested that the practice of the India Office was an admirable one to follow—a practice by which books could be freely borrowed on the condition that at the end of every six months the borrower had to report that book was in his possession and in proper condition.

The death was reported last week from Sofia of the Archimandrite Theodorit, who had been Abbot of the Bulgarian Monastery of Zographou, on Mount Athos, for about twenty years.

The Albanian Legation in London explains that the discontinuance of the Albanian Legation in Angora is purely a measure of economy and does not in any way affect the friendly relations between the Kingdom of Albania and the Turkish Republic.

At the International Congress of Penal Law, which was opened on October 6 in Bucharest by the Acting Minister of Justice, the delegates from 18 countries included M. Kouleff, Bulgarian Minister of Justice, and two representatives from the League of Nations.

The birthday of King Zogu on October 9 was celebrated in Albania as a holiday, and all the towns and villages were decorated with flags. The Albanian army was reviewed, and all the Muslim women appeared unveiled in accordance with King Zogu's programme of reforms.

The *London Gazette* announces that the King has conferred the dignity of Knighthood on Mr. Ganesh Datta Singh, Minister-in-charge of the Ministry of Local Self-Government, Bihar and Orissa; Maulvi Saiyid Muhammad Saadulla, member of the Assam Executive Council; and Mr. Hadji Abdul Karim Abu Ahmed Khan Ghuznavi, member of the Bengal Executive Council.

The Lord Mayor, Sir Kynaston Studd, on behalf of his predecessor, Sir Charles Batho, received on October 16 at the Mansion House from Lord Melchett a certificate of the inscription in the Jewish "Golden Book" of the names of the Guildhall, Sir Charles Batho, and Sheriffs of the City. The "Golden Book" is a record kept in the Jewish National Fund's offices in Jerusalem, and perpetuates the names of those who have rendered exceptional services to the Jewish people. Sir Charles Batho was Lord Mayor when, for the first time in history, a Jewish function was held at Guildhall. The banquet was in aid of the Balfour Forest in Palestine, and resulted in the raising of £17,000. Lord Melchett, referring to the banquet, said that the fund was inaugurated for planting the hills of Judea, which had been treeless for many generations, with a forest, in commemoration and in the name of the Earl of Balfour. Two years ago 57,000 trees were planted, and last year the number was 151,000.

NEWS IN BRIEF.

Bulgaria has notified Yugoslavia that it approves the settlement of frontier difficulties worked out by the recent joint conference.

An agreement for the abrogation of the Consular Court in Egypt was signed last week by Austria.

M. Ponsot, French High Commissioner in Syria, left Paris last week on his return to Beyrout. He visited Jerusalem on October 20.

A monument to the Emperor Napoleon I. was unveiled on October 12 at Liubliana, which was the capital of the Styrian Provinces when they formed part of the French Empire from 1809 to 1812.

Famine was reported last week in the Hadhramaut, and disease has broken out among the camels, so that transport has been disorganised. Many starving people have proceeded to Makalla.

The second son of the Amir Abdullah of Trans-Jordan, Amir Naief, arrived recently at Alexandria to join Victoria College, where his cousin, the son of Amir Ali, is already pursuing a course of studies.

The International Diplomatic Academy in Paris has unanimously elected Sadek Wahba Pasha, Egyptian Minister at Berlin, an associate member.

Mr. A. T. Waugh, British Consul-General at Constantinople since the War, who has been forty years in the Consular Service in Turkey, left for England on October 17, on his retirement.

Sir Eric Drummond, Secretary-General of the League of Nations, will leave Geneva on October 28 on a visit to Rome and Belgrade at the invitation of the Italian and Yugoslav Governments.

Over 80,000 visitors from overseas have attended the Industrial Exhibition organised by the Amir Ali al Jiziri in Damascus, which is being kept open for an additional fortnight.

The R.A.F. West African flight of three Fairey 3F machines took off from Helwan, near Cairo, on October 19, on a flight to Nigeria and the Gold Coast.

Three Arabs were sentenced to death at Haifa last week in connexion with the rioting in Palestine last August. They were convicted of killing a Jew at Safed.

The Yugoslav Minister of Finance, M. Sverlyuga, left Belgrade at the beginning of this week for Paris for important conversations about the pre-War and War debts of Yugoslavia to France.

Thirty aeroplanes from H.M. aircraft-carrier *Courageous* gave a display of formation and acrobatic flying over Constantinople on October 18. The people of the city were greatly impressed.

M. Venizelos, in an interview last week with the Greek Royalist leader, Mr. Tsaldares, failed to persuade the Royalists to resume attendance of Parliament, which they left in June owing to the inclusion of M. Gonatas in the Cabinet.

Mr. Sydney Waterlow, the new British Minister to Bulgaria, presented his credentials to King Boris on October 19. M. Liapcheff, the Prime Minister, attended as Minister for Foreign Affairs *ad interim*.

Major-General Sir Fabian Ware, vice-chairman of the Imperial War Graves Commission, on arriving at Aleppo last week, expressed great satisfaction at the condition of the cemeteries in which those who fell in the fighting at Palestine are buried.

The Amir Saif-al-Islam Sayyid Muhammad, eldest son and commander-in-chief of the Zaidi Imam of Sanaa, on October 1 occupied Bait-al-Faqih, the chief town of the Zaranqi tribe, in the Tihama of the Yaman, which had recently been in revolt against the Imam.

Mr. J. H. Dunn, structural engineer of H.M. Office of Works, who superintended the erection of the new British Consulate in Alexandria, left Egypt by the s.s. *Romania* on October 4 for Constantinople, and Angora, where he will superintend the building of the new British Embassy in that city.

According to a message from Sofia, M. Vassilieff, secretary of the National Committee of the Macedonian Emigrants, whose brother recently murdered the Protogeroffist leader Bjaroff, was mortally wounded on October 17 as he was returning from harvesting. The Mihailoffist revolutionary leader Avramoff, who was accompanying Vassilieff, is also reported to have been killed.

During the first six months of this year the revival of Jewish immigration into Palestine, which had begun to recover from the depression of 1927 (when 2,358 more Jews left the country than entered it), and 1928, when the excess of immigration (2,178) over emigration (2,168) was ten, was quite strongly marked. In January, 352 Jews entered Palestine and only 89 left; for February the figures were 378 and 104; March, 373 and 155; April, 322 and 70; May, 195 and 184; and June, 205 and 179. In all 1,825 Jews entered the country during the first half of 1929, an excess of 1,044 over the 781 who left.

PERSONAL AND GENERAL

TO-DAY

October 24, 1929 (New Style).

October 11, 1929 (Old Style).

Jumada I. 20, 1348 A.H., of the Muslim Calendar.

Tishri 20, 5690, of the Jewish Calendar.

General Sir John and Lady Shea and the Misses Shea left London on October 17 for India.

The Earl of Inchcape left London on October 16 to join the Countess of Inchcape at Glenapp.

Sir John Maffey, Governor-General of the Sudan left London on October 15 for Alexandria and Khartoum.

Captain and Mrs. Duncan McCallum returned last week to 7, Cheyne Walk from Scotland.

Orhan Tahsin Bey, Secretary to the Turkish Embassy, left London last week for Angora.

Sir Alexander and Lady MacDougal left London last week on their return to Madras.

Abdolahad Khan Yekta has been appointed Secretary to the Persian Legation in London.

On November 13, at 5.15 p.m., Mr. H. A. R. Gibb will deliver at the School of Oriental Studies a public lecture on "Ibn Battutah."

The Maharaja of Rajpipla, the Yuverajah of Mysore, and Sir Muhammad Habibullah embarked in the Ranchi at Marseilles on October 18 for Bombay.

The Yugoslav Minister held an afternoon reception at the Legation on October 20, to meet Yugoslav doctors and medical students from the Universities of Yugoslavia.

Sir Atul Chatterjee, High Commissioner for India in London, has been given an extension of his term of office until April 1931.

Mr. Kenelm Preedy left Croydon on October 19 by air on his way to Palestine, where he will represent the Palestine Government before the Commission of Inquiry.

Lord and Lady Edward Gleichen returned on October 16 from Court-in-Holmes, Forest Row, Sussex, to 35, Catherine Street, S.W.

Lady Stephenson, Sir Leonard and Lady Adami, Sir Gordon and Lady Fraser, Sir Robert Dunlop, and Sir Thomas and Lady Smith left London on October 17 for Marseilles, to join the Ranchi, en route for Bombay.

His Majesty has approved the appointment of Mr. Reginald Hervey Hoare, C.M.G., a Counsellor in his Majesty's Diplomatic Service, to be a Minister Plenipotentiary whilst employed at the Residency at Cairo.

A marriage has been arranged, and will take place tomorrow at Poona, India, between Major P. C. R. Dodd, D.S.O., M.V.O., British Military Attaché, Teheran, youngest son of the late Colonel Charles A. Dodd, and Norah Marguerite, eldest daughter of Lieut-Colonel R. C. Wilson, R.A.M.C.

Dame Louise Maxwell, widow of General Sir John Grenfell Maxwell, who both before and during part of the War was G.O.C., Egypt, died suddenly of heart failure on October 18, at her residence, 4, Queen's Gate Place.

Lord Herschell, Lord in Waiting to the King, died on October 11 at Ardington House, Wantage, Bucks, at the age of 51. Lord Herschell, who succeeded to the title in 1899, had travelled much, especially in the less frequented parts of Persia, and formed an interesting collection of Persian arms and armour.

THE YUGOSLAV VISIT.

A party of fifty doctors and fifty-six medical students from Yugoslavia, who are making a tour in Western Europe, arrived in London on October 18. The visitors were received by the Yugoslav Society of Great Britain, which with the help of the Fellowship of Medicine had made itself responsible for their programme during their stay in England. On Saturday morning an official welcome was given to the party at the Royal School of Medicine by Sir William Hale-White. Sir James Berry also spoke, on behalf of the Yugoslav Society, and Professor Burian replied for the Yugoslav visitors. The party then visited the British Museum and certain of their number were subsequently taken to the Maudsley Hospital at Denmark Hill, where they were received by Dr. Cooke Taylor. In the afternoon the visitors were entertained to tea at the Mansion House by the Lord Mayor and Lady Mayoress. Sunday was spent by over eighty of the visitors at Oxford, where a number of colleges were visited, and lunch was given them at Magdalen College. Others visited the Zoological Gardens. Later in the afternoon a reception was held at the Yugoslav Legation by Dr. Juritch.

On Monday morning visits were paid by different groups to London County Council Institutions, to Epsom Mental Hospital and to the Royal Free Hospital, and in the afternoon to St. Thomas's Hospital. On Tuesday morning the visitors laid a wreath at the Cenotaph. They were also received at the Royal College of Surgeons, and subsequently left for Paris.

On Monday evening a reception was held at Crosby Hall, Cheyne Walk, by the Yugoslav Society in honour of the visitors. The guests were received by Sir James and Lady Berry and Mrs. Carrington Wilde. A feature of the evening was the performance of Morris dancing, which was much appreciated by all present. It was followed by an impromptu *Kola* (the national Yugoslav dance), given by the visitors themselves. The visit appears to have been an unqualified success, and the party expressed their indebtedness to the Yugoslav Society, especially to Mr. Roland Bryce, Miss Marx, Miss Johnston and Dr. Subotitch, who with Sir James and Lady Berry and Mrs. Carrington Wilde had been responsible for the carrying out of a crowded programme.

Where to stay in the East

PALACE HOTEL
Inland City of Nicosia.

OLYMPUS HOTEL: Port of Limassol.

(Opened all the year round.)

OLYMPUS HOTEL: On Mt. Olympus (Troodos)

(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

THE EGYPTIAN HOTELS Ltd.

General Management: Shephard's Hotel, Cairo.
Telegr. add.: "Shepheards Cairo."

CAIRO.

SHEPHEARD'S—World-renowned.

The CONTINENTAL-SAVOY—facing the Royal Opera House and Ezbekieh Gardens.

The SEMIRAMIS—overlooking the Nile. The fashionable Hotel
MENA-HOUSE—an ideal spot for repose at the foot of the Great Pyramid. All Sports.

HELOUAN GRAND HOTEL—Health resort. Sulphur Baths and Thermal Establishment.

THE UPPER EGYPT HOTELS Co.

General Management: Winter Palace, Luxor.
LUXOR: The centre of the recent discoveries.

The LUXOR WINTER PALACE—The most up-to-date: beautifully situated.

The LUXOR HOTEL—Entirely rebuilt with all modern requisites
ASSOUAN: Ideal Winter Climate. The place for a rest cure

The CATARACT HOTEL—On the banks of the Nile.

The GRANE HOTEL—Entirely renovated.

Golf, Tennis and Excursions.

THE WEEK AT HOME

London, Tuesday Morning.

The "Edinburgh Review."

The *Edinburgh Review* has died. Few tears have been shed—had it been otherwise it would not have died. For it was, apparently, because it felt that it could not compete with journals that were published more frequently, daily, weekly, and monthly, that the melancholy decision was taken, after these more than hundred years, to let it perish. At least it can be said that it had magnificent obsequies, for every paper that had pretensions to culture gave space to a few "well-chosen words" on its demise.

I do not pretend to have studied each number as it came out with the attention that it probably deserved, but it is possible to say quite honestly that in the *Edinburgh Review* one could find stuff written from Olympian heights, with an amount of formulated serenity, that was very good to read. Not many people had the time, still fewer the inclination, to read it all, but I am surprised that there was not a sufficient number to keep it going.

It has been everywhere assumed that the whole tendency of the age was against the continuance of non-specialist quarterlies. I wonder? Did not the *Century*, of America, recently change from being a monthly into a quarterly? And will it be said that they have more time for contemplation in America than we have here? For shame!

Fashions in First Names.

The social historian who has infinite time on his hands ought to explore the connexion which exists between fashions in clothes, in morals, and in Christian names, or first names, as I believe they are called in America—which seems rather more fitting for our pagan age.

Quite certainly there is a fashion in names, as the industrious research student discovered the other day who informed the world that every other baby born in Mayfair in 1929 will, on the feminine side, at any rate, bear the name of Sarah, Sophia, or Virginia. What can all this mean but a direct return to Victorianism?

How different from the young Dianas and Pamelas now at school these young lavender-reminding females will be! How different, even, from their elder sisters, Doris, Gladys, Phyllis, and Joan! Perhaps. A revived Victorianism will be a fearsome thing. As for boys, they are indifferent to names, and persist in their evil-doing or mischief-making regardless of whether some old fogey named them Peter or David or John, or even, as in the earlier day, Warwick or Rupert.

Flying and Flu.

About this time of the year the thoughts of all cautious men are turned towards 'flu, or rather towards the prevention of it. For year after year passes and this dread disease in some form or another takes its toll of our people. Most philosophical souls, perhaps, have come to the conclusion that nothing can be done to forestall the beastly germ, that it is mainly a matter of luck. But there still exists a number of comparatively simple folk who believe that vaccines are a certain shield.

Unfortunately for this belief the Royal Air Force has just published the results of an experiment conducted at Halton. There a thousand apprentices were inoculated against influenza, but the disease, when it came, attacked them just as successfully as it did their unvaccinated fellows.

The truth appears to be that we are as far off as ever from having at our disposal a sure shield against influenza, which is perhaps our most homely and at the same time one of our most distressing and weakening complaints. Inoculations admittedly have worked well in some cases, but to suppose that they are at all generally effective is too optimistic.

Waterloo Bridge.

After many false alarms that Waterloo Bridge was doomed to destruction, it has now been virtually decided to preserve it. For the proposal that now holds the field is to do away with the ugly steel structure which has carried the south-going traffic for past months, and to recondition and widen Rennie's bridge itself. In any case, the wooden supports which have been shoring up what has been called "the noblest bridge in the world," have been an eyesore, and either a new bridge had to be built or the bridge be made adequate.

It will, presumably, be a difficult business making the bridge fit for the load of modern traffic. The roadway will have to be widened to thirty-five feet, and some of the piers and arches will have to be rebuilt. To the lay mind such an operation sounds full of danger, but it is assumed by competent engineers to be quite practicable.

All the artists and architects are delighted with the new decision, which has to be confirmed by the London County Council to-day. After all, most beautiful things, whether cottages or boats, have been preserved through their being adapted to modern requirements.

Landscape and "Progress."

Readers of these paragraphs may be almost weary with the emphasis laid on the work that is now going on in England in the despoiling of the beauties of the landscape, by means of material tokens of scientific "progress." But it should not be supposed that all hostility to visible signs of scientific improvement is reasonable, and Mr. Frank Hodges, who seems to have been converted from a promising politician into a prosperous businessman, has just been explaining how selfish and indefensible is much of the opposition, shown by wealthy people living in the country, to the erection of pylons and of overhead cables.

It is quite obvious that if all cables had to be taken underground the cost of electricity would be enormously increased. And why, Mr. Hodges asks, should the poor people, living in remote districts, have to pay more for their current because of the aesthetic objection of wealthy people? The matter is one for State opinion to prevail. A balance can, and must, be obtained between the securing of the amenities of civilisation and the maintaining of the beauties of tradition. To certain kinds of landscape pylons do little damage; in others they are an unforgivable offence. Decision on their erection should rest, not with suppliers of cheap electricity, whose aesthetics are rarely well developed, nor with those retired people whose rural prospects may be endangered, but with the community, which, once awakened, may be relied on to balance usefulness with beauty.

Book Reviews

THE DANUBIAN STATES.

"ECONOMIC NATIONALISM OF THE DANUBIAN STATES." By **Leo Pasvolsky.** (London: George Allen and Unwin, Ltd. 12s. 6d. net).

The five countries with which this book deals—Austria, Hungary, Czechoslovakia, Roumania, and Yugoslavia—have either been carved out of the pre-War Austro-Hungarian Empire or have had portions of the former Habsburg domains joined to them. Accordingly there are five economic frontiers where only three existed before, and the experience of the last decade has shown that this state of affairs, however gratifying to nationalist sentiment, has not made for the material prosperity of any one of the States. "By easy analogy with pre-War conditions, the thought naturally occurs that the sane and most hopeful road for these countries to pursue is the one which leads to some sort of economic unity among them." The author investigates the prospects of such an economic unity. He sets out the basic elements in the post-War situation in the various countries, analyses the experience of each within its present frontiers, and finally appraises the possibilities for future development. The book provides a valuable analysis of the economic situation in each country; but the author's verdict is adverse to the chances of unity. The Peace Treaties have left three of the nations contented and two discontented, frontiers cut across economically interdependent areas, and a system of restrictions against mutual economic intercourse is a prominent feature of the present situation in the Danubian countries. No country feels strong enough to break away from a system which came into existence as a result of abnormal conditions and persists after those conditions have ceased to exist. Considerations of national sovereignty constitute a factor of paramount importance; the form of any economic union presents a serious problem, and finally, the attitude of outside Powers renders unification difficult. For these and other reasons the author decides that the weight of argument is against the creation of a Danubian economic union. There, unfortunately, he leaves the matter. The crux, he considers, lies in Austria and Hungary. There is a conflict between the industrialised and the industrialising countries. Austria, Hungary, and Czechoslovakia constitute the former; Roumania and Yugoslavia the latter. It is admitted that neither of these latter countries—any more than the others—can be an economically self-contained area, and, if there are solid objections to their co-operating for economic ends with the three industrialised countries, the natural corollary would seem to be that the two should look elsewhere for economic unity. The only alternative lies in the direction of a Balkan federation. The proposal is not popular in Roumania, which seems to have revived its resentment towards being regarded as a Balkan State. The creation of the Little Entente, by linking Roumanian destinies with those of Czechoslovakia, is held to have given Roumania a Central European orientation, and this circumstance is gratifying to the country's pride. There would seem, however, to be no specific reason why Roumania should not still regard herself as of Central Europe, while heading an economic federation of the States of South-Eastern Europe.

Since Mr. Pasvolsky's book was written, there has been a more definite movement among the States of the Little Entente to explore the ground for economic co-operation. Another development is the new economic policy adopted by the Maniu Government in Roumania in contradistinction to the policy of M. Vintila Bratianu, the only one known to our author, which stood for slow development with the country's own means as opposed to

a more rapid development with foreign capital. Whether these movements would affect the author's verdict on the possibility of economic union between the five Danubian States may be doubted.

The book is issued under the auspices of the Brookings Institution—an American organisation "Devoted to Public Service Through Research and Training in the Humanistic Sciences"—which, it has to be inferred, has enabled Mr. Pasvolsky to carry out his investigations. The economic experience of Bulgaria since the War is promised as a separate study at a future date, and it will be of interest to see whether the author finds the prospects of economic unity among the countries of South-Eastern Europe—none of which has yet become an industrialised State—brighter than those of the Danubian countries. Within the compass of this review it has not been possible to do justice to the author's analysis of present-day conditions in the different States; but it may be stated confidently that the book provides an invaluable compendium for those who want a rapid and impartial survey of the economic situation in the five countries.

HOW PHARAOH LIVED AND DIED.

"THE PRIVATE LIFE OF TUTANKHAMEN." By **G. R. Tabouis.** Translated by **M. R. Dobie.** Illustrated. (London: George Routledge and Sons Ltd. 15s. net).

Mademoiselle Tabouis has used a light framework of fiction on which to display the conditions under which an Egyptian Pharaoh lived. She has, naturally enough, chosen Pharaoh Tutankhamen as her central figure. In doing so, she has certainly made her task easier, though one consequence is that, as a work of art, the book suffers from an excess of sentimentality which it was perhaps difficult to avoid. Where so few historical facts are known, the picture has perforce to be a composite one, depending not only on the contents of the marvellous tomb, but also on the sculptures, paintings and other records relating to Tutankhamen's predecessors and successors. Further, there are many pages of interesting glimpses, which the Egyptian sands have kept for us, into the life and thought of these old days. The result is an exceedingly readable and, in its limits, scholarly book which will enable many who would be scared by the learned works available, to inform themselves easily and pleasantly of much of the soul of ancient Egypt. The illustrations, which have been carefully selected and are well produced, do much to add to the book's usefulness.

If we find fault with the way in which references to authorities are treated in the foot-notes, we must not be thought to regard this defect as a very serious one in a book of this kind, where, after all, the intention is merely to give some indication to readers, who have felt themselves interested, where they may find further particulars for study. Still, bare references like "Plutarch," "Maspero," "Petrie," are far too common and are hardly helpful. Nor do they do justice to the genuine scholarship of the authoress. We trust that she will avoid them in her next work, to which we look forward, towards the sound popularising of the knowledge of ancient Egyptian civilisation.

The New 'BP' from Crude to Car

Here is the Geologist

The Geologist is actually not in the least like this. He is the strenuous young man who finds the crude oil from which the new "BP"—the better petrol is made.

He works with highly scientific instruments and the knowledge acquired through long training and study. He locates oil by surveying fresh territory, studying rock formations and determining the nature of the underground structure. He paves the way for the driller.

The Geologist is the first link in the chain which brings the new "BP" to the happy motorist. Join the throng of happy motorists to-day by using the new "BP"—the better petrol. It is quality alone which counts and it is by quality that the new "BP" has achieved its amazing success.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Misr Bank and Pilgrim Transport.

A new phase in the activities of the Misr Bank is marked by the news that the bank has received a contract for fifteen years from the Egyptian Government for the transport of pilgrims from Suez to the Hijaz. For the operation of the necessary services the bank is to receive a loan which will be repayable by instalments. A separate company will be formed by the bank for the pilgrim traffic, the capital of which will not be less than £E500,000. Special steamers will have to be obtained for the service and it is understood that it is intended between the pilgrim seasons to use the steamers for passenger and goods traffic between Egypt and neighbouring countries. If this development is successful it will no doubt form the forerunner of other steps in the direction of the acquisition of a modest mercantile marine—a project which is so dear to Egyptian hearts.

The Industrialisation of Turkey.

Much has been heard of the intention of the Angora authorities to exploit to the utmost the industrial possibilities of Turkey, but it is only now with the decision to establish an iron and steel industry that the first really important step has been taken to this end. It is worthy of note that in this venture Turkey is relying on German assistance, and the necessary contracts have gone to a German combine. As to the prospects for the creation of this industry it must be pointed out that Turkey has at her disposal ample supplies of the necessary raw materials. Iron ore exists in many parts of Anatolia in various forms, the largest deposits being at Ayasma, south of the Gulf of Edremid, at Alaya, on the east coast of the Gulf of Adalia, in the region between the Gulf of Alexandretta and Zeitun, and in the Brussa vilayet. Other important deposits exist in the vilayet of Aidin, at Kozan Dag and Demir Dag, in the vilayet of Lazistan, in the district of Tireboli and in the Van vilayet. As is well known also, the country possesses large supplies of coal, which, while greatly inferior to the British product, is believed to be suitable for most purposes if properly screened and washed. The factors which will handicap the efforts of the Angora authorities to develop the industry are the labour problem and the question of technical direction.

Motors in the Sudan.

The figures for motor cars in the Sudan in 1928 show a striking advance on the total for the previous year, the respective figures being 2,118 and 1,472. The increase of nearly 650 cars in a year emphasises the success of the road policy which the Sudan Government is so rigorously pursuing, but an analysis of the figures for the various types of cars scarcely justifies one in congratulating our manufacturers as a whole on the result. The Sudan is a market which, as I have often pointed out, offers special scope for our traders, but the bulk of the trade, as in so many other motor markets in the Near East, goes to the foreign manufacturer. Thus the 1928 total includes 1,095 Fords and 392 Chevrolets, the leading British firm being Morris Motors, who with 164 cars occupy the third place. I hear that Morris Motors, by the way, have been achieving a good deal of success in another Near Eastern market, Persia, and I only wish more of our firms would follow their example and produce cars suitable for the conditions encountered in countries like the Sudan and Persia. Concentration on the home market is all very

well, but if our unemployment problem is ever to be solved we must obtain all the overseas trade that is possible. I may add that the figures for motor cycles in the Sudan tell a very different story, it being a case of British cycles first and our competitors well behind. In 1928 the motor cycles in the Sudan numbered 337 as against 290 in the previous year, the principal makes being Triumph 81, B.S.A. 80, Raleigh 53, and A.J.S. 34, and most of the remainder were British. It is true that there is no clearance problem in regard to motor cycles, but is there really any valid reason why our motor car manufacturers cannot achieve a similar measure of success?

Bulgarian Currency Contract.

In view of the fact that the Royal Mint has just obtained the contract for the new Roumanian currency, it is a little disappointing that the similar Bulgarian contract should have gone elsewhere. The contract is for silver coins of 20, 50, and 100 leva of a total nominal value of 580 million leva, and for 5 and 10 leva coins of an alloy of nickel and copper of a nominal value of 250 million leva. Altogether there were eleven tenders, and the contract for the silver coins has been given to the Hungarian Mint, while that for the other coins has been obtained by the firm of Arthur Krupp-Bensdorf of Wurtemberg.

Lake Copais Company.

At the meeting of the Lake Copais Company Mr. Sandford Poole described the unfavourable climatic conditions encountered in 1928, a heavy rainfall in the spring and then a spell of hot weather adversely affecting the crops. In the circumstances it can be regarded as most satisfactory that the company's profits in Greece for the year amounted to £36,131, as against £32,367. The company has steadily proceeded with the development of its property, and by the end of 1928 the net area dealt with amounted to 11,794 acres. After an extension to April last the Greek Government's purchase option has definitely lapsed, so that by the terms of the arbitration award the greater part of the property becomes the company's freehold. It is interesting to note that the company is paying increasing attention to cotton production. In 1928 the area harvested amounted to 5,504 acres, as against 4,575 acres for the previous year, and cotton was responsible last year for 32.6 per cent. of the company's revenue.

COMMENTATOR.

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathens."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.
 The Bank transacts every description of banking operations.

THE ECONOMIC ADVANCE OF THE SUDAN.

During the past year there has been a marked improvement in the economic situation in the Sudan, and the annual report of the Central Economic Board of the Sudan Government for 1928-29 is couched in a more encouraging tone than has been possible on the last two occasions. The effects of the late food crisis were pronounced, and while the country has shown marked recuperative powers a warning note is sounded in the report that if the balance has not been redressed by this year's harvest "it will not be long before difficulties begin to reappear." It is further pointed out that there is the possibility of more formidable invasions of locusts.

These are chastening reflections, and it is well to bear them in mind while taking stock of the various encouraging features in the present situation. The result of this year's rains will show whether or not the recent change is to continue and is a real promise of easier times.

It is comforting, however, to feel that the country's resources against food crises are continually being strengthened, and, as will be seen from the record of the recent developments of transport, the Sudan has been placed in a still stronger position to contend against the calamities into which it is periodically plunged by failures of the food crops.

Attention is fittingly drawn to the somewhat spectacular character of the economic career of the Sudan in the past five years. The period has been one of remarkable progress in many directions. It has seen a large extension of cotton growing in the Gezira for one thing, and another very notable development has been the construction of almost 500 miles of new railways at an expenditure, including rolling stock, of £E2,853,000. In addition, each year has seen great extensions of the road system, opening up hitherto untouched areas of the country and bringing within the bounds of possibility further economic expansion. Whatever may be said of the motor by cynics in crowded countries, to the Sudan it has meant a key to development, and a solution to the problem of the furtherance of progress in outlying areas. Hence the wise concentration on a programme which is covering the country with what may soon be described as a network of roads. It is significant that these things have been done in a period marked, or rather marred, by two of the worst harvests on record, but for which naturally the fruits of the works of development which have been accomplished would be much more apparent. While bad harvests are bound to recur from time to time, the records suggest that the country should now enjoy a series of good crops, and if that proves to be the case there is no doubt that the country's advance will be rapid, for the spade work has been accomplished and the foundations have been truly laid on which the country can build a prosperous future.

It is well said that the Sudan has always been a land full of sharp contrasts, and it is natural that they should have been intensified by the works of development. This can be instanced from the case of the great cotton pro-

ducing region, the Gezira. In that region there is a highly developed civilisation, and the value of the cotton in the export trade is such that, while the Sudan has a number of other important exports, the value of other forms of production is dwarfed. But it is pointed out that if it were possible to isolate the Gezira in examining the economics of the country the results would be misleading, for the effects of the prosperity of the Gezira are widespread, and the success of the cotton crop may influence trade many miles away from the province. Then in the rest of the central and northerly areas it is pointed out that conditions vary greatly. In some areas the population is scanty and in some unpromising.

In some districts the people may be expected to avail themselves readily of new facilities and aids to production, and are in fact already doing so to a satisfactory extent, as for instance in the cotton growing area in the Gash Delta in Kassala Province and in other parts of the country opened out by the new railways.

Reference has been made to the importance of the motor as an instrument for the development of the country. Of the influence on the general life of the country of the introduction of this form of transport the report has much to say of interest.

Socially and politically, this new form of transport, which appeals very strongly to the native, especially in the more sophisticated areas, where he is buying cars and lorries and going into the motor transport trade himself, must already have begun to make itself felt to a considerable degree. Many thousands of natives now have opportunities to travel which they never possessed before. Towns and outlying villages are being linked up, and inhabitants of comparatively remote districts are able to see the world and sharpen their wits by contact with fresh interests and activities.

This mixing up of the people has already begun to reflect itself in increased internal trade and a desire for a higher standard of living.

Economically, it is remarked, the direct effect of motor transport has not yet been very marked. Its indirect effects have, however, been important, notably its influence in widening the range of railway and river communications. Then it has made cotton growing possible in the south, has made traffic with the Belgian Congo feasible, and is influencing trade with Abyssinia. The difficulty to be overcome in the development of motor transport as an economic factor is that few of the Sudan products can stand the cost of mechanical transport. On the solution of this problem future developments largely depend.

Imports into Egypt for September amounted to £E4,814,476, against £E4,447,162 for the same month last year; and exports, £E1,670,660, against £E2,505,475. Cotton exports amounted to £E1,310,043, against £E2,065,120.

The Cunard Steamship Company is arranging to consolidate into a single office its various interests in the City of London. The office will occupy a corner site in Leadenhall Street and plans are being prepared with a view to an early start on construction.

EGYPTIAN STATE RAILWAYS

A pleasure trip to Egypt, the Land of Eternal Sunshine, is now within the reach of nearly everybody.

Combined Steamship, Railway, Sleeping, Restaurant and Pullman Car Tickets, from Marseilles to Assuan and return, including accommodation at the Leading Hotels, are available from 1st November, 1929, to 31st January 1930, as under:—

**1st Class throughout. } A. 10 days sea-passage & 18 days stay in Egypt... L. Stg.: 72.10.
B. 10 days sea-passage & 25 days stay in Egypt... L. Stg.: 81.10.**

A Supplement of L. Stg. 5 will be charged for November departures.

SMALL SUDAN GUM ARABIC CROP.

Messrs. Boxall and Co., of Khartoum, report as follows for the week ended September 30:—

Arrivals in Kordofan stations amounted during September to 31 tons in all—a wholly negligible quantity—as against 270 tons last year, a shortage of 240 tons, or 80 per cent. The 1928/1929 season might be reckoned as practically closed. It is the smallest crop recorded since 1923, during which season commenced the series of crops averaging 20,000 tons for all quantities. The total arrivals of Kordofan gum from the beginning of the season to date amounted to 10,970 tons, as compared with 16,330 tons for the corresponding period in the 1927/1928 season, a shortage of about 5,350 tons, or 33 per cent. With the shortage of inferior Hashab estimated at about 2,000 tons, the total shortage in Hashab gums as against last season would amount to date to 7,350 tons.

El Obeid prices closed at 5s. per cwt. more than on August 31. Although much higher prices than the El Obeid price were offered, it has proved impossible to find any parcel of gum free from rain damage outside the daily arrivals at the auction markets.

Orders for old crop gum continued to come, but only a small proportion of them could be accepted owing to the absence of goods. Some business in new crop gum was also done, but neither buyers overseas nor sellers here appeared very anxious to contract at so early a period before the new season starts. It is too early yet for anything to be known concerning the new crop, and any business done is purely speculative.

Talha.—Although demand was small, prices rose 6d. per cwt. during September.

MARKING OF BULGARIAN PRODUCTS.

An Ordinance has been issued by the Bulgarian Ministry of Trade, Industry, and Labour, under the authority of the Law for the Encouragement of Local Industry, making it obligatory for any undertaking benefiting under the terms of the Law to place a distinctive mark of origin on articles produced by them for local consumption. The inscription is to be applied to the goods themselves, where such articles already bear a trade mark, or on the immediate packing where marking of the articles is not practicable. The ordinary inscription will be "Bulgarsho Proizvodstvo" (Bulgarian Production) or the abbreviated form "B.P." The additional marking will not be required where there already exists, in the Bulgarian language, the name of the firm or the location of its factory. Special forms of marking are prescribed for textile goods. The Ordinance prohibits the application of these marks allocated to local products to any manufactured articles imported into Bulgaria.

The Calcutta Electric Supply Corporation has declared an interim dividend of 5 per cent. actual on the ordinary capital, payable November 15, less tax at 2s. in the £.

The directors of the South Indian Railway Company, Ltd., have decided to recommend that a final dividend for the year 1929 of 2½ per cent., less income tax, be made from surplus profits on January 1, 1930, making with the guaranteed interest of 1½ per cent. payable on the same date, a total payment of 4½ per cent., less income tax, for the half-year ending December 31, 1929, and together with the payment that was made on July 1, 1929, a total payment of 8 per cent. for the year, being the same as the dividend paid for the previous year.

ANCHOR LINE LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Electric Lighting Installation.—The Ministry of the Interior, Cairo, invites tenders for the supply and erection of Diesel-engine driven electric lighting installation at Abou-Tig (Assiut Province). November 30. (D.O.T.)

Wines and Spirits.—The Department of Public Health, Cairo, invites tenders for the supply of brandy, rum, sherry, and Malaga wine required during the year ending April 30, 1931. December 7. (D.O.T.)

Pharmaceutical Sundries.—The Department of Public Health, Cairo, invites tenders for the supply of various pharmaceutical sundries required during the year 1930-31. December 7. (D.O.T.)

INDIA.

Battery Charging Motor Generators, Transformer, and Oil Switch. The Indian Stores Department, Simla, invites tenders for the supply and delivery of the above electrical machinery for the Posts and Telegraphs Department, Wireless Section, Simla. November 12. (D.O.T.)

Two Generating Sets, etc.—The Indian Stores Department, New Delhi, invites tenders for the supply, delivery, and erection of two 20 k.w. oil engine driven D.C. generators, water softening plant, and overhead travelling crane. November 18. (D.O.T.)

Wet Concrete Mixers.—The Indian Stores Department, Engineering Branch, New Delhi, invites tenders for the supply and delivery of wet concrete mixers. November 7. (D.O.T.)

Dusters.—The Indian Stores Department invites tenders for the supply of dusters. November 12. (D.O.T.)

ROMANIA.

Tin in Blocks and Rods, etc.—The British Consul at Timisoara reports that a local firm wish to get into touch with United Kingdom suppliers of English Standard, Lamb and Flag, and Banca tin in blocks and rods, and also of tinplates. (D.O.T.)

YUGOSLAVIA.

Postal Boxes.—The Post and Telegraph Department of the Kingdom of the Serbs, Croats and Slovenes intends to order a certain number of postal boxes for the Central Post Office in Belgrade. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Glasgow, October 30; Manchester, November 4; Birkenhead, November 5). (For passenger sailings and dates see advertisement.)

Anchor Blockbank Line.—S.s. Circassia for Calcutta (Birkenhead, October 31); s.s. Manipur for Calcutta (Birkenhead, November 7).

Bibby Line.—S.s. Cheshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 30).

British India Line.—S.s. Mandala for Colombo, Madras, and Calcutta (London, November 2); s.s. Domala for Bombay (London, November 2).

Cunard Line.—S.s. Brescia for Casablanca, Gibraltar, Algiers, Genoa, Leghorn, Naples, Corfu, Bari, Gruz, Venice, Trieste, and Fiume, also Palermo, Messina, Catania, and Ancona if sufficient inducement (Liverpool, October 26; Swansea, October 26); s.s. Bantia for Gibraltar, Malta, Patras, Piraeus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if inducement (Glasgow, November 14; Liverpool and Swansea, November 16).

Johnston Line.—S.s. Avigmore for Piraeus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 8) (this steamer will be the last sailing of the season to the ports of Galatz and Braila, and sailing November 9); s.s. Quernmore for Piraeus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 7).

P. and O. Line.—S.s. Viceroy of India for Bombay (London, November 8); s.s. Behar for Calcutta (London, November 8).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 26); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 9).

Ellerman and Papayanni Lines.—S.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 31); s.s. Lesbian for Gibraltar*, Algiers*, Oran*, Patras, Piraeus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 2; Swansea, November 2); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 7); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, November 9; Swansea, November 14); s.s. Roumelian for Algiers*, Oran*, Patras, Piraeus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 23; Swansea*, November 23). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piraeus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 22.

The pressure of liquidation has exerted a strong influence on prices on the Stock Exchange during the past week and apart from gilt edged stocks a long list of declines has to be recorded. The Consol market has maintained a fairly firm appearance thanks to the strength of sterling in terms of the dollar, and partly owing to a transfer from speculative stocks to high-class securities. Fluctuations in Wall Street and forced liquidation produced an all-round decline in the industrial section, oil shares became less firm and the mining markets were reactionary. A feature of the foreign market was the weakness of Brazilian bonds. Australian stocks were adversely affected by the results of the elections in the Commonwealth. Altogether the Stock Exchange has passed an unhappy week. The uncertain movements of New York have been an important factor and while a strong reaction in that centre would probably be to London's ultimate advantage, its immediate effects would be to add to the existing unsettlement.

Industrial Profits.

From the *Economist's* compilation of industrial profits as made public during each quarter of the year by a number of representative companies, it would appear that during the third quarter of this year a set-back was visible compared with the steady advance over the last seven years, except for the period of the coal dispute. The set-back as revealed by the total profits of the 257 companies investigated, on closer examination is found to be due mainly to adverse conditions of companies trading abroad, especially in the groups of rubber and tea, but in the home industries advance is on the whole to be recorded with the important exception of textiles, and in the textile group the decline is mainly attributable to one firm, British Celanese. Iron, coal and steel and shipping,

it is noteworthy, show improvements this year. The net profits published of the 257 companies amounted to £23,327,750, which was distributed in the proportion of 61.6 per cent. to ordinary dividends, 17.8 per cent. preference dividends and 20.6 per cent. was "left in the business," i.e., placed to reserve. Compared with the third quarter of last year slightly more of the profits were paid out in dividends leaving a smaller proportion for allocation to reserves. The amount "left in the business" this quarter as usual, varied considerably from industry to industry; iron, coal and steel placed over 32 per cent. of profits to reserve, shipping as much as 45 per cent., but breweries, for example, only 17.2 per cent.

Paint Prosperity.

While many principal industries have been experiencing hard times, supplementary trades have managed to prosper and of these the paint business is a conspicuous example. The recently published report of Goodlass, Wall and Co., paint, colour and varnish manufacturers, show a profit of £72,967 for the 14 months ending August 31 last as against £52,585 for the 12 months ended June 30, 1928. A final dividend of 15 per cent. on the ordinary shares makes the dividend 22½ per cent. for the period as against 17½ per cent. for the previous year. Reserves received £5,299 (against £10,000 last year) and are thus brought up to £170,000. The company's business has been extended to new areas with results satisfactory to the directors, and an arrangement has been made with Valentine and Co., of New York, for the sale and manufacture of that company's brand of goods in the British Isles and certain colonies. Another successful firm in the same line of business is Pinchin, Johnson and Co., who last year paid a 30 per cent. dividend on their old ordinary share capital and have for the current period paid 10 per cent. on the enlarged ordinary capital which amounts to £1,374,956. This company, which in its last report showed reserves and balance amounting to £1,264,648, has been progressing steadily and expanding its activities abroad. In view of the capital bonus increase the yield on the ordinary shares cannot be accurately stated, but the preference shares which are very well covered yield £5 15s. per cent.

Argentine Loans.

In his speech at the annual general meeting of the Anglo-South American Bank, the Chairman, Mr. R. J. Hose, gave his usual interesting review of conditions in the Latin-American states. Of these Argentina is the most important to British investors, her securities being very popular on the Stock Exchanges here. During 1928 conditions in that country were good, but in the present year a reduced output of wheat and linseed is anticipated owing to the prolonged drought. Nevertheless, said Mr. Hose, generally speaking the Argentine economic situation continues on a very sound basis, although the immediate future naturally depends upon the eventual out-turn of the forthcoming crops. On a longer view, the outlook for the Republic is decidedly favourable. Until this year production of all staple commodities had shown such a steady and such a substantial advance that it could not be solely attributed to favourable climatic conditions. The present President, Dr. Irigoyen, too, who assumed office in October 1928, has given evidence of a policy favourable to the intensive development of the agricultural industry of Argentina, as well as towards improvements and extensions in the railway systems. The 5 per cent. Gold Loan of the Republic yields £5 5s. per cent. the 5 per cent. Port of Buenos Aires Bonds, £5 11s. per cent., and the Province of Buenos Aires 5 per cent. Consolidated Gold Loan yields £6 7s. per cent.

It is estimated that the 1929 crop of locust beans in Cyprus will amount to about 25,000 tons. To this should be added about 1,000 tons of the 1928 crop still unshipped.

THE MOTOR SHOW.

(From Our Own Correspondent.)

The temptation in reviewing an exhibition of this character is always to be over-indulgent in superlatives, but on this occasion I have no anxiety lest undue exuberance should bring down upon my head the barbs of criticism, for I think there is a very general measure of agreement that the Motor Show of 1929, from whatever angle it is viewed, marks a very distinct advance on any of its predecessors. In saying this, one says a good deal, for there has never been a Motor Show which has not been a delight to the eye and a temptation to the purse. This time the charm and the desire are alike intensified by the attractions of the latest models which the manufacturers of this and other countries have contrived for our captivation.

All told there are, I believe, about 350 cars in the Show, and between them they cover all manner of prices—the difference between the cheapest and the most expensive car is about £3,000—and meet every requirement that the motorist, actual or potential, can put forward. One matter in which there is little change from last year is the question of price, and I should think it doubtful whether prices are now likely to go much lower. Manufacturers have contented themselves this time with introducing improvements in various directions, with the result that the 1930 car represents much better value than its similarly priced rival of a year ago. A feature of the Show of special interest is the marked increase in the number of six-cylinder models shown by British firms. Other developments of note are the fitting of unsplinterable glass, automatic gear change, and the adoption of chromium plating. Improvements in the body of cars have kept pace with other developments. The stream-line appears to be no longer fashionable, except on American cars, but most of the cars approach very closely to it, and while it is purely a matter of taste, a certain unevenness of outline gives a far from displeasing effect. The luggage arrangements are now much improved, and the attachment at the back now proves a graceful addition to the body. At one stand, that of a foreign firm, I noticed an additional luggage receptacle on the hood, the effect of which was anything but satisfactory, and the innovation is not one which I think is likely to be followed. An interesting development in some cars was the absence of a dashboard, the advantage or otherwise of which must remain to be seen. Personally, I thought it detracted from the appearance of the cars, but in this as in other things it is no doubt a case of *alii alia sentiunt*. I have left to the last the principal departure from previous practice of this year's Show, that being the experiment of Trojan Ltd, in placing the engine at the back of the car where it simply appears in the place of the luggage receptacle. The advantage of this development is that the engine drives direct on to the back axle, and the long propeller shaft, the universal joint, and reduction gearbox are all eliminated. It is claimed that steering is much easier with the engine at the back, and driving is vibrationless. It will be interesting to see if this departure is followed by other manufacturers in the course of the next year.

As usual the stand of Morris Motors Ltd., is a special attraction. This firm's exhibits include an 8 h.p. four-cylinder Minor fabric saloon in blue, a 8 h.p. four-cylinder

Minor coach built saloon in brown with folding head, an 11.9 h.p. four-cylinder Cowley coupe in blue with a folding head, a six-cylinder Oxford saloon in blue with a sliding roof, and a fabric saloon. Of these cars the Oxford six-cylinder particularly merits attention. The chassis of this type is also exhibited, and shows the wonderful mechanical construction. The features include an automatic radiation system and a device for dealing with fumes from the engine, hydraulic brakes on all four wheels, easily adjusted hand brake operating on the rear wheels, a self-cleaning oil cleaner, and hydraulic shock absorbers. All the Morris cars, it may be added, have unsplinterable glass, shock absorbers at front and back, and four wheel brakes. Another stand of special interest is that of the Austin Motor Company, whose exhibits include their well-known ranges of 7 h.p. to 20 h.p. cars. A 7 h.p. chassis is shown, also a 7 h.p. saloon and a 7 h.p. tourer. The 7 h.p. and 12 h.p. cars have four cylinders, but the other models have six cylinders. The cars are all fitted with four-wheel brakes, unsplinterable glass and shock absorbers to the front and rear. At the stand of Singer and Co., there is a very attractive two-seater sports model in green. Features of this car are three forward speeds and central change, four-wheel brakes, and shock absorbers. In an exhibition so comprehensive as this and so packed with attractive cars, it is no easy task to single out stands for special mention, and those I have referred to must serve as examples of what is to be seen at this year's Show. Of the stands not devoted to cars mention must be made of that of the British Petroleum Co., showing a model of a refining plant, and that of the Dunlop Rubber Company. As a matter of fact, most of the stands were, in a way, Dunlop stands, for car after car bore the word Dunlop on its tyres.

ROUMANIA'S NEW OILFIELD.

The recent discovery of oil on the Boldesti field, which has hitherto been known only as a gas producer, has given a great impetus to the Roumanian petroleum industry (says the *Petroleum Times*). The Shell Company's (Astra Romana's) well No. 7, after penetrating the gas levels, reached a 50 ft. oil sand in the neighbourhood of 4,850 ft., and according to the latest advice is producing 140 tons, or about 1,000 barrels, of light oil per day through a 12 mm. bean, to which diameter the well is pinched down. The Boldesti anticline is one of the largest in Roumania and the lands situated upon it are principally owned by the Shell, Phoenix, and the Standard Oil Companies. It will be recollected that at a depth of about 4,600 ft. large quantities of gas were discovered—the wells producing as much as 4,000,000 cubic feet per day through a 7 mm. bean and under the colossal pressure of 2,400 lb. per sq. in. It is now also practically certain that further oil-sands will be found below the 4,850 ft. level, since the Meotie oil-producing series have only been penetrated to the extent of less than half their usual thickness. The Boldesti discovery, following as it does upon the proving of the Ceptura anticline where a similar structure exists, has created much confidence amongst operators, as the many similar structures held by the larger oil companies can now be confidently tackled and great development may be expected in the near future.

DUNLOP RUBBER PLANTATIONS EXTENSION.

Two million young rubber trees are now being planted in the Dunlop plantations, Malaya, section by section as the heavy tropical jungle is cleared and its soil prepared over an area of sixteen square miles. In ten years' time it is expected that the new trees will yield an annual crop of 5,000 tons of rubber. At present 8,500 tons of rubber a year is being tapped from four million trees. Every other day a very thin strip of bark is cut from each tree and the fluid rubber drips into the cup below. As each cup receives, on the average, only half an ounce of dry rubber daily, between six and seven hundred million cupfuls of it have to be collected in the course of twelve months. One-third of the native workers are Chinamen, but the bulk of them are Tamil specially recruited from the South of India. Temples for their worship are built by the Dunlop organisation, which also provides houses and hospitals for them, schools for their children, and rice at cost price. Golf courses have been laid down for the European staff, whose Rugby team is making a bid for the championship of Malaya. Early next year the dense jungle is to be tackled over a further sixteen miles of the Dunlop territory, which is more than 125 miles in extent.

ATTWATER & SONS, PRESTON, England

Company Meetings.

LAKE COPAIS COMPANY.

Steady Progress with Development.

Debenture Arrangement Approved.

The ordinary general meeting of the Lake Copais Company, Ltd., was held on October 21 at Winchester House, E.C.

Mr. W. Sandford Poole (the chairman), in moving the adoption of the report and accounts, said:—The autumn of 1927 was a favourable one and permitted good progress being made with early crop cultivation, but during the first quarter of the year 1928, which was one of the wettest on record in the annals of the company, exceptionally heavy rains were experienced. The actual rainfall registered was in those three months over 21 in., compared with less than 8 in. in the corresponding period of 1927 and an average of about 12 in. This interfered with cultivation operations. Some 1,750 acres of early crops were ruined by flooding, which occurred following a breach in the bank of the Marsh Canal, caused probably by weakness at one spot owing to the burrowing of an otter.

The rains were in May succeeded by a spell of hot weather, which led to the premature ripening of the early crop cereals generally, and caused damage to the young plants of maize and cotton, large areas of which had to be resown. The summer was a comparatively cool one, the wet season providing an ample supply of irrigation water, and the autumn was favourable for the harvesting of the cotton and maize.

Steady progress continues to be made with the development of the property, the areas from which crops were harvested being the largest since the year 1918 and over 12 per cent. more than in the year 1927. Of the area cultivated in 1928, 3,571 acres were broken in and prepared by our development department, the whole being sown by tenants.

At the end of the year 1928 the net area dealt with by the company since 1924, when the programme was initiated, amounted to 11,794 acres. The total cost of the programme up to the end of the year 1928 was approximately £13,061, all of which has been met out of revenue, and works out at about 22s. per acre.

A comparison of areas harvested in 1923 and 1928 is interesting and instructive. In 1923 the area harvested was 34,491 acres—showing an increase of nearly 40 per cent. The caterpillar tractors, which we purchased for use in ploughing derelict areas, have proved to be a great success, and we purchased two more up-to-date machines towards the end of 1928, which are yielding even better results.

The area of cotton harvested was about 20 per cent. larger than that of the previous year, 4,405 acres compared with 4,575 acres, whilst the company's total collections of this crop increased by about 26 per cent. The water supply for irrigation purposes was plentiful, the crop was remarkably free from disease, and the price obtained was in advance of that obtained in the previous year.

Of our revenue in 1927 cotton yielded 24.2 per cent., whilst in 1928 cotton yielded 32.6 per cent. On an estate which can supply irrigation water, cotton is perhaps one of the best paying crops, and we are doing all we can to foster the growing of this crop by the cultivators.

The net profit in Greece for the year ended December 31, 1928, is £36,131, which compares with £32,367 in the previous year. For the first time since the distribution made in the year 1921, payment of interest (less income tax) at the rate of 5 per cent. on the "A" debenture stock issued is being made in cash and will absorb £13,897.

It is also possible to increase the rate of interest recommended for distribution on the "B" debenture stock from 4½ per cent. to 5 per cent., and, in accordance with the terms of the scheme approved to-day at class meetings of the "A" and "B" debenture stockholders, this distribution, less income tax, will be made in the form of fully-paid scrip certificates of "A" debenture stock taken at the price of 80.

At the general meeting last year I informed the proprietors that the Greek Government had requested the company to extend until December 31, 1928, the time for exercising their purchase option under the arbitration award, in order that they might further consider the matter and come to a decision. By the wish of the Greek Government, negotiations through the medium of the Greek Minister in London ensued.

After much correspondence and many interviews, the time limit was reached without any result being achieved, and the State's request for a further and definitely final extension of the option until the end of April, 1929, was acceded to by the board.

However, this extension also lapsed, no definite offer to purchase the estate for cash or marketable securities having been received by the board. The greater part of the estate, therefore, has now, by virtue of the terms of the arbitration award, become the company's freehold.

As regards the current year, owing to the severe drought experienced this spring the early crop harvest has proved to be disappointing, but, on the other hand, the areas sown in late crops, principally maize and cotton, have been very considerably increased. It is hoped that the yields from the late crops will in some measure compensate for the deficiency in the early crops, but recent reports from the estate indicate unseasonable weather for the gathering in of these late crops.

There is only one other matter I need refer to: it is the resolution to increase the borrowing powers of the board as set out in the notice

of meeting. There is no present intention of exercising these powers beyond the increase of £50,000 "A" debenture stock which the "A" and "B" debenture stockholders have just authorised, but we think it well that the directors should have in hand a moderate margin of borrowing powers.

The report and accounts were unanimously adopted; the formal business was duly transacted, and a resolution was passed extending the borrowing powers of the directors.

At separate meetings of the "A" and "B" debenture stockholders resolutions were passed sanctioning the arrangements referred to by the chairman at the ordinary general meeting.

H.E.H. THE NIZAM'S GUARANTEED STATE RAILWAYS.

Another Satisfactory Year.

The seventy-sixth general meeting of H.E.H. the Nizam's Guaranteed State Railways Company, Ltd., was held on October 22 at Winchester House, Old Broad Street, E.C. The Chairman (Lieutenant-Colonel George Huddleston, C.I.E., V.D.) presided.

The Chairman, in moving the adoption of the report and accounts, said:—You may remember that last year ill-health prevented my meeting you. This year I rise with mixed feelings. First of all, it is a great pleasure to see so many of you here to-day. Secondly, the report is of such a highly satisfactory character that it speaks for itself and my task in placing it before you is comparatively simple. But there is another side to the picture. There is a possibility, I need not put it higher than a possibility, that we may not meet again on the same footing as we have done annually for so many years past. I will revert to this later on.

I have told you, and I feel sure you will agree, that the report before you is of a very satisfactory nature. The working results of our broad gauge system are particularly so; the net results in sterling having risen in round figures from £479,500 to £520,000, or by nearly 8½ per cent. On the metre gauge as well the comparison shows an increase. There has also been a striking advance in the earnings of Government lines worked by us, both broad and metre gauge. The broad gauge Kazipet Balharshah Railway was opened throughout for all classes of traffic in November, 1928. Between then and March 31 last, that is to say in five months, its earnings were more than double what they were for the previous 7 months before the line was completed, and there was no through booking. The earnings of the Secunderabad-Dronachellum Railway have also improved greatly since a connexion with the railways in Southern India was made in September, 1928.

In my view the Kazipet-Balharshah Railway has only begun to touch the potentiality of the big earnings I venture to predict for it. I referred briefly to its prospects in my address last year. I believe, also, that in the metre gauge Secunderabad-Dronachellum Railway, His Exalted Highness's Government have a system carrying great hopes of development. All that is needed is a liberal rates policy and a sound anticipation of necessary facilities to deal with prospective traffics.

I am sure you do not wish me to take up your time in analysing the traffic of our own lines. I will, therefore, only say a few words about it. On the broad gauge both coaching and merchandise earnings improved. Naturally, there were fluctuations in various items; for example, a decrease occurred in suburban passengers, but this was more than made up by a growth in ordinary passenger traffic. It was not, however, the coaching, but the merchandise and minerals that account for the greater part of the broad gauge increase, and a portion of this was derived from an entirely new passing and interchange traffic with the Government lines already referred to. Similarly on the Hyderabad Godavery Valley Line both merchandise and coaching earnings were slightly better than in the preceding

COMPANY NOTICE.

NOTICE IS HEREBY GIVEN that the next ORDINARY GENERAL MEETING of the South Indian Railway Company, Limited, will be held at the Offices of the Company, 91, Petty France, Westminster, S.W.1, on Friday, the 1st November, 1929, at 11.30 a.m., for the purpose of receiving the Directors' Report and Statements of Accounts for the Year ended 31st March, 1929, and for the transaction of the ordinary general business of the Company.

The Transfer Books will be closed from Tuesday, the 17th, to Tuesday, the 31st day of December, 1929, both days inclusive, for the preparation of the half-yearly Warrants.

Transfers will not be received at the Office while the Books remain closed.

The Warrants, payable on and after the 1st January, 1930, will be forwarded to the Proprietors on the 31st December, 1929.

By order,

A. MUIRHEAD,
Managing Director.

Company's Offices:—

91, Petty France, Westminster, S.W.1.
16th October, 1929.

excellent year, but details of fluctuations do not call for comment.

I will now pass on to the question of the possible purchase by His Exalted Highness's Government of the company's lines. You know that His Exalted Highness's Government have the right under the contract to give notice of its termination on January 1, 1933, and to end it on January 1, 1934. The Board were prepared to see the Government take this step when the time came, and for this reason never felt confident that we had more than a short life before us.

Last summer we heard from our agent in India, Mr. Lloyd Jones, that His Exalted Highness's Government were considering the possibility of making us an offer to take over the railways from a still earlier date than that provided for under the contract. We invited Mr. Lloyd Jones to come home to discuss the subject with us. The Board discussed the matter with Mr. Lloyd Jones and told him that if a sufficiently liberal offer was made to them by the Government of His Exalted Highness the Board would not hesitate to put it before the stockholders. You will readily understand the desire of the Government to secure under their own management such a prosperous undertaking and that it may be well worth their while to offer a price which may induce you to part with it at once instead of waiting until 1934. On the other hand, His Exalted Highness's Government will, on their side, no doubt appreciate, what I believe to be the fact, that you, the stockholders, are very well satisfied with the position as it stands and are not desirous to change it before you must, unless indeed it is made unquestionably worth your while to do so.

Soon after his return to India Mr. Lloyd Jones was able to advise the Board that His Exalted Highness the Nizam had sanctioned a proposal being prepared by his Government with a view to an offer being made to us. It then seemed only right that the proprietors should be apprised of the position, and, as a result, the Board's notice, dated September 20, was advertised in the public Press and copies were issued to the stockholders. Since then, your Board's knowledge of what will happen has not been added to. No offer has yet been made to them, and I may say that we have reason to believe that if it is made it is not likely to reach us much before the end of the year.

You may rest assured that if, and when, such a proposal does come, provided that it is of a nature the Board think it well to recommend you to accept, you will be invited to attend a meeting, when the position will be placed before you again and you will be consulted as to your wishes before any definite step is taken.

A cable has just reached us from our agent regarding the prospects for the current year. There had been some anxiety regarding the rainfall, which was short, but he tells us that recently there has been very satisfactory rain, which had benefited the crops greatly and they are expected to be exceptionally good. The agent anticipates that the net earnings will be somewhat better than for the year I have just commented upon.

The motion was carried unanimously.

EASTERN AND OVERSEAS PRODUCTS.

Amalgamation with Eastern Oil Industries.

The first ordinary general meeting of Eastern and Overseas Products, Ltd., was held on October 22 at Winchester House, Old Broad Street, London, E.C.

The Rt. Hon. Lord Hardinge of Penshurst, K.G. (the Chairman), in the course of his speech, said:—It is a source of satisfaction to me that in this our first year we have been able to make considerable progress. This is particularly gratifying as, owing to our close connexion with Germany, we had to face during a large part of the period under review economic conditions in that country which were difficult.

Our company was formed for the purpose of acquiring and holding one-half of the issued capital of the Aktiengesellschaft für Osthandel of Berlin and of acting as the connecting link between the Osthandel and this country, where the Osthandel expected to develop its trading business. The main part of our capital, to be exact £337,500 out of £400,000, was invested in the shares of the German company, leaving a relatively unimportant balance available for direct business. The Aktiengesellschaft für Osthandel, mainly owing to the constant assistance of the Deutsche Bank, which even before its recent amalgamation with another important German bank, viz., the Direktion der Disconto Gesellschaft, was one of the most powerful banks on the

Continent, has developed a large and extensive business as general merchants in raw materials and foodstuffs in Germany and in the countries of Eastern Europe (excepting Russia) and the Balkans. The Osthandel enjoyed, therefore, from its start the fruits of the special experience which German trade and banking had acquired in these countries for many years before the War, and could rely on the remarkable organisation which had been built up since under altered conditions. Under these favourable auspices the Osthandel was able to extend its business and increase its turnover. For the last few years it has paid a dividend of 15 per cent.

Our company, being during its first year mainly a holding company, was dependent for its profits on the results of the trading of the Osthandel, and was chiefly interested in assisting it by means of our company's English connexions and in assuming a certain control of a general character over the Osthandel's policy. As regards profits, our company had, in addition to the dividends on its holding, to look to revenue arising from various commercial services which we were able to render to the Osthandel as regards arranging of credits, insurance, and by way of executing its various orders and joining in various contracts, which resulted at the end of the year in a handsome return.

Conditions in Germany.

Our first year experienced very difficult conditions in Germany, which naturally affected the Osthandel. Shortage of capital remains still a source of considerable difficulty in Germany, but we look with every hope and confidence to a steady general improvement. Apart from the German business, we have started certain direct trading operations in this country in various commodities, particularly in those in respect of which we could, through our German connexions, get into touch with suitable openings. We look forward to being able to develop extensive direct trading mainly on a commission basis.

At the extraordinary general meeting which was held in May I dealt fully with the question of the increase of the company's capital. Since the date of the balance-sheet, viz., June 30, this important transaction, which raised the paid-up capital of the company to £1,010,000, has been completed, the company using the proceeds of the newly issued shares, viz., £610,000, roughly as to one-half for the purpose of acquiring the balance of the shares in the Osthandel and the other half for the purpose of increasing its cash resources. Our company is thus now the only shareholder of the Osthandel and disposes of important cash resources which enables it for the present to effect considerable saving in interest and bank charges. It was also able to replace a part of its bank credits by its own money, while its increased cash resources will enable it to get increased bank credits when it wants them later on.

The company has not lost its close connexion with the powerful German group which was instrumental in creating the Osthandel. The group agreed to exchange its holding of Osthandel shares for shares in our company, and the Deutsche Bank, one of whose directors is a member of our board, has assured the company of its continued support. We are busily engaged now jointly with our German friends in reviewing the business of the Osthandel. The simplification of control should result in very considerable saving on account of general expenses. Whereas the Osthandel up to now has worked mainly through subsidiary companies in which other parties had certain interests, it intends in future to assume sole control and either to have the subsidiary companies merged in it or work them as separate departments only. We hope that in one of the European offices, where we had to work through three different organisations, the "rationalisation" should yield the very considerable saving of at least £10,000 a year. In this connexion we have found it desirable to ask Mr. Max Rosenberg, who was the senior general manager of the Osthandel, to take up his residence in London as a managing director in order to have his knowledge of the business and organising experience close at hand.

Conversion of Deferred Shares.

Passing now to other matters, I intimated to you in May that we should shortly make certain proposals with regard to the £10,000 deferred shares which we are advised in responsible quarters are more a handicap than anything else for the development of this company. The existence of these deferred shares creates an obstacle to a true and exact appreciation on the Stock Exchange and elsewhere of the value of the ordinary shares of the company, and it appears to be in the interests of all shareholders to bring this uncertainty to an end and to put the capital of the company on a uniform basis. This may be achieved by converting the deferred shares into ordinary shares, which the Board are now asking the

STEAM & HYDRAULIC ENGINE PACKING MANUFACTURERS

FLAX, ASBESTOS AND COTTON,
AND ALL ENGINE ROOM STORES.

ATTWATER & SONS,

Hopwood St. Mills, Preston. Tel. Add.: "Attwater, Preston".

Contractors to British, American, French and Italian Admiralty.

shareholders to approve. In submitting a ratio of exchange at four ordinary for one deferred I desire to state that we arrived at this ratio after full and careful consideration of all aspects of the case and after obtaining the best financial advice. This conversion requires the issuing of 30,000 ordinary shares out of the 90,000 shares which are still unissued to the holders of the 10,000 deferred shares, who will, of course, retain those shares after they have been converted into ordinary shares. The 30,000 ordinary shares, which will constitute the consideration for the surrender of the deferred rights, will be paid up in full out of the company's reserves.

Before turning to the accounts there remains only one important point to deal with, namely, the amalgamation with the Eastern Oil Industries, Ltd. We already control about 55 per cent. of the issued capital of the Eastern Oil Industries, Ltd., a company registered with a fully paid up capital of £500,000. Eastern Oil Industries, Ltd., is engaged in the manufacture and sale of vegetable oils in the Near East and Roumania. It has recently concluded an important agreement with the Margarine Union group, disposing of some of its assets in Europe for a considerable compensation, to which we were a party, limiting the sphere of its operations and establishing a friendly collaboration with this powerful concern within this sphere. The reasons for the amalgamation with the Eastern Oil Industries are dealt with in a joint statement of the two Boards, which has been communicated to the shareholders, and they commend themselves to your Board, who are of the opinion, that if the amalgamation is carried through on the lines which have been carefully considered, the position of our company will be substantially strengthened. The purchase of the outstanding shares in the Eastern Oil Industries, Ltd., will require the issue of 345,000 ordinary shares in our company, so that after the conclusion of this transaction and taking into consideration the proposed conversion of the deferred shares, the total paid-up capital of our company will amount to £1,385,000. It is proposed that upon the amalgamation becoming effective your Board will be reconstituted and that a number of the directors will resign, but no retiring director will receive from the company any compensation for loss of office.

Profits.

Turning to the figures of profit, which amount to £53,086, I have already indicated that it consists of dividends on our holding in the Oshandel amounting to £22,500 and of various commissions, etc. Thus the net result, after charging directors' fees and legal and professional charges, amounts to about 12 per cent. on the capital. We have already paid an interim dividend of 3 per cent., and we propose now to pay a final dividend of 5 per cent., making a total dividend of 8 per cent. for the period covered by the accounts, and to utilise the available balance of £17,329 in writing off our preliminary expenses, which stand in our balance-sheet at £8,807, leaving £8,521 to be carried forward. I am sure you will consider these are satisfactory figures for the first year of a company in our position.

Reference has been made in the directors' report to our regret that Sir Edwin Dodd has, acting under medical advice, been compelled to resign his seat on the Board. I would like to emphasise here the great loss your company has sustained by his retirement, since from his exceptional knowledge and experience he was a tower of strength to the Board and from his genial personality a most pleasant associate.

The report and accounts were unanimously adopted without question or comment.

At an extraordinary general meeting of the company, followed by separate meetings of the holders of the ordinary and deferred shares, the proposals for the conversion of the deferred shares into ordinary shares were unanimously approved.

A hearty vote of thanks to the Chairman, directors, and staff closed the meeting.

COMPANY NOTES AND REPORTS.

EASTERN OIL INDUSTRIES.

The report of the Eastern Oil Industries, Ltd., states that so far as the original company (Palestine Oil Industry Shemen, Ltd.) is concerned, the accounts cover the period from January 1, 1928, to June 30, 1929. Early in 1928 the re-equipment of the factory at Haifa was set on foot; and later in 1928 the undertaking at Smyrna was acquired and the reorganisation was started. In order that the accounts might be presented to the shareholders as soon as possible after the close of the company's accounting period, viz., June 30 last, the accounts of the branches and subsidiary companies abroad were closed some months prior to that date, and the accounts therefore only include the trading results for a portion of the period. The work of organising and equipping the company's undertakings is now completed, and the prospects of the company, especially in Turkey, where the new tariffs came into operation on October 1, 1929, are in the view of the Board satisfactory; but having regard to the limited period during which the company's undertakings as reorganised have been in operation, the Board have not found themselves in a position to recommend the payment of a dividend.

In June, 1929, after considerable negotiations, arrangements were concluded with the Margarine Union Group involving the sale to the Union of the company's undertakings and interest in Hungary, Austria, and Poland, and providing an agreed and friendly basis for conducting the operations of the two companies in the Near East. Subject to certain trading restrictions, most of the countries in Europe and the Near East, which constitute the region of the

principal activities of the company are retained by the company as its sphere of operations; and in two of the countries of Eastern Europe a basis of joint working has been agreed upon. In consideration of this agreement the company was credited with the gross amount of £511,224. This was subject to certain deductions for charges, commissions, compensations to subsidiary companies and adjustments contemplated under the contract, amounting to £78,229, leaving a net cash balance receivable by the company of £432,995. This amount, pending further developments of the undertaking, has been employed in repayments of the company's loans from its bankers in respect of working capital. In addition to the arrangements with the Margarine Union, the company has acquired the whole of the share capital of 1,000,000 lire in a company known as the S.I.L.C.O. in Italy, which trades in a high quality olive oil, chiefly from North and South America. Negotiations have been in progress and have now been provisionally concluded for the amalgamation of this company with the Eastern and Overseas Products, Ltd.

PALESTINE EXHIBITION IN NEW YORK.

The success of the Palestine Exhibition which was held in the Queen's Hall, London, last May, under the auspices of the Jewish National Fund and the Economic Board for Palestine, has stimulated a movement in New York for the holding of a similar Exhibition in that City. It is proposed to organise the Exhibition on a large scale, one of the most important halls being contemplated as the venue. The programme already outlined indicates that the Exhibition will be the most important function of its kind and enormous interest is expected to be shown in it. It is proposed that the Exhibition should provide a picture of all aspects of the Jewish Renaissance in Palestine, both cultural and economic. The arrangements in Palestine are in the hands of the Jewish National Fund Headquarters.

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

Engineering Topics

(By Our Engineering Correspondent)

Tar for Road Work.

For some time past the chemical research laboratories attached to our big coal distillation plants and coal-tar derivative works have been paying special attention to the production of various qualities of tar, realising as they did, that tar would shortly be increasingly used for road work and that in such event engineers would be asking for special grades to meet special conditions of service. At the same time, the engineer has been busy seeking for new ways of using tar products and other materials in order to keep his roads abreast of the ever-increasing demands made upon them by commercial and other motor vehicles. That is to say that we are at present experiencing development not only in tars, but in the methods in which they are utilised.

Road work has been the great outlet of late for tars which would otherwise have been treated in a different manner and used for other purposes. Secondary and lower-class roads have been tar sprayed, and as a result the public have been able to obtain far better roads and at far lower costs than they would otherwise have had. Durable and dustless roads and street surfaces are now being provided in places which could not even boast of waterbound macadam roads a few years ago. Recently there has been a rather strong propaganda on the part of the British tar producers, and although that may not have received the full and unqualified support of the suppliers of bitumen, there is no doubt that the tar people are advancing arguments which appear strong, if not actually unanswerable, from both the efficiency and the economy standpoints.

Penetration Methods.

Something has been said in these pages before regarding what is known technically as the penetration method of using tar in road work. The chief drawback to the method so far has been its cost, but the introduction of new and improved machinery for dealing with the tar and for handling the aggregates and finishing off the surfaces have changed matters considerably. Now it is possible to get improved stone spreaders for laying the aggregate, better types of graders and maintainers for spreading the stone, as well as mechanical spreaders for the choke stone and the cover stone, all of which had to be done by hand before. Further, sweeps are now attached to the rollers, so that both the choke and the cover stone can be evenly distributed. The high labour cost, which was so high with this type of road work and which militated so greatly against its adoption, has consequently disappeared.

But although there has been some change in methods of working, so far as the introduction of machinery is concerned, other changes have been confined to the sizes of stone and the quality of the tar used. At one time the usual size of stone specified for the penetration course was from $1\frac{1}{4}$ to $2\frac{1}{2}$ inches for all materials. Now, whilst those sizes have been retained for hard rock, the size for soft rock has been raised, the minimum being now 2 in., and the maximum 3 or in some cases $3\frac{1}{2}$ in. This has meant a

considerable reduction in costs both of stone and of putting it in place. In order to fill more thoroughly the surface voids, the average size of choke stone has been reduced from $\frac{3}{4}$ to $\frac{1}{2}$ in. The amount of tar used in the first seal coat has been increased from half a gallon per square yard to $\frac{3}{4}$ gal. per square yard, in order that the seal coat may have greater adhering qualities and so be able to stand up better against the sucking action of the modern motor tyre.

Another thing is that after the research work that has been carried out we are now in a position to say exactly how much tar per square yard will give the best results under certain working conditions. It is no longer a matter of chance, but of intent, as to how much tar should be used on roads with stone of certain sizes, and machinery makers have risen to the occasion by providing machinery with valves that can be set to give any required amount, neither less nor more. Improved heating apparatus enables the engineer nowadays to keep his tar at exactly the right temperature, a point that, a few years ago, was largely a matter of luck.

Puddled Macadam.

As an alternative to the penetration method the cold or puddled macadam method has been introduced. This method is being adopted rather largely for use in streets where the traffic is comparatively light. A road of this kind is built up exactly like a waterbound macadam road up to the point where the water is applied. The procedure then differs as a cold, refined tar which will flow and penetrate easily is then used in place of the water, this first coat of tar being applied at the rate of approximately $\frac{1}{2}$ gal. per square yard and covered quickly with a light coat of pea gravel or stone chippings. A few hours later the road is rolled, and within the next twenty-four hours an additional $\frac{1}{2}$ gal. of the tar per square yard is applied and immediately blinded with coarse gravel or hard stone chips. The roller is then run over the surface again and within a very few hours the road is ready for traffic. If the road needs repairing at any time, there is no difficulty in doing the work, and all that has to be done with this type of road is to give it a fresh and extremely thin coat of tar and blind it with fine stone chips. If any pot holes have developed they should be well picked out and filled with a macadam of stone of about $1\frac{1}{2}$ in. size, treated with hot boiled tar and well tamped down into place.

Sewage Matters.

One of the essentials about sewage, not only from a health point of view but in order that it may be dealt with properly, is that it should be removed from the place of origin without delay to the place where it may be disposed of. Sewage which has only travelled a short distance through the conduits or has been made to travel a longer distance at a fairly high speed still contain free oxygen and can be treated more easily than can stale sewage which has lost its oxygen and become dead. Keeping the sewage fresh is an important factor, and in Germany particular attention is paid to rapid delivery. Nearly all the sewage there is collected and transported in open concrete or brick sewers, troughs or ditches, to the disposal plant, in order that it may be oxidised to some extent during the journey. Some of these open and, as we should consider, objectionable ditches are several miles in length and it frequently happens that the sewage arrives at the plant in a condition which renders only little further treatment necessary. In the opinion of engineers best able to judge, the ease with which such sewage can be dealt with more than balances any objectionable features, but that is not a view in which the general public is likely to share.

British Consular Reports

V—EGYPT.

(Continued from page 443.)

New Works During 1928.

The ambitious programme of development in irrigation and drainage by means of a chain of up-to-date pumping and electric generating stations throughout the Delta, and of separate stations in Upper Egypt, which had been planned some year ago but owing to the War and for other reasons had not been executed earlier, was seriously taken in hand some few years ago, with the result that during the past two years, following some earlier conversion operations, contracts for the erection of important stations at Mex, Abu el Menaga, Seru, Atf, Esna and Belcas were placed at a total cost of £551,197.

It is to be regretted that of all these large mechanical orders only that for the supply and erection of a station of three turbo-alternator generating sets with auxiliary diesel engine and generator was secured by a British firm. It is possible that the general success of Continental manufacturers has been due to a certain extent to the preference shown by the Mechanical Department of the Ministry of Public Works for the open air-injection design of diesel engine, which particular combination appears to be mostly produced in central Europe. During 1928 deliveries of the following diesel engine plant of foreign manufacture were made to the order of the Public Works Ministry: Four 1,300 b.h.p., four 540 b.h.p., two 400 b.h.p. The Main Drainage Department placed important orders during the year for sewer reticulation, duplicate main collector, pumping engines, duplicate rising main and machinery, air compressor plant, piping, etc., for which budget estimates were provided to the amount of £E406,500.

The large pumping station at Amria (the contract for the machinery for which had been secured by a British firm in 1926) was officially opened by His Majesty the King of Egypt early in 1929. Although United Kingdom manufacturers secured an important order for a 46 in. diameter cast iron rising main in the Damanhour area, the contract for the installation of the piping required for Amria was taken by a French firm at a lower quotation.

Apart from the cost of preparation of designs and estimates connected with the construction of the new Kasref-Aini Hospital (Faculty of Medicine), which has been designed by a British firm of architects, no estimate was included for this project in the 1928-29 budget, but initial expenditure is carried over to the 1929-30 budget.

A beginning was made in the execution of the Ministry of Education's programme of new schools, but owing to congestion resulting from the many departmental demands upon the State Building Department, a great part of these works had to be carried over to the 1929-30 budget with consequent delay in execution.

Among more important orders placed by the Egyptian State railways, telegraphs and telephones administration with foreign firms during the year under review were the following: 20 side tank engines: Italian firm at a cost of £E91,580; 320 open low sided wagons: Franco-Belgian group £52,160; Mansourah bridge: Belgian firm £E5,343; steel sleepers: Belgian firm £28,439. The most important orders secured by British firms were for the roofing required for the new locomotive workshops, 13 steam rail coaches, underground cable—Cairo to Alexandria, and automatic exchanges at Cairo and Mansourah.

Electrification Schemes.

Egypt has not remained oblivious to the great advances made of recent years in the use of electric power, and it seems not unlikely that in the near future various schemes for electrification, which are at present somewhat nebulous, may take more concrete form. During the early

part of the current year tenders were invited for the electrification of the Helouan railway, but were eventually refused on the ground that it had been decided to postpone that undertaking in view of certain more comprehensive schemes that had in the meantime been put forward. Similarly the proposals of a Franco-Belgian company, which had been formed with the object of erecting a large power station at Shubra for the supply of power to various existing undertakings, were not accepted.

Other and more ambitious schemes in which interest has, it is understood, been shown by various British and other groups envisaged a more or less general electrification of the whole country, either from thermo-electric or hydro-electric stations or a combination of both. In connexion with the suggestion that the required power should be generated hydraulically, it is of interest to note that in their report on the question of heightening the Aswan Dam the international experts advise that the fabric of the dam should not be pierced for the purpose of harnessing the water. It is, however, in some quarters believed that the desired result could be obtained without piercing the dam, as it is also contended that the difficulties attendant on the transmission of power from such a far distant source to the centres of consumption could also be overcome. Another scheme, which, however, by many is considered to be uneconomic if not impracticable, is connected with a proposal to conduct water from the Mediterranean and flood the desert area at Quattara, which lies several metres below the sea level. This scheme would need extensive tunnelling operations, and although of manifest interest is unlikely to be undertaken at an early date.

(To be continued.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 16:—

Egyptian Futures.

Sakel Contract.—The prevailing tendency in most commodity markets during the past week has been towards lower levels, and this, combined with the fact that Sakel values have been generally admitted to stand at too wide a premium over other cottons, has led to sentiment in our contract strongly veering to the "bear" side during recent sessions. Encouraged by the persistent decline, speculative selling has been in evidence daily; it is rather too early to state with any assurance that prices have been unduly depressed, but one or two points have latterly developed to lead one to incline to that opinion. In the first place, support of near positions by spot houses has latterly been a strong feature, and Novembers, from being over 40 points discount with January, have closed in to the neighbourhood of 10 to 15 points. Further to this, trade support has expanded and will probably continue to be of a more whole-hearted character with Alexandria below the 30 dollars level and our own contract running under 15d. Reports from Egypt indicate that heavy hedge selling has been in progress throughout the week, and we are informed that opinions there on the future course of the market are very mixed. Supplies are considered to be ample, but fears are expressed that present low levels will lead to the position being manipulated, or possibly to Government interference. During the later trading to-day, a much improved undertone has been in evidence, and under the influence of trade calling, prices have reacted sharply, the closing rates showing declines of 15 points for near and 32 to 48 points for more distant positions.

Upper Contract.—Only a moderate amount of business has transpired in this market during the past week, operations being mainly confined to trade calling on the one hand, and merchant's sales against imports on the other. Outside speculation continues to be negligible, and, whilst straddle differences with American appear attractive, very few are willing to embark on this operation on account of the heavy discounts now ruling. Statistically, the position of the Upper varieties appears sound, and once the early weight of the crop movement has passed into trade channels we look for values to develop a gradually hardening tendency.

Egyptian Spot.

The demand for the native Egyptian growths has not been so good this week. The market has had a more two-sided appearance and buyers have probably been rather puzzled as to what course to

pursue. Apart from this, the medium qualities of both Sakel and Upper (in which the bulk of the business for some time past has been taking place) have now been so thoroughly combed out that there is little left to reward the seeker. The Upper situation, of course, should obtain speedy relief from the new crop, but there are still several weeks to pass through before the bread-and-butter qualities of Sakellaridis can arrive in any appreciable quantity. It must be many years since this market has been swept as bare of these qualities as it is to-day. Spinners have recently been experimenting with various "fancy" growths by way of substitutes, but we doubt if any of them have given entire satisfaction. In spite of all vicissitudes Sakel still maintains its position as the Egyptian cotton *par excellence*. In another section of the spot market, that is Sudan Sakellaridis, the week has been marked by considerable activity and some important lines have been placed.

Sakel has been in moderate request only, but practically all grades have come in for a share of attention. Prices are somewhat easier.

Uppers have been rather quieter than of late, and buyers are disposed to await new crop shipments. The customary range of "pass to 25 on" has been the most popular inquiry. Prices have become slightly irregular for old crop lots and holders are anxious to clear stocks. New crop prices appear attractive, but spinners are not eager, as a whole, to buy beyond immediate requirements.

Pilion has been in very moderate demand and chiefly for the "Best."

Nahda has again attracted attention owing to the scarcity of Sakel, but sales have been strictly limited.

White, Maarad, etc., have been rather neglected.

Sudan Sakel.—A very large business has taken place, and all qualities have participated.

Tokar Sakel.—This cotton still remains the Cinderella of the market, but with Sudan Sakel disappearing at its present rate there is a possibility that it may soon share in the improved offtake.

C.i.f. Business.—On the whole, contracts on these terms have been disappointing, but we believe that conditions up-country are showing a steady improvement. Forwardings last week were returned as 7,391 bales Egyptians and 2,453 bales Sudans. Estimated spot sales for the week, 1,700 bales Egyptians and 11,150 bales Sudan Sakel. Quotations of Sakel show a fall of 25 to 30 points; Uppers are 18 to 25 and Pilion 25 points lower on the week. F.G.F. Sakel to-day, 15.65d. F.G.F. Upper to-day, 10.97d. F.G.F. Pilion to-day, 11.85d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 10, state:—Since our last report the futures market has been very active, but the tone has been rather weak. The week's summary of price movements is as follows:—Sakellaridis: November, 30.60 dollars, 1.16 dollars down; January, 31.19 dollars, 1.09 dollars down; March, 31.75 dollars, 1.11 dollars down; May, 32.23 dollars, 1.11 dollars down. Ashmouni: October, 20.05 dollars, 0.45 dollars down; December, 20.53 dollars, 0.35 dollars down; February, 21.00 dollars, 0.35 dollars down; April, 21.43 dollars, 0.34 dollars down; June, 21.83 dollars, 0.32 dollars down.

Notes of the Week.

The New Regime in Afghanistan.

So far the success that King Nadir Shah deserves has not failed him. Bacha-i-Saqao, having been taken prisoner, is no longer a potential menace to the new King's security. To such an extent are things being done decently and in order that the late Amir has himself handed over the seals of Government, before withdrawing into the rigorous confinement in which he is being kept. Unless the reports of terrorism in Kabul are authentic, the temporary Amir would seem to have played a not altogether ignoble part during his brief stay in the lime-light. He championed the general hostility towards King Amanullah's over-hasty reforms, and has been the agent of Afghanistan's change in rulers—a change which, it is to be hoped, will prove to the country's advantage. No decision as to his ultimate fate is yet reported. King Nadir Shah promises to be not only an enlightened Sovereign, but also a discreet one. He proposes to lead his people along the path of progress in order to make Afghanistan a civilised State, but he will try to carry his people along with him in a gradual movement of reform, instead of leaving them a bewildered and disgruntled crowd behind him. His first act is to summon the leaders of the tribes to Kabul, and a special *jirgah* at Jalalabad will deal with the question of eastern provinces. The items on the King's programme will all have been included in King Amanullah's long list of reforms, but Nadir Shah will begin at the right end, promoting the material progress of the country, without encroaching on religious and sumptuary matters. Roads and railways are to be rebuilt and schools reopened. All reforms call for expenditure, and King Nadir Shah starts under the grave handicap of an empty exchequer. Afghanistan is likely, therefore, to appear as yet another claimant for a foreign loan, but it is to be feared that the security that she can offer at present will not carry much conviction with it in the world's money markets.

Brigandage in Bulgaria.

The Bulgaro-Yugoslav skies have an unhappy knack of clearing, after long days of depression and obscurity, only

to become suddenly clouded over again through some unexpected incident. The reappearance of the notorious bandit, Dotcho Ouzounoff, is recorded in our Bulgarian Letter this week. Since that was written, however, this brigand and his band have murdered the President, one of the Puisne Judges, and the Public Prosecutor of the Court of Sevliyevo. This extraordinary murder appears to have converted the Bulgarians' fear that the brigands found their inspiration in Yugoslav sources into a conviction. The opinion is expressed, indeed, that Dotcho Ouzounoff's band is but an agent for those Yugoslav militarists who wish to see Bulgaria so humbled as to fall a prey to a greater Yugoslavia. The charge made by Bulgarians is, of course, no new one; but, however lacking it may be in evidence which would convince outside observers, it is undeniably a symptom of the unhappy psychological relation between Yugoslavia and Bulgaria. Western opinion may ask whether it is also Yugoslavia's fault that the Bulgarian authorities are unable to lay hands on the brigands. There are, indeed, many points in this affair which have yet to be cleared up. An investigation is urgent, for the outrages come as a very ominous commentary upon the agreements recently arrived at between the two neighbouring Slav countries on the question of the border between them.

Archæology in Palestine.

The situation which was revealed on October 25, at the General Meeting of the British School of Archæology in Jerusalem—it is reported elsewhere in this issue—is one which it is difficult indeed for any man in this country with pretensions to culture to face with equanimity. That this School should cease to exist would be most lamentable from every point of view, for, as Lord Plumer hinted at this meeting, civilising institutions such as this School have an influence quite apart from their actual discoveries. If it so happened that the School in Palestine had to close down for lack of funds, it might be regarded by malevolent people as the beginning of the end of British influence in the Holy Land. There is a sad urgency for stating afresh the obligations which Great Britain has

INDIAN NOTES.

in the Holy Land, and we speak not of political obligations to this or to that people but of obligations to her highest self. The connexion between Great Britain and the birth-place of Christianity is too obvious to be stressed, and in any case a conscious religious impulse is not essential to bind the Englishman to the Holy Land. The Mandatory Power cannot, however, escape from her religious heritage, and it is precisely in such an instance as this of the School of Archæology, in which there are no political or racial complications, that the Mandatory Power, or rather, the people of Great Britain, should rise to a sense of the part which it is called to play in the world and of its destiny. It will be a most miserable comment upon the modern Briton's sense of the fitness of things if sufficient money is not found for the continuation of the work of the School of Archæology in Jerusalem, and we must persuade ourselves that means will yet be found to avoid the making of such a comment.

A School in Iraq.

That there exists a belief that money can be obtained for archæology is, happily, made very evident by the preparations which are now well in hand for making that dream of Gertrude Bell—a British School of Archæology in Iraq—a reality. There are, moreover, sound reasons for such an optimism. In the first place, the record of British archæologists in Iraq is far superior to that of any nation. One thinks of the work of men like Layard, Rawlinson, and Smith: the very notion of founding a School to carry on their pioneer work and to perpetuate the good name of Great Britain in archæology in Iraq excites the imagination. Secondly, the fact that the idea was adumbrated and a basis of its realisation laid by so attractive a personality as Gertrude Bell must in itself impel many Britons to support the establishment of a British School. And thirdly, the recent and unforgettable memories which some of the worthiest Englishmen, and as an equal consequence of the War, many English families, have of Mesopotamia must be a lively basis on which to build hopes of a British School. That such a School should of itself conduct excavations is not a prime necessity, for it could do absolutely invaluable work in training archæologists. It is notorious at the present time that a shortage exists of British archæologists competent to discover the still priceless things to be found in the Middle East. This state of affairs can continue only to the detriment of British prestige. Fortunately, the scheme is at hand whereby such a reproach may be removed. We advise all our readers who can to be present at the public meeting of the British School of Archæology, which is to be held at the Central Hall, Westminster, at 3.0 p.m., on November 8.

The Simon Commission and The Local Governments.

The leading features of the reports of the various Provincial Committees of the Simon Commission have been lately outlined in THE NEAR EAST AND INDIA. These documents may be regarded as expressions of the views entertained by the more or less moderate class of Indian members of the Provincial Legislatures. They are not representative of the Extreme Party, by whom the Commission has been, of course, ignored. Nor do they stand for official opinion, as the Provincial Governments have themselves submitted separate memoranda to the Commission. Violent abuse of the Executive is yearly becoming more and more popular in India; and anything that is said by the Provincial Government, or by the Central Government, is practically certain to be condemned out of hand and without consideration. It may be safely anticipated, therefore, that very little that is good, and a great deal that is bad, will be said by the politicians and their followers about the memoranda in question. Nevertheless it is impossible to read such of these papers as we have seen without being greatly impressed by them. They are obviously the work of experts in administration. They are written with skill and ability, and are informed by first-hand knowledge of the prevailing conditions. While too voluminous to be reproduced in full in THE NEAR EAST AND INDIA, we hope to be able to include fairly full summaries of the more important of the documents within the next few weeks. The Bengal Government's memorandum appears to us to be one of the ablest and most interesting, and we shall accordingly begin the series with it in next week's issue.

Bombay's Trade in 1928-29.

Those who have begun to regard Bombay as almost "a lost cause," will find considerable ground for satisfaction in the annual Port Trust returns. The revenue has slowly increased till it has now reached the highest figure recorded; and, if it has only been possible to keep the expenditure within this limit by the strictest economy, this has been achieved, and a small balance of seven lakhs on the year's working was obtained. The increased revenue of recent years has been due to the necessity for increasing the port charges; but these are admittedly dangerously high, and reductions have been made which will in the present year amount to 25 lakhs per annum. In spite of the prolonged riots in Bombay there has been some improvement in trade, and it is a pleasing reversion to old time conditions to find a larger import of piece-goods, and a very welcome recovery in the staple export of Bombay, raw cotton, in which exports increased by 50 per cent. The wisdom of past administrators in providing additional land for trade and residential purposes at Colaba, the Ballard Pier, and Mazagon is being fully justified, and these estates should form a most stable component of the Board's Revenue in coming years. Finally, the Port Trust Railway has at last become a paying proposition, partly due to reduction in expense, and still more to the tardy grant of a more equitable share in the receipts from the traffic brought to the Port by the outside Railways. There are, of course, many flies in the ointment. Financial equilibrium has been obtained at by the total avoidance of capital expenditure. However wise this may have been while trade remained stagnant, no public body can stand still for too long without danger of petrification. The severe competition of other ports continues, and this can only be met permanently by the provision of better facilities, without excessive charges; admittedly a difficult combination. There is also the question of Municipal taxation: the members of the Bombay Corporation are not over-ready to remember that the prosperity of Bombay is bound up with the successful management of its Port. Above all, there is the uncertainty of the future efficiency of administration, not only in Bombay City, but in higher places also.

THE CONFLICT IN PALESTINE.

The arrival in Palestine last week of the Commission of Inquiry turned anew the attention of the world to the problem of Palestine. We hope that we shall not be accused of prejudice in calling it a problem, for although certain partisans, on both the Arab and the Jewish side, profess to regard the difficult situation as one quite easy to rectify if only certain steps be taken in a particular direction, no impartial observer, whether favouring the Arab or the Jewish thesis, would deny that a solution, howsoever reached, would be an extremely delicate task for the Mandatory Power to accomplish at all quickly. It is generally agreed by non-partisan opinion that whatever be the outcome of the recent disturbances, the manifestation of open conflict, in Palestine, should be the result of mature reflexion and of sober execution. Panic measures in any direction whatsoever would be deprecated by the best world opinion. One thing alone is certain, despite the opinion to the contrary apparently entertained by a section of the British Press, and that is that Great Britain will continue to execute her Mandate for Palestine to the best of her ability. Secure in this conviction, outside observers are speculating variously upon the precise form in which the Mandatory Power will endeavour to soothe the intense acerbities that have latterly been only too visible. They may rest assured, however, that it is not on their nostrums, but solely on the findings of the Commission of Inquiry, that the British Government will act. They may be perfectly confident in their own minds that they know where the balance of right and wrong lies, but, if they are wise, they will realise that British public opinion, which, after all, is the main arbiter in this affair, will hold back its voice on a matter still *sub judice*. That fact, of course, does not inhibit their very natural attempts to influence public opinion before the Commission of Inquiry has completed its work: the two fundamentally opposed views of Zionists and of Arabs on the recent conflict in Palestine are, indeed, so interesting, that they deserve summarising, if only as a means of eventually discovering the degree of truth which the Commission may have found in them.

To take the attitude of the ordinary Zionist first. He stoutly denies that the conflict is one between Arab and Jew. In his opinion the chief blame lies at the door of the Palestine Administration, which, he says, has notoriously failed in its duty towards the Jews. Whether in large or small things, the interests of the people to whom a "National Home" in Palestine was promised have been the last to be considered. The bogey of "Pan-Islamism" has been allowed unduly to frighten the British officials, and in many instances, he continues, there has been a positive pro-Arab bias in administration. Charges of incompetence, unsuitability, weakness, even of hostility to the Zionist cause are commonly laid at the head of various members of the Administration. Descending to the particular, the Zionist accuses the Administration of deifying the *status quo*, though, of course, the permission given to the Muslims to breach the southern end of the Wailing Wall is regarded as a gross and absolutely unwarrantable violation of that *status quo* in the interests of the Muslims. The Police, again, he complains, are quite hopelessly committed to acting in Arab interests. And one of the significant demonstrations in the early stages of these disturbances, the Zionist

demonstration at the Wailing Wall on August 15, is regarded by sober Zionists, if not as a deep-laid plot on the part of the Administration to provoke a strong, but (as, they allege, was hoped) controllable Muslim protest, at least as a piece of criminal weakness and folly. The ordinary Zionist, in short, appears to have scant regard for the present Administration in Palestine, and views its continuance in office with something little short of dismay. As for the Arabs, he marvels how it is that the British Government cannot see through their game, which is, in his judgment, to rid themselves entirely of the Mandatory Power, to gain complete independence, and, as a natural implication, to end all prospects of a "Jewish National Home" in Palestine. When he says "Arabs," moreover, he means the effendi class, for he is convinced that it is only a matter of time before relations between the fellaheen and the new colonists are perfectly friendly.

That is one side of the picture, which may be painted in high or in low colours according to the point of view of the particular Zionist. Of the Arab case a similar qualification has to be made; but whether it be done in glaring oils or in soft water-colour, the basis of the opposition is the same. The Arab seizes upon the Balfour Declaration as the whole source of the trouble. There is, he says, not the slightest animosity to Jews as such, and points, say, to Sanaa, Baghdad, Aleppo, as places where Jews have lived unmolested side by side with Arabs for hundreds of years. Even in Palestine, he goes on, Arabs and Jewish colonists lived in perfect amity before the War: it is only the claims of the Jews, founded in the Balfour Declaration of 1917, and the unjust privileges which have been granted to them under that Declaration, which have aroused the antagonism of the Arab Muslims and Christians. As for the Administration's pointing out of the clause in the Mandate to the effect that the interests of the native inhabitants of Palestine should not suffer through the implementing of the Balfour Declaration, that is, he rejoins, so much nonsense, for there is an inherent and fundamental contradiction between the purpose of the Mandate, in so far as it concerns the Arabs, and the promise to establish a "National Home" for an immigrant people. Even were the Administration willing to protect the interests of the Arabs—and there is, in their opinion, abundant evidence to the contrary—it could not unceasingly do so, seeing that it is also committed to a policy excluding the possibility of such protection. He concludes by asserting that no solution, therefore, can win the assent of the Arab population which does not repeal the Balfour Declaration and allow to that population the political rights which, in its opinion, were promised to it by Great Britain during the War, and which, indeed, are implicit, he repeats, in the Mandate itself.

In this very brief form we have given what we believe to be some of the salient points in the rival Arab and Jewish theses. Those theses will not, of course, be heard by the Commission of Inquiry either *in toto* or in anything like the form in which we have presented them, both for reasons of policy and because questions of major policy are expressly excluded from the Commission's terms of reference. They will, however, be the background of thought of the rival witnesses before the Commission, and it might be well if every student of the Palestinian situation were to ponder them, to see whether there is any real possibility of reconciliation between them. For that is the real problem of Palestine: reconciliation between the Arabs and the Zionists. The cynic might say that a policy which is disapproved by both Arab and Jew—and, incidentally, the Arabs seem to fear that the Zionists' counsel and the Palestine Administration's counsel may overbalance their own counsel in the Commission's eyes, whereas the Zionists are apt to imagine that the combination of Administration with Arab may wreck the chances of their interpretation of the recent disturbances bearing fruit—is in all probability a quite sound policy. But cynics, even in Eastern matters, are not always right.

'The Near and Middle East

From Our Own Correspondents.

EGYPT.

Cairo, October 19.

The Mediterranean Fleet.

The visit of the Mediterranean Fleet to Alexandria this year has been remarkable for two reasons—the visit which King Fuad paid to H.M.S. *Revenge*, as far as can be ascertained only the second time he has boarded a British man-of-war in Egyptian waters since his accession, and the presence of the High Commissioner as Chairman—an entirely unprecedented event—at the usual dinner given by the British community to the officers of the Fleet at San Stefano Casino. The King's visit to the *Revenge* in the present peculiar circumstances may be regarded, to quote Sir Percy Loraine's reference in his happily framed speech of welcome to Rear-Admiral Kelly, as "a further proof of the friendly sentiment which His Majesty entertains towards the British Government and people and . . . as of the happiest augury for the future relations of the two nations which His Majesty's Government are so desirous of placing on a firm and lasting basis of mutual friendship, understanding and co-operation."

Two Statements.

The two outstanding events in the political situation this week have been the statements sent by Nahas Pasha to the *Daily Express* on the subject of the attitude of the Wafd towards the Treaty proposals and towards relations with Great Britain, and the interview granted by the High Commissioner to the *Egyptian Gazette* on the subject of British policy towards Egypt. What Sir Percy Loraine said has already been said in various forms at various times. But it was just as well that the true aims of British policy should be again stated, and that Egyptians should be reminded of the grave responsibility that rests on them at the present moment in the matter of the future of their country. The High Commissioner's statement leaves no doubt on either point, and has been very well received by the Press of all political shades.

The statement made by Nahas Pasha has not materially altered the situation. He has, it is true, put officially on record the friendly intentions of the Wafd towards the Treaty proposals and its keen desire for a settlement with Great Britain. But beyond an expression of pious wishes, the leader of the Wafd has said nothing which precisely

describes the views of his party on the question of the Treaty itself. Nahas Pasha has various peculiar reasons for not wishing to make public what he and his colleagues think of, and intend to do towards, the Treaty proposals until the Wafd is safely in the saddle again and has made sure of its majority within the walls of the Chamber. And, looking at the matter from the Wafd standpoint, he is perfectly right in his refusal to reveal what the attitude of the Wafd is going to be. But so long as he maintains silence, Nahas Pasha must not complain if the reputation of "bad boys," which its past exploits in the realm of administration and higher politics gave the Wafd, colours the view held by large numbers of people with regard to the fate of the Treaty, and, in fact, the fate of Egypt, if either or both be left to the tender mercies of a Wafd in the mental condition which characterised its former tenures of office.

The Elections.

There has been some delay in getting the elections decree out, owing to the slackness in certain districts in drawing up the lists of electors and selecting the polling centres which must be done before the decree is issued. But there is every hope that before the end of the month it will be possible to fix the date for elections, and already many candidates have gone down to their constituencies to organise for the coming electoral campaign.

The Mixed Tribunals.

The decree has been published appointing Mr. Hugh Holmes, Judge in the Cairo Mixed Court of First Instance as Procureur General of the Mixed Court of Appeal in succession to Baron Firmin Van Den Bosch, who retired from that position on the 15th instant. Thus for the first time in the whole of its history the Mixed Tribunals have now an English Procureur General.

At the same time it is stated that Mr. Hansson, President of the Mixed Court of Appeal, has been offered a seat on The Hague International Court, but that he has not yet taken a decision in the matter. Should he accept this offer, the question of a successor will add one more to the many problems which are at present preoccupying the Ministry of Justice.

Normally the Vice-President succeeds, or rather is elected by his colleagues to succeed, the President. But it is doubtful whether the present Vice-President, who is an Englishman, will accept the post—and that is where the complication will arise. Incidentally, it may be as well to point out that it is really a misnomer to talk of Judges Hansson and Cator as President and Vice-President of the Mixed Court of Appeal. They are actually Vice-President and deputy Vice-President acting as President and Vice-President in the absence of anyone filling the presidency, which is an honorary post reserved to an Egyptian, and has not been held by one for many years.

Communications.

Communications in the provinces are gradually undergoing improvement as a result of the schemes for creating new roads and widening existing ones which the Government has been executing. But, while this will considerably improve conditions for motor traffic, something really must be done to minimise the risk of accidents to which the motorist is exposed. This week a friend motoring from Alexandria to Cairo passed at three different points a motor car submerged in the canal, and from inquiry he ascertained that seven passengers had met their deaths from these accidents. Partly accidents are

due to the overwatering which causes cars to skid at sharp corners and run into the canal. But they are also due in greater part to the conditions under which motors are allowed to ply in the provinces. It would be interesting to know how many fatal motor accidents occur in a year on the provincial roads; the total would probably surprise the authorities. While the latter are to be commended for improving the conditions in so far as the roads themselves are concerned, they are certainly to blame for not exercising more effective control over the chauffeurs to whom they grant permits, and in regard to the overloading with passengers, which is notorious, and together with bad driving is responsible for most of the accidents that are now of daily occurrence.

ROUMANIA.

Bucharest, October 24.

A Political Panic.

A few days after the appointment of the new Regent, M. Saratzeanu, Bucharest was thrown into a state of semi-panic by large headlines in the Opposition Press, which issued special editions during the course of two days,

stating that the Queen had fallen out with the Prime Minister, M. Maniu, and that, in her indignation at not having been appointed to the Regency, had made certain statements of so strongly antagonistic a nature that M. Maniu was about to resign and the whole position of the Government was most precarious. At first the attitude of the public was rather incredulous, but as further special editions appeared and more details were given, a feeling of alarm began to take hold of the people. Fortunately, however, the Queen sent a formal denial of the statements made; M. Maniu gave no sign of wishing to resign; and the work of the Government went on as before. The whole thing proved to be a storm in a teacup, or rather a ruse of the Opposition Press to sell some special editions and, incidentally to harry the Government.

Alleged Dissensions.

In connexion with this scare the Liberal Press published alarming statements of disunion between the leaders of the two parties forming the present Government, viz., the Nationalists and the Peasants Party. Most fortunately, these too, appear to have been unfounded, as no confirmatory evidence has yet come to light. That would, indeed, have been the greatest possible misfortune, for any such disunion would speedily prove fatal to the Government, which would thus be playing into the hands of its adversaries. If, on the other hand, it is able to carry on in harmony, there is every chance of its being able to do great service to the country.

It is to be regretted that no efficacious libel law exists in this country, and the "Liberty of the Press" is interpreted with such freedom that the most unfounded and mendacious reports, even affecting the Royal family and public men of mark, may be published without fear of untoward consequences. This accounts for the extraordinarily vulgar and scurrilous language used in many of the newspapers.

M. Madgearu's Foreign Tour.

M. Madgearu has now been back in Bucharest for several days, but no statement of his has yet been published in regard to the significance of his visit to London. Great satisfaction is felt in Government circles at the excellent reception given to him, and the friendly attitude adopted by the British Government. One section of the Press states that he has laid the foundations of a new commercial treaty between Great Britain and Roumania, but his partisans deny that he had any such official mission, and that his only purpose was to get into personal touch with the authorities in England, and to see for himself how present conditions in that country compared with those in his own. It is believed, nevertheless, that a new Commercial Treaty between the two countries is under consideration, and will shortly be drafted, more especially as the clause under which most European countries enjoy the benefit of the minimum tariff, limits this privilege to a certain number of months.

BULGARIA.

Sofia, October 14.

Political Brigandage.

The band of Agrarian-Communists who recently came from Yugoslavia under the command of the famous brigand Dotcho Ouzounoff, who attempted a few days ago to blow up the express train going from Sofia to Varna in the region of Cherven-Breg, having escaped the pursuit of the soldiers, appeared the day before yesterday in the mountainous district of Teteven, fifty kilometres from Sofia, and robbed a postal carriage as well as a group of passengers in a private automobile, taking from them all their money and provisions.

Robberies of this nature are in the programme of the Agrarian-Communists, who seek by this means to provide comfortably for themselves and to help their comrades on their return into Yugoslavia. Public opinion is very uneasy at the powerlessness shown by the police and the gendarmerie to capture the bandits and to put an end to their depredations.

The Communist Conspiracy.

As is known, the Bulgarian Communists, whose party was officially dissolved in virtue of a law at the end of 1924, have never ceased since that time trying to re-constitute themselves under the patronage of the Bolshevik International. All efforts in this direction, however, have been foiled by the vigilance of the Bulgarian Police. The most recent plan was discovered in September, and led to the arrest of fifty Communists and the seizure of a certain number of bombs and revolvers and of a small printing machine. This was a great *coup* for the police, who were able to lay hands on the new chief, Anghel Karadimoff, freshly arrived from Moscow. But two days ago this Karadimoff, transferred provisionally to Plovdiv (Philippopolis) to appear before the *Juge d'instruction* in connexion with an old Bolshevik affair in this town, succeeded in escaping and in covering up all traces of his flight.

Bulgaria and Italy.

The problem of reparations has not troubled the excellent relations existing between Italy and Bulgaria. At the

Hague the Italian delegate lent powerful support to the claims of the neighbours of Bulgaria—notably Greece—and thanks to this support the Balkan creditors succeeded in persuading the Conference to impose a definite settlement of reparations which would be possible only by an increase of the Bulgarian instalments. An official journal in Rome interpreted the help lent to M. Venizelos at The Hague in connexion with the discontent felt by the Italian Government at certain manifestations of Bulgaria's foreign policy, and notably the personal attitude of M. Bourroff, Minister for Foreign Affairs, and it was thought that Italy had allied herself to Greece to the detriment of Bulgaria and that she would continue to support Greece at Paris against the legitimate efforts of the Bulgarian delegation towards a lightening of her burden in consideration of the bad economic state of the country. Naturally, considerable alarm was felt over such a prospect.

Happily, however, it was soon made known that a misunderstanding had arisen. Signor Mussolini stated to a Bulgarian journalist a few days ago that he had never envisaged a change of policy towards Bulgaria and that what Italy had done for the Bulgarian people up to the present she would continue to do in the future—"the sympathies and the full support of Italy remaining invariably faithful to the Bulgarian people." This statement, which dissipated all fears and caused fresh hopes on the deliberations at Paris, where Italy is the most interested of Bulgarian creditors, was followed by the authorisation, given by the head of the Fascist Government to the chaplain Don Galone, to institute in Italy, for the profit of Bulgaria, a "day of bread," the product of which, estimated at about 50,000,000 levas, would be used in the construction, near the "Pro Oriente" Institute at Sofia, of a large sanatorium for the treatment of Bulgarian consumptives.

This gesture and the words of the Duce have had a deep impression on the whole of Bulgaria.

Conference of Orthodox Churches.

The Orthodox Churches have decided to assemble at Easter, at Mount Athos, in a conference for the purpose of examining the present condition of the Orthodox world and of taking certain decisions to prepare for the convocation, at an early date, of a General Orthodox Council, but an obstacle exists in the peculiar position of the Bulgarian Church, which, as is well known, has been declared schismatic by the Œcumenical Patriarchate since the creation of the Bulgarian Exarchate at Constantinople in 1871. As a consequence of this there are, and can be, no relations between the two Churches. In an attempt to remove this obstacle, the Roumanian Church recently sent one of its prelates, Mgr. Tite Targovisteano, to discuss the matter with the Holy Synod at Sofia. Mgr. Tite explained the matter very frankly to the heads of the Bulgarian Church, and made known to them the decision of the Patriarch to end the schism, on the condition that the Bulgarian Church craved for forgiveness. The Holy Synod explained to Mgr. Tite that it could not formulate a request for pardon, the schism, which the Greeks themselves now regarded as purely a disciplinary measure, no longer existing in Bulgarian eyes, but that, prompted by the most conciliatory sentiments, it would willingly send delegates to the projected conference if the proposed measure were dropped. Mgr. Tite took back this answer to Bucharest, whence he was sent to Constantinople bearing a personal letter from the Roumanian Patriarch, Mgr. Myron Cristea, to the Patriarch Basil. Mgr. Myron offered to issue the invitations for the Conference, so as to avoid the "protocolary" difficulty between the Churches of Constantinople and Sofia. The Patriarch Basil rejected this suggestion. Soon afterwards, however, he died. His successor, Photius, has decided to hasten the meeting of the Conference, which will be assembled in the name of the Œcumenical Patriarchate, without finding a solution of the difficulty inherent in the existence of the schism—this fact leaving the question of Bulgarian participation uncertain. It is not impossible that the rais-

ing of the schism, as much desired by Photius as by his predecessor, may be pronounced by the Conference, under pressure of the delegates of other Churches, without an insistence on the demand for pardon, and that the Bulgarian Church will thereupon be invited to attend the Conference. Be that as it may, the Primate of Roumania has informed the Patriarchate, as a consequence of certain serious information published in the Bulgarian Press, that if he delayed in issuing the invitations, he himself would take the initiative and summon a conference at an early date, and not being embarrassed by the formal scruples of the Church of Constantinople, he would in these circumstances address an invitation to the Bulgarian Church as to all other Orthodox Churches.

It may be said, then, that the raising of the Bulgarian schism will be realised before long.

Belgrade, October 24.

Yugoslavia and Italy.

What was the reason behind the series of attacks so suddenly launched against Yugoslavia by Italy? The hasty decision to bring Gortan and his four Croatian companions from the prison in which they had lain untried for seven months charged with attempting to intimidate voters during the Fascist elections and with having killed one of their compatriots who was going to vote, the faint pretence at a trial with the prisoners' guilt taken for granted before ever it began, the savage sentences, one youth to be "shot in the back," and four to be imprisoned for thirty years, the open threats against Yugoslavia made in the court by the President, the Public Prosecutor and the council for the defence, and the inspired campaigns against Yugoslavia in the Fascist Press—all these point in the Yugoslavs' eyes to a deliberate attempt by Italy to upset relations with Yugoslavia.

It may be that this was merely a subterfuge to distract the attention of the Italian people from home affairs, but, if so, there is no apparent reason for the choice of this particular moment. It is possible that the Italians hoped, by stirring up demonstrations in Yugoslavia and then insisting on their severe suppression, to stir up trouble between the Yugoslav Government and the Croats and Slovenes and so disturb the process of unification now proceeding in Yugoslavia. Perhaps the most probable explanation is that the Italians fear that Yugoslavia may secure a loan on the London or American market and have heard the report that Rothschild, when received by King Alexander at Bled this summer, said that this would depend on the improvement of relations between Italy and Yugoslavia and between the Serbs and Croats. Yugoslavs are recalling that the declaration of the Tirana Pact (with the consequent rupture of Italo-Yugoslav relations) was made just in time to prevent Yugoslavia from securing a loan in London some year and a half ago.

The circumstances of the trial, the verdict, foreshadowed days before the trial began by the President of the Court-Martial himself, based on the evidence of paid informers and Fascist officials, the references made by the President to "Balkan bandits" and the appeal of the Council for the Defence (appointed by the Court) for mercy on the ground that Istria, which had always been Italian [*sic*], was now secure and the Fascist régime strong enough indeed "to widen our frontiers and give air to suffocated Fiume and Zadar"—these and the Press attacks and appeals for the liberation of "our Dalmatia"

were bound to lead to ill feeling in Yugoslavia. But the Yugoslav Government took strong measures to keep all expressions of feeling within the most reasonable of bounds. Demonstrations were confined to meetings in the Universities which passed resolutions calling on the Pope, the League of Nations, the women of Italy, and the Governments of the Great Powers to intervene to save the lives of these "innocent victims of inflamed nationalism," and the Press was severely muzzled to prevent it from stirring up the people. Nevertheless the Italian Government took advantage of a tussle between sailors from Italian and Yugoslav merchant vessels to make strong verbal protests to the Yugoslav Government against the demonstrations against the verdict and its immediate execution and the tone of the Yugoslav Press—thus adding, according to Yugoslav opinion, insult to injury.

Rumours.

As is natural in any country where the Press is restrained from writing freely on political matters, rumours abound in Belgrade at present. And amid a mass of exaggerations and fabrications there may be certain measures of truth to be found. Thus it would appear very probable that the Government intends in the near future to introduce an act making it illegal to use the Serbian script (*cirilica*) in all official documents. This would lead to the gradual introduction of Latin script, *latinica*, throughout the whole country, a reform which would be a great step towards the real union and consolidation of the Serb, Croat and Slovene peoples. While there is considerable fear in some quarters lest the Government should be tempted to try the compulsory use of *latinica* even for private purposes, newspapers, commercial correspondence, and so forth, and make the change too suddenly, as in Turkey, there would be little opposition to its gradual introduction. There are few people likely to have much dealing with the Government who do not know the Latin alphabet, whereas the overwhelming majority of the inhabitants of the ex-Austro-Hungarian provinces do not read *cirilica*. Government administration would be far easier and more efficient if documents from all parts of the country were written in the same letters, and great advantages would accrue also if the same unification were introduced in the commercial world.

The Alleged "Reign of Terror."

Great astonishment is expressed by all British residents and visitors here at the statement made in a certain section of the British Press to the effect that Yugoslavia is suffering a "reign of terror." This is far from a true picture of conditions in this country. The great mass of the people are calm, neither enthusiastically for the present régime nor violently against it. The economic life of the country is proceeding normally and the constant interruptions formerly due to bitter party strife are ended. A number of Communists who tried to start a violent reaction by terrorists methods have been arrested from time to time. Some of these resisted arrest and in the ensuing struggle, or while trying to escape, as was reported at the time in the Yugoslav and foreign Press, were shot down and in several cases killed by the police. Three policemen were killed by Communists they tried to arrest during the same period. A number of arrested Communists, about whose membership of the secret terrorist organisation there can be no doubt, since in many cases obituary notices appeared in the Soviet Press acting under instructions from their organisation in Moscow, committed suicide by jumping from the windows of prison offices in order to escape the inevitable confessions of the secrets of their organisation and accomplices, under "third degree" examination. To suggest that these men were pushed out of the window by the police is absurd, since they were far more valuable alive than dead, and had the police wanted to get rid of them there are a hundred quieter and more effective ways by which their aim could have been achieved.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 10.

The Pronouncement.

The persistent report that a "momentous pronouncement on India," is to be expected has continued to occupy space in our newspapers, but now with the variation that the pronouncement is not to be made by the British Prime Minister in the House of Commons, but by the Viceroy of India. As Lord Irwin is leaving England to-day on his return journey to India, we should not have long to wait for the statement, unless there is some reason for delaying it. There may be a reason—Mr. Ramsay MacDonald may not yet have said his "yea." One suspects your Prime Minister of more than the statesman's usual desire to make history. He would always be wanting to make it—now that Mr. Snowden has made so much at The Hague, he may be wanting to make history with the passion with which a beautiful girl, who has seen another beautiful girl shine at a ball, would now want it to be her turn. Mr. MacDonald is a Scotsman; there is always something of unease in the Scots soul. It is obvious that at this moment history is easier to make in America than in Asia. That is against us.

A Matter of Urgency.

If Mr. MacDonald could put his personal feelings on one side, he would be one of the first to see that the people of India is far more important to the British Commonwealth of Nations than any problem of disarmament. Mr. Hoover and he are "roadmakers on the road to peace," he has said. What kind of peace, a lasting peace or a temporary? One suspects that at the best it will only be temporary. Europe is now poor and saddled with debt; Europe is as the devil is, "when the devil is sick"; but does any one believe that, when Europe has grown rich again, and is no longer sick, arming will not begin again? None believes that but the sentimentalist. So the most that Mr. MacDonald can secure is disarmament for a time, and what that will save the British taxpayers. That no doubt would help him more at the next General Election in Great Britain than any laurels to be won by settling the Indian constitutional question wisely; but there can be no question which in the long run will matter most to the Commonwealth, or even, if you come to that, which will mean most in the end in mere £ s. d. Mr. MacDonald, if he wants his name to go down to history, must leave disarmament alone until he has settled this huge Indian problem.

The Indian National Congress.

In the cablegrams regarding the pronouncement, and the Round Table Conference that would follow it, there have usually been some such words as these: "The British Government are anxious to make such a statement at an early date in order to induce the Congress to defer its decision on the issue of independence." So much stress has been laid on that, that one has very naturally asked oneself the question, how important would the decision of the Congress be? That is to ask, in other words, what following the Congress has in the country. I have quoted documents showing that the Congress hold over the Muslim community is steadily weakening. There have been two items in this week's news that bear on what remains of the point.

The South Indian Liberal Federation.

One of these two is the speech of the President of the eleventh session of the South Indian Liberal Federation. In the course of it he said: "Our party is wedded to work the reforms while the Swarajya party is out to wreck them. Ours is the only recognised party in this Presidency which stands for orderly progress and constitutional reform. It can then claim to be a fully representative political organisation, in which all those who

are for working the reforms and for orderly progress can find a place. The political goal of the Federation and the Congress being the same, the Federation may well occupy the position of the Congress in Southern India."

The Sikhs.

The heading of a column in one of this week's newspapers was: "Sikhs to Boycott Congress?" I quote this from a statement that appeared below: "I cannot see with what justification the Congress can accuse the Government of turning a deaf ear to public opinion when the Congress itself has proved so callous in the matter of the Sikhs' demands. The only course left to us is to boycott the Congress lest the strong feelings among Sikhs should cause further trouble in the Congress meeting. It is not difficult for our community to be reconciled to the Government because our estrangement on the Gurdwara agitation is over. Our military and agricultural importance will convince anybody of our reasonable demands. The Hindus are not prepared to forgo anything and the Muslims are unwilling to give up their majority."

Separate Electorates.

One or two interesting points were made in the same speech to the South Indian Liberal Federation on the question of separate electorates. First I should state that the Federation is a non-Brahmin body; Brahmins are excluded from it by rule. The non-Brahmins, in 1919, through their spokesmen before the Joint Parliamentary Committee, pressed for separate electorates for non-Brahmins. They did not ask for them for all time, they explained, but for so long as the communities claiming them originally held them to be necessary; until, that is, those who in 1919 were opposed to separate electorates had convinced those who then claimed them that they need not insist on them any further. One can hardly say that those who were opposed to separate electorates in 1919 have made any very serious attempt to convince the others that they are not necessary.

Miscellaneous.

Of much more than Indian interest is the report of Sir Geoffrey Salmond, published in a "Gazette of India Extraordinary," on the lessons of the Kabul evacuation last Cold Weather, whereby Kabul was saved from a "horrible tragedy." India was able successfully to draw on the Imperial air resources in Iraq, and Iraq in turn drew upon those of the Middle-East Command. Another interesting document published this week is the Government of India's report on education in India during the five years 1922-27. In it is claimed that "the foundation of further advance under new conditions in the years to come has been laid." How new the conditions will be remains to be seen. Many of the old, bad conditions will remain. The progress of education in India is far less a question of finance than the authors of the report appear to see. The agitation against the Child Marriage Act, to conclude with a word about it, continues, and may be gaining ground. One believes that it will be worn down in the end.

THE NEW COMMANDER-IN-CHIEF IN INDIA.

The King has approved the appointment of General Sir Philip Walhouse Chetwode, Bt., G.C.B., K.C.M.G., D.S.O., A.D.C.-General, to be Commander-in-Chief in India in succession to Field-Marshal Sir William Riddell Birdwood, Bt., G.C.B., G.C.M.G., K.C.S.I., C.I.E., D.S.O., LL.D.

With His Majesty's approval, the Secretary of State for India has invited Field-Marshal Sir W. Birdwood, who will complete five years' tenure of the appointment on August 5, 1930, to serve for a further period of three months from that date.

The selection follows the usual, though not invariable, custom of choosing in turn for this important position an officer of the British Service and of the Indian Army

respectively. As Sir Philip Chetwode has been Chief of the General Staff in India for the past twelve months, an appointment in which he will presumably remain until he succeeds Sir William Birdwood next summer, the new Commander-in-Chief will bring to his responsible office an unusual degree of experience of current Indian politics and administrative problems.

During the course of a long and distinguished career Sir Philip has been brought in contact with Indian troops on many occasions. After commanding a cavalry brigade and then a cavalry division in France, he proceeded to Egypt to command the Desert Mounted Corps, in which capacity he took part in the last great advance in Palestine and Syria. After the Armistice he served in turn as Military Secretary at the War Office and Deputy Chief of the Imperial General Staff. In 1922 he was appointed Adjutant-General to the Forces, from which post he was transferred in the following year to be General Officer Commanding-in-Chief, Aldershot Command.

THE DILEMMA IN INDIA.*

There have been many books published within the last few years with the laudable, though perhaps illusory, object of bringing the facts of the Indian problem to the attention of the British electorate: but not one of these has been more worthy of study than the volume published recently under the above heading. The facts and conclusions are based on the knowledge and experience of one of the most successful and upright of Indian administrators: they are set out with obvious sincerity: the correctness of the facts can hardly be disputed, and the logic of the conclusions, if not equally indisputable, will be accepted by many of those qualified to judge.

A possible weakness is some failure to estimate fully the extent of the national feeling, however crude and imperfect, that has existed for many years in India. It is surely incorrect to say that: "It is we, the people of England, who began calling the inhabitants of the sub-continent Indians." The designation, irrespective of differences of caste and race, is surely as old as Megasthenes and the Roman Empire: India, or nearly the whole of it, has been united under one rule, at several periods of history, before the British Raj, though the union was in every case short lived. The local feeling for Hindustan, which was near akin to a national or patriotic sentiment, has within our own time extended to the whole of India. The fact that the extension has been due to the bond of British administration and the English law does not affect the existence and the reality of the sentiment, though it may at any time yield to more powerful centrifugal influences. Sir Reginald Craddock makes an interesting comparison between the countries of Europe and individual Indian Provinces. The size and incompatibility of the component units would seem to make union almost as difficult in one case as the other. But if the United States of Europe is not an impossible, if a remote, ideal, surely the united Government of India, with the traditions of British rule, and the *lingua franca* of the English tongue, is an attainable object. Sir Reginald points out the terrible example of China, and reminds us that even the Northern States of America, with a common language and religion, and a homogeneous population, were only kept united by one of the most desperate wars in history, and by an effort of which India may not unfairly be regarded as incapable. He might equally have quoted the example of the States of South America, in which the hopes of union after the Liberation from Spain were quickly shattered by incessant and fratricidal warfare. The same dangers obviously exist in India, with the added risk of foreign invasion. The only safeguard against such dangers is clearly the *nexus* with the British Empire, which the politicians of India profess to be ready and anxious to discard.

*"The Dilemma in India." By Sir Reginald Craddock. (Constable 1929) 10s. 6d.

Sir Reginald is on sure ground when he examines the unfortunate circumstances of Mr. Montagu's visit to India, and deals destructively with the so-called Nehru constitution. Many will share his regret that the period of the Morley-Minto Reforms was not prolonged. But Sir Reginald perhaps hardly emphasises sufficiently for the general reader that the previous system of administration, however well suited to the conditions of the country, was essentially transitory, and that development was inevitable. The utterances of statesmen from Munro onwards, the promises that could not unfairly be read into the Queen's Charter of 1858, and finally the unbridled freedom of the Press all combined towards this result. However unfair and inaccurate vernacular papers may be nowadays, they can hardly be worse in the way of misrepresentation and venomous personal attacks, than the Press of forty years ago. To these causes, and to the idealistic haste of Mr. Montagu, were added the world movements, and the noble sentiments of Mr. Woodrow Wilson, to which Sir Reginald gives due weight.

It must not be thought that Sir Reginald is merely destructive in his criticism. Of his proposals, it may be said that they would have provided an excellent development of the Morley-Minto Reforms: but they could hardly be regarded as forming a successive stage or advance such as was promised by Mr. Montagu in 1917. The situation, as described, and very correctly described, by Sir Reginald thus becomes an impasse rather than a dilemma. Fully as we must agree with his dictum that it is not fair to the people of India to let them learn through suffering from the mistakes of others, some risks must inevitably be taken, so long as the principle of the necessity of an Indo-British Dominion is not surrendered. Sir Reginald's book should certainly be studied by every one interested in this vital question.

THE UNITED STATES AND INDIA.

Mr. H. Wickham Steed presided at a meeting of the East India Association at the Caxton Hall on October 21, when a paper was read by Mr. S. K. Ratcliffe, formerly Editor of the *Calcutta Statesman*, on "India and America."

No English visitor to the United States, Mr. Ratcliffe said, could fail to note the evidence of widespread interest in India and her problems, and the interest was certain to increase. To no small extent the views of the American public upon Indian political questions had been influenced by the active work in the United States of Indian writers and speakers, most of them being identified with the more extreme position. Their influence had been, during the past two years, counteracted to some extent by the widespread sale of Miss Katherine Mayo's highly controversial book, "Mother India." While looked upon with suspicion by the anti-Imperialist section of American opinion, this book had had a strong influence among American women and the church-going population generally. They had welcomed it as providing evidence that could be used to prove the superiority of Western over Oriental civilisation. It was to be expected—since every Imperial system was criticised severely by other countries—that during the approaching discussions and practical difficulties following the Simon Report much of the comment in America would be adverse to the British Government. But it was not unreasonable to hope that there was to-day a large recognition among educated Americans of the immense difficulties of the British position.

A discussion on the paper was initiated by Sir Albion Banerji, who emphasised that the American Press and people were often misled, in the absence of reliable information, in their opinion of India and also through Indians themselves lacking a sense of responsibility. Mr. L. F. Rushbrooke Williams, Dr. Seva Ram, Mr. Yusuf Ali, Sir Hari Singh Gour, Mr. G. T. Garrett, Sir Louis Dana and Dr. Paranjpye also spoke.

THE BRITISH SCHOOL OF ARCHÆOLOGY IN PALESTINE.

Discoveries at Jerash and Athlit.

A very serious and lamentable state of affairs was disclosed at the annual meeting, which took place on October 25 in the Room of the Society of Antiquaries, Burlington House, W., of the British School of Archaeology in Jerusalem. For the Report and Statement of Accounts made it quite clear that unless a large sum could be raised with the next few months, the School, in its present shape, must cease to exist at the close of the session now beginning. In 1927, it will be remembered, the Treasury Grant of £500 per annum was discontinued, and since that date the School has had to draw heavily on its deposit account. That deposit is now nearly exhausted, and at the beginning of 1930 the School's general account will show a balance of little more than £200. For special purposes, such as the excavations at Jerash, Shukbah, and Athlit, there is a sufficient balance in hand—contributions having been ear-marked for these campaigns, but for the maintenance of the School's modest premises and working library in Jerusalem and work at the London end and the Director's salary there is insufficient money. It will, therefore, probably be necessary, according to the "Report," to submit in the next few months proposals either for the reorganisation of the School, or for closing it altogether and disposing of its library, excavation outfit, and other effects, after the next excavation season.

The Archbishop's Appeal.

Such a fate would be most deplorable, and it was good that so eminent an authority as the Archbishop of Canterbury was in the Chair at this annual meeting to appeal for support to enable the splendid work of the School to be carried on. His Grace said that, so far as he might claim to represent the public opinion and the religious life of the country, he wished to testify in the strongest possible way to his sense of the importance of the work of the School being maintained. The three main springs of civilisation, certainly in the West and the Near East, were Athens, Rome, and Jerusalem. There were great Schools of Archaeology in Athens and Rome, and it was essential that there should be a thoroughly established School in Jerusalem. But when he read in the draft report which had been submitted that the School was only secure until next summer, then, like a great figure in the history of Jerusalem, he confessed that he sat down in astonishment. He could scarcely have believed that the School of Archaeology in Jerusalem was in any kind of danger. It was unthinkable that the learned and even the ordinary educated public in this country would allow such a calamity to take place. They all recognised the big responsibility which the people of this country had in regard to Palestine and Jerusalem. We had a Mandate for the care of that country, small in extent, but unequalled in the richness of its associations with history, and included in the Mandate was special care for the antiquities of the country. It would be extraordinary if the Mandatory Power were to proclaim to the learned world that it was so inadequately aware of its trust in regard to those antiquities that it was unable to maintain the School of Archaeology. For ten people who owed a great debt of gratitude to the culture of Athens and the political genius of Rome, there were hundreds who owed a debt of gratitude to the deeper spiritual memories of Jerusalem and Palestine, and, therefore, the support given to the School in Jerusalem should be greater and more widespread than that given to other Schools.

The Churches of Gerasa, 1928, 1929.

In illustration of the worthiness of this appeal, and of the excellent work accomplished by the School, Mr. J. W. Crowfoot, Director of the School, gave an address, which was illustrated with photographs both from the air and from the ground, on the excavations at Gerasa (Jerash) in 1928 and 1929. We are privileged to publish a portion of the Director's lecture herewith:—

"The University of Yale and the British School of Archaeology in Jerusalem agreed two years ago to send a joint expedition to Gerasa to explore the churches and other remains of the early Christian period there. The ruins of six churches were known to exist there: in the last two seasons the joint expedition has discovered the ruins of eight others, and ten churches in all have been excavated down to the floor. The classic expeditions of M. de Vogüé in the last century and of Mr. H. C. Butler in the present century, to which we owe most of our knowledge of Christian antiquities in Syria, were precluded from making excavations: consequently it was certain that our knowledge was very incomplete, and the sympathetic attitude of the Trans-Jordan Government, by facilitating our researches in every way, has enabled us to supplement their work to a material degree.

"Gerasa lies on the east side of the fertile highlands which separate the Jordan valley from the Arabian desert. As the crow flies, it is only about 23 miles east of the Jordan and about 53 north-east of Jerusalem, but these figures are deceptive, for the country is seamed with deep watercourses, and to go from Gerasa to Amman or Jerusalem one has to follow a most circuitous route.

"Gerasa itself was built on both sides of a tributary of the Jabbok: the banks rise steeply from the river and the hilly ground on each side was so broken that it was only after much artificial terracing that it was possible to secure level platforms for the larger buildings. Here the rock had to be cut back, there embankments had to be constructed against it, and long flights of steps were necessary to lead from one level to another. The peculiar charm of the site is largely due to this.

"Before we began work the ruins of Gerasa appeared to belong almost wholly to the Classical period. The sites of six churches, as

we have said, could be identified with some difficulty, but their remains was insignificant beside the remains of the two great Pagan temples, the theatres and the baths, the Propylæa, the Nymphæum, and the colonnaded street. These Classical buildings still dominate the site, and yet a closer investigation has shown that apart from those buildings we have just enumerated there is practically nothing visible on the surface which does not come from constructions of the centuries after Constantine.

"Why have the churches fallen while the walls of the temples are still standing? This question can be answered only when we have learned how completely the two buildings differed in plan and structure from the very beginning.

"The ritual of the church was developed from the ritual of the synagogue, and churches, like synagogues, were designed primarily as meeting-places for a congregation assembled to observe the ritual of their religion. The architect's first consideration, therefore, was for the interior disposition of the building, its suitability for the purpose in view: its external monumental appearance was at this time a matter of secondary importance. In temples, on the other hand, the public was most interested in what went on outside, in the temple court, and the monumental appearance of the central building was never forgotten. The exterior lines of an early Christian basilica were in consequence as different as can be well imagined from those of a Pagan temple. Let us look at one of our Gerasene basilicas as it must be reconstructed, first from north to south and then from east to west. In the centre of the north-south line is a flat gabled roof over the nave which is carried on walls pierced by rows of clerestory windows and resting on arcades on piers or columns. On either side are the sloping roofs of the aisles, starting below the clerestory windows: beyond these again north and south respectively, there are chapels or lateral narthexes. The same stepped effect is produced at the east end by the projection of the apse with its semi-dome and at the west end by the sloping roof of the east alley of the atrium. In place of the simple lines of the uni-cellular temple we see a group of stepped masses balanced against each other and each representing an area which played a definite and distinct part in the ritual of the day. The new structure has evidently been planned from the inside outwards, not primarily to produce a particular external effect but to provide for the needs of a ritual: the façade and the west towers which are found in North Syria and which counted for so much later in Europe have not yet come into being, and the external beauty of these churches did not lie in any carved decoration; of this there is hardly a trace apart from a few shell-headed niches taken, like columns and caps, from earlier buildings; it lay solely in the grouping and coherency of the different masses we have described. Upon the interior, on the other hand, these builders lavished all the wealth of decoration at their command. Little of this has survived, but our excavations enable us to trace the internal disposition in detail: the floor of the nave and aisles where the congregation stood was paved with brilliantly coloured mosaic patterns which are still of absorbing interest, mutilated as they mostly are; a low stone screen separated the congregation from the sanctuary; from the south side of this screen an ambo or pulpit projected into the nave for the reading of the scriptures; on the north side was a table for the preparation of the elements; round the wall of the apse were tiers of seats for the priests and deacons with a raised seat in the middle for the bishop; in front of them was the altar with a reliquary built under it. This seems to have been the invariable arrangement in Gerasa, though all these features could not be traced in every church we excavated.

"Such were the buildings, and it is not difficult now to understand why so much less of them is left above ground than is left of the temples. The walls of the apses carried a semi-dome of masonry; they were, therefore, solidly built and have largely survived. The other walls carried only timber roofs; with one exception they were of poor construction, the fact that they were concealed by plaster or revetting having no doubt encouraged jerry-building. They were further weakened by the numerous windows with which they were pierced; many of them were erected very rapidly, as we can tell from the dates of their construction, and they formed part of a complicated system of balanced masses. It is small wonder that so much more remains of the older and more rudimentary structures."

Mr. Crowfoot described in detail some of the results of excavation at Jerash—the large church east of the Fountain Court (excavated in 1928), and a splendid flight of steps connecting this with the main street of Jerash were cleared; also a complex of three churches, built early in the reign of Justin, west of the Church of Saint Theodore; a fourth church to the south-west; a fifth behind the Temple of Artemis, built (as was discovered) over a synagogue; and a sixth on the extreme west of the site, built in the seventh century. Excavation ended about the middle of June, and the Director returned to England in July to prepare the results for publication.

Prehistory at Athlit.

Miss D. A. E. Garrod, of Cambridge, then described the remarkable discoveries of pre-history in Palestine at Athlit, south of Haifa. The "Caves of the Valley" (*Mugharat-al-Wad*) lay, she said, three miles south-east of Athlit, at the western foot of Mt. Carmel. Soundings made by the Palestine Department of Antiquities in the autumn of 1928 resulted in the discovery of a large number of flint implements and an interesting prehistoric carving representing a young deer or bovine animal. The British School of Archaeology in Jerusalem had undertaken the complete excavation of the Cave in collaboration with the American School of Prehistoric Research, and the first season's work has yielded important results. Five prehistoric levels had been found, the most ancient of them being Mousterian. Above this lay a series of hearths, nearly two metres in thickness, containing four distinct industries of Upper Palaeolithic type, followed by a Mesolithic layer in which microlithic imple-

ments were associated with bone points, bone beads, pierced teeth, and a small carving in stone representing a human head. The discoveries made in the *Mugharat-al-Wad* helped to fill a large gap in the prehistoric chronology of Palestine. Miss Garrod concluded by saying that this work at Athlit was so important that long-held theories were being challenged by the discoveries being made there, and that, therefore, the work at Shukbah would have to be postponed until Athlit, where work would be resumed next year, had been more thoroughly investigated.

Testimony to the School.

After these two lectures, which in themselves were a quite remarkable testimony to the value of the work being accomplished by the British School, Sir Frederic Kenyon, in proposing a vote of thanks, associated himself with what had been said by the Archbishop of Canterbury. He spoke very highly of the work which was being done by the British School of Archaeology in Jerusalem. He could testify from his own official knowledge that there were not enough trained archaeologists for field work, whereas the opportunities for work had greatly increased; particularly since Great Britain was given mandates for Palestine, Trans-Jordan, and Iraq. It was necessary, therefore, to have schools of archaeology, and no better situation could be found than Palestine in which to train students for that work.

Lord Plumer also supported the appeal on behalf of the School, stating that he had had personal experience of the energy, zeal, and devotion with which its work was carried on. Whether the School received additional financial help or not, however, he hoped that it would not be deterred from carrying on.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE ARABS AND PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—A clear view of the disturbances in Palestine and of the situation which produced them has been made difficult for Western peoples by the systematic diffusion of Zionist propaganda. This propaganda tends to discredit the majority of the Palestinian population and to obscure their real and permanent aims. The Arabs of Palestine do not possess the instruments for influencing Western opinion which are so abundantly supplied to the Zionists by wealthy and powerful representatives abroad. Under these conditions the point of view of the Arabs is either not presented at all, or is presented in a form which depends upon the mood, intelligence and whims of foreign correspondents sent here by the Western Press during the crisis. We trust that space will be found in the impartial columns of your Paper for the following direct statement of the Muslim attitude towards the recent troubles and towards the general situation which produced them:—

1. It is not the fact that the feeling of the Islamic population of Palestine is anti-Semitic in character; anti-Semitism, a European invention, is difficult for Muslims to understand, the hatred of Jews as Jews has never flourished among Muslim as among Christian peoples. The most cursory examination of either Muslim or Hebrew history will show this to be true. The great periods of development of Hebrew culture were those which took place under benevolent and friendly Muslim rulers in Spain, Africa, and Palestine. For years before the War, peaceful Jewish colonists came to Palestine, settled here, and lived in amity with their Arab neighbours. General Muslim feeling did not become unfriendly even to Zionism until Zionism itself, by the persistent practice of an aggressive policy, came to menace rights which all Muslims must hold very dear.

2. It is not the fact that the feeling of the Arabs of Palestine is anti-British in character. Those who know what the Arabs in general, and the Arabs of this country in particular, did and suffered for the Allied cause in the World War, can scarcely entertain such a suggestion. There must be thousands of Englishmen who remember the welcome given by the Arab population of this country to the British troops which occupied it. The recent disturbances, in so far as the Muslims' share in them was concerned, were a spontaneous and uncontrollable protest, not against the Government, not against the presence of Jews in Palestine, not against the Jewish race, but against unnatural and unjust Zionist aggression.

3. It is not the fact that the recent disturbances were "instigated by the Muslim authorities," as has been so assiduously stated by various Zionist and Jewish leaders; neither is it true that "the Arab effendis" stirred up trouble "for political purposes." The Muslim authorities, as the Palestine Government well knows, did everything possible to calm the feelings of the people and to prevent violence. We profoundly regret the human lives which have been lost on both sides in these troubles, and we declare that so far from instigating disorder, we endeavoured to prevent it beforehand, and to cause its cessation once it had begun.

Let me now summarise briefly the dangerous situation which has grown up around the place known among Muslims as *Al Buraq*, among Jews as "The Western Wall" (*Quotel Moravi*), and among European Christians as "The Wailing Wall."

Al Buraq is a small part of the Western wall of *Haram As-Sharif*, the holy Islamic area erroneously known among foreigners as the Mosque of Omar. Not only the whole area but also *Al Buraq* itself is of special sanctity and is mentioned in the Holy Quran. The area

surrounding *Al Buraq* on the outside is, and has been for five hundred years, an inviolable Muslim Waqf. The *Haram As-Sharif* has been Muslim property for thirteen and a half centuries, but in the remote past it was the site of three successive Jewish Temples. The structures of the holy area, including the walls, are Muslim, but it is believed that three of the lower courses of masonry in the western wall are remnants of the last, the Herodian Temple. For this reason, centuries ago Jews developed the practice of going there to lament over the destruction of the Temple. Their lamentations, it should be noted, are for the destruction of the Temple of Solomon, of which no remnant remains at the Wailing Wall or anywhere else.

Muslims have never objected to the practice of visiting the wall of the holy area. These walls may be visited by anybody, Jewish, Christian, or unbelievers. The Jewish practice of visiting *Al Buraq* grew up under Muslim tolerance and continued over such a long period of time that it became a prescriptive right. But the prescriptive right to visit the wall is a far different thing from the right of ownership, or even of free usage, which has been implied in Jewish pretensions there in recent years. These pretensions involved the introduction of chairs, fixed benches, tables, lamps, mats, the Ark of the Covenant and the Scrolls of the Law and a screen, so as in fact to create an actual open synagogue in a place of special sanctity to the whole Islamic world. Moreover, the unofficial comment of the Jewish Press and public in Palestine tended to make of *Al Buraq* a symbol of vast significance, standing for the Temple itself.

The steady progress of this development culminated on the Jewish Day of Atonement, 1928, and His Majesty's Government, perceiving the dangers of the situation, issued the White Paper of November, 1928, defining the *status quo*, assured Muslim possession of the area, and reiterated the Jewish prescriptive right to visit it. The Muslims have never asked more than this. Since the White Paper was published every responsible Muslim body has repeatedly urged the Palestine Government to put it into effect; yet for nine months, while feeling on both sides mounted, nothing was done.

At this stage the Zionist Organisation itself took charge of the Jewish side of the controversy and transformed the issue into a political one. The Zionist Congress at Zurich this summer dealt with the question of the *Buraq* in a temper of unprecedented zeal. It was urged that "the *status quo* was not enough for the Jews," and a delegation was dispatched by aeroplane to London to present the Jewish case against the White Paper to the new Imperial Government. Every speech made at Zurich, every action taken there, was reported in the Hebrew Press here with rising excitement. The agitation thus created among the Jews was watched with corresponding alarm by the Arab Press and public. The climax of this Jewish agitation was reached on August 14, the day commemorating the Destruction of the Temple, when the Jews gathered from all Palestine to make a demonstration which startled Jerusalem. On that night they marched around the walls of the city; on the next day they made a nationalist demonstration at the Wailing Wall itself, with speeches and banners. That demonstration was not a religious one. Of its nature I can speak as a witness, since my own house stands at one end of the Wailing Wall and these manifestations took place under my windows. The Government's *communiqué* of August 17 recognises the facts of the case. In view of the Sacred Muslim character not only of the wall, but also of the area which surrounds it, every friend of peace viewed this Zionist insult with consternation.

Yet in spite of this, as I have stated, the Supreme Muslim Council and the responsible Muslim authorities, as well as the Arab leaders, both Muslim and Christian, used their influence on behalf of patience and peace. Indeed, throughout the disturbances, the majority of Muslims remained patient and peaceful. But in the state of feeling to which the Jews and Muslims had been brought by these fundamental conflicts of political and religious interests, spontaneous disorders ensued first in one city and then in another, as the news travelled. I deplore every drop of blood shed in this Holy Land, the cradle of religions, which should be the home of peace and happiness. The Arabs of this country feel no hatred towards any race or religion, and if they must vigorously condemn Zionist activities, it is only because the Zionist policy here has made intolerable aggression against the political and religious rights of the existing population.

The ultimate goal of Zionist policy, as the Zionists themselves disclose it to us, cannot be achieved without detriment to those rights.

The Arabs of Palestine believe that permanent peace and good understanding between all communities here can be secured only by a régime of justice for all, regardless of race or religion. To secure this justice there should be

(a) A democratic parliamentary Government, shared by Muslims, Christians and Jews according to their numerical proportions.

(b) A change in the present unjust and unnatural policy which exploits, in the interest of a Zionist minority of perhaps a hundred and twenty thousand persons, the overwhelming majority of the people of this country.

We await in full confidence the arrival of the Commission of Inquiry. Its investigations cannot but support what has here been stated. This statement, from which I have rigidly excluded anything which might be construed as controversial or open to question, is addressed to fair-minded people, of whatever race or religion. It is a definite statement, and I shall enter into no controversy upon it.—I am, etc.,

HAJJ AMIN HUSSEINI,
Grand Mufti of Jerusalem, President of the Supreme Muslim Council.
Rabia 17 A.H., 1348 (September 21, 1929).
Jerusalem.

[In the interests of obtaining a final settlement of the Palestine problem, we publish this presumably authoritative statement of the Arab case. Certain features in it, however, such as the omission of any reference to the breach made in the southern end of the Wailing Wall, are bound to be challenged.—Ed.]

THE LATE SIR VALENTINE CHIROL.

It is with deep regret that we have to record the sudden death, on October 22, of Sir Valentine Chirol. On the previous evening he had been to a concert at the Queen's Hall, and appeared to be in his ordinary health; but during the night he roused his valet, stating that he did not feel well. The valet went out to fetch a doctor, but when the latter arrived Sir Valentine Chirol had already passed away. For some years he had not been in good health. He had spent the winter of 1928-29 quietly in India, and on his way home suffered from a bad attack of pneumonia during a short stay in Egypt. He seemed, however, to have made a complete recovery when he reached England, but it was obvious that advancing years were leaving their mark upon him. His main trouble was failing eyesight, but he had been able during the summer to complete another book of reminiscences, which is due to be published next month.

To all associated with THE NEAR EAST AND INDIA the death of Sir Valentine Chirol comes as a great personal loss. For fifteen of the eighteen years of the Paper's existence he had been a director of the Company, and, apart from his occasional contributions, those responsible for the conduct of the Paper could always count on the advantage of his wide knowledge and advice.

With the death of Valentine Chirol passes one of the last of the Old Guard of journalists—historians of contemporary history, whose names are generally unknown to the man-in-the-street of their time, but who command the attention and respect of Governments and are sometimes instrumental in shaping policies that they are called upon to interpret to the reading public. The secret of their position is to be sought in their character and in the accuracy of their knowledge. A keen student of public affairs, Chirol prepared himself for the position that he was subsequently to occupy by study and careful observation. He was well read, had a retentive memory, and brought to bear on all his work a well-balanced mind, a catholic sympathy and an intellectual honesty that despised verbal quibblings or any deviation from the truth. Essentially a man of letters, he was a lucid and polished writer. Few autobiographies can compare with his "Fifty Years in a Changing World" for sheer artistry of treatment and smoothness of style. His life, as he has recorded himself, was cast in a period of immense and immensely rapid changes all over the world; and it was at once his good fortune to be brought into personal contact with a good deal of history in the making and to be able to make full use of his opportunities.

In private life Valentine Chirol—or V. C., as he was to all those who knew him well—was a man of many and warm friendships, an excellent companion, a true and generous friend. Though a bachelor, he was always responsive to the amenities of family life, and it meant much to him that, thanks to his own loyal nature, these amenities remained with him to the day of his death.

Born on May 23, 1852, Ignatius Valentine Chirol was the younger son of the Rev. Alexander Chirol, the descendant of a Huguenot family that had taken refuge in England during the wars of the French Revolution. Both his father and mother were received into the Roman Catholic Church, but, whereas the Rev. Alexander Chirol returned after a short time to the Church of England, Mrs. Chirol remained a Roman Catholic. Valentine Chirol was brought up in the latter faith, and out of devotion to his mother made no open renunciation of it during her lifetime. He regarded himself, however, as a Protestant, and expressed the wish that his funeral service should be according to the rites of the Church of England.

Having been educated mainly in France and Germany—he took his degree at the University of Paris—Valentine Chirol had a thorough knowledge of French and German, and with both Frenchmen and Germans could pass for a national of the country, as far as his speech was concerned. In 1872 he entered the Foreign Office,

but to remain only four years in Government service. During that brief period he was sent to the Balkans, and there began his association with the East which was to remain his major interest for the rest of his life. On resigning from the Diplomatic Service Chirol set himself to acquire first-hand knowledge of the countries of the Near and Middle East, and for the next sixteen years was to be found in various capacities in that part of the world. His first visit to Egypt coincided with the closing years of the Khedive Ismail's reign. In 1879 he went to Syria, and a year later passed on to Asia Minor and Constantinople. During the Egyptian campaign he acted as correspondent of the *Standard*; he went to India in 1883, and in 1884 travelled across Persia from Bushire to the Caspian Sea, the immediate object of his visit being to present a machine-gun to the Shah on behalf of Nordenfolt. In 1885 the *Standard* engaged Chirol as its war correspondent in the Sudan, and in the following year sent him to Bulgaria.

It was his long association with *The Times*, which began in 1892 and lasted beyond its formal termination by his retirement from active journalism in 1912, that provided Chirol with full scope for his energy and abilities. As *Times* Correspondent in Berlin, he enjoyed exceptional advantages for the purpose of his work by reason of the respect in which he was held by the German Foreign Secretary, Baron Marshall von Bieberstein, and of his personal friendship with Herr von Holstein, permanent head of the Foreign Office, and with successive British Ambassadors of that time. Chirol believed in the necessity for, and the possibility of, good relations between Germany and Great Britain, and for the earlier part of his stay in Berlin his work was comparatively plain sailing. It was, however, a transition period in German history; Bismarck had been deposed, but the Emperor William was only gradually allowing his headstrong propensities to exercise their baneful influence on German policy. The trouble came to a head with the dispatch of the Emperor's famous telegram to President Kruger. Chirol's blunt exposure of German designs was not at all to the liking of the German Government, which officially closed its doors to him. *The Times* accepted the position, and Chirol was recalled to the London office, where he acted first as deputy to Sir Donald Mackenzie Wallace, and in 1899 succeeded him as Foreign Editor. The twelve years during which Chirol held this post established his reputation both at home and abroad as one of the foremost interpreters of world politics and as a factor behind the scenes in the trend of international affairs. The grant of a Knighthood when he left *The Times* in 1912 was a recognition of the public service that he had rendered. His interest in the East and his desire to keep his finger on the pulse of world developments led him to undertake visits to India and the Far East during this period. He published "The Middle Eastern Question" in 1903 and "Indian Unrest" in 1910. Five years later this latter book was the basis of the libel action brought against him by Tilak, the Indian leader, whom he had called "the father of Indian unrest." The Great War had already broken out, and Chirol, who in the summer of 1914 had undertaken for the British Government the forlorn mission of trying to undo mischief already done by British diplomacy in the Balkans, with a view to uniting the Balkan States on the Allied side, found himself obliged to interrupt his War work in England in order to collect evidence in support of the statements that he had made in "Indian Unrest." The libel action was tried at the beginning of 1919: the trial lasted seventeen days and resulted in a verdict for Chirol. By this time he had become one of the foremost authorities on Indian affairs. He had previously served, 1912-1916, on the Royal Commission on Indian Public Services, and in 1921 he published his "India, Old and New." A further volume entitled "India" came from his pen in 1926, as one of the series of "The Modern World: A Survey of Historical Forces." He was no less an authority on Egypt, as his book on "The Egyptian Problem" (1920) bore witness.

The affairs of both countries he approached with characteristic sympathy and breadth of vision, but fearless in his denunciation of mistakes, by whomsoever committed.

Of recent years his failing health caused him to follow the course of home and foreign affairs, as it were, from a distance, and he sought consolation for any slackening of his grip on the trend of current events in the writing of his reminiscences of more active days. Each winter took him abroad, still indulging his love for painting, which had enabled him to accumulate a pictorial record of his world-wide travels.

The funeral took place at Golders Green Crematorium on October 25. The service was conducted by the Rev. Herbert Trundle. Among those present were:—Mr. G. E. Buckle, Colonel Armstrong, Mrs. Moberly Bell, Mr. Moberly Bell, Mr. Pumphrey, Miss Cynthia Bell, Miss Thornton, Miss Eldridge, Major Eldridge, Mrs. Tansley, Mrs. Jago, Vice-Admiral Sir Herbert and Lady Richmond, Miss Dorothy Ward, Mr. and Mrs. Napier, Miss Hill, Mr. Chapman, Mr. John Walter, Mr. Geoffrey Dawson, Mr. Philip Graves, Lady Dawkins, Lady Spring-Rice, Sir Benjamin Robertson, Admiral Sir William Goodenough, Professor Coupland, Mr. A. L. Kennedy, Mr. J. B. Capper, Mr. B. L. Richmond, Mr. and Mrs. Wemyss Carbery, Sir Hugh Murray, Dr. Murison, Mr. and Mrs. P. A. Tristram Ellis, and the household staff from 34, Carlyle Square.

The following were among those who sent floral tributes:—Miss Dorothy Ward, Mrs. Bruce Richmond, Colonel Armstrong, Mrs. Moberly Bell, Mr. and Mrs. Jackson Eldridge, Mrs. D. Bush, Miss L. H. M. Hill, Lord Hardinge of Penshurst, Lady Spring-Rice and Miss Betty Spring-Rice, Sir Hugh and Lady Bell, the Central Asian Society, Major and Miss Eldridge, Lady Margaret School (Parsons Green), the staff of Lady Margaret School, Lady Margaret School Parents' Association, the Earl and Countess of Cromer and Lady Rosemary Baring, Mrs. Nelson and family, Mrs. A. Murray Smith, Mr. Launcelot Oliphant, Lord and Lady Tyrell and Miss Ann Tyrell, Mr. and Mrs. Philip Napier and Major Claud Napier, Miss Enid and Miss Cynthia Bell, Sir Stanley and Lady Reed, Mrs. A. Hinton, the domestic staff of 17, Carlyle Square, Mrs. and Mrs. Brookman and Miss Brookman, Mr. W. L. Chapman, Major the Hon. J. J. and Lady Violet Astor, Mr. John Walter, Mr. W. Lints Smith, the proprietors and staff of *The Times*, Lady Hill, Mrs. Prescott, Mr. and Mrs. Marillier and Gerald, Mr. and Mrs. Harold Dixon, Jeremy and Nicholas, the Rev. T. A. A. Chisol, Mr. Flanagan, Admiral Sir Herbert and Lady Richmond and Valentine, and Mrs. Buckle.

A Memorial Service was held at St. Martin-in-the-Fields on October 28. The Rev. H. L. Johnston officiated. The Bishop of Worcester was unavoidably prevented from taking part in the service.

Among those present were:—The French Ambassador, Lord Hardinge of Penshurst, Lord Islington, Lord Meston, Major the Hon. J. J. Astor, the Marquess of Crewe, Mrs. Moberly Bell, the Misses Moberly Bell, Mr. W. Lints Smith, Mr. and Mrs. George E. Buckle, Mr. B. L. Richmond, Mr. G. Murray Brumwell, Mr. R. M. Barrington Ward, Mr. and Mrs. H. Pirie Gordon, Mr. and Mrs. H. T. Montague Bell, Mrs. Dumbrell, Sir Murray Hammick, Sir Stanley Reed, Sir Robert Carlyle, Sir Walter Lawrence, Sir Charles Bayley, Major-General Sir Desmond O'Callaghan, Sir Harcourt Butler, Mr. F. H. Brown (representing the East India Association), Lady Bell, Lieutenant-Colonel Stewart Patterson (Political Aide-de-Camp to the Secretary of State for India), Sir Chauncey Cartwright, Sir Francis Aglen, Major Richard Rigg, Colonel E. Armstrong, General Sir Edmund and Lady Barrow, Mrs. Hubert Walter, Lady MacDonnell, the Hon. Anne MacDonnell, Admiral Sir William Goodenough and Lady Goodenough, Sir Charles Stewart-Wilson, Mr. and Mrs. P. A. Tristram Ellis, Mr. and Mrs. J. B. Capper, Sir Malcolm Seton, Lady Phipps, the Hon. Mrs. Wilson Fox, Lady Joan Fletcher, the Hon. Mrs. John Collier, Miss Collier, Miss Moberly Bell (representing the Lady Margaret School), Sir Michael O'Dwyer (representing the Central Asian Society), Sir Elliot Colvin, Major-General Sir John Hanbury-Williams, Sir Herbert Baker, Lady Harding, Sir Reginald Tower, Sir Arthur Willert, Mr. and Mrs. L. S. Amery, the Hon. Lady Lytton, Sir Almeric FitzRoy, Sir Edward Boyle, Mr. S. T. Sheppard (Editor of *The Times of India*), Mr. C. W. Brodribb, the Hon. Mrs. Edgar Henley, Sir Ian Malcolm, Sir John and Lady Miller, Sir William MaxMuller, Mr. L. Oliphant (representing the Foreign Office), Mr. and Mrs. A. Murray Smith, Mr. and Mrs. Wemyss Carbery, Mrs. Elkington, Mrs. Prescott, Miss Spring-Rice, Mr. H. D. Barnham, Miss D. M. Stuart, Mrs. Griffiths, Mrs. Smiles, Mr. Kenneth Williams (Editor of *THE NEAR EAST AND INDIA*), Mr. G. Fitzmaurice, Mrs. Benson, Mr. Walter S. Scott, Mrs. E. Carr, Mrs. John Daniell, Mrs. Bartlett, Mr. W. S. Miller, Mr. and Mrs. Hughes Buller, Mr. and Mrs. Harold Dixon, Miss Richmond, Lila Lady Abinger, Mrs. H. C. Marillier, Miss Caesar, Mr. A. S. McDowall, Mrs. W. B. Gladstone, Dr. Clemow, Mr. C. L. Graves, Mr. W. C. Chapman, Colonel A. Leslie, Sir Henry Sharp, Mrs. Eagle, Miss Dawkins, Mr. Lionel Hitchens, Mr. H. B. Cobb, Miss Dorothy Ward, Brigadier-General Buzzard and Mrs. Buzzard, Mrs. Carrington Wilde, Miss Hannen, Miss Muriel Mackenzie (League of Nations Union, Chelsea Branch), Miss Huxley, Mrs. Carson Roberts, Mr. George Saunders, Mrs. Saunders, Miss Mills, Miss F. A. Cottrell, Mrs. Sharp, Mr. R. J. Hawker (Lady Margaret School Parents' Association), Mr. and Mrs. D. D. Braham, Mr. Wynnard Hooper, Mr. Percival L. Witherby, the Rev. R. Hartley, Mr. W. S. Millard, Mr. Philip C. Sarell, and Mr. Geoffrey Drage.

The Earl and Countess of Cromer, Lady Colvin, and Mr. Wickham Steed were unavoidably prevented from being present.

CYPRUS.

Dr. A. Zemenides, a Professor of Education from Cyprus and the founder of the London Cyprus Brotherhood, lectured on his native country at the Wood Green Public Library on October 17. The lecture was illustrated by lantern slides of the Island.

After an introduction dealing with the history of the Colony, the lecturer gave a description of the Island and of its inhabitants. He made special mention of the archaeological importance of Cyprus and of the recent excavations. The second part of his lecture was devoted to the produce and industries of his country. He said that the economic future of the Island of Cyprus depended on the development of its industries; on the establishment of irrigation works, with increase of the lands under cultivation, and last, but not least, on re-afforestation.

In conclusion, he paid a tribute to the work which had been done for the Island by the present Governor, Sir Ronald Storrs, whom he described as the best Administrator that the Colony had ever had.

IRAQIS AND PALESTINE.

We have received the following telegram, dated October 28, from Muzahim Beg al Pachachi, for the "Iraq Committee":—

"Iraqis protest against British Administration's partiality in Palestine, repeating their profound indignation over Balfour Declaration and its iniquitous designs, which are alarming and wounding Islam and Arab lands."

NEWS IN BRIEF.

Hassan Tahsin Bey, Turkish Chargé d'Affaires in Cairo, who has been transferred to Budapest, left Egypt on October 11 for Angora, prior to taking up his new post.

Shaikh Talib Markah has been sentenced to two years' imprisonment and to pay a fine of £P50 on a charge of instigating the attacks on Hebron during the recent disturbances in Palestine.

A sum of 405,240 francs (about £3,000) is to be provided by the French Government for the assistance and repatriation of French subjects evacuated from Afghanistan.

Air Vice-Marshal F. R. Scarlett, C.B., D.S.O., who has taken over command of the R.A.F., Middle East, from Air Vice-Marshal Webb-Bowen, arrived at Port Said on October 23, accompanied by Mrs. Scarlett.

Air Vice-Marshal Webb-Bowen, who left Egypt on October 27 to take up his new appointment of member of the Air Council in London, was entertained by the Staff officers of R.A.F. Middle East at the Turf Club, Cairo, on October 18.

The Imperial Airway liner *City of Rome* was wrecked in the Gulf of Genoa on October 26, and seven lives were lost. The air liner was carrying mail which left Karachi on October 20, and was one which is used on the Mediterranean section of the India-London air mail.

The Greek Government is considering the formulation of a protest to the League of Nations against obstacles which the Turkish authorities are alleged to have been placing during the past few weeks in the way of Greek shipping passing through the Dardanelles to the Black Sea. The action of the Turkish authorities is said to be in contravention of the provisions of the Dardanelles agreement.

For the first time since the War extensive manoeuvres by Roumanian armed forces have been held for the past week and will terminate to-morrow (November 1). All arms of the services have been taking part in a battle between Red and Blue armies. As the plan of action was secret, foreign military attachés were not invited to be present at the manoeuvres.

Three Bulgarian judges, Dr. Kuratcheff, President of the High Court, M. Valieff, a public prosecutor, and Justice Todoroff, who were travelling by motor-car along the highway near the Bulgarian town of Suchindol on October 23, were shot dead by bandits, who recognised them in the course of a systematic hold up of motor-cars, all the passengers of which were robbed.

THE WEEK AT HOME

London, Tuesday Morning.

Conservatives and the Empire Crusade.

To one not in the inner counsels of the Conservative Party the expressions of discontent to which some of its younger members are giving vent seem more serious than possibly they are. There is, however, a quite general feeling that apathy exists in a dangerous degree in the party, and that unless some new ideas are formulated, the chances of a return to power of the Conservatives are very remote.

That is as it may be, but it is interesting to note that great attempts are being made by Lord Beaverbrook's "Empire Crusaders"—a non-party body—to secure the malcontents of the Conservative Party. Each convert is hailed with applause that echoes windily down the corridors of the Beaverbrook Press, and it is not unnatural, though it may be unjustifiable, to presume that were Mr. Baldwin willing to lay down the reins of leadership of the Conservative Party, Lord Beaverbrook, or one of his nominees, would, were he "asked," take them up.

What hold this Empire Crusade is getting on the country at large it is extremely difficult to gauge, for the only recorder of its progress is the Beaverbrook Press, which certainly knows how to welcome the one that comes in and to ignore the ninety and nine that are left without. Of course, it has made its opponents, who seem, however, to belong mainly to the doctrinaire Free Trade camp, and who, therefore, must have been discounted in advance by Lord Beaverbrook when he launched his campaign. At the moment, a fair summary of the situation seems to be that people are a little more impressed by the difficulties of the scheme than by its most desirable possibilities. Whether unparalleled publicity can alter this attitude remains to be seen. We shall know soon: because, if the idea is not "going," it will quickly be dropped by papers whose main aim is increased circulation.

An Election Petition.

It is rare nowadays that a man elected to Parliament is unseated owing to some irregularity, for the bribery and corruption which were so jolly a feature in the good old days now take on much less direct and entertaining forms.

This reflexion is prompted by, but it really has nothing to do with, an election petition at Plymouth, where it was alleged by certain members of the Tory Party, whose candidate had been defeated, that unfair influence had been exerted in favour of the winning candidate, Mr.

Moses, a Labour member, by a wealthy local man, a Mr. Ballard. As a matter of fact, Mr. Moses was most triumphantly acquitted, and he accepted his victory in Court in the most sporting way, realising that what his political opponents were really after was, not his own downfall, but the curbing of this Mr. Ballard's queer activities.

It is now all ancient history, and, since it appears to have left no bitterness, will very soon be forgotten. Yet not quite. For *The Times*, galvanising its elephantine body into preparation for a resounding joke, took one of those flying leaps into flippancy which it permits itself once a century, and published on October 26 a leader called "Ordeal by Ballard." Excellent. After this delicious relapse we may presumably expect to be informed really seriously how this old world wags on (from the Government's point of view).

Skirting a Subject.

To the mere man, whom experience of the world has taught many things, there is a touch of unreality about the present furious controversy of whether or not women shall abandon the short skirt and return to the long affair worn by their graceful mothers. Far behind the passionate protest that the short skirt is now an immortal feature of emancipated women, there lies the greater, more enduring, and quite contradictory fact: that women, who are such subjects of fashion as they never were of man, will quite certainly bow the knee, or, rather, cover it, if the dictates of smartness decree it.

The topic, however, is a terribly serious one—far too serious for a man to rush into it with an opinion. The least that can be said for it is that it has helped to fill the columns of the more jejune papers until to-day, when Parliament reassembles.

"Les Neiges d'Antan."

Who said that the clock could not be put back? For it is just announced that, after a break of ten weary and mostly unprofitable years, Drury Lane is to have at Christmastide—Pantomime!

We thought we had lost it for ever—pantomime—that it had been sacrificed on the altar of progress, sophistication, or whatever this process is called that destroys all good things, whether they be chocolates after eight, drinks at any old hour, cheap tobacco, hansom cabs, and the rest of it. What modern children will make of it all (it is, by the way, "The Sleeping Beauty" that is being revived) one cannot tell—for they are often so much more modern than children; but surely the children who are always young, despite their rheumatism and their income tax, will chortle with joy at Drury Lane. I think, too, that some at least of the youngsters whom they take as an excuse will have eyes a-sparkling and hearts aflame with imagination.

Yet though the snows of yesteryear may return, most of the stars have faded. Where are they now—Marie Lloyd, Dan Leno, Harry Fragson, Arthur Conquest? And will there arise other such stars, or has jazz perverted them all?

London and Colour.

It is heartening to see that London can show such love for the old. Another instance of right feeling is in the announcement that the London General Omnibus Company have capitulated to public sentiment and have decided to maintain their big red buses on our drab streets, instead of making the upper half of the bus a cream colour—which was their original decision.

The Londoner likes his colour, even though it be laid on with a trowel. Whatever he may think of the "Reds" in general, he is apparently resolved at all costs to keep his big red bus. They are his known friends, and he always feels a little awkward, and is glad to get to the end of his journey, when travelling in one of those chocolate or blue or inferior red buses whose aim (so blatant and natural and justifiable) is to make money quickly.

PERSONAL AND GENERAL

TO-DAY

October 31, 1929 (New Style).

October 18, 1929 (Old Style).

Jumada I. 27, 1348 A.H., of the Muslim Calendar.

Tishri 27, 5690, of the Jewish Calendar.

Mr. and Mrs. Dosabhoj Chinoy left London on October 23 on their return to Hyderabad.

Sir Sankaran Nair, Chairman of the Indian Central Committee, left London on October 22 for India.

The Earl of Morley arrived last week at Saltram, Plympton, Devon, on his return from a visit to Egypt.

Lord and Lady Lloyd have left London for a short stay on the Continent.

Sir Maurice and Lady de Bunsen are expected to return to England from Syria about the end of November.

Sir Leslie and Lady Wilson left London on October 25 for Vienna, and expected to be abroad for about a month.

The Bishop of Jerusalem left Marseilles on October 25 in the Narkunda on his return to Jerusalem.

Sir Philip and Lady Buckland left England on October 25 on their return to Calcutta.

Mr. R. Gordon Canning left London on October 24 for Cairo and Jerusalem, and will be away for about two months.

The Earl and Countess of Inchcape, accompanied by Lady Margaret Shaw, left London on October 24 for Freiburg.

Sir Arthur and Lady Hirtzel, who are at present in Italy, are expected to return to 47, Palace Court, Bayswater, on November 10.

Lord Goschen, Acting Governor-General of India, and Lady Goschen left Bombay on October 26 in the Ranpura, and are due to arrive in London on November 9.

The Maharaja Jam Saheb of Nawanagar, who was received by the Secretary of State for India on October 23, left London the following day to embark in the s.s. Narkunda for Bombay.

The Prince of Wales received at St. James's Palace on October 22, on behalf of the King, Mr. Nevile Henderson (upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Belgrade).

On the completion of his undergraduate course at Christ Church, Oxford, the Maharaja Yashwant Rao Halkar of Indore left England last week for India to undergo a course of six months' administrative training.

Field-Marshal Viscount Allenby has been appointed Honorary Colonel of the Australian Light Horse. Viscount and Viscountess Allenby will leave London for India in December.

The King has appointed Mohamed Pasha Mahmoud, the late Egyptian Prime Minister, to be an Honorary Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George.

Mr. Robert Stonehouse Broomfield has been appointed a Puisne Judge of the High Court of Judicature at Bombay in the vacancy created by the retirement of Sir Charles Fawcett.

Lieut.-Colonel Sir Francis and Lady Humphrys arrived at Sandringham on October 23 and left the following day. Sir Francis was received in Audience by the King and kissed hands upon his appointment as His Majesty's High Commissioner for Iraq.

The Turkish Ambassador and Mme. Ferid Bey received members of the Turkish Colony in London at the Turkish Embassy, 69, Portland Place, on October 29, on the occasion of the anniversary of the proclamation of the Turkish Republic.

After delivering 120 addresses during his ninth world tour, and visiting Egypt, Palestine, Iraq, India, Australia, New Zealand, and the United States, Mr. J. J. Cirgo, Chairman of the British Commonwealth Union of Y.M.C.A.s, arrived at Southampton on October 28 in the *Homer*.

Sir George Schuster, Finance Member of the Government of India, will arrive in London about November 9 to confer on some financial question with Mr. W. T. Layton, Financial Assessor to the Simon Commission. Lady Schuster, who is now in England, will return to India with him. They will be in Delhi when the Viceroy and Lady Irwin return from their winter tour and, on December 23, take up residence for the first time at the Viceroy's House—the name now officially chosen.

THE CENTRAL ASIAN SOCIETY.

The next two meetings of the Central Asian Society are on November 8 and November 19 respectively, at the Royal Society's Hall, Burlington House, W., at 5 p.m. At the first Sir Aurel Stein will lecture on "Alexander's Campaigns on the North-West Frontier of India," and at the second, Mr. C. F. Strickland will lecture on "Some Contrasts in the Indian and Malayan Countryside." Both lectures will be illustrated.

THE MISSION FROM CYPRUS.

The Cyprus deputation, which arrived in England last month, and which consists of the Right Rev. the Bishop of Kitium, Mr. St. Stavrinakis, and Mr. Zenon Rossides, was received on October 25 by Lord Passfield, Secretary of State for the Colonies, at the Colonial Office. The interview lasted for about an hour. The deputation asked for the satisfaction of the aspirations of the Greek people of Cyprus by allowing the islanders to be united with their "mother country," Greece. The opportunity was taken to draw the attention of the Government to the alleged anomalous and unsatisfactory general state of affairs in the island. Lord Passfield stated that he would bring the matter before the Cabinet at an early opportunity and would subsequently give a reply.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Conditions in Turkey.

The continued weakness of the Turkish exchange will not have escaped notice. I have pointed out on previous occasions that various factors have been responsible for this, among them the unfavourable crop position and the large imports which have been made in recent months with a view to anticipating the operation of the new tariff. The latter factor has, of course, ceased to operate for some months, and it is the general position, and, in particular, the adverse crop reports—in which connexion I might specially mention the dried fruit situation—which are now exerting the chief influence. In recent months, however, the effect of the increased imports has been very pronounced, as can be shown by a few statistics. For the first eight months of this year the imports totalled roughly 335,700 tons as compared with 248,300 tons for the corresponding period of 1928. It appears that textiles, in particular, were largely imported, and it is believed that the requirements of the market have been anticipated for at least two years ahead. As the purchasing power of Turkey at the present time is very restricted, it is likely to be a matter of extreme difficulty to dispose of these stocks within a reasonable time.

Constantinople Loan Interest Payments.

The satisfactory announcement was forthcoming last week that the Banca Commerciale Italiana had been instructed by the City of Constantinople authorities to pay in London and Constantinople, on and after October 31, coupons on the Five per Cent. Municipal Loan. The coupons affected are coupon No. 38 (the encashment of which carries with it the holder's assent to the agreement of April 30, 1929) at the rate of 7s. per 10s. coupon, face value, and coupons in arrear, No. 9, to 22 and Nos. 28 to 37, inclusive, at the rate of 2s. per 10s. coupon, but in each case only after coupon No. 38 of the corresponding bond has been presented and paid. Holders of coupon No. 38 will be required to sign a form confirming their assent to the agreement of April 30, 1929, a copy of which may be seen at the offices of Messrs. Godfrey Warr and Co., 85, Gracechurch Street, E.C. The terms of the settlement reached after about 8½ years of effort were submitted for approval to a meeting of the bondholders on May 14. The essential features of the agreement were that all monies received by the bank, and held in suspense in respect of arrear coupons, should be released for equal distribution in full discharge of the coupons representing those arrears. Secondly, the bondholders were to be reinstated from June 1 in the security of which they had been deprived. Thirdly, the Municipality undertook to pay an annuity, rising gradually from £37,400 per annum to £60,000, at which last figure it was to be maintained from 1945, until the final extinction of the loan. Fourthly, the rate of interest on the bonds was reduced from 5 per cent. to 3½ per cent. Fifthly, the residue of each annuity, after payment of interest, was to be applied to amortisation. As in other cases the terms involved concessions on the part of the bondholders, but in view of the existing conditions this was inevitable.

Eastern Oil Industries.

At the meeting of Eastern Oil Industries (a report of which will be found elsewhere in these columns) the Chair-

man, Sir Montague Barlow, gave an account of the work of reorganisation and development during the year. The business and factory at Smyrna is the most important of the company's undertakings, and the machinery of the factory has been adapted to deal with the higher oil-bearing seeds. A feature of the year was the steady development of the Haifa undertaking, the turnover for the first four months of this year being approximately 20 per cent above the average turnover in 1928. In moving the resolution approving the amalgamation of the company with the Eastern and Overseas Products, Ltd., the Chairman referred to the advantages of greater economy and the prevention of unnecessary waste which would result from the fusion. The Products Company has been in a position to pay a dividend of 8 per cent. in respect of their first accounting period, while the Chairman further pointed out that the company, besides having under their control a large and expert organisation throughout Central Europe and the Near East, has developed an important business as general merchants and has strong financial support.

Sudan Plantations Syndicate.

As was expected a very satisfactory report is forthcoming from the Sudan Plantations Syndicate for the year ended June 30 last. The season's crop in the Gezira totalled 108,287 bales as against 77,665 bales for the previous season, the area under cotton being 731,351 feddans as compared with 105,587 feddans. On the Zeidab estate on a slightly smaller area of 5,026 feddans the yield was 3,855 bales as against 3,330 bales. The stock of cotton unsold at the end of the year was shown in the balance sheet at valuation which subsequent sales have indicated to be conservative. At last year's meeting the Chairman, Mr. MacIntyre, indicated that it was expected to have 155,000 feddans under cotton in the current season, so that next year's report should show a further substantial increase in the production of Sakellarides. The most interesting feature of the report is the statement that as a result of recent negotiations considerable additional areas which are to be brought under irrigation to the north of the existing area will be entrusted to the company's management. Further details of this development will be forthcoming at the general meeting.

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 29.

The heavy slump in Wall Street, which came in successive waves and culminated in almost panic conditions in that centre on Thursday, has naturally had repercussions on the London Stock Exchange, but prices on the whole have held their ground successfully. Gilt-edged stocks have experienced a firm demand and shown consistent strength, partly owing to the improvement in sterling-dollar exchange, and home rails were less inactive. Industrials, after a discouraging start, developed a more satisfactory tone, and apart from those shares with a large American interest, in which there were wide fluctuations, have been steadier than for some time past. No further statement has yet been forthcoming as to the Hatry settlement, and there is a disposition in some quarters to regard the Wall Street slump as a factor likely to enhance the difficulties of the position. Until these matters are settled considerable uncertainty is bound to beset the markets, but in view of the manner in which prices as a whole have resisted the effects of the somewhat dramatic events in Wall Street, which indicates a not unhealthy state of affairs over here, it may well be that a gradual improvement may develop here under the stimulus of a diversion of investment funds from New York to London.

New Motor Car Developments.

The announcement that the Prudential Assurance Company is to lend £1,000,000 to Rootes, Ltd., the well-known car distributors, to be used for the encouragement of the sales of British cars in Empire and other overseas markets, is of great interest to shareholders in British motor car concerns. It is generally agreed that a great increase in exports is needed to place the industry in a healthy position. In the past British exporters have been handicapped by cash and financial resources—which have prevented intensive sales propaganda and efficient after-sales service—and the concentration on low-powered cars. The former will no longer hinder Rootes, at any rate, while it may be presumed that the Prudential would not have made this move if they were not convinced that our manufacturers have now produced cars which could compete abroad. It remains to be seen, however, how far the optimistic forecasts of the sponsors of this scheme are borne out; but it should, at least, be a considerable help. It is to be hoped, also, that further progress may be made towards rationalisation in this industry, for, as we have explained before, it is intense competition which has, in the past, prevented most motor car manufacturers benefiting from the rapid advance in demand. Moreover, helpful as will be improved marketing to exports, British cars can hardly be expected to compete seriously with American until, through amalgamations, production is on a scale comparable with that of the great American producers.

Motor Accessory Profits.

A feature of the Motor Show this year has been the increased attention given to accessories. The desire of motor car users to have their cars as well-equipped as possible is naturally pleasing to the shareholders of motor accessory making concerns, who have also benefited from the rapid growth in the number of cars in use much more than have motor car shareholders themselves, owing to the comparative lack of competition in the accessory making business. One of the most successful firms is Joseph Lucas, Ltd., who reported this week a record net profit of £247,799 for the year ended August 7, 1929. This compares with £220,661 for the previous accounting period of 40 weeks and £226,092 for 1926-27. The ordinary dividend of 25 per cent. is to be maintained for the third consecutive year, and the reserve is to be brought up to £475,000 (the ordinary capital being £1,019,300) by the allocation of £58,185 (against £50,000). Prospects for the ordinary shares are complicated by the

recent issue of £200,000 new shares for the acquisition of a competing business. It may be presumed, however, that this will contribute to profits, and, assuming the present dividend is maintained, the ordinary shares give the satisfactory return of about £6 10s. per cent.

Kreuger and Toll's New Capital.

The directors of Kreuger and Toll, the great Swedish investment trust associated with the Swedish Match Company, have announced that the capital of the company is to be increased by 110,000 new "B" shares of 100 kroner each, and 37,916,660 kroner in new participating debentures, both to be offered to existing shareholders. The purpose of the offer is the financing of the recently-acquired bunker and wood pulp interests in Northern Sweden. Kreuger and Toll is the largest stockholder in the Swedish Match Company, whose operations extend over 35 countries, and has interests in a large number of real estate, banking, and finance companies in many countries, in addition to the Grangesberg Company, the largest iron ore producer in Europe. The company also holds very large sums in European Government bonds, acquired in the financing of extensions of the interests of the Swedish Match concern. Its balance-sheet shows a strong position, total net assets, after allowing for the proposed increase in capital, amounting to over £49 million. Earnings have recently advanced rapidly, and it is stated that the current accounts indicate a further increase this year. Dividends have been at the rate of 25 per cent. for the past ten years, but the net earnings for 1928 amounted to some 60 per cent. on the capital. Assuming, as is reasonable, that the new capital can be used remuneratively, a rise in the near future, or some other benefit to shareholders, can be expected. Investment abroad inevitably involves a certain amount of risk, but it is minimised in the case of a sound, well-managed concern such as this, with well-distributed assets.

EXPLOITATION OF ABYSSINIA'S MINERAL RESOURCES.

Abyssinia is known to contain extensive deposits of coal, copper, gold, phosphate rock, potash, rock salt, and sulphur; also occurrences of asbestos, feldspar, iron, lead, limestone, marble, mica, mercury, petroleum, platinum, silver-lead ores, tin, and tungsten (says the United States Trade Commissioner at Cairo, Mr. R. F. Chesbrough, in a recent report). With the exception of a small production of gold, platinum, and potash, the deposits of the various minerals mentioned have not been commercially developed, owing in part to the inaccessibility of the country and also to the fact that large areas have been only partially explored. Abyssinia has an area of approximately 400,000 square miles and an estimated population of 10,000,000.

The deposits of potash in the Asal salt plains, which were worked by an Italian company during the World War, have been estimated at over 1,000,000 tons. The mines have been idle for several years. The areas in which the mineral wealth is known to exist are in the districts north-west, west and south-west of Addis Ababa, the capital. It is reported that indications of important oil deposits have been discovered in the north-western section, near the Sudan frontiers. An American company holds a concession for the exploitation, in different sections of the country, of mica mines, the product of which is said to be of excellent quality.

The power of granting concessions to foreign interests for the exploitation of mineral areas lies either in the hands of King Tafari or the governor of the Province in which the privilege is sought. This power, in some districts, is held jointly by the King and the governor in question. Concessions already granted have, in some cases, provided for percentage royalties on production, to be paid to the Government. This participation may be in the form of a fixed stock interest or percentage of the profits. Certain details of three of these concessions are as follows:—

In the Province of Beni Shangul, 100 areas, each 5 by 5 kilometres square, or a total of approximately 900 square miles, comprise the concession granted by King Tafari to the Deutsches Studiensyndikat of Stuttgart, Germany. It provides for the prospecting and exploitation of all mineral deposits in the allotted district, which include gold and platinum. The terms have been accepted by King Tafari and ratified by the German Minister at Addis Ababa. Already 12 areas have been registered, and it is expected that work on these will be begun after the rainy season in October. Deposits in this district are mostly in river beds where placer mining and washing are carried on by the natives. The Province of Beni Shangul lies along the Sudan frontier opposite Kurmuk, to which point metals extracted could be most easily and economically

shipped. From Kurmuk they may be transported abroad by truck and rail through the Sudan to Khartoum or Port Sudan. Precious metals of high value, such as platinum and gold, could be carried to Khartoum by airplanes. It is necessary for the concessionaire to secure the approval and permission of the governor of the province in order to operate in the areas granted. In the Deutsches Studiensyndikat areas gold and platinum deposits have been found together in the river beds, usually at a depth of 3 to 6 feet. Alluvial gold has been assayed to run 32 grains per cubic metre. Samples of platinum from this district have been analysed and found to contain 70 per cent. platinum, 10 per cent. gold, 7 per cent. irridium, 3 per cent. omnium, and 10 per cent. palladium and other foreign matter.

An Italian citizen has obtained from the King concessions in Beni Shangul, and in the adjoining province of Wollaga where rich alluvial deposits of gold and platinum exist. The territory has been allotted in the form of seven circles, each having a radius of 5 kilometres from a given point. Several of these areas already have been worked, and in 1928 platinum was produced and sold in Europe at prices ranging from 55,000 to 100,000 French francs per kilo. During December, 1928, and January, 1929, 38 kilos were extracted. The work was done by hand, by natives who were paid the equivalent of 0.50 dollars per gram of gold or platinum turned in. The production was taken across the border and shipped abroad through the Sudan. According to the terms of the concession, 10 per cent. of the output is given to the Government.

A third concession, granted by the governor of the Province of Selale to a citizen of Abyssinia, is situated north of Addis Ababa in the districts of Borana, Jamma, Gundubret, etc., in the Province of Selale, which has an area of 25,000 square kilometres. In this province are important deposits of saltpetre which, according to various analyses, have produced 70 per cent. of potassium nitrate, in the raw state, and 95 to 97½ per cent. after decantation. Deposits have been found at Debra Libanos, Harro Fitché, but the most important are those at Derra in the district of Jamma. In these areas are deep caves where crystallised nitrates in almost pure state in the form of stalactites have been found. Coal and copper have been discovered in these district, but have not been exploited on account of the costly means of transport. Alluvial gold is also known to exist.

The terms of this concession allow the holder to select seven different sections for exploitation, each of which is to have an area of 9 square miles. A royalty of 3 per cent. on nitrates extracted for the first two years is to be paid to the Government. The rate increases to 6 per cent. beginning with the fifth year and thereafter applies to the expiration of the concession, which is for a period of 30 years. At the option of the Government this concession may be renewed for a similar period. The right is given to the holders to make use, gratis, of timber and waterfalls on the property.

Distances from Fiche, Debra Libanos, and Derra to Addis Ababa by a very bad road are respectively, 51, 66, and 84 miles. These minerals cannot be exploited profitably until a modern highway is built from this area to the capital. According to the treaty of August 2, 1928, between the Abyssinian and Italian Governments, the former has agreed to construct a highway from Addis Ababa to the Eritrean frontier and the route will pass through Fiche. This highway probably will be built by Italian interests for the account of the Abyssinian Government.

The English Steel Corporation have been given a contract by the Egyptian State Railways for the supply of helical springs.

The yield of the Egyptian cotton crop is officially estimated at 7,490,609 kantars, of which 2,528,275 kantars are Sakellarides. The average yield per acre was 4.7 kantars.

After visiting Tabriz on October 23 and examining those parts of the city which were damaged by the recent floods, the Shah of Persia ordered the early construction of the barrages sufficient for the future protection of the town. The Shah gave £1,000 to those who had suffered from the floods at Tabriz, and motored from Ardebil via Astara along the new Caspian littoral road, arriving at Pahlavi, formerly Enzeli, on October 26.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Microscopes and Accessories.—The Department of Public Health, Cairo, invites tenders for the supply and delivery of microscopes and accessories required during the year 1930-1931. December 7.

Medicinal Oils.—The Egyptian Department of Public Health invites tenders for the supply of medicinal oils required during the year commencing May 1, 1930. December 7. (D.O.T.)

Disinfectants.—The Egyptian Department of Public Health invites tenders for the supply of disinfectants for medical and general purposes required during the year ending April 30, 1931. December 7. (D.O.T.)

New Bridge over the Nile.—The Main Roads and Bridges Department, Cairo, invites tenders for the construction of a new bridge over the Nile at Kasr-el-Nil, Cairo, to replace the existing one. February 1. (D.O.T.)

Swing Bridge.—The Main Roads and Bridges Department, Cairo, invites tenders for the construction of a swing bridge over the Bahr-el Baqar Drain (Charkieh Province). December 9. (D.O.T.)

Money Safes.—The Central Stationery Stores of the Ministry of Finance, Cairo, invites tenders for the supply of small iron money safes with steel keys. November 28. (D.O.T.)

TURKEY.

Railway Material.—The Turkish Railways and Ports Administration invites tenders for the supply of metal parts for 155 railway trucks (wheels, axles, wheel centres, brace bolts, axle supports, brake parts, washers, springs, nuts and bolts, etc.). November 12. (D.O.T.)

INDIA.

Electric Cables.—The Indian Stores Department, New Delhi, invites tenders for the supply of electric cables for the period from December 1, 1929, to November 30, 1930. November 7. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Manchester, November 4; Birkenhead, November 5); s.s. Massilia for Bombay (Glasgow, November 15; Manchester, November 19; Birkenhead, November 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manipur for Calcutta (Birkenhead, November 7); s.s. Mangalore for Calcutta (Glasgow, November 7; Birkenhead, November 18).

Bibby Line.—S.s. Yorkshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, November 13).

British India Line.—S.s. Mandala for Colombo, Madras, and Calcutta (London, November 2); s.s. Domala for Bombay (London, November 2).

Cunard Line.—S.s. Bantria for Gibraltar, Malta, Patras, Piræus, Smyrna, Mitylene, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if inducement (Glasgow, November 14; Swansea, November 16; and Liverpool, November 16); s.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Algiers, Oran, Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, November 23; Swansea, November 26).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 8) (this steamer will be the last sailing of the season to the ports of Galatz and Braila, and sailing November 9); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 7).

P. and O. Line.—S.s. Viceroy of India for Bombay (London, November 8); s.s. Behar for Calcutta (London, November 8).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 9); s.s. Portuguese Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, November 13).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 2; Swansea, November 2); s.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 7; Liverpool, November 14); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, November 9; Swansea, November 14); s.s. Roumelian for Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 23; Swansea*, November 23); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 23); s.s. Maronian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Swansea, November 28). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*ELYSIA ...	Nov. 12	*CASTALIA ...	Dec. 10
*MASSILIA ...	Nov. 26	*BRITAINNA ...	Jan. 10

† Leaves Marseilles January 18.

*First class passengers only. Specially low fares. † Calls Port Sudan.

‡ First and Third class passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

British Consular Reports

V—EGYPT.

(Continued from page 471.)

Trade With the United Kingdom.

While the import and export trade of Egypt shows an increase for the year under review, leaving a favourable trade balance of over 5½ million pounds Egyptian, the United Kingdom's share of the imports shows a decrease of one million pounds, being only 21 per cent. of the whole import trade. While the United Kingdom's largest loss of trade was in cotton-piece goods, quite appreciable increases on the other hand are noticeable in engineering goods, Colonial tea, footwear, jams, bottled beer, stout and ales, whisky, cement, printers' colours, chocolate and confectionery, proprietary articles, ink, patent fuel, toilet soap, sewing cotton, artificial silk and cotton goods, cotton laces, trimmings and embroideries, sheets, etc., and other cotton articles (other than piece-goods), linen sewing thread, handkerchiefs and piece-goods, linoleums, woven machine belting, iron and steel goods, sluices, valves and hydrants, rail locomotives, portable steam engines, stationary internal combustion engines, power pumps, cutlery and hardware, threshing machines and other agricultural machinery (exclusive of tractors) sewing machines and parts, textile machinery, unenumerated machinery and parts, motor vehicles and spare parts, insulated electric cable, armoured electric wire and cable, electric light fittings, antifriction metals, silver, plated and gilt metal goods, tinplate, stationers' sundries, toys, hats, scientific and surgical instruments, gramophones and discs, asbestos, cigarettes and tobacco, and woollen goods.

Coal.

Imports of coal into Egypt during the year under review amounted to 1,221,916 metric tons valued at £E1,531,832,

of which about 1,100,000 metric tons entered through the port of Alexandria. The latter figure represents a general decrease of 27,363 metric tons in volume and £E400,753 in value compared with 1927, this decline being mostly due to the fact that the consumption of liquid fuel is steadily increasing and also to the sufficiency of water for irrigation during the summer.

The United Kingdom supplied 1,159,084 metric tons valued at £E1,455,545, as compared with 1,249,279 metric tons worth £E1,856,298 in 1927. Of the total quantity of 588,500 tons imported for trade purposes, Great Britain furnished 533,650 tons compared with 659,030 tons in 1927, but the increased consumption in that year may be mostly attributed to the replenishment of abnormally low stocks consequent upon the coal stoppage.

Despite the opening given to German and American coal exports during the period of the stoppage, neither country has maintained its position since the United Kingdom coals have returned to this market. German steam coal has proved to be a failure and the only American imports for trade purposes in 1928 were to the order of the Gas Company (French). This company obtained their supplies either from Newcastle or from the United States. The total imports of coal from the United States in 1928 were 26,072 metric tons. The foregoing figures are exclusive of bunker coal, the imports of which amounted to 1,160,476 metric tons in 1928 as compared with 1,066,542 metric tons in 1927. The United Kingdom share was 1,054,524 metric tons in 1928 and 908,163 metric tons in 1927. The import of Russian coal is increasing, but it is unlikely that it will cause any damage to British trade. The greater part of this coal is imported for bunkering purposes at Alexandria for the Sovtorgflot vessels. Russia is also sending some anthracite coal to Alexandria, which is superior to German but inferior to the British product.

German anthracite, as all anthracites in Egypt is used in suction plants, but it is of inferior quality. Recently rumours have arisen that Poland intends to compete in the Egyptian coal market, but up to the present no Polish coal has materialised and in the trade doubts are expressed as to whether it could hope for success. The price of German patent fuel is considered to be much too high in comparison of its calorific value with Welsh coal. Before the War patent fuel was 1s. below Cardiff qualities, while now this commodity costs 2s. 6d. more than Cardiff coal. These briquettes are practically only used in ploughing machines. United Kingdom patent fuel is generally dearer than the German product. The locally produced briquettes also compete strongly with the imported article. The same conditions apply to foundry coke, which is used for smelting purposes and for lime burning. German foundry coke is generally preferred to, and cheaper than, the United Kingdom article.

Imports of Machinery.

The sales of oil engines in Egypt fall into three distinct classes, viz., (a) Small paraffin engines up to 10 h.p., (b) larger heavy oil engines from 10 h.p. to 100 h.p., (c) large multicylinder diesel engines. The first are used for driving lighting sets and for small centrifugal pumps for irrigation of smallholders' lands from artesian wells. The second are used for all power purposes, but particularly for flour mills and larger irrigation pumps both in wells and canals. The third are used, of course, in smaller numbers, for large flour mills, ginning factories and oil plants.

It is generally considered that the Continental, Far Eastern or American manufacturer gives his agent far easier terms than the United Kingdom manufacturer will consider, and he does not hesitate to carry large quantities of consignment stocks at very cut prices. He frequently helps his agent, by paying Egyptian customs

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

LONDON—ANDREW WEIR & CO., 21, Bury Street, E.C.3

duties for him and relieves him of all charges on goods, with the exception of storage and selling charges in the market. In addition, he will grant his agent quite a good percentage of commission on sales effected. On the other hand, several local agents complain that, though they are willing to push sales of British machinery, they are quite unable to do so as they are not in a position to finance the stock that they require to exhibit as samples of the goods that they want to sell.

Imports into Egypt of stationary internal combustion engines amounted in value to £E452,203, compared with £E277,519 in 1927. Of this grand total the United Kingdom's share stood at £E285,440, or more than 100 per cent. increase compared with 1927, while the chief competitors were Switzerland and Germany, with totals of £E69,864 and £E69,974 respectively. So far as the small engines are concerned of an average of 45 h.p., the United Kingdom continues to predominate; but in the larger machines of over 100 h.p., United Kingdom quotations are far in excess of Continental prices. In fact, Continental engines can be delivered in their packing cases, c.i.f. Alexandria for something like £E7 per h.p.

With the exception of one important contract for three powerful turbo-alternator groups and accessories, the United Kingdom did not fare well where Egyptian Government contracts were concerned in 1927 and 1928 with the result that Continental internal combustion engines supplied the major part of the considerable Egyptian Government requirements during these years. On the other hand, it should be observed that the British machinery, valued at about £E53,000, in respect of an Egyptian Government order for the installation, of power pumping plant for the great drainage station at Amira, which was placed in 1926, was, for the reasons given in Mr. Mulock's Report on Egypt, dated May, 1927, only supplied in 1928, and thus figures in the import statistics for that year.

Total imports of power pumps during 1928 amounted to a value of £E70,411, compared with £E46,056 in 1927. The United Kingdom continued to predominate in this business, her share being £E43,115, or an increase of £E18,076 compared with the previous year. Swiss imports showed a slight increase, but generally Continental imports remained constant. In this trade there is still greater discrepancy in price than in the case of internal combustion engines, as pumps of Continental manufacture can be purchased in Egypt for nearly half the price of United Kingdom pumps. The United States does not participate in this trade to any considerable extent. Some Continental manufacturers of engines and pumps have thoroughly studied the requirements of Egypt and have even gone to the extent of designing special engines and pumps to meet the duties which they have to perform in this country. The above refers especially to the pump question where Egyptian Government regulations prescribe that a farmer is allowed to have a pump of, say, 6 in. discharge. As the standard pump throughout the world, which is called a 6 in. pump, has a 6 in. impeller and a 6 in. discharge pipe, Continental manufacturers have now designed for this market a pump which, taking this standard size, would possess a 7 in. impeller inside a casing tapering down to a 6 in. discharge pipe, thus complying with Government regulations, but producing a unit which, it is claimed, is capable of discharging a much greater quantity of water due to the size of the impeller—the Government regulation being met by the size of the "discharge orifice." The Egyptian buys on quantity of water discharged and, therefore, this type of pump

is obtaining a fairly wide demand in this market. The general requirements of centrifugal pumps are a very large discharge at generally very low heads. Two sets of conditions exist, firstly the raising of water from canals to the land, where two or three metres head is the average; and secondly, the raising of water from artesian wells, chiefly in Upper Egypt, where the head averages from 12 to 15 metres.

The only portable steam engines imported during the year under review were supplied by the United Kingdom, who also furnished the greatest quantity of threshing machines, boilers, sewing machines and parts (£E101,162), textile machinery (£E11,407), unenumerated machinery (nearly half the total import of £E569,803), motor cycles (£E17,188), road locomotives, and gramophones.

The exceptional advance in British imports of electrical machinery during 1927 was, unfortunately, not maintained during the year under review, the British share of this trade declining by almost one-half of the previous year's import, whereas total imports, though smaller than in 1927, did not decline in the same proportion as the United Kingdom's loss of trade. France during 1928 occupied the United Kingdom's former position, and Italian business, though less dangerous, is nevertheless increasing. The cause for this decline must apparently be sought in the fact that British prices are far in excess of Continental quotations, as British firms do not manufacture the cheaper lines so popular in Egypt. British trade is made more difficult by the absence of electrical regulations in Egypt. It may, however, be remarked that a British firm was successful in securing for future delivery an important order from the Egyptian Government for three turbo-alternator generating sets with auxiliary Diesel engine and generator.

It is anticipated that the market for rice hulling machinery should tend to increase, while it is also believed that extension of existing, or erection of new, flour milling plant will be executed in the near future. Threshing machinery should be a good opening, as the method still employed of treading out the grain by driving cattle over a threshing floor results is a most unsatisfactory product. The age-long customs will, however, be hard to overcome. Milling installations will now be necessary as the existing mills, of which there are only a few of any considerable capacity, would be inadequate to cope with a possible crop of 350,000 tons.

Motor Cars, Motor Cycles, etc.

The United States remained the only important supplier of tractors, and it should be noted that this business is steadily increasing, amounting in all to a value of £E94,118 in 1928, compared with £E55,519 in 1927. The United States also retained the predominant position in the local market for motor vehicles, the total import of which was valued at £E907,613, compared with £E947,895 in 1927. While imports from the United Kingdom and from Continental sources appreciably declined, American deliveries on the other hand were far in excess of that country's trade with Egypt during 1927. For example, out of a total import of motor cars and chassis amounting to 4,639 valued at £E772,789 during 1928, the United States supplied 3,385 worth £E506,687, compared with 2,559 valued at £E371,767 in 1927. France and Italy, with greatly reduced imports, contributed 423 and 417 respectively, valued at £E96,393 and £E84,301, whereas the smaller share of the United Kingdom, viz., 328 valued at £E62,699, though also recording a diminution of trade, yet represents only a relatively small decrease.

On the other hand, although the United States increased her share of the business in motor buses, truck, and lorries by 300 in number, compared with 1927, United Kingdom deliveries also increased appreciably, viz., by 65 in number. Of the total import of these vehicles, amounting to 1,090 valued at £E134,824, the United States supplied 913

JOHNSTON LINE

Mediterranean, Black Sea and Danube.
REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Rates of Freight, Insurance and other information apply to:

JOHNSTON LINE, LTD., 6 Billiter Street, London,
86, Cross Street, Manchester.
and **FURNESS, WITBY & CO., Ltd., Royal Liver Building, Liverpool**

valued at £E83,774, the United Kingdom 102 worth £E25,347, and France 54 valued at £E15,968.

In the above-mentioned category particularly, British manufacturers should be encouraged to persevere in view of the intention of the Egyptian Government to enforce regulations in control of motor buses. Moreover, it may safely be assumed that the British share of the trade, though relatively small, was in general conducted on sounder lines than appears to have characterised the apparently venturesome system adopted by some of the powerful American interests in connexion with their provincial sales of light lorries on extended credits. However this may be, there is no doubt that American manufacturers, though competing keenly with each other, have the Egyptian market almost to themselves. The principal reasons for this situation may be briefly summarised as follows:—(a) American manufacturers with their strong financial position are able to expend large sums of money on advertising. (b) They can afford to stock in Egypt all types of models and necessary spare parts. (c) Price for price they offer to the buyer up to £E350/400 (which represents the most popular sales of cars) greater horse power than a British car of equal value, which is always a consideration in this market where economy in running is of less immediate consideration than in the United Kingdom. Local tastes also incline to prefer the finish of American cars and their usually wider seating accommodation.

A very important factor in successful sales in Egypt is that of commission. Whereas agents for British cars make as a rule 18 per cent. to 20 per cent. on selling prices, agents of American manufacturers make from 22 per cent. to 30 per cent., and even 40 per cent. Another fact which stands out is that almost all the American makes of cars, of all prices, are represented in Egypt, and that, moreover, they are continually increasing their business, whereas on the other hand only a comparatively few well-known British makes have attempted to concentrate in any way on the Egyptian market, and only one on a relatively large scale. The result of these and other circumstances has been that American suppliers of Ford and other light cars have seized their opportunities, particularly in the provinces, and it will now be an up-hill fight to secure for British cars the position they should hold on the Egyptian market.

The market for motor cycles remains favourable to British manufacturers of all designs, the only competition being felt from "Indian" and "Harley-Davidson" makes. The local interest in motor cycling has been stimulated by the formation of motor cycle and light car clubs in Cairo and Alexandria which, it is hoped, will result in an increased demand. Stocks of spares are essential. There is a wide field for the sale of a motor cycle and side-car at £E60 to £E65, which should be easy to handle and to keep, reliable and silent. Speeds of about 35 m.p.h. to 40 m.p.h. maximum, if easily arrived at, are quite sufficient in most cases for local requirements. British solo machines already hold a very good position in Egypt. Of a total import of motor cycles valued at £E20,864, the United Kingdom furnished £E17,188.

Motors and Motoring.

(By Our Motoring Correspondent)

The Motor Show and After.

The great Motor Show is over, and it is to be hoped that it has done a great deal of good to an industry which is sorely in need of a tonic. Quite a number of those who visited Olympia had the air of buyers; agents, of course, were there in plenty to give huge orders. There are pessimists in the motor trade to-day, but the more recent news regarding a scheme for financing the export trade will probably do a good deal to reduce their ranks.

Compulsory Insurance.

There is a good deal to be said in favour of compulsory insurance. Equally there is a good deal to be said against it, and the general feeling is that the disadvantages are so numerous that the idea will fall through. When everything is said and done the arguments in its favour boil down to the fact that there are a large number of motorists on the road who are, from a financial point of view, men of straw, and if they are involved in accidents the sequel is unfortunate. So the proposal is made that insurance shall be compulsory in order that some insurance company shall pay whatever sums have to be paid—out of monies provided, in the shape of substantial premiums, by other and more careful motorists!

With regard to this accident aspect of the matter, there is another point to be considered. Taking the class of motorists we have mentioned, is the mere fact that they have paid an insurance premium likely to render them any more careful? In the non-compulsory days, they stood to lose something; they might have to sell the car or borrow the money from a reluctant friend, or they might have some few possessions with which they might have to part. But, when they have paid their insurance premiums a possible consequence is that such elements of caution as they had may become modified.

It does not seem possible, unless the Government pays a portion of the premiums, which it can only do by taking money out of the public purse, that premiums can be anything but heavy. Taking the number of fatal and other accidents that occur each year, and taking also into consideration the fact that at present no insurance company is concerned with many of them, it will be seen that the annual sum to be paid out will be very high, and if we add the necessary establishment and other charges, profit for engaging in the business, taxation and so forth, and divide the total by the number of motorists, we shall get some idea of what the premiums are likely to be. In regard to this, there is a further matter to be taken into account and that is, the inherent desire amongst a certain class to "get their money's worth" and, in short, to magnify if not actually to invent accidents. The less scrupulous of the public will cheerfully take a hand in that game and stumble into or near to cars without the least hesitation. Bogus claims are not unknown to-day; what will they be like in number when every driver is insured against third party risks?

The objection has been raised, also, that any scheme of compulsory insurance would create another and an over-ruling licensing authority, in that insurance companies might and in all probability would refuse to insure certain people known to be careless, reckless or unscrupulous. There is, on consideration, very little in that; careless, reckless and unscrupulous drivers are not wanted on the road and any scheme that would prevent them from driving would meet with considerable approval.

IVORY PRICES STEADY.

Messrs. Hale and Son report that the quarterly ivory sales held on October 22 comprised 30½ tons (against 38 tons at the same time last year and 37 tons in July last), viz., 13½ tons Zanzibar, Bombay, Mozambique, East African, Rhodesian, and Siam, 3½ tons Abyssinian, 2½ tons Egyptian (2½ tons Alexandrian, ½ ton Malta description), 8 tons West Coast African and Congo and 3 tons land carriage, also ½ ton mammoth tusks, ¼ ton sea horse tusks and boars' tusks and ¼ ton rhinoceros horns; total, 31½ tons.

There was a moderate attendance of buyers. America and the Continent bought freely, and the home trade took about the usual quantity. The quantity catalogued of all descriptions was small. A generally quiet tone prevailed. Soft large tusks met with good competition at firm prices to £2 per cwt. advance, but hard was £2 to £4 per cwt. lower. Some quantity was bought in. Ball pieces did not maintain the extreme prices of last sales.

Abyssinian.—Only a very small quantity sold, being held above views of buyers; soft tusks were steady. Ball scrivelloes were £4 to £6 per cwt. dearer.

Egyptian.—Soft large tusks were firm to £2 per cwt. higher, medium steady to a little easier. Hard, £2 to £4 per cwt. lower. Ball scrivelloes, £4 to £6 per cwt. higher. Scrivelloes steady.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British Bulgarian Chamber of Commerce of Sofia, dated September 30.]

General Situation.

The debating of the Eastern Reparations issue in Paris is followed with keen interest all over the country. In business and financial circles, there is a marked tendency to refrain from any new commitments before this very important issue comes to a head. The general impression is that, whatever the decision taken in Paris may be, the financial and fiscal burden resulting is not going to be heavier than the present reparation annuities. It is at any rate premature to form an exact opinion on this subject at the present stage.

Owing to circumstances repeatedly referred to in this Bulletin, the position of the local money market is showing symptoms of considerable uneasiness. Credits are becoming scarcer, rates are increasing, and the general state of solvency is viewed with some pessimism by business men and bankers. The hardware, cotton yarn and piece-goods trades are still involved in difficulties, although the peasant consumption appears to expand on normal lines for this season of the year.

Exports have been more active during September, and the position of the foreign trade has very probably improved. Large tobacco sales are on the point of being concluded. Sunflower seed, beans, and maize exports are expected to be very active this and next month.

The acute traffic crisis prevailing on the railways, as a consequence of the shortage of rolling stock, is causing some disturbance to the export trade and to the local distribution of goods and produce.

The position of the Treasury continues to be satisfactory. Receipts are coming in regularly and expenditure is being kept in proportion to the resources available. The service of the foreign debt is carried out punctually, all payments falling due being effected without any delay.

Sericulture.

Sericulture in Bulgaria may be considered as one of the best auxiliary occupations of the farmers and the inhabitants of the small towns. The raising of silk worms takes place in May and June just before harvesting of the cereal crops begins. The Ministry of Agriculture, in order to encourage the production of cocoons, has allotted special tracts of the Government nurseries to mulberry trees, which trees are later on distributed among the population free of charge.

In order to illustrate the development of this industry, we are giving below the quantity of silk worm eggs hatched and cocoons produced during the last ten years.

Year.	Quantity of silk worm eggs ounces.	Quantity of cocoons produced kilograms.
1920	25,101	1,120,000
1921	29,391	1,200,000
1922	23,850	1,100,000
1923	30,007	1,300,000

1929	41,714	2,357,230

The Large Industries of Bulgaria.

In 1927 the National Bank of Bulgaria instituted an inquiry into 312 large undertakings representing the ten chief industries. According to the results obtained, the capital invested in these undertakings on December 31, 1927, amounted to 114,285,763 gold leva and was distributed as follows: real estate 5,819,578 gold leva (5.00 per cent.), construction 47,570,589 gold leva (41.25 per cent.), and machinery 61,325,596 gold leva (53.66 per cent.). The capital invested in 331 large undertakings on December 31, 1926, amounted to 11,270,012 gold leva, and on December 31, 1925, in 349 large undertakings it amounted to 89,352,330 gold leva.

The power producing plants of these 312 undertakings in 1927 numbered 453 with an effective h.p. of 33,316, of which 233 steam boilers, locomobiles and turbines with an effective h.p. of 2,166; 34 benzine engines with an effective h.p. of 375; 70 Deisel engines with an effective h.p. of 6,349; 14 water-wheels with an effective h.p. of 174; 2 naphtha engines with an effective h.p. of 20; and 19 other type engines with an effective h.p. of 280.

There were employed in these 312 undertakings 20,077 workers, of which 12,303 were men and 774 women. The number of wage-days reached 5,450,791 for which 12,296,880 gold leva were paid. The raw materials used in these 312 undertakings on December 31, 1927, were valued at 92,463,474 gold leva, of which 60,787,171 gold leva (65.74 per cent.) were paid for materials of local origin and 31,676,303 gold leva (34.26 per cent.) for imported materials. The auxiliary materials used are valued at 9,934,773 gold leva, 1,870,725 gold leva (28.90 per cent.) of which were used for the supply of materials of local origin, and 7,064,048 gold leva (71.10 per cent.) for imported materials. The fuel used is estimated at 4,894,468 gold leva. The total value of the materials used by these 312 undertakings on December 31, 1927, totalled 107,292,715 gold leva, of which 67,983,583 gold leva (63.36 per cent.) for the supply of materials of local origin and 39,309,132 gold leva (36.64 per cent.) for imported materials.

Miscellaneous.

Receipts of the State Treasury for July show a slight decrease as compared with the figures for June. The receipts for August, however, show a small decrease, as compared with July, due to decreased receipts from direct taxes. In August, ordinary receipts amounted to 549,730,774 leva, and in July to 596,134,000 leva, while in June they were 620,070,000 leva.

The wholesale commodity index number (on the basis of 1914 equals 100) for August was 3,141 as compared with 3,200 for July and 3,245 for June and 2,961 for August, 1928. The general level of wholesale prices, therefore, has decreased by 1.9 per cent. as against July, while an increase of 6.1 per cent. is shown as compared with August, 1928.

The trade balance during July is down by 383,791,755 leva as against 33,119,339 leva for June, and 248,199,380 leva for May, while the deficiency for August is stated to be 310,864,985 leva. Imports during July totalled 52,781 tons for 775,846,516 leva, and exports amounted to 16,314 tons for 392,054,761 leva, while in August, imports amounted to 45,012 tons for 675,836,011 leva, and exports totalled 18,049 tons for 364,871,026 leva.

The quantity of bank notes in circulation from August 15 to September 23 again show a steady level. On August 15, the notes in circulation amounted to 4,016,043,000 leva, on August 23, to 3,997,100,000 leva, on August 31, 4,121,003,000 leva, on September 7, to 4,170,148,000 leva on September 15 to 4,148,064,000 leva and on September 23, 4,129,942,000 leva.

The foreign exchange reserves of the National Bank, also show a steady level during August and September. Thus on August 15, foreign exchange amounted to 1,275,592,000 leva on September 15 to 1,310,174,000 leva, on August 31 to 1,259,807,000, on September 7 to 1,275,592,000 leva on September 15 to 1,310,174,000 leva and on September 23, to 1,313,842,000 leva.

The movement of goods transported by the State Railways for the first six months of 1929, show a considerable decrease as compared with the same period last year, which decrease is due mainly to the shortage of rolling stock.

According to official data furnished by the Labour Section of the Ministry of Commerce, Industry and Labour, the number of employees in industrial undertakings during August was 89,698 against 86,565 in July, and 76,676 in August 1928.

Company Meetings.

EASTERN OIL INDUSTRIES.

Review of Past Year's Operations.

Amalgamation Proposals Approved.

The annual general meeting of Eastern Oil Industries, Limited, was held on October 24 at Winchester House, London, E.C.

The Right Hon. Sir Montague Barlow, Bt., P.C., K.B.E. (the Chairman), in the course of his speech said:—With regard to the balance-sheet now in your hands, I wish to make one or two preliminary points clear. It will be borne in mind that, as clearly indicated in the particulars, a large policy of re-organisation and re-equipment, coupled with the purchase of interests in certain subsidiary undertakings, was being initiated; this policy of development had been commenced prior to January of this year by reconditioning the factory at Haifa, and by acquiring the undertaking at Smyrna and launching a programme of reorganisation there. In accordance with this policy, the company had also during the later portion of 1928 acquired a controlling interest—valued in the particulars at £186,000—in, and commenced the development of, the business of Adolf Kohn and Co., at Budapest, operating two oil mills, a large one at Raab in Hungary, and a smaller one at Vienna; the company had further arranged to purchase interests valued at some £43,000 in undertakings at Ivry and Balti, and one or two other subsidiary businesses, as indicated in the particulars. This process of re-organisation and development occupied the close attention of your directors during the earlier part of this year, and it will be appreciated that during that period it has been impossible to secure output to capacity, or to realise trading profits on the scale which, now that the process is completed, can be reasonably anticipated. In addition to that, and pending certain negotiations with a very important group, which occupied a considerable period, your board did not consider it desirable to press forward the trading operations of the company in the particular areas, or in relation to the particular commodities, which might be affected by the contemplated agreement.

It will be realised that, owing to the extension and reorganisation that has taken place in the last eighteen months, no effective comparison with last year's balance-sheet is possible; it is, however, satisfactory to point out that, in place of a deficit last year of £25,618 8s. 4d., our accounts this year show a balance of over £71,000; while items of £10,044 13s. 3d. for preliminary expenses, and £5,000 expenditure in relation to patent rights, have been written off. With regard to the trading losses, I wish to anticipate possible queries by stating at once that the amount of such losses is approximately £20,000—not a considerable figure in view of the magnitude of the company's undertaking. The losses themselves are mainly due to certain special and temporary difficulties at Smyrna and Haifa. In accordance with a sound conservative policy, which the Board believed would commend itself to the shareholders, it was decided that the balance of £71,976 os. 6d. as shown in the profit and loss account, resulting from the sale of a capital asset, could not be considered as available for the purpose of declaring a dividend.

Important Working Arrangement.

Your Directors realised at an early date that it would be in the best interests of the company to come to a working arrangement with the powerful group represented by the Margarine Union and its allied undertakings, with a view to promoting satisfactory business relations and eliminating unnecessary and wasteful competition. Accordingly negotiations were entered into with that group and ably conducted on behalf of the company by Mr. Rosenberg and our legal advisers. These negotiations resulted in conclusions satisfactory from the point of view of your company.

Our Directors agreed to dispose to the Margarine Union Group of all its holding in Adolf Kohn and Co., of Budapest, the chief asset of which was two oil mills, including one of large capacity at Raab, valued at £266,194, the company's share in which was stated in the particulars as estimated at £186,000.

In consideration of this sale and of certain other agreed limitations of the company's activities, your company received a consideration which ultimately realised a gross sum of £511,224, but it was arranged that this sum should be subject to adjustments due to investigations of values of stocks and to certain valuations, guarantees, etc., contemplated under the contract; in addition, deductions on account of commissions, compensations to subsidiary companies and other claims had to be taken into account, making altogether the sum of £78,229, and leaving a net cash balance receivable of £432,995. This amount of cash, pending further developments, has been employed in repayments of the company's loans from its bankers in respect of working capital.

Trading Results.

Although the company's trading results have necessarily been restricted by the limited period covered, and also by the time and effort necessarily devoted to the reorganisation, so far as possible the trading operations of the company have been actively carried on. At the same time, the period under review was a difficult one, and the market in edible oils—the chief commodity in which your company deals—suffered a considerable drop in price. This involved a depreciation in the stocks carried at the time when the accounts were made up. Recently, that is since the close of the accounting period, prices in edible oils have generally shown a more favourable tendency.

The Smyrna Factory.

By far the most important of your company's undertakings is the business and factory at Smyrna. The new tariff laws for the development of Turkish industries have been foreshadowed for some time and, as the Board were aware, these would certainly involve a largely increased import duty for the majority of the oils in which your company deals. A principal preoccupation of the Board from the start has been to equip its factory at Smyrna in such a way as to be ready to take full advantage of this new situation as soon as it should arise. The development involved was very considerable, as the bulk of the machinery had to be adapted to deal with the higher oil-bearing seeds, such as sunflower, sesame, etc., in place of the cotton seed previously crushed, and it involved a capital expenditure up to June 30, 1929, of approximately £31,000. The work was delayed by the severe frost of last winter, but the factory is now in full working capacity. This delay in productive capacity, coupled with the necessity of paying continuously wages and other overhead charges, accounts for a portion of the trading loss, as mentioned above. It will, of course, be realised that this improvement in the conditions at Smyrna could not be reflected in the accounts now before you, which were closed in March last.

Quite recently—namely, on October 1 last—the tariff, involving a considerable increase of duty on the majority of oils in which the company is interested, came into actual operation. The full effect of the tariffs cannot be felt for some months yet, as naturally importers made arrangements to increase their stocks, in anticipation of the new tariff. Satisfactory reports recently received from our factory in Smyrna justify the Board in anticipating that the programme of sales at this factory indicated in the particulars will be realised.

The Haifa Undertaking.

The business of the Haifa undertaking has shown a steady development, and between January 1 and April 30, 1929, the turnover was approximately 20 per cent. above the average turnover in 1928, and a substantial gross profit was shown. Owing, however, to the difficulties of falling prices and a depressed market already indicated, and the charges involved in carrying certain stocks both of raw material and manufactured goods, a small loss was the net result; the period concerned, however, is only a portion of a year, and it is satisfactory to be able to report that, since the date when the accounts were made up, the position has improved and portions of the remaining stocks are now being realised at a profit. Some interruptions of business naturally occurred as a result of the disturbances in August, but I am glad to be able to report that no actual damage was done to the factory, and although the works had to be closed it was possible to re-open them and recommence business in a few days.

The report and accounts were unanimously adopted.

Advantages of Amalgamation.

The Chairman then moved the resolution approving the amalgamation of the company with the Eastern and Overseas Products, Ltd. In doing so he said:—I need not labour the advantages—advantages

FOREIGN EXCHANGES.

	Method of Quoting.	Parity of Exchange.	Latest Quotations.
Alexandria.....	Piastre to £	97½	97½

which will be enjoyed by both companies—of greater economy and the prevention of unnecessary waste which will result from the amalgamation. These have been fully set before you in the printed scheme, and, indeed, are obvious. But there are one or two considerations which especially affect the position of this company and its shareholders.

The Products Company, though not an old or long-established company, have had so far a successful career and find themselves in the position already, as was stated by the chairman, Lord Hardinge of Penshurst, at their general meeting two days ago, to pay an 8 per cent. dividend in respect of their first accounting period.

Further, in addition to having under their control a large and expert organisation throughout Central Europe and the Near East, the Products Company has developed a large and extensive business as general merchants, and enjoys the benefit of strong financial support. As indicated by Lord Hardinge in his speech, the Products Company and its German partner, the Osthandel, have been able to rely on the constant assistance of the Deutsche Bank, which was—even before its recent amalgamation—one of the most powerful banks on the Continent.

The Osthandel has during recent years paid a dividend of 15 per cent. After the amalgamation, the close co-operation between the Osthandel and the Products Company (which, in fact, owns all the shares in the Osthandel) will continue; while the interest and support of the Deutsche Bank in the amalgamated undertaking can, as Lord Hardinge indicated, be relied on in the future.

Finally, the Board secured for the shareholders a substantial bonus, in the shape of three shares for two—equal to 50 per cent.

It is proposed that, after the amalgamation, the Boards shall be reorganised, and some of our Directors will co-operate in the work of the Products Company. I am glad to be able to state, as was stated by Lord Hardinge at the Products meeting, that no compensation will be paid by the company to any retiring Directors.

The resolution was unanimously adopted.

ASSAM RAILWAYS AND TRADING.

Passenger Traffic Increasing.

The forty-ninth ordinary general meeting of the Assam Railways and Trading Company, Ltd., was held on October 23 at Winchester House, Old Broad Street, E.C.

Mr. James Mackenzie, the chairman of the company, who presided, referred first to the loss the company had sustained through the death of the late chairman, Mr. George Turner. To fill the vacancy Mr. G. E. Harris, who had been associated with the undertaking since 1921, had been elected to the Board.

The most important event of the year had been the receipt of an intimation from the Government of India that they did not intend to exercise their option to take over the railway in 1931. The Board were relieved, rather than otherwise, that the Government had not exercised that option, as the railway had always contributed its full share to the profits of the company, and traffic at present showed signs of increasing. Moreover, the knowledge that they had at least another 11 years in possession of the railway enabled them to push on with schemes of development and supplies of rolling stock to cope with the increasing traffic.

The passenger traffic had developed in a most promising way during the last few years. It was in 1926 that the shareholders were congratulated on the fact that for the first time a million passengers had been carried; only three years later, as would be seen from the report, well over a million and a half had been carried and the Board believed that with continued improvement in facilities and accommodation, the passenger traffic would continue to increase. That, of course, implied a sufficient supply of modern rolling-stock. Moreover, they would adopt a programme for the replacement of the "F" class of engines over the next two or three years.

As to the railway accounts, the coaching traffic was the largest they had ever earned; the goods traffic showed a decrease, but it was only a falling off as compared with the high-water mark of 1927 and 1928, apart from those two years the goods traffic never before having reached £140,000. It did not seem to him, however, that the setback was more than temporary; the figures for the current year up to date showed quite a good increase.

On the other side there was the satisfactory position that working expenditure had been reduced to practically 50 per cent. of the earnings, which was a very good result indeed. The colliery account was not quite so satisfactory, as once more it showed a falling off in profit. The encouraging feature was, however, that reduction in price seemed to have steadied sales, which this year showed an improvement, and the Board hoped to reduce costs following on an increased output and thus improve the position. The company's investments had paid practically the same as last year. It was proposed to pay the same final dividend on the "B" stock as last year, making a total of 12½ per cent., carrying forward slightly less at £13,330.

As to the future, at the moment prospects were more encouraging. The figures of earnings showed a distinct improvement, and while he would not say more than that he thought the company was advancing, he was prepared to end on an optimistic note.

The report and accounts were unanimously adopted.

COMPANY NOTES AND REPORTS.

SUDAN PLANTATIONS SYNDICATE.

The report of the Sudan Plantations Syndicate, Ltd., for the year ended June 30 states that during the year additional capital was expended upon the new ginning factories, agricultural machinery, buildings, canalisation, and other items required by the extension of the area under cultivation. This, together with increased running expenditure necessary to finance the tenants and the agricultural operations on the larger area entailed a reduction in the company's liquid resources. In the Gezira and at Zeidab the average yields of cotton per feddan exceeded those of the previous year. The subjoined table shows the areas under cotton and the crop produced during the year, together with the corresponding figures for the previous season:—

	1928.		1929.	
	Area in feddans.	Bales.	Area in feddans.	Bales.
Zeidab ...	5,100	3,330	5,026	3,855
Gezira ...	105,587	77,605	131,351	108,287

At June 30 41,957 Gezira bales and 2,847 Zeidab bales, together with all the cotton seed shipped from the Gezira and from Zeidab, amounting in all to 45,480 tons, had been disposed of at satisfactory prices. Owing to the conditions which prevailed in the cotton market a larger proportion than usual of the cotton remained unsold at the close of the financial year. This stock is entered in the balance-sheet at a valuation made by the directors, which, judged by sales since effected, appears to be conservative. The directors are pleased to be able to report that as a result of negotiations recently concluded with the Sudan Government, considerable additional areas, which are to be brought under irrigation to the north of the existing area, will be entrusted to the Syndicate's management.

The Kassala Cotton Company, Ltd., has made better progress in the development of its new concession area than had been anticipated, and an area of 15,548 feddans is now planted with cotton. A crop from this area should be obtained in the year 1930. The activities and interests of the Brazil Plantations Syndicate, Ltd., after its abandonment of cotton growing, became practically identical with those of the Parana Plantations, Ltd. The two companies have therefore been amalgamated by means of a share for share exchange. The share capital of the Parana Plantations, Ltd., has been increased by £200,000 for this purpose.

The profit and loss account for the twelve months, after deduction of all outgoings, shows a net profit of £656,356 7s. 8d., which, added to the balance brought forward from last year, viz., £412,117 10s. 4d., less payment made on account of directors' percentage, £8,483 10s. 10d.—£403,634 0s. 6d., brings the total credit to £1,059,990 8s. 2d. The directors now recommend the declaration of a final dividend of 3s. per share (equal to 15 per cent.), payable on Wednesday, January 15, 1930, to shareholders on the register on December 31, 1929, less Sudan profits tax at the rate of 1s. 5½d. in the £, and British income tax at the rate of 2s. 6½d. in the £, which, with the interim dividend paid in July last, will be equivalent to a dividend for the year of 5s. per share (equal to 25 per cent.). This final dividend, amounting to £337,500, together with the interim dividend of £225,000, will absorb the sum of £562,500, leaving a balance to carry forward of £497,490 8s. 2d.—£1,059,990 8s. 2d.

NATIONAL BANK OF EGYPT.

Position at July 31, 1929, published in conformity with Article 8 of the Statutes:—Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £E2,925,000; reserve fund: statutory reserve, £E1,462,500; special reserve, £E1,340,625; current, deposit, and other accounts, £E14,021,665; Egyptian Government, £E16,008,479; Sudan Government, £E116,340; Mixed Tribunals, £E2,072,832; bankers' accounts, £E498,686; cheques and bills payable, £E203,275; sundry other accounts, £E1,914,707—£E40,654,109. Assets: Government securities and securities guaranteed by the Egyptian Government, £E22,433,610; sundry securities, £E916,704; advances on merchandise, £E1,935,446; advances on securities, £E4,015,772; advances otherwise secured, £E1,356,029; sundry other advances, £E1,241,440; bills of exchange, £E3,199,790; local bills discounted, £E719,669; buildings and furniture, £E225,579; money at call and at short notice, £E979,875; bankers' accounts, £E430,462; sundry other accounts, £E1,207,209. Cash: Notes, £E1,361,100; gold, £E325,739; silver, nickel, etc., £E295,685—£E1,982,524—£E40,654,109. Issue Department.—*British Treasury Bills, £E8,200,430—£E11,600,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills, and British War Loan, £E10,100,000—£E11,600,000—£E23,200,000.

*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 23 :—

Egyptian Futures.

Sakel Contract.—Quite a large volume of business has been transacted in this market during the past week, and, with one or two factors developing to influence a healthier undertone, there has been distinctly less disposition on the part of local "short" interests to continue their rather aggressive campaign. In fact, on one or two occasions when covering orders have made their appearance, prices have reacted sharply, but from the subsequent action of the market it appears that it is yet too early to anticipate the consolidation of any material upward swing. Too much cotton is coming "into sight" for one thing, and with trade buying both in this country and on the Continent continuing on the present close lines, the passing of the early crop movement into consumers' hands will probably only proceed on a very gradual scale. Reviewing both sides of the situation, it rather appears that values will stabilise in the neighbourhood of the present level for some little time. In contrast to previous seasons the natural laws of supply and demand have so far been given free scope, but whether this position would hold if Alexandria falls much below the ruling basis we very much doubt. Past experience shows the Government amenable to pressure from the growers, and some form of intervention would no doubt be sought if, for some reason or other prices reverted to the low point of the season reached a couple of weeks ago. Features of the local trading have again centred on the demand for near position, and these have closed in further with the later contract deliveries as a consequence, also our market has gained appreciably in comparison with Alexandria. Taking a long view of the position, we would prefer to advise purchases should prices fall away to any extent, especially as trade reports are beginning to be of a more encouraging character, and increasing support from this source is commencing to develop.

Upper Contract.—Business in this contract has proceeded on fairly similar lines to preceding weeks, operations again being mainly confined to moderate trade purchases which have been offset by merchants' sales against imports. Very little speculative business is coming into the market, and values have been governed mainly by the action of the American departments. On the whole, we consider values stand at a reasonable basis and whilst it is probably too early to look for any decided upward movement purchases at the present level should later on be realisable at a moderate margin of profit.

Egyptian Spot.

Sentiment has been more two-sided during the past week and buyers have not had it all their own way. Values have fluctuated somewhat erratically, and the tendency has (for once) been in an upward direction, and at one time it looked as if quite a substantial advance might be registered. The harder rates have not attracted any great influx of buying on the spot; in fact, business in this department appears to have been checked for the time being, but it is always difficult to judge the offtake by spot results alone, and we are inclined to the opinion that c.i.f. business has been more active.

Sakel has been in fair request at from 75 to 150 on, and there have been limited but active inquiries from time to time for cotton at about 200 to 300 on. "Inferior" cotton at from 5d. to 8d. has also figured on the board more frequently than of late.

Uppers have again been rather on the quiet side, but the inquiry has been steady for cotton at from pass to 20 on, and some improvement has undoubtedly been witnessed in the demand for the better cotton up to 75 on November contracts. "Off" cotton down to 50 points below the same contracts has met with rather more support.

Pilion has been almost entirely neglected this week.

Nahda has been in moderate request only and results have been meagre.

White, Maarad, etc.—Neglected.

Sudan Sakel.—A good business has been done, chiefly in the medium qualities.

Tokar Sakel.—A very slight improvement in the offtake has occurred.

C.i.f. business seems to have been more active on the whole. Forwardings to the trade last week were returned as 4,547 bales Egyptians and 2,102 bales Sudan.

Spot Sales.—Estimated sales for the week, 1,600 bales Egyptian and 2,100 bales Sudan Sakel. Quotations of Sakel show an advance of 25 points; Upper and Pilion have hardened 10 points. F.G.F. Sakel to-day, 15.90d. F.G.F. Upper to-day, 11.07d. F.G.F. Pilion to-day, 11.95d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 17, state:—Since our last report the futures market has been quite exceptionally active; the tendency, however, has again been weak and prices have continued to lose ground. The week's summary of price movements is as follows:—Sakellaris: November, 29.75 dollars, 0.85 dollars down; January, 30.45 dollars, 0.74 dollars down; March, 31.00 dollars, 0.75 dollars down; May, 31.50 dollars, 0.73 dollars down. Ashmouni: October, 10.75 dollars, 0.30 dollars down; December, 20.10 dollars, 0.43 dollars down; February, 20.50 dollars, 0.50 dollars down; April, 21.05 dollars, 0.38 dollars down; June, 21.40 dollars, 0.43 dollars down.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended October 12 :—

Grain.—Notwithstanding a temporary improvement about the middle of the week, grain markets abroad have been much quieter, and a continued fall in prices towards the week-end has made it very difficult for merchants here to effect fresh sales. So long as arrivals of grain at Danube shipping ports were in excess of demand, local prices adjusted themselves sufficiently to encourage transactions, but as at the moment only limited quantities are arriving, merchants are confining themselves to the fulfilment of old sales. Grain arrivals have fallen off partly on account of low water in the Danube delaying the movements of up-river lighters, and also due to the fact that transport by cart and rail from the interior has been more intermittent owing to the peasants being occupied with the gathering of the maize. In the circumstances no fresh freight engagements of importance are taking place, and chartering has been correspondingly quieter. The available stocks at shipping centres are expected to keep spot tonnage going for a certain time, but berth rates for Continental destinations have weakened to 15s. 9d. and even 15s. 6d. The position is likewise weaker at Constantza, where there are several steamers loading full cargoes and waiting for turn at the silos in fulfilment of old engagements, there being practically no new demand for space.

Timber.—Cargo is still available only in limited quantities, but freights have been maintained owing to scarcity of small steamers whose owners, in view of prospects of employment for anticipated export of maize to the Adriatic, prefer to abstain from committing themselves to timber. Rates are £7 15s./£8 Greece, £8 10s. West Greece, £7 15s. Smyrna, £10 Syria and Palestine, £8 5s./£8 10s. Alexandria, and £10 10s. Sicily and South France.

Weather and Crops.—Warm cloudless weather lasted until Wednesday in the Western districts and till Thursday night in the Eastern, when the sky became overcast and the wind, which had been a mere drift from the south, veered north-west and became strong, and there was a considerable fall in the temperature. Rain was reported on Thursday, October 10, from nearly all parts, excepting the Dobruja and adjoining districts, and by Friday the clouds had also spread to this neighbourhood, the weather becoming very dull and cold, though the rain here has so far not been much more than an intermittent drizzle. The rain in other districts, however, was more abundant, especially in Transylvania. Ploughing for the autumn sowings is reported to be very backward owing to the recent dry weather and the large area covered by maize which is only now being cleared, but the useful rains of this week should sufficiently soften the ground to enable ploughing to be carried on more actively.

Sulina.—Bar depth, 24 feet. General conditions are satisfactory; a bucket dredger is working as often as the weather permits. River depth, minimum 22 ft. 6 in. Two suction dredgers are in use up-river, where the depths at several points are less than that on the Bar, the minimum of 22 ft. 6 in. being at the 41st mile.

Constantza.—This week about 10,000 tons of grain arrived from the interior, and about 20,000 were shipped to the Antwerp/Hamburg range, mostly going to German ports. The only shipment to the Mediterranean consisted of a few hundred tons for Genoa. At the time of writing two steamers of 7/10,000 tons are loading at the elevators, and another steamer is loading from carts, whilst five others are waiting for berth or expected to arrive to load grain. Twelve vessels loaded about 58,000 tons petroleum products, and one took oil fuel for bunkers.

Bulgarian Report.

Bourgas, October 5.—Business has been brisker this week, and there was a fair demand for room for Rotterdam, about 3,000 tons maize and a similar quantity of sunflower seed at 11s. to 11s. 6d. and 18s. respectively having been booked, as well as 2,000/2,500 tons oilcake, mostly for Hamburg at 16s., all for prompt shipment. A few small parcels have also been engaged for Antwerp at above rates. Business to Mediterranean destinations has also been more active, beans and maize being the principal articles shipped, but the numerous regular liners calling at Varna and Bourgas sufficed to lift this cargo. The weather was cloudy and cold at the beginning of the week, but since Wednesday, October 2, it has been fine and warm.

In their report for the week ended October 19, Messrs. Watson and Youell state :—

Grain.—Little alteration in the position took place at the beginning of the week owing to inactivity here and abroad due to the Jewish holidays, but on the resumption of normal business the weakness of consuming markets became gradually accentuated, culminating in a serious fall in prices abroad this week-end, which has temporarily paralysed business in the Danube market. Very few parcels have been booked this week in the circumstances, but nevertheless rates for the Continent have been maintained at about 15s. 6d. to 15s. 9d., and some freight engagements have been effected for the U.K. at

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

Weather and Crops.—According to an official report the rain between October 10 and 13 appears to have been sufficient to facilitate the autumn sowings in the Carpathian regions, i.e., Transylvania and the districts bordering the Eastern and Southern slopes of the mountains, but in other directions, including Bessarabia (apart from the extreme north), Moldavia, Dobruja, and parts of the Danubian plain, rain appears to have been insufficient, and ploughing and sowing is delayed owing to the hardness of the ground. The weather has been fine and generally cloudless all the week, only light rains being reported from a few districts in the south-east on Sunday, the 13th. There was a heavy gale at Constantza on the

Constantza.—This week about 8,500 tons of grain arrived from the interior, and about 17,527 tons were shipped to Antwerp/Hamburg, Rotterdam, London/Hull. At the time of writing two steamers of 6/8,000 tons are loading at the elevators, whilst nine others are waiting or expected to arrive to load grain. Nine vessels loaded about 25,500 tons petroleum products, and three took oil fuel for bunkers.

Bourgas, October 12.—Business continued to be active and further 2,000/2,500 tons of maize and 1,000/1,200 tons of sunflower seeds were booked for October shipment, mostly to Rotterdam. The yield of barley having been found far below estimates, this commodity is being shipped in moderate quantities only. The rates to Antwerp, Rotterdam, and Hamburg are being maintained at 11s. to 11s. 6d. per unit for heavy grain, and 16s. per ton weight for sunflower seed. Activity to Mediterranean destinations is also being maintained. The weather has been mostly foggy in the early mornings, but fine and warm during the day until yesterday morning, when the sky became overcast and it has been raining at intervals since last night.

Notes of the Week.

The Coming Elections in Egypt.

The General Election in Egypt has been fixed for December 21; it will be followed by further elections on December 29, when a fresh ballot will be taken in constituencies where no candidate has obtained an absolute majority in the first instance. Parliament will re-assemble on January 11, and shortly afterwards the fate of the proposed treaty between Egypt and Great Britain will be decided. When it was announced that the Liberal Constitutionalists had resolved to take no part in the elections, it was difficult for the outside observer to believe that a mistaken policy was not being adopted. The motive behind the decision was good; they hoped to prevent the treaty from being thrown, as it were, into the electoral cockpit. But the main point of the General Election is that it should enable the Egyptian electorate to pass judgment on the proposed treaty. To this end the provisions of the treaty have to be explained to the electors, and no one is better qualified to do this than the representatives of the Party identified with the drafting of the proffered terms. It would seem to be the duty, therefore, of the Liberal Constitutionalists not only to take part in the elections, but to see that they are represented by candidates in every one of the 235 constituencies. These will not be expected to enter into competition with the Wafd in promising to secure more advantageous terms, which they know to be unattainable, at least for some time to come. Let them explain and commend the proposed treaty, and claim full credit for it. If the electorate prefers to rely on the rash promises of their rivals, the Liberal Constitutionalists will be in no worse position than if they left the field clear to the Wafd. At least the electors will understand better what it is they are offered to-day, and will not be deceived by any subsequent attempt to prove that the treaty, as it may be signed, is an improvement on the terms brought back from London by Mahomed Pasha Mahmoud. It is unfair to the Egyptian people that only Wafdist candidates should offer themselves for election. Egypt has need of the best brains the country produces for her Parliament, and to this end her best men must stand for election. If they are defeated, they will have done their duty, and will not be responsible for what follows from a Parliament deprived of the salutary check of an

able Opposition. Not the least unsatisfactory aspect of the Egyptian situation is the spirit of "defeatism" shown in the general belief that the cause of moderation and intelligence is doomed to be overwhelmed at the elections.

Balkan Recriminations.

Protests and accusations have once more been going the round of the Balkan States. A collision between Italian and Yugoslav sailors at a Dalmatian port has led to Italian protests to the Belgrade Government, which, while restricted to the immediate cause of complaint, must be read in connexion with the tension that has arisen between the two countries over the execution of a Yugoslav student in Italy and the consequent outbreak of anti-Italian feeling in Yugoslavia. Another Note has reached the Belgrade Government from the Albanian Government regarding the murder of a Catholic priest, who is stated to have been an Albanian subject. As the murdered man is also claimed as a Yugoslav subject, the matter is not likely to be carried further than an exchange of assertions regarding the priest's nationality. There has also been a recrudescence of the Press warfare—unhappily never suspended for any length of time—between Yugoslavia and the public prosecutor of a district Court. The particular band of brigands responsible for the outrage, it is declared in Bulgaria, spends the winter in Yugoslavia and roams about Bulgaria during the open months, and a Yugoslav commandant is named as responsible for arming the band and providing it with a plan of campaign. It may be immaterial whether the allegations are true or untrue; they are believed in Bulgaria, and the charges brought against the Yugoslav authorities are not unnaturally resented in Yugoslavia. So long as murders are rife in the Balkans the overlapping of the different peoples provides a wide field for these accusations and counter-charges, which serve to keep alive international bitterness. The evil could be mitigated to a considerable extent by mutual good will on the part of the various States; but life is not valued in the Peninsula as highly as it is in Western Europe, and consequently the incentive is lacking to put an end to a state of affairs that would be regarded as a disgrace in other countries. Unfortunately, each Government seems to imagine that it divests itself of all responsibility by levelling charges against

another Government, and remains oblivious of the fact that the West has ceased to make any distinctions in the degree of culpability attaching to one country or the other. It must hold all equally responsible until it sees a genuine attempt to establish a more satisfactory state of affairs.

A Political Crisis in Bulgaria.

As a result of her misguided action in the Great War Bulgaria prepared for herself such a troubled heritage that it would not have been a matter for surprise, if it had been her fate to undergo the chronic political changes that have been the bane of her Yugoslav neighbours. With only five changes of Government during the eleven years since the Armistice Bulgaria has enjoyed a degree of political stability that does her credit. The present Prime Minister, M. Liaptcheff, has been in office since January 1926, and it is inevitable under the conditions prevailing in the Balkans that his position should show signs of weakening. On more than one previous occasion the Government has been challenged by M. Tzankoff, the former Prime Minister and now President of the Sobranie, who, although nominally a supporter of the coalition of which M. Liaptcheff is the head, has maintained from the outset a critical attitude towards the latter's policy. During his own period of office M. Tzankoff had shown little disposition to temper justice with mercy in his dealings with Agrarians and Communists, and it was mainly the fear lest something like the permanent division of the country into two hostile camps might result, if no limits were set to his policy of repression, that brought M. Liaptcheff to power. The change of Government proved successful; but, whereas better relations have been established in Bulgaria between Agrarians and the so-called bourgeois classes, it cannot be denied that the position in regard to the Macedonian question leaves much to be desired. Under the ægis of Mikhailoff there has been a recrudescence of Macedonian outrages. M. Liaptcheff's Government would seem to have been more successful in stopping raids into Yugoslav territory than in coping with the campaigns of murder on Bulgarian soil. This fact provides Dr. Tzankoff with his opportunity, and he has made a fresh outbreak of Macedonian assassination the occasion for withdrawing the support of his Party from the Government on the re-opening of the Sobranie.

Settling Down in Afghanistan.

It is not the custom of the East to suffer Pretenders gladly or to spare the vanquished, but King Nadir Shah's reputation in the West was high enough to allow for the hope that he would be able to dispose satisfactorily of

the Amir Habibullah without resorting to the more obvious method of putting him to death. The new ruler, however, appears to have found it politic not to adopt too firm a stand against his victorious tribesmen, with the result that the deposed Amir, his brother and chief supporters have, according to report, all been executed in Kabul. There is no reason to suppose that these executions will cause any reaction in Afghanistan, where the sparing of the lives of the ex-Amir and his principal followers would have been more calculated to give rise to comment. On the contrary, the elimination of all traces of the old régime may well have a tranquillizing effect, and help King Nadir Shah in his efforts to consolidate his position. The crux of the situation lies in the King's capacity to obtain adequate sums of money to enable him to carry on the government of the country without pressing his tribesmen too severely at the beginning. His task is neither easy nor enviable, but until it is completed, the outlook in Afghanistan must necessarily remain precarious.

The Future of Trans-Jordan.

In treating of the Middle East the realist observer finds himself nowhere at greater loss than in commencing upon Trans-Jordan. For of all political entities in that part of the world, Trans-Jordan, without question, is the most artificial. It has been said that there is no way of judging the future but by the past: which means, as it concerns Trans-Jordan, that we know—nothing. As a matter mainly of academic interest, however, it may be recorded that the Parliament of Trans-Jordan was officially opened on November 2, when it was announced, in addition to the fact that the Anglo-Trans-Jordan Treaty had been ratified by Great Britain, that King George had granted to the Amir Abdullah a salute of twenty-one guns. Whether, as a result of this, the Amir will now feel he is indeed a ruling prince, we do not know, but the recognition has been so long delayed that it may be supposed that the Sharifian monarch had some time ago adjusted his mental processes to the facts of the situation. There it is, however; and in a perfectly natural way the Amir Abdullah went on to speak of striving to realise the "desires and hopes" of Trans-Jordan for "national sovereignty." Much water, nevertheless, will have to flow down the Jordan, before that section of the untapped, inchoate region beyond Palestine, develops a real consciousness of its own. There are those who believe that out of the artificial the real may emerge, that since something in the nature of an independent Arab State for the Amir Abdullah had to be created, if Great Britain were to fulfil her honourable obligations, an illusion of natural unity had to be fostered. And at least this can be said: that those who so believe have a very creditable record to show in Trans-Jordan.

After Twelve Years.

The anniversary of the Balfour Declaration this year was like none ever before celebrated. For on this November 2 it was the Arabs, not the Jews, who marked the day. There was, indeed, a general strike by the Arabs as a protest against the Declaration, and the Jews took good care not to provoke any violence by the simple expedient of keeping quiet. That there was in fact no bloodshed upon this significant day is probably a good omen for the immediate future: the situation must be well in hand, and the spokesman of the Colonial Office in the House of Commons last week was justified in his denial that the situation was still serious—serious, that is, in the military sense. Psychologically, there appears to be little real change in the situation; the boycott still continues, to the apprehension, apparently, of both Arabs and Jews. The voice of reconciliation between the Arabs and the Jews is heard but thinly, for the air is thick with partisan cries, and the trumpets of propaganda are sounded from almost every house-top. It is, however, a matter for some gratitude that action has been changed from the violent to the vocal sphere.

INDIA AND DOMINION STATUS.

The wisdom and expediency alike of the time-honoured convention, that India should be kept above party politics, were never more clearly demonstrated than by the events of the past ten days. With the claims, counter-claims, and personal recriminations that are the inevitable but minor consequences of the departure from precedent, we are not now concerned, except to deplore that issues of such magnitude should ever have been made the object of merely partisan animosity. For the unbiased student of Indian affairs, and all who are genuinely anxious to promote the permanent interests of the two countries, the real issue is, fortunately, more simple. It can be stated in a few words. Are the letters exchanged between Sir John Simon and the Prime Minister, the text of which appears on another page, and the form and substance of the Viceroy's subsequent announcement, published in the *Gazette of India Extraordinary* of November 1, likely to prove a help or a hindrance in the difficult task to which we have set our hands in India. Obviously, no short nor dogmatic answer can be given to such a question; it remains, therefore, to examine briefly, but in all their bearings, three specific declarations of policy. Each is of outstanding interest, though, as we shall seek to show, not all are of the same significance and importance. The correspondence between Sir John Simon and the Prime Minister, in one respect at least, will occasion no surprise to readers of THE NEAR EAST AND INDIA. More than two years ago we referred in these columns to the growing belief which we shared, "that the Commissioners will find it impossible adequately to deal with the wider issues remitted to their charge without taking into earnest and early consideration the problem presented by the Indian States." The integral connexion of the States (which comprise one-third of the territory of India and contain one-fourth of its total population) with the British Empire not only consists in their relations with the British Crown, but also in their growing interest in many matters common to them and to the British provinces.

When the Indian States Committee was appointed we emphasised again the fact that the work of the two bodies was in a large degree complementary, and that it was essential that some means should be found whereby the work of these two investigating authorities might be satisfactorily co-ordinated. "Perhaps it may be feasible," we proceeded, "so to widen the terms of reference to the Commission as to enable it to deal, in consultation with the Butler Committee, with questions affecting the States. Or, if this is impracticable, the appointment of another Commission is a possible way out of the difficulty. But, whatever method may be adopted, it will be, in our opinion, impossible for any authority to deal adequately with the question of further constitutional changes in British India without bearing in mind the problems presented by the Indian States." The somewhat indecisive nature of the Butler Committee's report rendered the extension of the scope of the Simon Commission's inquiry more imperative than ever, and we unreservedly welcome the proposal in that regard. It is in our judgment no less essential, if the Commission's report is to take this wider range, for the scheme of subsequent procedure at present proposed also to be revised. We are fully aware of the interpretation which may be placed upon the Government's action in agreeing to the particular plan suggested by Sir John Simon to that end, namely that between the publication

of the Report and the drawing up of legislation a conference should be held between His Majesty's Government and the representatives of British India and of the States, but there is no other obvious means by which the latter could be brought on to the common ground. The difficulties in the way of evolving a practical working scheme are more formidable. The concurrence in the plan of the leaders of other parties in this country and the attitude of moderate Liberal opinion in India towards the proposal encourages, nonetheless, the hope that they may be surmounted without imperilling unduly the Conference's chances of securing "the greatest possible measure of agreement for the final proposals which it would later be the duty of His Majesty's Government to submit to Parliament." We come now to the famous declaration by the Viceroy that, in the opinion of His Majesty's Government, "it is implicit in the declaration of 1917 that the natural issue of India's constitutional progress, as then contemplated, is the attainment of Dominion Status." In the view of no less an authority than the late Secretary of State for India this authoritative exposition of what is and always has been the aim of British policy in India, is either "mischievous and should be repudiated . . . or superfluous and should never have been made." From the terms of the motion of which Lord Reading has given notice in the House of Lords, this weighty opinion is shared in substance by Lord Irwin's predecessor.

While the declaration might with advantage have included some reference to the conditions attaching to the time and manner of the advance, we think that the position taken up by Lord Irwin's critics is wholly untenable. Neither the statement itself, which, as we have said, no more than reiterates promises made by many responsible statesmen, including Lord Birkenhead himself, at various times since 1917, nor its promulgation at the present time affects in any way the weight of the Simon Commission's report when it is published in due course. There is not, and never has been, any disagreement about the ultimate ideal of full self-government for India. The all-important questions are the rate of the progress towards its attainment and the measure of each successive stage in that advance. That is the real problem, and vital to its successful solution is the considered judgment of a body of disinterested members of all parties possessed of very different political ideals and of some irreconcilable personal standpoints, but united in their determination to present a just and impartial verdict on facts and conditions more complex than any person without real experience of India can conceive. With the supreme necessity of avoiding any action that might throw, or be regarded in India as throwing, a shadow of doubt upon the authority of the Commission, or prejudgment in responsible quarters of its survey and conclusions, we are in cordial agreement. But we have yet to learn that vitally important as are the responsibilities entrusted to its care His Majesty's Government has abrogated its functions in the Simon Commission's favour. The responsibility resting upon the shoulders of the Secretary of State and the Viceroy, in whose considered judgment the need of the restatement afresh of the British position was never more urgent, is a heavy one, but it is their's alone. Until they are proved unworthy of their high offices—and the course of events in India since the announcement is a striking testimony to the value of the advice tendered by Lord Irwin—we must and shall continue to repose the utmost confidence in their ability and discretion. Constructive criticism from fully-informed and responsible quarters is vital to the development of policy on sound lines; but it becomes a hindrance rather than a help, unless the matter is viewed from the beginning in proper perspective. Denunciation of the authorities' action on the lines which too many of their critics have taken can only logically be accounted for, as Lord Zetland has aptly pointed out, "on the assumption that the critics themselves place upon the Viceroy's words the very interpretation that Indians naturally desire to give them."

*The Near and Middle East

From Our Own Correspondents.

EGYPT.

Cairo, October 26.

The Residency.

Lady Loraine arrived in Alexandria this week from Athens, where she had broken her journey from England in order to superintend the packing of the furniture and effects which had been left there. For the time being the Residency remains at Bulkeley, but it will probably come up before November 15. Some of the Legations, such as the French and the American, have already transferred back to Cairo. But the rest remain by the seaside, and in view of the intention attributed to the King to remain at Montaza until the end of November it seems improbable that there will be a general move in official circles to the capital much before the middle of the coming month.

It has been with the greatest regret that everyone has learned that neither of the Aides-de-Camp, who have worked with such success during the past three years at the Residency are returning. One knew that Major O'Callaghan had decided to retire in order to take up a civil occupation, but it has come as a surprise that Captain Kimmins would not resume his duties. Both will be sorely missed, for they were admirable at their work, and as charming and as affable as they were efficient. None will miss them, however, more than the representatives of the Press, who, like myself, had repeatedly to have dealings with them. It mattered not what rush was on, how many important things and persons had to be attended to at the same time—they never lost their heads and always found time to arrange for, or to give, the information one wanted. It was indeed a delight to drop in to the A.D.Cs' room, of which alas! we shall now be deprived, for it has been arranged that henceforward there shall be no "A.D.C.s," and that all the hospitality side of the work shall be done by the permanent clerical staff with the assistance of an Attaché. The reason is that the opportunity has been seized by the Treasury to reduce the already inadequate allowance, which will now scarcely permit for the ordinary upkeep, let alone any entertaining on anything like the scale that has been witnessed during the past four years.

The Elections.

The Cabinet is still occupied with the preliminaries which must necessarily be accomplished before the elec-

tion decree can be issued. The promulgation of the latter will, however, in all probability have taken place by the time this letter reaches you. The Wafd is leaving nothing to chance, and is already hard at work selecting its candidates and seeing that its regional committees are ready for the fray. Whether there will be much of a contest is exceedingly doubtful. The Liberals, who of the minority parties are certainly the most important, have decided not to participate in the elections, and their example may be followed by the Ittihadists, who, like the Liberals, have accepted the proposals, and the Nationalists, who have rejected them as being contrary to their principles, which forbid any negotiations so long as British troops remain on Egyptian territory.

The decision of the Liberal Party is undoubtedly due primarily to their realisation that their position at the elections will be a hopeless one. Another reason is stated to be their desire to save the Treaty, or at any rate not to do anything which might in any way embitter the situation and obstruct the passing of the Treaty. But the decision is so worded that it is likely to have just the contrary effect. The reference to the Treaty as having been negotiated by the President of the Liberal Party is alone calculated to touch the susceptibilities of the Wafd, and to make it more determined than ever to see that whatever Treaty is accepted bears its cachet.

The New Customs Tariff.

Considerable uncertainty reigns with regard to the new customs régime, which should be applied next February—as from which date the customs conventions with the various Powers have been denounced by the Egyptian Government. It was understood that the new tariff would be ready next month, and would be communicated to the Chambers of Commerce for comment, so that whatever adjustments might have to be made could be introduced before its promulgation. A Special Committee, under the presidency of Ahmed Bey Abdel Zahab, Under-Secretary of State for Finance, has now been set up by the Ministry of Finance to study the whole project and report on it as soon as possible. But the change in the political situation and the return to a parliamentary régime will, it is feared, interfere with the scheme. It is considered as not at all improbable that Parliament will want to have a say in the matter, particularly in view of the fact that the question had already been debated to some extent in the Chamber. If that is so, then there will be difficulty in getting the new régime applied next February, and the Government may be compelled to continue the old system and prolong the commercial treaties until such time as Parliament has been able to deal with the question.

The Mixed Court Codes.

In other directions also the change in régime will interrupt useful work that was being done. For instance, a commission has been sitting at the Ministry of Justice charged with the work of elaborating a new Code of Criminal Procedure, and other law amendments required by the transfer of limited jurisdiction in criminal matters from the Consular to the Mixed Courts, which has been under discussion with the Capitulatory Powers. The complete transfer will necessitate a far more extensive remodelling of codes and general reorganisation than the limited transfer of criminal jurisdiction would entail. Consequently the work, which this commission was doing, has had to be suspended pending a decision with regard to the whole question of the Capitulations.

The Village Hospitals.

Whatever difficulties the political events of the past few months may have placed in the way of most of the Government services, they have, however, by no means interfered with the progress of the Public Health Department, where, under the direction of Dr. Mohamed Shabine Bey, the programme of hospital construction initiated a year ago has been quietly adhered to. Already two of the village hospitals have been completed and are working, while before the end of the month five others will have been taken over by the hospital service and by the end of the year it is expected that twenty village and ten district hospitals projected for the first year will be at the disposal of the provincial population.

CYPRUS.

Nicosia, October 23.

The Petition for Union.

According to a telegram received by the Greek Archbishop from the Bishop of Kition in London on October 12, the deputation, in their interview with Sir John Shuckburgh, submitted an abbreviated statement of the claim put forward in the memorial conveyed by the delegates. It is confined to the "one and only" desire which is alleged to be felt by the Greeks of Cyprus, to the exclusion of all other claims and grievances. The impression has prevailed in the island that the late Unionist Government were considering the adoption of certain changes in the Cyprus Constitution, with a view to remodelling it on the pattern of Ceylon and Malta. This would not please the agitators for union. Whatever the issue of the mission, it is considered certain that changes will be introduced by the present Government. The Press unceasingly urges that every other consideration should be subordinated to the one aim, the fulfilment of which is regarded as a "just right."

The Population of Cyprus.

The total island population on December 31, 1928, amounted to 344,020. The largest town population was that of Nicosia with 20,945, Limassol coming next with 16,572.

More Tourists.

On October 17 Larnaca was visited by a large number of British tourists. The majority, over 200, proceeded to Nicosia and inspected the mosques, bazaars, and museum, buying over £50 worth of objects of antiquity. Others visited ancient Kition and many other places of interest.

The Military Police.

Much pleasure has been caused in the Police Force by the announcement that the King has approved of the institution of a silver medal for long and good service. The regulations governing the award are published in the *Cyprus Gazette* of October 18, and a list of officers and other ranks to whom it has been awarded. The body of foot and mounted police, composed of both Greeks and Turks, has always proved a most useful and efficient one, and its duties are very numerous and miscellaneous.

Cyprus Sponges.

Tenders are invited by the Treasury for the purchase of 320 okes (8 cwt.) of sponges from inland waters, to be sent to the Tender Board. The Cyprus sponges are of very good quality, especially for baths. Mr. Crawshaw, a sponge fishery expert, who has been for over four months in Cyprus to report on the sponges and the fishery, has left, and will return next year, should his report be held to justify further expenditure.

General News.

A forestry exhibit, which is now held annually, and which offers a very interesting show, will be held at Nicosia from November 1 to 14.

Regulations for guidance of applicants who desire to obtain British nationality, and the necessary forms, are published in the *Gazette* of October 18.

One small community of Armenians, chiefly in Nicosia, who—as well as the Turks—were said to have protested against the Greek memorial for union with Greece, contradict the statement, and say that they would do nothing displeasing to Greeks, from gratitude for their great kindness and hospitality offered to their many refugees.

Sir Ronald Storrs, with Lady Storrs, has been visiting various localities, and has recently been to the large village of Morphou, to the Central Experimental Station of the Agricultural Department, and to the boring work for artesian water, which is being carried out in the neighbourhood.

Mr. S. Pavlides, Crown Counsel, is appointed to act as Solicitor-General, in the Attorney-General's office, from October 10.

Mr. Surridge, Commissioner of Larnaca, is transferred to Nicosia, from October 11, while carrying out special work in connexion with rural life inquiry.

Mr. Reilly, Assistant Conservator of Forests, who will return from leave in January, is reappointed to be Assistant Commissioner at the important village of Morphou.

The Commandant of Police, at Papho, Mr. Kareklas, having suffered serious injury owing to a fall from his horse, is lying up at Limassol, his duties being performed by the local commandant of that district.

ABYSSINIA.

Addis Ababa, October 10.

Air Developments.

Aeroplanes have at last been seen in Abyssinia. A French machine—with a French pilot—duly arrived on August 18, having flown from Jibouti in three hours, whereas the train takes three days. A German Junkers machine, piloted by a young German, Baron von Engel, flew from Dire Dawa (not in French Somaliland), and arrived on September 5, carrying mails. *En passant*, no mails have been carried by air, so far, out of Abyssinia. There followed the arrival of two more French 'planes on September 22. It is reported that Italian 'planes—or is it seaplanes?—may now be expected. We assume that all parties concerned have satisfied themselves that these are commercial planes for mails; but it is significant that British 'planes are conspicuous by their absence, perhaps too quixotic an interpretation is being placed on the words "war material."

The race course, polo ground, and Imperial Club have been commandeered for the purpose of accommodating the machines, and it would appear that the grounds will no longer be available for games, etc. It would be a pity, but, no doubt, the authorities have realised that an aerodrome in the middle of a town is not exactly ideal and that another site will soon be found to house the 'planes.

Railway Matters.

The break in the railway line at Gotha has not yet been repaired, and considerable discomfort and inconvenience have thus been caused. It is promised, however, that the new bridge will be in position by the end of the month.

We devoutly hope so. The new railway station is expected to be ready and opened in December. It is to be hoped that adequate provision will be made to keep away the howling, clamouring mob of *guragis* from the trains—making departure and arrival nightmares.

Registration of merchants and brokers is being enforced—to the decided advantage of business life. There are too many "hangers-on," masquerading as brokers, and although the tax may be too low to act as a deterrent, the recommendation that brokers have to obtain from merchants may be the means of weeding out some of the undesirables. *Negadies* are being protected too—they have been too long at the mercy of unscrupulous Arab, and other, dealers, who have not hesitated to swindle them. A recent edict has also been issued, requiring immigrants to have 100 dollars in their possession or to be assured of employment in Addis Ababa. The Capital has been in the past a refuge for undesirables of all nationalities, and this measure may stop the flow of this gentry.

General News.

It is with undisguised relief that we can record the end of the "rains." They started early—there were no "small" rains—have continued practically to the time of writing, and have been most depressing. During the "rains" life is somewhat lugubrious, but with the advent of the dry season we can look forward to delightful weather, tennis, riding, polo, and all that goes to make life bearable in Addis Ababa.

Lady Barton, wife of H.E. the British Minister, and Miss Barton, arrived at the end of August and their presence constitutes a much appreciated addition to the small British circle here. Their experience of motoring in the bed of the river at Dire Dawa, and the discomfort of the break in the railway line, will, perhaps, be remembered for some time.

Mascall—the Feast of the Cross—was duly celebrated on September 27. The ceremony was held at the Church of St. George and was attended by the King and Diplomatic Corps. All religious dignitaries, headed by the Abouna, were present also. It was a very quiet occasion—for *Mascall*. A military review was held at the same time, and included "tanks" presented by the Italian Government. Aeroplanes hovered overhead, the French machine indulging in aerial acrobatics. Bouquets of flowers were dropped from the machine—very accurately—and the German machine flew to Fichi to demonstrate to Ras Kassa. The Officers Training Corps—very smart in their white uniforms with red facings—were also very much in evidence.

BULGARIA.

Sofia, October 29.

Parliament Again.

Yesterday, October 28, King Boris opened the ordinary session of the Sobranie.

The King's Speech was very short. It was stated that Bulgaria maintained good relations with all foreign countries, and that the Bulgarian Government hoped to obtain alleviations in the matter of reparation payments.

There was no word on the internal situation, and the

silence on this point was significant. Yet the internal situation is very tangled, not to say grave. On one side, it is felt that the Government has outlived its day; on the other, popular discontent is organising itself into one vast plan of anti-Government action. In between there are military and Macedonian dissensions, and, above all, Agraro-Communist activities which culminated a few days ago in a horrible massacre on the road from Sevlievo, where three eminent legal officials were killed. The bandits, who were under the leadership of Dotcho Ouzounoff, remain, despite all the measures organised against them, uncaptured. They left on the bodies of their victims notes to the effect that they would unceasingly struggle in the defence of the peasants and workmen against the oppressive régime which had resulted from the *coup d'état* of June 9, 1923, and against the present "reactionary" Government.

A particularly lively debate is, in these circumstances, promised when the King's Speech is discussed in the Sobranie.

In the Cause of Peace.

The International Union of Associations for Peace, which recently held a general congress at Athens, took advantage of the occasion to visit the Balkan capitals. When they came to Sofia, the Congressists were the object of much attention, and the lamentable situation of the country was explained to them.

The day of their departure was marked by a remarkable demonstration in favour of peace organised by the National Committee of Bulgarian Co-operatives, who arranged a banquet in honour of the guests. At this, M. Liaptcheff, President of the Council, one of the pioneers of the co-operative movement in Bulgaria, was present, together with numerous representatives of co-operative associations in the country. M. Liaptcheff made a speech, in which he talked of Bulgaria's love of peace. He traced the events of the last half-century and the growth of the Bulgarian nation. To-day, however, even that section of the nation which enjoyed independence was prevented from living in peace. For thirty-five years Bulgaria sought by all pacific means the application of the reforms promised in the confines of the Ottoman Empire, and finally, in 1912, she founded the Balkan Alliance to assure liberty to oppressed peoples. If she lost the fruits of the War which her sons gained, the reason did not lie in the desire attributed to her of becoming mistress of the Balkans, but rather in the people's consciousness of their duty to assure the liberties of their brothers. Analysing the situation on the eve of the victories over the Ottoman Empire, M. Liaptcheff narrated the great disillusionment of the Bulgarian people, and he added that in moments so painful Bulgaria could with difficulty restrain itself, while her neighbours were allowed to carve out for themselves fresh territories. Speaking of his personal rôle since the Armistice of Salonika, M. Liaptcheff recalled the disappointment caused by the terms of the Armistice. But accepting her fate, Bulgaria, he said, had made gigantic efforts to fulfil all her obligations. He praised the League of Nations and the pacific rôle it had played in the Balkans, mentioning in particular the warlike attempt of the Greek dictator, Pangalos. Asserting that he was satisfied with the results obtained by the League, he went on to express his approval of M. Briand's scheme of a United States of Europe. Before this could come about, however, inter-Balkan relations would have to become more friendly. If all the Balkan countries had a clear conscience towards each other, confidence would rapidly be established between them, and, he said in conclusion, the obstacles in the way of this did not seem to him insurmountable if certain mental attitudes could be modified.

Mr. C. J. Norton, of the Foreign Office, has been transferred from the News Department to the Egyptian Department.

Dr. H. Schlesinger, children's specialist at the Anglo-Swiss Hospital in Alexandria, has had the honour conferred on him of the Order of Officer of the Crown of Roumania.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 17.

The Risk of India.

"I will take the risk of peace," the Prime Minister is cabled as having said. (One may be permitted to think that a Lord Salisbury, a less vain man, would have made it, "We must take the risk of peace.") It would be more to the point, we think here, if the Prime Minister was thinking of the risk of India, and in a spirit less histrionic. Even in his own day, as head of the Government, he will be so little allowed to take the risk of peace. It will be the experts, the technical men, not of Great Britain alone, but of Europe and Asia. If Great Britain knew that the technical men were determinedly opposed to the Prime Minister—knowing, too, that his whole gain can be but a saving of some millions of money, for it is not he who will change human nature—it would not be the technical men of whom Great Britain would make short shrift, but the Prime Minister. In Indian affairs, on the other hand, the Prime Minister would be master. He might be opposed in the House of Commons by Sir John Simon and the Conservatives, in the House of Lords by Lord Reading and others; but the country would support him. The British working classes, one suspects, care little really whether India remains within the British Commonwealth or goes out of it. They will be prepared to back up any Prime Minister saying gravely that this or that must be done. Speaking gravely, one must think, and not histrionically, as one who had taken over from Providence the governance of the material universe for the rest of time.

The Secretary of State.

To those who saw quite clearly that the Indian constitutional problem was much too big a thing for the Secretary of State to deal with, whoever might be holding that office this autumn and winter, the *Pioneer's* persistent effort to prepare the way for the Secretary of State's visiting India this Cold Weather appeared misguided. One agrees with the *Saturday Review* that "the rumour of Mr. Wedgwood Benn touring India is distinctly disturbing." Time was wasted and is still being wasted by the Statutory Commission. A visit of the Secretary of State to India would mean a further waste of time. One therefore welcomed a Reuter's cablegram of three days ago, that the reports of Mr. Wedgwood Benn's visiting India in the near future are baseless. Even the *Pioneer* has come over to this view. "If Lord Irwin," it wrote the other day, "were to consult with various representative people in India with a view to the convening of a round-table conference on certain conditions, and he received a satisfactory response, so that invitations could be issued for a conference in London, Mr. Benn would be able to establish the personal touch and to get the first-hand knowledge he wants without undertaking a journey to India." Two things are to be said to that: (1) that it is already well known to whom the invitations should be sent; so that there need be no more consulting; (2) it is not the Secretary of State who must establish the personal touch, but the Prime Minister. What must be done will be the better done, if done soon.

The Sikhs and the Congress.

Here is another voice on the subject of the proper attitude of the Sikh community to the National Congress, that of the President-elect of the eleventh session of the Sikh League. "Referring to the question of the Congress boycott," my report reads, "he drew a distinction between principles and methods. As regards the ideal they were at one with the Congress. If they resorted to boycotting the Congress, they would be left without a programme, while their participation in the Congress was also likely to be misunderstood. They were thus on the

horns of a dilemma. A negative policy was, however, no programme. They should find out an effective method of protest. For the present he advised the community not to boycott the Congress." The "effective protest" would be against what they see as an attempt "to subject them to slavery under one community; i.e., the Muslims of the Punjab. The Nehru Report, the President-elect thinks, would mean, if given effect to, the establishment of a Muslim *raj* in the Punjab, and under such a *raj*, they fear, they would not get their share of things. Better almost British *raj*."

Blind Leaders.

I have just quoted a man, conscious of being in the dark, and little hopeful of finding a light to guide his dark steps by. There is a worse darkness—when a man thinks he will save his soul by saying to others what he knows is not true. A professor of the Benares Hindu University, addressing a Students' Conference, will say a thing like this: "To-day I intend to speak to you as the inmates of the educational institutions to which you belong, and to which you are expected, by their authorities, to sell your souls and your convictions; but I shall speak to you as the would-be citizens of a great Society and nation, where your life as a whole moulds and expresses itself, and takes some definite shape, in the pursuit of national ideals and in the ennoblement of national traditions." What is the truth? The authorities of the colleges are concerned to teach the young men what they can, and regret it should be so little. About their souls they are unconcerned to the point of culpability. They see it as natural that the young men should have convictions, but care little what they are as long as the young men do not thrust them in their professors' faces. Most of the young men hope for quiet lives in the future, full of professional and domestic thought. They will neither pursue national ideals, nor seek to ennoble national traditions. "How is the last done?" they might well ask. The professor whom I have quoted knows all this almost as well as I do. His is the worst darkness.

Leaders and Discipline.

I had a word two months ago about the lack of discipline in India, and I have just been speaking of blind leadership. What follow are the words of an Indian, writing about the election of Pandit Jawaharlal Nehru as the next President of the Congress: "The Congress has been captured . . . by certain leaders who have developed . . . a 'class war mentality.' And of Pandit Motilal's leadership the same person bitterly complains that it has shattered the Congress 'into a hundred fragments.' It will be hard to deny this impeachment; and the proceedings at Lucknow, especially Mr. Gandhi's speech threat, evidence the truth of this indictment. . . . Though the Congress has not yet degenerated into 'the boil that corrupts and poisons,' it has least ceased to be 'the heart that drives the pulses' of our national activities. To this sad plight has it been reduced by the ill-chosen barbarism of the youthful and the laxity of the elders in keeping them in hand. It is so easy, as indeed is freely resorted to by way of excuse, to blame the foreign ruler for the impetuosities of unrestrained youth. But is the country in any way ripe for direct action of the revolutionary kind, with its anti-social tendencies? The Mahatma has confessed that for direct action, even on his own eminently peaceful lines, the country is ill-prepared. Yet the new evangel is mass action, to be directed by leaders themselves immature and untried."

The Child Marriage Act.

A point persistently sought to be made, in the agitation against the Child Marriage Act, is that it is "an inroad on the personal law of the Muslims, to preserve which the British Government in India is irrevocably committed;" and one suggestion that has been made is that an amending Bill should be introduced, exempting the Muslim com-

munity from the operation of the Child Marriage Act. There would then be no law binding the Muslims; it would be left to them to take their own measures to prevent child marriages amongst them. There you have another proof of the extent of the disunity of those who inhabit India. "Parliament by law established in India may legislate," it is desired that some seventy millions of them should say, "but if your law would touch our personal law, it shall not concern us." These people do not ask themselves, such is the depth of their obscurantism, if it would not be better for them that they should not marry while children. To forbid them so to marry is to touch their personal law, and that must never be done.

Murders.

No student of men and matters in India will neglect to read the annual administration reports of the Police. The report for 1928 of the Inspector-General of Police of the North-West Frontier Province has an instructive passage on the subject of murders for trivial causes. A quarrel at football may end in a murder on the field. A villager, for appealing to a man not to use force on his wife, may be stabbed to death for not minding his own business. The wife may be killed for having appealed to the villager. If you are a girl, and you love not wisely but too well, your brother may strangle you. Your lover may lose his life too. If you are a girl of nine, and your uncle have abducted some woman, you may be found dead on a railway line, strangled by the abducted woman's relatives. There are advantages in being a hum-drum Englishman.

THE REPORT OF THE STATUTORY COMMISSION—AND AFTER.

Below is reproduced the text of the correspondence recently exchanged between Sir John Simon, Chairman of the Statutory Commission, and the Prime Minister, with regard to the widening of the scope of the Commission's report and the procedure to be followed after the latter is presented:—

Sir John Simon, writing to the Prime Minister, under date October 16, said:—

My dear Prime Minister,—The Indian Statutory Commission has now entered upon the final stages of its work and hopes to be able to present its Report early next year. Before proceeding further, however, we desire to address you with an inquiry and a suggestion.

As our investigation has proceeded, we have become more and more impressed, in considering the direction which the future constitutional development of India is likely to take, with the importance of bearing in mind the relations which may develop between British India and the Indian States. We are not at present in the position to forecast the Report which we shall hope in due course to present to Parliament. It is, however, already evident to us that whatever may be the scheme which Parliament will ultimately approve for the future constitution and governance of British India, it is essential that the methods by which the future relationship between these two constituent parts of Greater India may be adjusted, should be fully examined.

We have carefully considered the Report of the Butler Committee, but the terms of reference to that body did not cover the whole ground to be surveyed so far as these relations are concerned. Our own recommendations, if we were to exclude from our purview the wider problem which we have indicated, would, we feel, be unduly restricted, and we therefore wish, before going further, to ascertain whether we should have the approval of His Majesty's Government in giving this possibly extended interpretation to our own terms of reference. It is not our purpose to seek to explore the field already traversed by the Butler Committee; but it seems clear that we cannot afford to ignore the reactions of the presence of the States on the problem we are studying in British India or

the possible repercussions on the former of any recommendations we might frame regarding the latter. At certain points an inevitable contact takes place.

We venture to point out that if the Report we are preparing and the proposals to be subsequently framed by the Government take this wider range, it would appear necessary, because of the need of consulting the States, for the Government to revise the scheme of procedure to be followed after these proposals are made known. It seems to us that what would be required would be the setting up of some sort of conference after the Reports of the Statutory Commission and the Indian Central Committee have been made, considered and published and their work has been completed, and that in this conference His Majesty's Government would meet both representatives of British India and representatives of the States (not necessarily always together) for the purpose of seeking the greatest possible measure of agreement for the final proposals which it would later be the duty of His Majesty's Government to submit to Parliament. The procedure by Joint Parliamentary Committee conferring with delegations from the Indian Legislature and other bodies, which was previously contemplated, and is referred to in my letter to the Viceroy of February 6, 1928, would still be appropriate for the examination of the Bill when it is subsequently placed before Parliament, but would, we think, obviously have to be preceded by some such conference as we have indicated.

We realise that it is not for the Statutory Commission to devise this subsequent procedure in detail, for our task will be discharged when we have reported. But we feel that it is desirable to obtain an assurance from His Majesty's Government that we shall not, in their view, be travelling beyond the terms of reference approved by Parliament if we pursue what seems to us an integral element of our investigation. We have also thought it right to make plain to His Majesty's Government the consequence that such an assurance from His Majesty's Government is likely ultimately to involve, in order that the future course of procedure may be so shaped as to provide means for consulting with the Indian States, and to promote the full co-operation of all parties and interests in the solution of the Indian problem as a whole.—Yours very sincerely, John Simon.

The letter from the Prime Minister in reply is dated October 25, and reads:—

My dear Simon,—Your letter on behalf of the Statutory Commission raises issues of such importance that I have thought right before answering it to consult the leaders of other Parties. I have now been able to ascertain their views, and they have been good enough to concur in the terms of my reply.

His Majesty's Government welcome the intimation that your letter affords of the Statutory Commission's desire to deal in its report with the wider aspects of the subject to which your letter directs attention. It appears to His Majesty's Government, as it does to those on behalf of whom you write, that your work would necessarily be more complete if it included a careful examination of the methods by which the future relationship of British India and the Indian States may be adjusted.

His Majesty's Government have given full consideration to what you have said in your letter concerning the consequential necessity of some revision of the later procedure as at present contemplated, and I am glad to be able to inform you that they concur in the view that you have expressed. His Majesty's Government are, with you, deeply sensible of the importance of thus bringing the whole problem under comprehensive review; and that under conditions which may promise to secure as great a degree of unanimity as may be practicable. His Majesty's Government are also greatly concerned to find means by which they may approach the treatment of the broad question of British-Indian constitutional advance in co-operation with all those who can authoritatively speak for British-Indian political opinion. It seems to them

that both these objects can best be achieved by the adoption of procedure that will permit the free representation of all points of view, in advance of the stage at which His Majesty's Government will lay any proposals before Parliament which may be expected later, as you point out, to form the subject of examination by a Joint Parliamentary Committee. When your Commission has submitted its Report and His Majesty's Government have been able, in consultation with the Government of India, to consider these matters in the light of all the material then available, they will propose to invite representatives of different parties and interests in British India and representatives of the Indian States to meet them, separately or together, as circumstances may demand, for the purpose of conference and discussion in regard both to the British-Indian and All-Indian problems.

It will be their earnest hope that by this means it may subsequently prove possible on these grave issues to submit definite proposals to Parliament which may command a wide measure of general assent. With my best wishes for the success of your further labours,—I am, Yours very sincerely, J. Ramsay MacDonald.

THE PORT OF CHITTAGONG.

The recently issued official return of the trade of Chittagong is of special interest, seeing that it covers the first year during which Chittagong has been a major port. Under the Reforms scheme the administration of the larger ports became a central subject. These ports were styled major ports, and their direct control was transferred from the local Government to the Government of India. The lines upon which Chittagong should be administered and developed had been considered and discussed for a long time quite apart from the question of development. The statutory powers of control were transferred from the Provincial Government to the Government of India by an Act which was passed by the Central Legislature in March, 1928. This Act also provided for the reconstitution of the Board of Port Commissioners so as to enable local interests to be more fully represented in the management of the port. It came into operation on April 1, 1928, from which date Chittagong became a major port. During the year ended March 31, 1929, the total trade of Chittagong aggregated rather more than Rs.15 crores. This was a drop of about 17 per cent. from the previous year, when the total went to the record figure of Rs.18½ crores; but it represented an increase of more than 7 per cent. on the total of 1926-27. It cannot, therefore, be considered to be unsatisfactory, and if the future development of Chittagong should be co-ordinated with that of the Assam-Bengal Railway, by the new scheme of administration, greater progress may be anticipated in the future. Of the half-dozen ports in Bengal, other than Calcutta, the largest is Chittagong. It is situated on the Kornafuli river, and it is the outlet to the sea of the province of Assam. Tea and jute are its chief articles of export, while the imports are mainly piece-goods, salt, oil, and machinery. The discussion to which we have referred ended by the Government of India deciding that Chittagong should be a major port in order, among other reasons, to facilitate its financial arrangements.

INDIAN AIR MAIL.

Owing to the damage to Imperial Airways marine aircraft on the Mediterranean section of the England-India air mail route, the homeward Indian air mail which left Karachi on Saturday, October 26, did not reach London until the afternoon of November 5.

Until further notice, the air mail will be carried from Croydon on an air route *via* Cologne-Nuremberg-Vienna-Budapest-Belgrade-Uskub-Salonika, instead of *via* Genoa, to Athens, whence the normal route to Karachi will be followed. The service from Karachi will follow the same route.

THE VICEROY'S DECLARATION.

The announcement of the British Government's assent to the widening of the scope of the Statutory Commission's report and the revision of the procedure to be adopted after the report is made, proposed by Sir John Simon in the correspondence reproduced in another column, was made by the Viceroy in a Gazette of India Extraordinary under date November 1. The statement opens with an account of the impressions which Lord Irwin has gleaned from his recent visit to England. After recording his unshaken belief that "behind all the disquieting tendencies of the time, there lay the great mass of Indian opinion, overflowing all divisions of race, religion or political thought, fundamentally loyal to the King-Emperor, and whether consciously or not only waiting to understand and to be understood," the Viceroy reiterates his equal confidence in the determination of British opinion, "puzzled as it might be by events in India, or only perhaps partially informed as to their true significance," that the pledges given for India's future shall be redeemed in full. "On both countries the times have laid a heavy and in some ways a unique responsibility, for the influence on the world of a perfect understanding between Great Britain and India might surely be so great that no scales can give us the measure either of the prize of success or the price of failure in our attempts to reach it."

The statement goes on to express the nature of the modifications proposed in the procedure subsequent to the Report of the Statutory Commission, and the circumstances in which the Chairman of the Commission made the proposals set out in the above-mentioned correspondence. At the same time, in a passage the real import of which has been made the subject of keen but in our opinion wholly unjustifiable controversy in this country, Lord Irwin takes the opportunity to restate the ultimate purpose of British policy in India. "In view of the doubts which have been expressed both in Great Britain and India regarding the interpretation to be placed on the intentions of the British Government in enacting the Statute of 1919, I am authorised," he says, "on behalf of His Majesty's Government to state clearly that in their judgment it is implicit in the declaration of 1917 that the natural issue of India's constitutional progress, as there contemplated, is the attainment of Dominion status."

After repeating that it is the earnest hope of the British Government that by the means suggested in Sir John Simon's letter, "it may subsequently prove possible to submit proposals to Parliament which may command a wide measure of general assent," the Viceroy concludes:—"It is not necessary for me to say how greatly I trust that the action of His Majesty's Government may evoke response from and enlist the concurrence of all sections of opinion in India, and I believe that all who wish India well, wherever and whoever they are, desire to break through the webs of distrust that have lately clogged the relations between India and Great Britain. I am firmly assured that the course of action now proposed is at once the outcome of a real desire to bring to the body politic of India the touch that carries with it healing and health, and is the method by which we may best hope to handle these high matters in the way of constructive statesmanship."

The Rev. Andrew Macfarlane, D.S.O., D.D., late of the Indian Ecclesiastical Service, having served in India for over twenty years, arrived in Cairo recently to take charge in St. Andrew's Church of Scotland for the coming winter season.

A sale in support of the Missionary Settlement for University Women, Bombay, was opened by Sir Leslie Wilson, late Governor of Bombay, at the Church House, Westminster, last week. The Settlement has for thirty years been an agency through which the university women of this country express their sense of responsibility for women seeking higher education in India. Larger quarters are needed, and one object of the sale is to help in raising the purchase money.

SOME TRIBES OF THE SOUTHERN SUDAN—II.*

The Bari.

(From a Correspondent.)

The Bari have been known to Englishmen since Sir Samuel Baker first visited them in the 'sixties, on the journey of exploration which ended in the discovery of the Albert Nyanza. He then formed an adverse opinion of them, which was confirmed when he returned in the 'seventies to administer the Equatorial Province for Ismail Pasha and to put down the abuses of the slave trade.

The Bari had by that time come to terms with the traders, who had a large settlement among them at Gon-

PITIA LUGA, CHIEF RAIN-MAKER OF THE BARI.

dokoro on the Nile, and they conspired to assist them in getting rid of Sir Samuel Baker. He found them fierce fighters, and treacherous negotiators. They are still looked upon as lazy and surly workers, though individually they may show great intelligence. However, there are a good many reasons to account for this generally bestowed bad character. They have suffered from long periods of famine and disease, and from their early contacts with the Arab slave-raiders. There is no doubt that their numbers were once much greater, and their herds of cattle were at one time so much reduced that marriage prices almost ceased to be paid in cattle at all, though cattle are probably now on the up-grade again. Even now they have a very much more precarious food supply than their neighbours, and have very often for several months in the year to go on exceedingly short commons.

They are divided into a number of exogamous clans. No one may marry within the clan, but beyond this and the fact that all the cattle have their ears cut and slit in various ways to show to which clan they belong, the organization by clans does not seem to be of much importance. The clans do not live in particular districts or villages, and the head of the clan holds no special position. The real head of the Bari tribe is the chief rain-maker. His name is Pitia Luga, and he lives at Shindiru, a village twenty-two miles south of Rejaf on the east side of the Nile. He can trace his family back for fourteen generations, and although this is nothing compared with the genealogy of the Shilluk kings, still it gives his line a respectable antiquity. His power stretches for some hundreds of miles north and south, from the Dinkas and Mandari, on the north, to the Acholi, on the south. His grandfather used to make his tour of his realm carried

on a couch by his slaves, but this practice has been given up by the present chief, although he still travels in the dry season. His power rests in the possession of certain stones, which apparently represent the spirits of his ancestors, who in their turn control the clouds. He shares his knowledge and power with a small body of assistants and representatives, and a number of other chiefs who are rainmakers in a small way. All the Bari who have not this power are his subjects, and must entreat him for rain; for this they have to pay him a tribute of cattle or goats and sheep. In the old days, if rain failed, the rainmaker ran some risk of being killed by his angry suppliants and, although this has never happened to the direct ancestors of Pitia Luga, it has happened both to his assistants and to other rainmakers.

The social organisation of the Bari is rather complex. The great bulk of the people call themselves freemen, but there is a small submerged class of *dupi* or slaves. This class is of the greatest interest, for in it we may have the representatives of the earlier and original occupants of the Nile Valley, a short thick-set hairy man, who built smaller huts, knew nothing of cattle, but lived by hunting and trapping.

At any rate, the existence of these two classes side by side is evidence of some distant migration and conquest, and the survivals of the conquered among the conquerors. Nowadays the *dupi* are the domestic servants of the freemen; they draw water and bring wood, cook for them, and on feast days feed apart from them. In return their masters are expected to give them cattle to help them in their marriages. But the *dupi* are improving their position, amid the various changes of social life that accompany a foreign rule. Occasionally they marry the daughters of freemen, formerly an unheard-of thing. Indeed, so deep was the division between the two classes in the old days, that the freemen are said to have killed the children of the *dupi*, if they became too numerous.

The freeman considers several other classes of Bari society as *dupi*. Thus the smiths or "artisans of the forge" are a base class, so are the "artisans of the river," or hunters of crocodile and hippopotamus, and so are the professional hunters of big game.

All these occupations are distasteful to the true freeman. And this is not surprising, if, as seems likely, he is in reality a Hamitic cattle-owning invader from the grass plateau country of East Africa, where his near relations, the Masai and the Nandi, still live. Thus his ideal has always been, and still is, the life of the herdsman. He has now to do much agricultural work, but he has not forgotten the old days. Then the whole life of the Bari was organised round their cattle. In the dry season these

A VILLAGE SCENE.

were kept in the village enclosures, and taken down to the river to water; but in the wet season when the inland grass was good, the herds were driven off to a large common enclosure, where the young unmarried warriors would look after them. The warriors went off

* The first of this series of articles appeared in THE NEAR EAST AND INDIA of September 19.

for several months with their weapons. They enlivened their time by attacking their enemies and driving off their cattle. There was a good deal of rivalry even with their neighbours. They had a curious custom of boasting of the points and merits of their favourite bulls. The boaster sneezed and then said: "My father's bull is speckled," or "My uncle's bull has twisted horns." This would be enough to start a fight. Sometimes the bulls themselves would be urged on to fight and their horns would be anointed to give them strength and courage.

The Bari did not willingly eat their cattle. They drank their milk and also their blood. This they used to obtain, as the Masai do, by piercing a vein in the neck with an arrow. They then mixed the blood with milk.

Marriage prices are paid largely in cattle. Cattle at least should form the bulk of the payment, and the balance

VIEW OF REJAF FROM REJAF HILL.

is made up of so many sheep and goats, so many horses, and so many guineas. The discussion of the price is a solemn affair. The relations of the bridegroom collect the necessary cattle and some of the sheep and goats, and set off for the village where the bride's father lives. When they arrive the time is passed in dancing and eating, while negotiations are left to the old men on either side. They have dressed up in their best shirts and trousers, with perhaps a seedy tarbush on their heads (a legacy of the Turkish fashions of the Egyptian occupation), and they settle down to a long and well-sustained wrangle, of which they probably know the outcome from the first. As each speaker rises he picks up the speaker's staff and paces up and down, stating the claims of the bride's family or the contributions of the bridegroom. At least once in the discussion, the bridegrooms's father will threaten to break off the negotiation, if the other side show such rapacity, but at last the price is somehow settled. Ten or fifteen cattle is the usual quota, and each item is earmarked for some particular member of the bride's family. Thus the mother-in-law will receive a cow and a cow calf, the father-in-law a cow and a bull calf, the mother-in-law's brother a cow, and so on.

The Bari give the impression of being a depressed people. It remains to be seen whether they will accommodate themselves to the rapid changes which they have been going through for the last fifty years. During that time it seems that they have been forced by a number of circumstances to turn from being a pastoral people to becoming an agricultural one. At present, either through inertia or the difficulties of their climate and soil, they seldom seem to grow a large enough amount of food for their needs. It is remarkable to a white man how they adapt themselves to a fluctuating food supply, and how natural they appear to feel it is to have too little one month, and almost too much another. But it seems to leave its effect in an uncertain temper, and their present most urgent need seems to be a regular and adequate food supply. When they have this, they may regain some of their former prosperity.

NEW AFGHAN CABINET.

King Nadir Shah has made the following appointments:—
 *Sirdar Shah Wali Khan ... Prime Minister.
 *Sirdar Shah Mahmud Khan ... War (Acting).
 *Sirdar Mohamed Hashim Khan Interior and Governor of Jalalabad.
 †Gul Mohamed Khan ... Interior (Acting).
 †Faiz Mohamed Khan ... Foreign Affairs.
 The Hazrat Sher Agha ... Justice.
 Mohamed Ayub Khan ... Finance.
 Ali Mohamed Khan ... Education.
 Haji Mirza Mohamed Akbar Khan Commerce.
 Allahnawaz Khan ... Court.
 *Brothers of King Nadir Shah.
 † Other members of the Royal House.

Among the other appointments are Ghulam Nabi Khan, King Amanullah's Minister to Paris and then to Moscow, as Governor and G.O.C. the Northern Province, and General Mirza Nek Mohamed Khan, nephew of the Ulya Hazrat (King Amanullah's mother), the former G.O.C. 3rd Division, as G.O.C. Jalalabad. The Minister for Foreign Affairs is the son of Gul Mohamed Khan, the King's second cousin, who is acting while the new Minister of the Interior governs Jalalabad.

A memorial, in the form of a marble column, has been erected in Liubliana to commemorate the founding of the Kingdom of Illyria by Napoleon.

A Belgian Military Mission is to visit Ethiopia, to reorganise the Army of Ras Tafari, Regent of Abyssinia.

An earthquake lasting 45 minutes occurred in Bucharest on November 1. A woman was killed by fabric which fell from the Catholic Cathedral owing to the shocks.

After Kiazim Pasha had been re-elected President of the Turkish Grand National Assembly on November 1, Mustapha Kemal Pasha, as President of the Republic, opened the third session of the third Assembly.

Mrs. Maria Elizabeth Yeilding, of Cliff Dene, Pangbourne, Berks, late of Sheffield and of Port Said, Egypt, left £23,414, net personalty £17,987. She desired that her body should be cremated and the ashes sent to Port Said for deposit in the cemetery there.

Sir Eric Drummond, Secretary-General of the League of Nations, arrived in Belgrade on November 3 from Rome, as the guest of the Secretary for Foreign Affairs. Sir Eric will have an audience of the King and will afterwards visit the Dalmatian coast, whence he will return to Geneva.

The Albanian Minister at Belgrade on October 30 presented a supplementary Note to that which he handed the previous day to the Yugoslav Government, asking for an inquiry into the case of the Franciscan friar who is alleged to have been an Albanian spy and was shot near Prizrend.

A party of men of the South Wales Borderers were proceeding by motor-lorry towards Lydda, when they were run into by a train at a level crossing at Ras-al-Ain, on November 1. Two men were killed outright, and an officer, Lieutenant Cox, and five men were injured.

The Order in Council of August 15, 1929, transferring "the superintendence, direction, and control of the military government of Aden" and its dependencies from the Viceroy of India to the Resident and Commander-in-Chief at Aden was gazetted on November 1 as the Government of India (Aden) Order, 1929.

The Yugoslav Government last week proposed that the Pirot Protocols, as amended by the Nish Agreement, should come into force on November 5, and that Yugoslav and Bulgarian delegates should meet on November 15 for further negotiations about the estates divided by the frontier of 1919 and the proposed neutral zone on either side of the frontier.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE ARABS AND PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I shall be much obliged if you will allow me to correct some of the errors of fact contained in the letter of the Grand Mufti of Jerusalem published in your last issue, as well as to supply some significant omissions.

1. The area in front of the Western (Wailing) Wall has never been regarded by the Muslims as possessing any sanctity. Although it is a private Wakf, the Muslims have attached so little sanctity to it that on part of it they have built a cluster of miserable hovels, and they are in the habit of driving donkeys laden with dung across the pavement immediately in front of the Wall for the purpose of annoying the Jews praying there.

2. The Mufti's claim that the Muslim has always attached special sanctity to the Wall itself would not appear to be accepted by the Government of Palestine, for at the July session of the Permanent Mandates Commission the High Commissioner for Palestine made the following statement:—

"Tout retard est dangereux, car les Mahométans sont en train de répandre certaines rumeurs destinées à conférer un titre de sainteté mahométane à une certaine partie du Mur."

3. It is not true that the Zionist Congress, which was held last July, dispatched a delegation to London for the purpose of presenting "the Jewish case against the White Paper," which had, as a matter of fact, been published in November, 1928. The reason why the delegation was dispatched was to protest against the violation by the Muslims of that very *status quo* which they wish the Jews to observe. The Muslim violation consisted in effecting certain structural alterations to the Wall—a construction on top for the convenience of the muezzin and the establishment for the first time of direct means of communication between the Haram area and an Arab house which has immediate access to the Jewish place of worship at the Wall. The declaration adopted by the Congress stated (in part):—

"While not questioning the assurances as to its intentions which have been given by the Government of Palestine, the Zionist Executive felt it to be their duty to draw attention to the fact that the opening of direct means of communication between the Haram area and the Jewish place of worship at the Kotel Maaravi may, in its practical effects, have precisely those results which it is the Government's desire, and our just demand, should be rendered impossible."

4. In his account of the Jewish Demonstration at the Wailing Wall on August 14, the Grand Mufti omits to mention that it passed off quite peacefully after those taking part in it had raised cries against the Government and the Zionist Executive. Not a single Arab was molested by the demonstrators.

5. The Grand Mufti significantly omits to mention, although he must have also seen the incident, that on the following day there was an Arab demonstration at the Wall, which concluded by the demonstrators smashing the table used for the Scroll of the Law, tearing up prayer-books and papers containing petitions, and shouting "Kill the Jews: the Wall is ours!" whilst one Shaikh delivered an inflammatory speech.

6. The Grand Mufti would like your readers to believe that the slaughter of Jews committed by his followers was due to the Jewish demonstration of August 14. Sufficient evidence has already been given before the Inquiry Commission to show that the ignorant and fanatical mob who acted as tools of the Arab Executive were incited by living stories about Jews having attacked and bombed the Mosque of Omar, and that incendiary propaganda had been carried on for some time before.

7. It is not the case that "the Zionist policy has made intolerable aggression against the political and religious rights of the existing population." The Administration has carefully safeguarded the rights of the Muslims, and made them concessions that are denied to the Jews. Suffice it to refer to the impossibility of Jews to secure any position in certain Departments of the Administration, and to the official discrimination practised against the use of Hebrew—one of the three official languages.

8. It is untrue that the Administration "exploits, in the interest of a Zionist minority of perhaps 120,000 persons, the overwhelming majority of the people of this country." The position is just the reverse. In the first place, there are not 120,000, but 160,000 Jews. Although 20 per cent. of the population, they contribute 40 per cent. of the Government's revenue. The Jews are entitled, according to the Mandate, to State and waste lands not needed for public purposes in order that they may engage in close settlement thereon. But after ten years they have not received a single square inch of land, whilst Arab squatters at Beisan were given such vast areas that they were neither able to use them nor to pay the Government dues thereon, and they are now disposing of their surplus land at speculative prices.

9. The Grand Mufti concludes by saying that he will enter into no controversy regarding his statement. A further statement from him in your columns would probably be superfluous in view of the cross-examination to which, it is expected, he will be subjected before the Commission of Inquiry.—I am, etc.,

ISRAEL COHEN.

The Zionist Organisation, 77, Great Russell Street, W.C.1.

November 4.

THE ARAB HORSE SOCIETY.

At a Council Meeting held on October 24, the following new members were elected: Buxton, Miss Diana, Parsonage, Theydon Bois, Essex; Morton, E. D., Malquoits, Ewhurst, Guildford, Surrey; Ross, W., 71, Harley Street, W.1.; Turnham, R. Coates, 61, Muscliff Road, Winton, Bournemouth; and Urquhart, D. Ian, Linnmohr, Strathpeffer, Ross-shire. The following members were elected as Governors: Vaughan Williams, The Hon. Mrs. R. E. L., High Ashes Farm, Holmbury St. Mary, Dorking, Surrey, and Veragua, The Duke of, 7, San Mates, Madrid, Spain.

NEWS IN BRIEF.

An agreement was reached last week between the Yugoslav and the Bulgarian Government for the publication on October 31 and subsequent enforcement of the recently signed Pirot Protocols for regulating procedure along the frontier.

The Metropolitan Germanos of Thyatira, Official Representative at Lambeth of the Ecumenical Throne at Constantinople, has accepted the position of Orthodox President of the Anglican and Eastern Churches Association.

A conference at Amman of Arabs from Syria, Egypt, Palestine, Iraq, and Trans-Jordan on October 31 adopted a resolution protesting against the cancellation of the draft Syrian Constitution.

All troops taking part in the manoeuvres in Roumania, which had to be curtailed owing to bad weather, returned to their garrisons last week. The manoeuvres were attended by Prince Nicholas and by M. Maniu, the Prime Minister.

The Rev. C. R. N. Blakiston, Warden of St. Deiniol's Library, Hawarden, has been appointed by Bishop MacInnes to be Headmaster of St. George's School, Jerusalem. Mr. Blakiston has had experience of missionary work at Delhi. He will take up his duties at St. George's School at the beginning of the new year.

A number of Yugoslav police were sent on October 31 to the Siemens factory in Zagreb to arrest several persons suspected of complicity in the murder of M. Schlegel. When they arrived at the factory the policemen were fired on and two of them were killed and two others wounded. Many arrests have been made in Zagreb and elsewhere.

A successful return flight to Constantinople was accomplished last week by three Lufthansa airmen in an Arado aeroplane fitted with one 500 h.p. Hornet motor. Their object was to test the possibility of a regular air mail service between Berlin and Constantinople. The flyers reached Constantinople from Berlin on October 25 in 11 hours. They did the return journey on October 29 in 7 hours at an average of over 100 miles per hour.

In Bucharest on October 29 the Dowager Queen Marie of Roumania celebrated her birthday and a Te Deum was sung in the Cathedral. Members of the Government were present. Later M. Madgearu, Minister of Industry and Commerce, and M. Raducanu, Minister of Labour, conveyed the congratulations of the Roumanian Cabinet to Queen Marie.

The Times Correspondent at Athens states that according to trustworthy information from the island of Cos, in the Italian Dodecanese, peasants of the village of Antimachi have found an important statue of Hippocrates, the Father of Medicine, who was born at Cos about 400 B.C. The statue is described as being of heroic size, well preserved, and of a good period. It has been taken to the mediaeval castle of Cos, on its way to Rome.

A solemn requiem was sung for his All-Holiness Basil, the late Ecumenical Patriarch of Constantinople, at the Church of St. Clement, Clement's Lane, King William Street, on October 29. Among those present were:—The Counsellor to the Greek Legation, representing the Greek Minister, the Bishop of Willesden (representing the Bishop of London), attended by the Rev. W. G. Cameron, the Metropolitan Germanos of Thyatira, with the Very Rev. F. Meletios, the Archmandrite of the Greek Cathedral, Bayswater, the Hon. Venetia Baring, Mr. Athelstan Riley, the Rev. R. M. French (General Secretary of the Anglican and Eastern Churches Association), Prebendary William Russell, Rector of St. Clement's Eastcheap, Mr. Leonard Castle, Mr. C. F. L. St. George, Mr. H. S. Bragg, Mr. A. G. Hamlyn, Mrs. Carter, M. N. A. Klepinin, Miss Dampier, Mr. G. H. Wakeman, the Rev. H. J. Fynes Clinton, Rector of St. Magnus the Martyr (representing the Russian Church Aid Society), Miss Blevins, Mr. F. A. Yates, Miss A. M. King, the Rev. W. Horsfall Mellis, Mr. L. Foster, the Rev. V. Theokritoff, of the Russian Church in London, Mr. F. L. C. Kimber, Dr. Angelis, Miss Burls, the Rev. E. G. Phillimore, Mr. L. C. Glyn, Miss Margaret Smith, Miss Few, M. T. W. Clavey, Mr. A. K. W. Spier, Mr. Lang Huggins, Mr. T. H. Newman, Mr. W. L. Cooke, Mr. Hallett, Mrs. French, Miss Pearce, Mr. G. F. Field, and Miss Macleod.

PERSONAL AND GENERAL

TO-DAY

November 7, 1929 (New Style).
October 25, 1929 (Old Style).
Jumada II, 4, 1348 A.H., of the Muslim Calendar.
Chesvan 4, 5690, of the Jewish Calendar.

Sir Archibald and Lady Birkinyre will leave London at the beginning of December for India.

Sir Edward Barry will leave England on November 15 in the Mooltan for Bombay.

The Hon. Mrs. Hopewell left London for India on November 2, and will be away for a year.

The Ranee of Pudukota left Southampton on November 2 in the Cunard liner Aquitania for New York.

Semsettin Bey has been appointed Secretary to the Turkish Embassy, and has taken up his duties.

Sir George and Lady Godfrey sailed from Tilbury last Friday in the Rajputana, on their return to Calcutta.

Sir Edwin Lutyens will leave England for Delhi, sailing in the Kaisar-i-Hind, on November 28.

Chief Justice Sir George Rankin left London on October 31 to join the Morea at Marseilles on his way to India.

M. and Mme. Ivan Stancioff arrived in London last week from Sofia for a month, and are staying at 9, Courtfield Gardens, S.W.

Sir Arthur and Lady Hirtzel, who have been on a visit to Italy, are expected to return to-day (Thursday) to 47, Palace Court, Bayswater.

The Dowager Maharani of Cooch Behar has arranged to sail for Bombay in the P. and O. s.s. Viceroy of India, which will leave Tilbury to-morrow.

Mr. Kinnell returned to Paris last week from Yugoslavia and Venice, and will be at 38, Upper Grosvenor Street towards the middle of November.

Sir Arthur and Lady Froom have arranged to sail in the P. and O. s.s. Viceroy of India, which will leave Tilbury to-morrow (Friday) on their return to Bombay.

On November 12, at 5 p.m., Dr. Chaim Weizmann will lecture to the Central Asian Society, in the Royal Society's Hall, Burlington House, W.1., upon: "The Zionist Movement under the British Mandate."

Sir Denison Ross gave a lecture entitled, "A Tour in the Near East," at the Ladies' Carlton Club, 8, Chesterfield Gardens, on October 29. Lady Yate was in the Chair.

Princess Antoine Bibesco, who has been staying with the Duke and Duchess of Rutland at Belvoir Castle, arrived last week in London as the guest of Lady Ribblesdale.

Raouf Beg Chadirchi has been appointed to Angora as Iraq's Minister Plenipotentiary, in succession to the late Subhi Beg. Raouf Beg, who has held Cabinet rank in Iraq, is well known in the legal profession of his country, and is also popular in Turkey.

The Colonial Office announces that Lieutenant-Colonel A. E. Beattie, C.B.E., M.C., Chief Assistant Secretary, Cyprus, has been selected for appointment as Colonial Secretary, Gibraltar, in succession to Major H. W. Young, C.M.G., D.S.O., whose appointment as Counselor to the High Commissioner for Iraq was recently announced.

The Earl of Morley returned to England last week from Egypt, and is at present in residence at Saltram, Plympton, Devon.

AIR MAILS.

The Postmaster-General announces that a new edition of the Air Mail Leaflet, giving particulars of the winter services, is now available. It contains two maps, showing the principal Continental and oversea air services used, and also an inset with a map and details of the direct service to India. Apart from the usual temporary suspension of certain services during the winter, the most important alteration shown in the leaflet is the reduction, as from November 4, of the air fees for countries served by the England-India Air Mail Service. These air fees, which are additional to the ordinary postage charges, will be as follows:—

	Air fee.	Ordinary postage.
Egypt and Palestine	2d. per ½ oz.	1½d. first oz., then 1d. per oz.
Iraq	3½d. per ½ oz.	2½d. first oz., then 1½d. per oz.
Persia (including Gulf Ports)... ..	5d. per ½ oz.	2½d. first oz., then 1½d. per oz.
India	5d. per ½ oz.	1½d. first oz., then 1d. per oz.

Correspondence for Persia can now secure accelerated delivery in Persia by air services from Baghdad to Teheran and from Bushire to Shiraz and Isfahan. The air fee of 5d. per half-ounce in addition to ordinary foreign postage covers transmission by the England-India air route to Baghdad or Bushire as the case may be, and thence by air into Persia.

Copies of the new leaflet may be obtained free of charge from any Post Office.

THE WEEK AT HOME

London, Tuesday Morning.

Political Matters.

The reopening of Parliament was, of course, the main political feature of last week, but it was not that which most popular attention was given. Far more attractive than this was the spectacle of internal divisions in the Conservative and Liberal Parties.

It is known that for some time a section of the Press, nominally "Conservative," has been doing its utmost to discredit Mr. Stanley Baldwin and to remove him from office. This feud burst out last week, when the ex-Premier had to denounce assertions of weakness on his part, made by the *Daily Mail*, as wholly untrue. And I gather that in being under the necessity to make such a denunciation he had the sympathy of practically the whole House.

Another engaging topic has been the unqualified statement, made by the *Daily News*, which is regarded as the chief London exponent of Liberalism, that Mr. Lloyd George's notorious "Fund" must be scrapped. Whether this is a shadow cast of a coming event I do not know. Opponents say that Liberals have recently chased so many shadows in vain that this may be another one, but it is not doubted by adherents of the Conservative and Labour Parties that the conservation of this "Fund" has done the Liberal Party immense harm.

As for Parliament itself, the main interest of the proceedings, so far as they concern domestic issues, has been the difference unfolded in the points of view of Government and Opposition in regard to social and financial matters, or, rather, to the finance of social matters. This difference was made manifest in the debate on the new Widows' Pensions Bill, in which it was the doctrine laid down by Mr. Greenwood, Minister of Health, that "whether a nation can afford a thing or not depends upon how much it wants it," which so much disturbed the more orthodox economists of the Opposition.

That such a clash of ideas should be made visible is all to the good. So often the differences between parties appear to derive from the question of mere expediency, and it is altogether refreshing when a new political or social philosophy is allowed to be unfolded, through the medium of actual measures, in the House. Broadly speaking, the old philosophy concentrated on the interest, that is, the pocket, of the taxpayer; the new philosophy envisages a larger community, for whose advantages the taxpayer, it seems, may have to pay more.

Our Real Rulers.

It has long been recognised that the real rulers of this country are not those who make laws but those who administer them. In other words, we are fast being run by a bureaucracy. Government Departments have been doing more or less as they like, even in defiance of the intention of Acts of Parliament.

In part this tendency was inevitable: the more intricate the mechanism of a State, the more responsibility and power devolving upon the permanent expert official who alone understands it. But the tendency has gone too far, and the country now groans under (to use the rhetoric loved by the freedom-loving Englishman who has during the last decade seen a steady decline of his liberties) what is in fact a "new despotism," as the Lord Chief Justice, a salty Radical, has called it.

That the Government is fully aware of the causes of our present discontents is happily proved by the Lord Chancellor's appointment last week of a Special Committee to inquire into the whole question of the encroachment on the Rule of Law. It is, indeed, well realised that many laws passed in more or less haste by Parliament have to be determined by permanent officials, who, though they are as good a set of fellows as any, inevitably interpret those laws in the way most convenient to themselves—which is often enough the way most inconvenient to the ordinary citizen.

Yet it is difficult to see how this bad arrangement can be radically altered—any more than you can radically alter the fact that, though we are nominally a democracy, or even a bureaucracy, we are in truth a plutocracy.

The Public School.

The question whether it is worth while (often the only criterion for a large number of people) to send sons to public schools and the University is one that is being constantly and, indeed, increasingly asked. Our age is progressively utilitarian, if not materialist, and nowadays, since to earn good money both early and late is a capital object, the impression is rife that the old ideal of public school *cum* University is antiquated and unsuitable.

It is interesting, therefore, to notice the analysis which Sir Michael Sadler has just made of the careers of the hundred and fifty most notable personalities in England. These celebrities he divides into ten categories. Of lawyers, he finds that eighty-one per cent. have been educated at public schools. Of poets, seventy-seven per cent. were so educated. And in the category of financiers, economists, and leaders of industry, the percentage is as high as fifty-three.

These figures prove nothing absolutely, for they may represent a sharp decline from the figures of, say, thirty years ago; and this decline may be part of a progressive tendency. They are, however, impressive, in that most people would have thought to be more widely represented in our national life the type of, say, that to which the Prime Minister belongs.

Uniform for Waiters.

At the University one was early warned against mistaking gyps for dons, the mark of distinction being that gyps were always better dressed than dons. Even so, however, errors of identification were sometimes committed. It is comforting, therefore, to hear that a move is on foot to supply waiters with distinctive dress—so often guests in evening dress are mistaken for waiters, and *vice versa*.

One has always thought it wrong that the waiter should be wearing the second-hand garments of the guests, and wearing them much better, of course. Why should not every restaurant and hotel put its servants into distinctive uniforms, and so save all bother?

In case one should be thought to be flippant, it may be mentioned that the National Association of Outfitters is actually discussing the matter with the Hotel Proprietors' Association.

Book Reviews

THE ASSYRIANS.

"*THE ASSYRIANS AND THEIR NEIGHBOURS.*" By the Rev W. A. Wigram. (London: G. Bell and Sons).

Dr. Wigram is well known as at once the most persistent, the most doughty, and the most lively protagonist of the Assyrian people, among whom he has spent many years of his life. He has written much upon this virile and interesting folk, from this or that particular angle, but in this very welcome book he has viewed the Assyrians as an historical factor throughout history—from the misty beginnings of time in Mesopotamia to the also misty future of the Assyrians in northern Iraq. The tale is extremely well told, with a nice sense of proportion. It does not suffer from the modern fetish of impartiality, and, although Dr. Wigram has to a certain extent controlled his tendency to indulge in light-hearted archery, a few characteristic shafts of humour are inevitably loosed from his bow. This fact only makes the book the more urgent a necessity for both student and general reader, the former of whom will find sufficient record to satisfy him, and the latter, sufficient review.

Dr. Wigram boldly identifies the hardy mountaineers of whom much has been heard since the War with the original "Assyrians," who founded the first military empire in history. He believes that the Assyrian stock was never exterminated, and continued to exist in its old home. This identification will probably provoke challenge, for although no evidence exists of the destruction of the Assyrian stock, it has been widely assumed. Be that as it may, it is quite certain that the people to whom Christianity was first preached during Parthian rule, were the forebears of the folk whose fortunes have since been so chequered.

The account of the Assyrians, with their neighbours—Kurds, Armenians, and the rest, during the Sassanid period, is excellent: particularly clear is the explanation set out of why the Assyrians separated from the Church of the Empire, and of the relations between Eastern Christianity and Zoroastrianism. When the Arabs conquered Mesopotamia in the seventh century, Christianity was flourishing—at least in the material sense. But trouble was ahead for the Assyrians. First came the Seljuk Turks, and then the Mongols (who might so easily have accepted Christianity, and not Islam, as their faith), and with them the disunity and the oppression of the Assyrians. The "millet" that had existed in Kurdistan was divided by the Ottoman Turks into Chaldean (Uniate) and Nestorian Assyrian—and the history of these unfortunate people since the sixteenth century is generally known. Their conduct during and after the Great War is even better known: how the Assyrians in the mountains of Hakkiari declared war on the Turks, how they migrated to Persia, how finally they marched from Urmi to Iraq, where, at Baqubah, "by an act of generosity to which one can fairly say only a British administration could have risen" about 50,000 were settled, how the Assyrian levies were formed, how the League of Nations denied to these mountaineers the chance of returning to their native homes under Christian supervision, and how the remnant of the Assyrian nation now finds itself—scattered in villages in northern Iraq, living as best it may. It is a sad history, which deserves a better ending than seems likely to be provided for it. Dr. Wigram's penultimate words are:—

If the Assyrians are accepted as an element among the subjects of the King of Iraq, then they may perhaps have a future, and begin a new chapter of their long history in the land where history began. Failing that, the old independent Church much merge itself in the "Uniate" branch of it that exists at Mosul, and the long story of a nation that begins in the days of Abraham come to an end.

Much wisdom is needed, however, if peoples such as the Assyrians and the Kurds are ever really to collaborate with the Arabs of Iraq, and the virtue of tolerance will

have to be shown in a degree very rare, though happily not unknown, in Oriental history.

As we have said, this is a most readable book, and a worthy record of a worthy people. We may quote in conclusion, lest it should be feared that in becoming the sober historian the author may have lost his old, characteristic touch, this passage dealing with the Assyrians' recapture of Amadia from the Turkish invaders:—

They (the Assyrians, disappointed at not capturing the Turkish Governor-General) did secure as trophies, however, the Turk's private store of brandy and whisky (for it seems that His Excellency liked to take the field in comfort), and with them certain papers which the Assyrians could not read, but which they duly handed to the British Colonel. They proved to be the nominal rolls of the Turkish regiments engaged, and they were subsequently handed back to Ottoman authority, as an answer to a courteous explanation offered, that the recent regrettable frontier incident had been the work purely of irresponsible frontier tribes, over whom the Turkish Government was not in a position to exercise as much control as it might have liked.

MEHMET ALI IN SYRIA.

"*IBRAHIM PASHA IN SYRIA.*" By Saleiman Bey A. Izzeddin, B.A. In Arabic. (Beyrout. 6s.).

Izzeddin Bey's well written and well documented monograph deals with the revolt of Mehmet Ali, Pasha of Egypt, against his Turkish suzerain, his seizure of Syria in 1831, and subsequent administration of the country until the ejection of his armies in 1840-41. During recent years a good deal of attention has been given to this episode by Lebanese scholars, largely through the influence of the History department in the American University of Beyrout. The author (one would hazard that he is a Druse) has been able in consequence to draw not only on the European sources, but also on the contemporary Arabic memoirs and documents; the former are his authorities for the actual course of events and their international relations, the latter supply most of the material for the administration and internal condition of the country. The main value of the book derives from the second of these aspects, and while it is by no means exhaustive, it forms a welcome addition to the existing literature on the subject.

H.M.S. Ramillies left Malta last week for Jaffa, where she will remain until December 16, when she will be relieved by H.M.S. Royal Sovereign.

Coloured reproductions of the remarkable mosaic pavements, recently excavated in the ruined churches of Jerash by the British School of Archaeology in Jerusalem, are being exhibited in the rooms of the Palestine Exploration Fund, 2, Hinde Street, W.1, until the end of the second week of this month. The subjects of the mosaics include perspective views of ancient cities, portraits of founders and other functionaries of the Churches, studies of animals and birds, as well as inscriptions in Greek and Hebrew, and richly designed borders imitating carpets and other textiles.

It is announced in the *London Gazette* that the King has approved of the award of the Distinguished Flying Cross to Flight-Lieutenant Herbert George Rowe, in recognition of gallant and distinguished service rendered in connexion with the operations in the Nuer country during the period between December 8, 1927, and February 7, 1928.

FRENCH SELF-TAUGHT. GRAMMAR with KEY

By J. LAFFITTE, B.É.S.L., Principal French Master, City of London School.

For learning the Language by the Natural Method. It contains Classified Vocabularies, Travelling by Rail, Road and Sea. Cycling, Motoring, Post, Telegraph, etc. Commercial, Naval and Military Terms, etc. Conversations so arranged that they may be learned AT A GLANCE, with ENGLISH PHONETIC PRONUNCIATION Tables of Money with illustrations of Coinage, etc.

A course of simple and practical lessons in the Grammar and construction of the French language, progressively arranged and fully illustrated with model sentences; useful exercises throughout, and an Alphabetical Vocabulary.

Crown 8vo, 315 pp. Green Cloth, 6s. net. Postage 4d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

The New 'BP' from Crude to Car

Here is the Pipe Line Man

His job is to see that the pipe line is always up to its work of bringing the Persian crude oil over 145 miles of country, much of which is mountainous, to the port of Abadan at the head of the Persian Gulf. He is happy in his work for he knows its importance to the user of "BP". No fewer than 1,500 million gallons of crude pass through the pipe line in the course of a year. Enormous figures! So, too, are the sales figures of the new "BP", for motorists have proved for themselves that it is the better petrol—better in easy starting, acceleration and mileage, better in every way. Fill up with the new "BP" to-day and see what wonderful new life it puts into your car. © B.P. 1929

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Dead Sea Salts Concession.

The extremely suitable name of Palestine Potash, Ltd., has been adopted for the company which is to carry out the concession granted to Mr. Moise Novomeysky and Major T. G. Tulloch, for the extraction of salts from the Dead Sea. Details of the company, which are now available, show that the capital is £400,000 divided into 230,000 £1 seven and a half per cent. Preference shares, 150,000 £1 shares which may be issued either as Preference or Ordinary, and 400,000 1s. Ordinary shares. The directors are Lord Lytton, Mr. Israel B. Brodie, Mr. B. Flexner, Mr. E. Friedman, Mr. E. W. D. Tennant, Mr. F. M. Warburg, Major Tulloch, Mr. Novomeysky, and Mr. David Lyell. There will not be an issue of capital in the immediate future as a large proportion of the present capital of the company has been subscribed. Preliminary work on the concession has been in progress for a long time, and a good deal has been accomplished since the signature of the concession. Now that the company has been formed and capital is available, the necessary orders for machinery will be placed and the work of development will be rapidly pushed forward. It is of interest to note that during the recent disturbances in Palestine no trouble of any kind was experienced among the Jewish and Arab workers on the concession, and this was the common experience in Palestine where Jews and Arabs worked side by side under British supervision. This is a most hopeful portent for the future, showing as it does that it is perfectly possible for the two races to co-operate in the development of the country.

The Albanian National Brewery.

At the statutory meeting of the Albanian National Brewery in June last it was stated that out of a total of £200,000 due in respect of shares issued for cash, £66,621 remained unpaid, representing almost entirely amounts due from sub-underwriters who had been unable to comply with their engagements. Since that time, although every effort has been made to make them meet their obligations, only £1,529 has been received leaving £65,092 still due. The Chairman, Sir Harry Eyres, explained at an informal meeting of the company last week that the consequence of this was that there were not sufficient funds to pay the contractors for the material ordered. A minimum amount of £80,000 is required to carry out the concession, and it is proposed to raise this by an issue of Eight and a Half per Cent. Debentures at 96½. The success of this issue will depend largely on the shareholders, and as it has been plainly shown that there are promising prospects for the establishment of a brewery in Albania there is every inducement for them to give this further measure of support to the company.

Another Oil Discovery in Roumania.

It is only recently that an important oil discovery was made at Boldesti by the Astra Romana Company, and now the directors of the Phoenix Oil and Transport Company, in their monthly progress report, announce another notable find. A new deep source has been discovered in the Tzintea field at some 5,000 feet, the well sunk there having an initial output of over 100 tons per day. It is pointed out that the discovery of this prolific new sand revivifies a field that was fast approaching exhaustion. It

is of interest to note with regard to the discovery at Boldesti that the Phoenix Company also owns a large area in this field upon which development work, it is stated, will doubtless soon be commenced as a result of this discovery. In view of these developments, which throw a clear light on the importance of Roumania's oilfields, it is to be regretted that owing to the existing circumstances the industry has not yet become the economic asset to the country that it should be. The low price of oil has had a particularly severe effect in Roumania, but this factor has been overcome to a large extent elsewhere, and there seems no reason why what has been done in other regions should be impossible for Roumania.

Trade with Egypt.

A considerable portion of Mr. Turner's report on Egypt is devoted to British trade, and what he says deserves the most careful attention on the part of our manufacturers. No one could pretend that the position in the past year was satisfactory. There was a decrease of one million pounds in the United Kingdom's share of Egypt's imports, the largest decline being in cotton piece-goods. It is satisfactory, however, to know that there were notable increases in respect of a number of commodities, while there was the encouraging fact that we were regaining the coal trade lost during the stoppage. There is no getting away from the fact, however, that we are not doing all in this important market that we should do. It has been made clear abundantly in the past that, like other people, the Egyptians fully appreciate the outstanding qualities of British goods and are willing to take them if they can, but the trouble is that they are not given an adequate opportunity. It is the duty of our manufacturers to see that their goods are available in Egypt, and by giving their agents the same advantages as they receive from the exporters of other countries encourage them to promote sales. As regards motor cars, the Egyptian market, as is the case in so many other countries, is largely monopolised by the American manufacturers, while as regards motor cycles, the British product is, as usual, supreme. There is no valid reason why British cars should not hold their own, and this new export scheme will, it may be hoped, enable us to make a very different showing in this market.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.
The Bank transacts every description of banking operations.

NOTES FROM ROUMANIA.*(From Our Own Correspondent.)**Bucharest, October 24.***Roumania and Poland.**

During the past few years the relations between Roumania and her northern neighbour have become more and more cordial, cemented by various agreements in regard to railway traffic and transit and Customs facilities. Some months ago an important member of the Roumanian Administration visited Warsaw, and in return for this courtesy the Polish Foreign Secretary, M. Zeliski, has just arrived on a visit to Bucharest. A reception is being given in his honour to-night at the Foreign Office, to which public men and the Diplomatic Corps are invited, and to-morrow there will be a dinner at the Polish Legation. The *Argus* of October 25 publishes a long eulogy of M. Zeliski, and attributes the success of the recent negotiations between Poland and the Soviet Government to his loyal diplomacy.

The Maize Surplus.

Although the exact figures of the maize harvest for this year are not yet known, it is already abundantly clear that they fall considerably short of the bumper crop that had been hoped for. Nevertheless, there will certainly be an important surplus of maize for export. The sowings of wheat, etc., for next year's winter crop have been retarded by the persistence of dry weather, the soil being so hard that ploughing was impossible. Within the last fortnight, however, some rain has fallen and every effort is being made by the farmers to make up for lost time. There was a very cold spell towards the middle of September, and snow fell in some of the mountainous and hilly districts. This last week, however, has again been extremely mild, and the sun unusually hot for the time of year.

Improvements in Bucharest.

The Bucharest Municipality has recently been very active in improving the condition of the main arteries of the city. Many of the streets have been repaved with strong cement foundations, squares have been opened up and embellished with little plots of flowers, the Boulevard Bratianu has been widened and now with the Boulevard Lascar Catargiu forms a handsome thoroughfare from the centre of the city right out to Victory Square, where the Foreign Office stands. Farther north the neglected copses on each side of the Chaussée Kisseliff have been transformed into charming gardens, and chairs are provided at a small charge. The "one way" system of traffic has been introduced, and tramway cars now run the whole length of the boulevards out to the northern suburbs. The transport facilities have greatly improved, and altogether the city is hardly recognisable now to a visitor whose recollection of it dates from a few years back.

NOTES FROM BULGARIA.*(From Our Own Correspondent.)**Sofia, October 14.***The Draining of the Danubian Marshes.**

The institution of compulsory labour which has replaced military service is finding a splendid opportunity of indicating its utility through the recent inauguration of the works of construction of a dike 17 kilometres long for the draining of the marshy regions of Ghighen and Bélén, in Svishtov district, on the Danube border. These regions which are not marshes properly so-called, being regularly flooded by the Danube at the time of high tides, constitute very fertile lands which cannot be used for agriculture. The dike, which will be constructed by next spring, will be six metres high and sufficiently wide to permit the passage of two motors or peasants' carts. It will liberate an area of more than 23,000 decares. A large number of compulsory labourers are allocated to this important enterprise, which, on account of compulsory labour, will not cost more than 30 million leva. The construction of this dike has been considered many times in the past, but owing to the lack of resources it always had to be postponed to a more favourable season.

The Reparations Question.

As the discussions progress in Paris on the subject of Bulgarian reparations so grows the popular movement led by the lead of the Opposition, M. Malinoff, followed by the Democrats, Liberals and Agrarians, against the present Government to which the Opposition denies the necessary national authority for a good solution of this vital problem for the country. The movement has been marked by a great number of meetings, which always conclude with a motion emphasising the financial exhaustion of the country and stating that despite the loans obtained under the auspices of the League of Nations its resources are inadequate to satisfy the more elementary needs of the national economy, and that it will be impossible for a long time to meet the heavy charges for reparations.

Bulgarian Socialists.

The Central Committee of the Bulgarian Socialist Party sent a few days ago to the Executive Committee of the Second Socialist International a detailed memorandum on the economic, financial, and social situation of Bulgaria and on the reparations charges imposed by the Treaty of Neuilly. The memorandum, after emphasising the point that the problem of Bulgarian reparations can only be solved by taking account of the capacity of the country to pay and of its needs for its economic restoration, gives the causes which, it is suggested, have brought about the present difficult position of Bulgaria. In the first place there is the loss after the War of the most fertile lands of the country, the Dobruja, Bulgaria's granary, Thrace and

THE P.G. MACRIS TRADING & INDUSTRIAL CO. Ltd.**CAPITAL AND RESERVES ... Drs. 51,250,000.****18, LYCOURGOU STREET, ATHENS, GREECE.**

the Black Sea littoral, Macedonia, etc. Secondly, the influx of about half a million refugees aggravated further the precarious position of Bulgaria on the morrow of the War. The Budget deficits and the adverse trade balance finally brought about a financial crisis with which the country is now contending. It must be added that the national revenue has not increased though the population has increased normally and through the influx of the refugees. The memorandum further gives a description of the social conditions of the population, particularly the workers, officials, widows, wounded soldiers, and retired people who lead a miserable existence. The poverty of the population is leading, it is pointed out, to physical and moral degeneration, the consequences of which can affect in a disastrous manner the future of the race. After a comparison between the reparations payable by Germany, Austria, Hungary, and Bulgaria, the memorandum states that Bulgaria has been most unjustly and most severely treated, and concludes with an appeal to the leaders of the Second International and to all Socialist parties to influence their Governments and public opinion to help Bulgaria to escape from the tragic situation in which she finds herself.

Bulgaria and Poland.

For some time there has been in evidence an interesting political, economic, and cultural understanding between Bulgaria and Poland. The movement dates from the end of the War and the resurrection of Poland. Since then there has been established in Bulgaria a society for the development of Bulgaro-Polish relations and a Bulgaro-Polish Chamber of Commerce. But it is only this autumn that the understanding has begun to be developed in an important manner. A mission of leading Bulgarians, belonging to all ranks of the population, visited Poland on the occasion of the Poznan Exhibition, and received a wonderful welcome, its stay in Poland being a veritable triumph. In return for this visit a Polish delegation, drawn mainly from commerce and industry, has recently arrived in Bulgaria, and has met with the same friendly reception. Banquets have been given in its honour by the Chamber of Commerce and Industry of Sofia, by the Minister of Labour and Commerce, and by the Union of Bulgarian Merchants and Manufacturers, and the mission, introduced by the Bulgarian Minister at Warsaw, has had long audiences with the President of the Council, M. Liapcheff, and with King Boris. Advantage has been taken of its visit to inspect the Pernik mine and to visit the trade and industrial centres of Plovdiv with its large tobacco warehouses, Karlovo and Kazanlik with their factories for attar of roses, and Gabrovo and Sliven. As a result of the understanding already well advanced, which will greatly facilitate the union of the Bulgarian and Roumanian railways by the construction of a bridge across the Danube so as to link Bulgaria with Poland, the forthcoming conclusion of a treaty of friendship, and also of a Bulgaro-Polish commercial treaty is to be anticipated.

TOURING IN THE SUDAN.

The popularity of the Sudan as a winter resort is steadily growing as the attractions of that region, either for an ordinary tour or for a big game shooting expedition, are becoming more widely appreciated. A little brochure, issued by the Sudan Government Railways and Steamers Department, describes the various winter tours for the present season, among them being Shellal to Wadi Halfa and back, Shellal to Khartoum and Omdurman, and Khartoum to the Sennar Dam. An opportunity is, of course, given in the last tour of viewing the Gezira cotton scheme, which means so much to the Sudan. Details are also given of various excursions, and of the regulations regarding passports and permits, etc., while the brochure opens with a most fascinating illustrated article on "The Lure of the Sudan," to read which is to feel impelled to swell the stream of would-be visitors to that region.

LOW PRICES FOR ABYSSINIAN PRODUCTS.

(From Our Own Correspondent.)

Addis Ababa, October 10.

The new season in hides and coffee has not opened too well. Hides are at the low level of 9d. per lb., whilst there has been an ominous decline—long expected—of approximately 30 per cent. in coffee in European markets. Abyssinian hides may now be said to have reached their economic level and found their proper place in the world's supply of hides, but it is unfortunate that coffee should have received so serious a setback at the very commencement of the season; no doubt speculators have been "bitten."

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Massilia for Bombay (Glasgow, November 15); Manchester, November 19; Birkenhead, November 23). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Glasgow, November 7; Birkenhead, November 18); s.s. Malancha for Calcutta (Glasgow, November 18; Birkenhead, November 20).

Bibby Line.—S.s. Yorkshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, November 13).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, November 16); s.s. Mundra for Bombay (London, November 23).

Cunard Line.—S.s. Bantia for Gibraltar, Malta, Patras, Piræus, Smyrna, Mitylene, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if inducement (Glasgow, November 12; Swansea, November 14; Liverpool, November 16); s.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Algiers, Oran, Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, November 23; Swansea, November 26).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 8) (this steamer will be the last sailing of the season to the ports of Galatz and Braila, and sailing November 9); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 7).

P. and O. Line.—S.s. Viceroy of India for Bombay (London, November 8); s.s. Behar for Calcutta (London, November 8).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 9); s.s. Portuguese Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, November 13); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 9).

Ellerman and Papayanni Lines.—S.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 7; Liverpool, November 14); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, November 9; Swansea, November 14); s.s. Roumelian for Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 23; Swansea*, November 23); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 23); s.s. Maronian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Swansea, November 28). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 5.

The reduction of $\frac{1}{2}$ per cent. in Bank rate on Thursday, which was quickly followed by a fall of 1 per cent. in the New York Federal Reserve Bank's rediscount rate took both the money and stock markets by surprise. So far as the latter is concerned it had an immediately beneficial effect and an all-round recovery took place. Until Thursday the London Stock Exchange had borne the heavy shocks of the Wall Street slump almost surprisingly well, and in spite of the general uncertainty and some amount of nervousness, the decline in prices, with the exception of those of the international counters, was quite small. Gilt-edged stocks, indeed, were inclined to harden, and, after the announcement of the reduction in Bank rate, took the lead in the general advance. The directors of the Bank of England no doubt argued that the $6\frac{1}{2}$ per cent. Bank rate, imposed five weeks ago, had done its work in improving the sterling dollar exchange, and as the margin between Bank rate and the market rate was steadily widening, the former was becoming ineffective. It must not be assumed, however, that this change is the prelude to an era of cheap and abundant money or that the monetary outlook has suddenly been cleared. The situation is full of uncertainties. In the meantime the decision of the New York Stock Exchange to remain closed for the last two days of the week, which coincide with the closing of the London Stock Exchange for the annual November 1 holiday and the usual Saturday closing, should give a welcome breathing space to Wall Street and help to clarify the position.

Gilt-Edged.

The rise in the value of sterling resulted in a marked improvement in British Government stocks, which in common with other investment stocks had severely depreciated owing to the high Bank rate. Now that Bank rate has again fallen, this upward movement should continue and should spread to other sections of the Trustee Securities List. There is one group of stocks which do not attract so much attention, but which are on the same

footing as British Government securities. In order to facilitate the restoration of trade after the War the British Government guaranteed debenture issues by a number of prominent industrial concerns, under the Trade Facilities Acts. Since both principal and interest are covered by a British Government guarantee these debentures represent securities of the highest class. One of the highest yielding stocks in the group is the Silver Line 5 per cent. debenture, finally redeemable in 1945, which returns £5 4s. per cent. Tata Power $4\frac{1}{2}$ "A" debenture stock gives the same yield and is finally redeemable in 1948. Amongst the longer dated stocks, Pearson and Dorman Long 5 per cent. redeemable in 1956 returns £5 2s. per cent.

The Relapse in Rhodesians.

Without doubt the recent relapse in the quotation of Northern Rhodesian copper shares has been precipitated and accentuated by the slump on Wall Street. Last autumn, when British investors and speculators were taking scarcely any interest in the development of the copper resources of Rhodesia, considerable lines of shares of companies formed for that purpose were being quietly absorbed by United States investors. Subsequently, on the strength of the reports made by American engineers, important U.S. interests bought heavily and with little regard to price. At the moment calculations as to future profits are of little importance and shares are being sacrificed under financial stress, irrespective of their merits. London interests—powerful though they be—cannot stem the torrent. Evidence of the confidence still retained in Rhodesian copper is supplied by the fact that one new issue of shares is being made by one important undertaking and a second is projected by another. The Rhodesian-Anglo-American is offering its shareholders 1,500,000 ten shilling shares at 40s. above the current price, although well below that ruling at the time the agreement was made. The issue is guaranteed by the Anglo-American Corporation group for a commission of $2\frac{1}{2}$ per cent. The Rhodesian Selection Trust is now asking for powers to increase its capital by £250,000 in 5s. shares, but particulars of the coming offer have not yet been published.

New Companies' Legislation.

Certain important provisions affecting the published accounts of joint stock companies came into force on Friday, under the Companies Act of 1929. It may seem strange, but it is for the first time that all companies, public and private, will be obliged to keep proper accounts. In future the general meeting will be entitled to see not only the balance-sheets, as heretofore, but also the profit and loss account. Balance-sheets, too, must distinguish between fixed and floating assets, showing separately the amounts of preliminary expenses, goodwill, patents and trade marks, and shares in and indebtedness to subsidiaries, stating also how the values of the fixed assets have been estimated. In the case of a holding company a statement must also be annexed showing how the profits of subsidiaries have been dealt with. These changes all tend in the desirable direction of ensuring more publicity as to the activities of joint stock companies, the need for which, as for greater confidence between directors and shareholders, has been frequently commented on in these columns. Still further progress might well be made in the same direction, particularly with regard to holding companies. It remains possible for such concerns, whose numbers are constantly increasing, to present accounts which, owing to the little information given about subsidiaries, shed virtually no light on the position of the group as a whole. It is to be hoped, however, that such companies themselves will be moved to give their shareholders more information than the law at present requires.

The P. and O. has established its own office at Monte Carlo, and has appointed Colonel Cecil Fane, D.S.O., as agent in charge of the company's interests on the Riviera.

THE COMMERCIAL MOTOR EXHIBITION.

The Commercial Motor Transport Exhibition, organised by the Society of Motor Manufacturers, which is being held at Olympia from November 7 to 16, promises to be of exceptional interest. It is two years since the last exhibition, and as the exhibits will demonstrate the interval has been most profitably occupied by manufacturers. A list of the vehicles exhibited is at once an indication of new or improved designs, and some departure from the stereotyped, though mostly as regards improved details. Prospective buyers will find selection of makes a harder task than ever before, while newcomers may be bewildered by the variety of types and classes of vehicles, specially in the smaller and medium categories of trucks and coaches. A very high quality of comfort and body finish and upholstery has become the standard among the leading makers, a fact witnessed to by the long distance and all-night coaches. Untarnishable fittings, good lighting at all hours, roominess, safe and roomy luggage storage, even in the smaller coaches, suspension as comfortable as in a rail coach, the universal use of pneumatic tyres, and the rapid increase of six-wheel vehicles, are some of the factors which this year's show will accentuate.

Reliability nowadays is taken for granted, so much so that people are apt to overlook the fact that mileages between repair shop visits have been vastly increased, and now run into many thousands per annum. This holds good, too, of tyres; indeed tyre troubles, in spite of the vastly greater distance covered, and the increased weight of coaches, no longer count as a travelling risk. These results have been attained by attention to improvement of details of construction and to the means of maintenance and repair. Better materials of reduced weight are standard products. Higher engines speeds and better balanced engines, with increased compression rates for industrial vehicles and coaches are challenging the best results in the light engined cars. The six-cylinder engine with poppet valves or sleeve valves is becoming standard equipment for large vehicles, and is finding increased favour for smaller craft. Fuel and oil servicing is another marked improvement of the times; and to this may be added the improved filtration of air and oil which contributes so much to the freedom from engine trouble and decreases overhaul periods.

Six-wheel petrol models have made great advances since the last show, and may become standard for the largest coaches and buses. Engineers will find much of interest in the form of rear drive for these vehicles and in the vast range of technicalities in forms of brakes, transmission layouts, axles and electrical equipment. The Diesel type of crude-oil engine, too, which appeared at the last show, will be represented with many improvements as befits the effort to find means of using heavy oil fuel as well as motor spirit. Overseas visitors are promised much on this head which will make this show a land-mark in commercial vehicle development.

Full electrical equipment promises to be standard for

most industrial vehicles. All makers have provided for fitting an engine starter, and most have standardised dynamo lighting. Not all buyers wish to have the full range of electrical equipment, which explains why it is provided for, but is not universal standard equipment. Ignition by coil and battery with automatic or part hand and automatic timing, radiator temperature controllers, improved oil purifiers and coolers will be standard equipment of many exhibits. Magnetos with semi-automatic timing, and those with assisted hand starting "flick" mechanism have been improved and generally brought up to the most exacting requirements for the highest speeds and compression rates.

In the components for chassis and accessories for vehicle equipment, there promises to be a good exhibit. Free-wheels will find a place at this show, and visitors will be able to note some remarkable developments in this much discussed transmission auxiliary. Visitors, and operating engineers in particular, will find plenty of evidence of laboratory and test shop effort to improve materials and prolong wear. Centrifugal iron castings for cylinder-liners, pistons and rings, and nickel alloys for the complete range of chassis requirements are but two leading lines pointing to the great developments in recent metallurgy. New and improved metals for every day maintenance and usage are being featured by several exhibitors, who also will show patent special tools for use with their products. Accessories for furnishing coaches, body materials and upholstery fabric, and mountings; sprung cushions and hygienic sundries, and the special requirements for long distance coaches are but a few of the lines listed by several firms specially interested in these details.

Steam vehicles share, with electrics, but to a lesser extent the interest at these shows. The six-wheel steamer in particular will be found much developed since the last show. Municipal vehicles will be represented both in the vehicle and accessory and components section. Many of the larger vehicle makers are specially catering for labour saving motor plant for street service and refuse collecting, and the exhibits will show that the trade is not neglecting development of this enterprise. And it may be added that one of the attractions of these shows is the comprehensive and full range of vehicles exhibited whether for passenger, municipal use or transport of goods from a 7 cwt. van to the largest six-wheel trailer combination.

That there will be a few surprises in regard to vehicles and engines is certain. Luxury type coaches and buses of unusual elegance are promised, and there are heavy oil engines at present on test for passenger service, vehicles which will more than halve the fuel bill of the owners concerned. Overseas buyers in certain territories will note this trend with special interest.

Yugoslavia's cement exports for the first half of this year totalled 224,000 tons, of the value of 78 million dinars.

Engineering Topics

(By Our Engineering Correspondent)

High Pressure Steam in Industry.

Significant in view of the increasing use of high pressure steam in industry generally, was the display at the recent North-East Coast Exhibition (May-October) of International Combustion, Ltd., and their associated companies. This includes a model of the remarkable new forged steel drum boiler plant now being constructed by Synthetic Ammonia and Nitrates, Ltd., Billingham-on-Tees, which will cost about £800,000, operating turbines with "pass-out" steam available for process work. The boilers, eight in number, are to operate at 800 lb. pressure per hour, with 840 deg. F. superheated steam temperature, constituting the largest super-pressure industrial boiler plant in the world, being fired also by pulverised fuel on the latest principles. A model of the "R" turbulent burner was also shown, whereby, it may be remembered, combustion results in a flame of less than 10 feet in length, with a consumption up to 6 tons of coal per burner per hour, and not over 2 in. W.G. pressure in the air supply. Consequently, the design of the combustion chamber for pulverised fuel firing has been revolutionised, since only a few burners are required for even the largest setting, which also can now be placed at the front operating in a horizontal direction instead of downwards from the top. As a result the over-all height of the combustion chamber is much reduced, while the arrangement also includes three "Murray-USco" steel tube water-cooled walls, air heaters, and part of the hot air is passed through "Raymond" pulverisers. Also all the air, both primary and secondary, now goes through the burner itself, whilst if pre-drying of the coal is necessary, under these conditions the "Rosencrantz" vertical steam-heated mechanically continuous rabble arm dryer is employed.

With regard to air heaters, it may be stated, also as shown by a model, the well-known "USco" multiple plate heater has now been re-designed to allow of a cheaper method of construction, but retaining the method of electric welding of joints throughout so as to eliminate leakage of air and gas. Further, there is on view a model of the now well-known "Underfeed Type L" stoker with swinging louvre links, operating with "Detrick-USco" suspended arches to any width, whilst at the same time giving absolutely uniform air distribution under accurate control to every part of the grate surface, transversely and longitudinally, and eliminating all riddlings ejector mechanism, since the links all carry away their own riddlings. Single stokers on these lines over 30 feet wide are now under construction for the Deptford East Station of the London Power Company, Ltd., for operating boilers of 200,000 lb. evaporation per hour, being the largest travelling grate stokers ever constructed.

Filter Bottoms.

Recently, at a large water filtration plant, it was found that one of the filters was giving trouble, the distribution of wash water being uneven. A number of hard spots were also developing, and there was some inversion of the sand and gravel. In checking over the filter material in this unit it was found that there was but 9 inches of gravel, of which only 2 inches was greater than $\frac{1}{2}$ inch diameter. The engineer made some investigations into the possibility of getting a supply of suitable gravel locally and found that it would be both difficult and expensive to do so, and he decided to see what could be done with broken limestone.

Before he finally decided to increase the gravel depth by the use of limestone in the filter bottom, he visited a big plant in which crushed limestone had been used for

about 30 years in the filtration of sewage, and he found that not only had it stood up to its work well, but that there had been no need to renew the material since it was first installed. As a result of his visit he decided to use limestone for water filtration, and he decided, further, to use dolomitic limestone of $2\frac{1}{2}$ inch size.

One filter was reconstructed for experimental work, and as a beginning 4 inches of $2\frac{1}{2}$ inch hard dolomitic limestone was used on the filter bottom. On this stone was placed the original gravel and then the filter sand. The filter, thus reconstructed, has now been in operation for eighteen months and has so far given no trouble with gravel inversion. It has developed no hard spots and shows a very even distribution of wash water. No examination of the stone in the filter bottom has yet been made, but it has been decided to open it up next spring and afterwards to take samples of the stone every twelve months to compare it in every way with the original stone.

In regard to the above it may be mentioned that most engineers have a preference, for filter work, for irregular crushed stone rather than rounded and water-worn gravel. The irregular particles become bedded together and after a little while become so anchored to each other that in many cases examination has shown that there has been no movement whatsoever since the filter was put in commission. It appears that in one large filter it was considered, after a thorough overhauling, to increase the depth of the filter bed, and as gravel was not obtainable in the vicinity, a 6 inch bed of crushed sandstone was laid down and gave an excellent distribution of the wash water.

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to
the Secretary

Sewage Gas.

It is interesting to note that in many sewage disposal works the gases produced by the digestion of the sewage sludge are being collected and utilised, chiefly for sludge heating. This not only allows of a greater economy in construction of the plant by cutting the digestion capacity in half, but it also does away with the odour nuisance. So far as the writer is aware, there is only Imhoff plant in which the sludge is being heated, and in all the others the separate digestion process is being employed. At one big plant, which is not yet completed, the writer is informed that the gases will be used as a source of heat in glass-covered sludge beds to facilitate drying during the winter months, whilst at other period of the year it will be used for burning screenings. In the past, the gas has been successfully used in ordinary gas heaters for warming buildings. It has been found, however, that not only does it carry a quantity of dust which deposits itself in the pipes, but that it can be used to far greater advantage by being burned on a large scale for high capacity sludge driers.

The use of this sewage gas for power production has been developed considerably of late and there are some very large plants now at work on gas of this kind. In a number of stations the whole of the sewage is pumped, and all other mechanical work done by power obtained from sewage gas. The disposal of activated sludge by digestion has also opened up another field for the use of this gas in driving air compressors. This is already being done in many plants, and in one in particular the gas obtained from the digestion of raw and activated sludge amounts to upwards of 30,000 cu. ft. per day, and the whole of this is used in ordinary 4-stroke engines, working in 7-hour shifts, driving the air compressing plant.

Obviously when dealing with such a material as sewage gas, which, by the way, must not be confounded with sewer gas, particular care has to be taken in the design of the gas domes. In general, high seal domes are desirable, because they prevent the loss of gas if for any reason the liquid level of the digestion tank is lowered, and they also lessen the chances of gas line clogging through scum rising in the dome. In Germany it is the usual practice to use scum racks to clear the scum from the sewage, so as to prevent clogging, but it may be stated, without fear of contradiction, that experience elsewhere has shown that these racks clog quickly, require frequent cleaning and are consequently too costly in use. The best method of dealing with the scum which is such a trouble in gas collecting work, is to drain it off through a pipe running to the dome. Washing away the scum by spraying water through nozzles adjacent to the gas lines has been tried, with varying success. The methods mentioned all have advantages and all have, equally, some disadvantages, and it seems that further research work might with advantage be given to this side of sewage disposal work.

At the 80th ordinary general meeting of the Peninsular and Oriental Steam Navigation Company, to be held at the company's offices, on December 11 at 11 a.m., the Directors, after providing for the usual dividend at the rate of 5 per cent. per annum on the preferred stock (less income tax), will recommend a dividend on the deferred stock of 7 per cent. (free of income tax) for the six months ended September 30, 1929, making, with the dividend of 5 per cent. paid in May, a total distribution on the deferred stock of 12 per cent. for the year. Warrants will be payable on December 16.

British Consular Report

V—EGYPT.

(Continued from page 495.)

Banking.

In spite of a certain restriction of credit in some directions banking operations may be said to have extended steadily on a sound basis during the year under review, and practically in all cases a satisfactory year was recorded.

The Banque Misr has since its inception received hearty support from the Egyptian Government, as, for example, the transfer to its care of the accounts of the municipalities and local commissions and of private trusts, the handling of Government advances on cotton loans and loans to co-operative societies, and the exemption from customs dues on imports of materials required for the use of its subsidiary companies.

The development of this bank since its formation in 1920 has been remarkable when it is considered that its capital on formation in 1920 was only £E80,000, whereas to-day its capital is £E1,000,000 fully paid up, and deposits amount to £E5,500,000. In 1927 the bank paid a dividend of 8½ per cent. During 1928 the managing director visited the United Kingdom, Belgium and Germany with the object of studying industries which his bank intended to establish in Egypt. The chief results of this visit were the establishment of the Misr Spinning and Weaving Company and the Misr Press. While the order for machinery for the latter industry, amounting to some £40,000, was obtained by a German firm, German, Belgian and British manufacturers share the important orders for the former, viz.: Power house Belgian firm; Diesel engines, German firm; Spinning and weaving machinery British firm. Thirty students were sent to Belgium to train as spinning and weaving operators, etc., Belgian mechanics were engaged for the assembling of the plant. The Misr Company has already been successful in obtaining Egyptian Government orders for medicated cotton wool.

New Egyptian Tariff.

The three international experts engaged to assist the Egyptian Government in the preparation of a new Egyptian tariff commenced their labour at the end of 1927. The aim of the new tariff is (i) to increase the revenue from customs duties (it is understood that, roughly, it is hoped to double it); and (ii) to afford a reasonable measure of protection to existing and potential Egyptian industries. It is understood that the new tariff is to be based on the "specific" as distinct from the *ad valorem* system at present in force, and that the schedule will be based on the system of classification drawn up at Geneva, modified to suit local requirements. The schedule is expected to be a single rate and not a maximum and minimum rate schedule which was at one time expected in some quarters.

No information is as yet available regarding the individual duties contemplated under the new tariff, nor as to the method of assessment to be followed. It is believed, however, that the Egyptian authorities and the experts realise the desirability of keeping the whole tariff and its machinery as simple as possible, and that, as a general rule, assessments will be on weight per unit. There will, it is understood, be no goods entirely duty free, but reductions may be expected in regard to such commodities as fertilisers in order to foster agriculture. It is unlikely that any higher duties will be placed on articles of first necessity, in order not to increase the cost of living for the working classes. On the other hand, higher duties will doubtless be imposed on articles of luxury and on such commodities as are manufactured in the country. It is as yet not known when the draft schedule of duties will be published, but the authorities have stated that ample time

will be given for their consideration by interested parties before their introduction.

Exports of Egyptian Produce.

Exports of Egyptian onions amounted to 201,611,418 kilogrammes, valued at £E1,216,444, compared with 167,901,525 kilogrammes worth £E863,497 in 1927, but in spite of these satisfactory figures some complications were experienced in the trade owing to the crop having come forward too early. The United Kingdom remained the chief buyer while Italy, Germany, France and the United States were also important consumers.

Exports of Egyptian eggs slightly increased, the figures for the year under review being 127,066 kilogrammes in volume and £E288,081 in value, compared with 109,951 kilogrammes and £E242,965 respectively in 1927. Almost the whole of this export was taken by the United Kingdom. In spite of protests from many quarters, the Egyptian Government persisted in maintaining the restriction of seasonal export to 45 million eggs, which had been fixed in 1927 following the earlier petitions for the extension, or removal, of the 1926 restriction (fixed at 30 million eggs).

Exports of Egyptian rice amounted to 79,566,469 kilogrammes valued at £E1,023,053, the largest quantities going to Syria and Greece. These export figures represent an increase of some 25 per cent., whereas imports, mostly from British India, amountd to a value of £E192,038, or a decrease of £E16,925 in value compared with 1927. It should be observed that cultivation of rice in Egypt depends very largely upon what is known as the false rise of the Nile which precedes the full flood. If the false rise arrives at a normal time rice cultivation is allowed over a limited area, which is increased in accordance with the continuation of the rise. If the rise is late then the cultivation of rice is only permitted over about one-eighth of the normal area. It is anticipated that one of the results to be obtained by the execution of the Gebel-el-Aulia project will be that apart from the additional territory which it will be possible to devote to cotton cultivation, water will be available for a guaranteed area annually of 200,000 feddans of rice, in other words, as much again as the average cultivation over the last nine years. Up to the present only 48,000 feddans of rice can actually be guaranteed by the authorities, but the decision of the Egyptian Government to increase the area allowed for rice cultivation has caused great satisfaction.

British Participation in Trade.

Trade with the United Kingdom for the year showed a balance in Egypt's favour of some £E10,200,000, an increase of over £E3,000,000 as compared with the previous year. During 1928 Egypt imported from the United Kingdom goods to the value of £E11,326,000, or rather more than £E1,100,000 less than in 1927, while she exported to the United Kingdom produce valued at £E21,532,000, or some £E2,394,000 more than in 1927. These figures do not support the contention advanced in some quarters that from the Egyptian point of view the United Kingdom market is of diminishing importance.

The decline in the value of British exports to Egypt is mainly accounted for by the decrease in the exports of cotton piece-goods. There was, however, a falling off in regard to a number of other commodities. In some cases, e.g., rolling stock, this decrease was due to smaller purchases in general, but in many cases it would seem that competing goods were purchased, either because the market wanted cheaper goods or because competitors were at greater pains to secure orders.

The development of the Egyptian market during the past year has once again demonstrated the necessity—the urgency of which cannot be too strongly stressed—for British firms to exercise the greatest care in the selection of their local representative. Intelligent and

plausible visitors from Egypt should not be engaged without careful inquiry, and still less should they be permitted to replace older connexions, until the British firm has satisfied itself that the stagnation in orders received is due to slackness on the part of the older connexion, and not, perhaps, to his care of the firm's interests by refusing to book orders from buyers whose probable insolvency with consequent forced sale of stock would only result in spoiling the market.

The success of competitors must also in no small measure be ascribed to the greater trouble they take to investigate the market. The numbers of overseas business men who visit Egypt increase every year. Such men study the market together with their local representative and themselves obtain a valuable first-hand knowledge of its requirements. It must be remembered that a local representative, be he never so able a writer, cannot convey by written report that understanding of personalities and the "atmosphere" of the market, on a proper appreciation of which an intelligent "backing-up" by the home firm may very largely depend. This "backing-up" is a very integral part of good salesmanship and complaints are unfortunately not uncommon that there are still British firms who expect agents to sell their higher priced products on a very competitive market such as Egypt has become, without the inducements and assistance that their foreign competitors readily accord their agents. It would be invidious further to labour the point, but a failure in duty to refrain from reference to it. That "British" stands for high standard both in quality and in business methods is still traditional in Egypt. In these highly competitive days no article can be so good that "it sells itself," but the deservedly high reputation that British goods and business methods have won for themselves is a national asset from which the individual shipper derives a very direct benefit, and which should be jealously guarded by each individual in the interests of all.

Shipping.

The most noticeable features of the shipping situation during the year under review were perhaps the decrease in volume of cargo shipped in British and American bottoms, viz., 35,717 tons and 7,309 tons respectively, and the increase in quantities of merchandise exported in vessels of most other countries; also the appearance of Russia as a serious competitor in the shipping business. Statistics of shipping transiting the Suez Canal during the year under review show that total transits numbered 6,077 of a total registered tonnage of 24,940,936, as compared with 5,442 and 22,660,164 respectively during 1927. The British share of this shipping amounted to 3,315 transits and 15,810,427 registered tonnage, representing an increase respectively compared with 1927 of 335 transits and 1,140,408 registered tons. Whilst the number of transits under most foreign flags slightly increased, no particular countries, apart from Great Britain, can point to any marked increase in traffic through the Suez Canal.

During the year reports were current that the Egyptian Government were contemplating the acquisition of two or three vessels for the purpose of conveying to Egypt Government purchases abroad, notably coal. The matter is understood to be still under consideration, but in some quarters it is held that the experiences of some countries in regard to State ownership are not likely to encourage the Egyptian State in a similar venture. The question of the creation of an Egyptian mercantile marine is also

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

understood to be under consideration by the Banque Misr, who are believed to have put before the Government a proposal for the formation of an Egyptian shipping company with Government participation. The suggested company would carry the Government purchases referred to above and general merchandise, and would also handle the pilgrimage traffic.

Reference has been made in previous reports to the Petroleum Harbour at Suez, but the expected official opening of the new harbour has not yet been announced. The decision of the Egyptian Government to proceed with the execution of the programme for the improvement of Alexandria harbour, to which reference has been made under the heading of the State Budget for 1929-30, will be welcomed by shipping companies, industrials and all concerned with the goods and passenger traffic in Egypt's principal port. The work already in hand in connexion with the development of the Port Est harbour should also go far to solve the difficulties hitherto experienced in providing water space for recreation purposes and, consequently, liberate more water frontage in the main harbour for commercial purposes.

Company Meeting.

SOUTH INDIAN RAILWAY.

Government of India and New Construction.

The ordinary general meeting of the South Indian Railway Company, Ltd., was held on November 1 at 91, Petty France, Westminster, London, S.W.

Mr. Alex. Muirhead, C.I.E. (chairman and managing director), said that during the year new construction proceeded energetically. He was sorry to say that the rate of progress in carrying out the construction programme was in prospect of being curtailed by reason of the Government of India reducing the amounts available for this purpose. The company had already been advised of large reductions in the grant for 1930-31. If the rate of progress was curtailed, a very efficient and experienced construction staff, which had been organised with much labour for the purpose, would have to be disbanded.

Of the two questions mentioned at the last meeting as being outstanding between the company and the Secretary of State, the first—namely, the method of ascertaining the interest payable on the Secretary of State's capital—had been submitted to an arbitrator. As regarded the second question—namely, the method by which further capital requirements should be provided—the board considered the terms offered by the Secretary of State suitable and had accepted them.

The electrification of the Madras suburban section from Madras Beach to Tambaram was being proceeded with. The company's progressive policy was being maintained in the improvement of facilities and amenities provided for the travelling public, and particularly for third-class passengers.

The revenue earnings amounted to just over 547½ lakhs, the result being a net decrease of nearly 12½ lakhs. This decrease was entirely due to the general strike. The net result of the company's operations was an increase of Rs.16,42,565 in net earnings, and the board were again recommending a final distribution for 1929 of the same amount as for 1928, the total distribution for the year being 8 per cent., less tax.

Compared with the corresponding period in the previous year, the gross earnings in the first half of the current year showed an increase of nearly 36 lakhs of rupees, the working expenses 17½ lakhs, the net earnings 18½ lakhs, and the share of surplus profits Rs.35,500.

The report was unanimously adopted.

NEW OIL FOR THE EMPIRE.

A new Empire industry, the production of tung-oil, is to be encouraged by the Empire Marketing Board, which has approved a grant to the Royal Botanic Gardens, Kew, for the distribution of tung-oil seeds to various parts of the Empire. A further grant has been made to the Paint and Varnish Research Association for research into the technical properties of the oil. The Imperial Institute elected a tung-oil sub-committee some little time ago, and it is this committee's recommendations which have led to the Empire Marketing Board's action.

Tung-oil is an essential constituent of certain types of varnish. It was used during the War in special water-resistant varnishes which were needed for aeroplane work. Until recently the world's wants were almost entirely supplied by China, but, after the War, tung-oil production was successfully started in America. Supplies from China are fluctuating and of irregular quality, and are not likely to expand fast enough to meet the increasing demand.

Seeds have been distributed by Kew to various Empire countries, and promising trials are now in hand in a number of Dominions and Colonies. Areas concerned include India, Ceylon, Assam, Cyprus, and Palestine. The Empire Marketing Board grant will provide for the further distribution of seed from Kew, and for the purchase of the tung fruits for experiments in this country. The second grant will provide for the appointment of a research assistant who will conduct tests on the technical properties of Empire-grown tung-oil, and other problems such as the best methods of extraction and suggested new uses for the oil. Experiments connected with the use of the residue as a feeding cake will also be undertaken.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date October 31:—

Currants.

During the first half of the period under review the market showed no more life than was displayed towards the close of the previous month. It had been hoped that the further arrivals would provide the necessary impetus to business, but evidently the disappointment felt at the out-turn of the first supplies was responsible for the absence of demand—so unusual at this season—and it would appear that some time must elapse before trade settles down and adjusts its ideas to existing conditions. This state of affairs continued, and business remained on a very small scale almost up to the closing days, when, although more interest was shown, the trade did not gather that momentum which is generally experienced in October. A steadier demand prevailed for good medium qualities, prices of which were fully maintained. The lower grades were difficult to move and concessions were granted by holders, in spite of which there was very little response from buyers. Vostizza prices have given way owing to pressure from Greece, though they show some improvement on the lowest rates recorded. Latest sales were:—Pyrgos, 38s. 6d. to 39s.; Amalias, 41s. to 42s.; Patras, 42s. to 44s. 6d.; Gulf, 44s. to 47s.; Gulf, shade dried, 54s. to 58s.; Vostizza, 54s. to 58s.; Vostizza, fine, 60s. to 64s.; Vostizza, choice, 66s. to 70s.; Vostizza, smalls, 52s. to 57s. The market has been well catered for, as the s.s. Algerian, Bosnia, Sitra, Oporto, Brescia, Lesbian, and Bantria all arrived during the month.

Sultanas.

Smyrna.—The outstanding feature of the market has been the pronounced indifference of buyers, who continue to take no interest in the article, and with the exception of fine coloury parcels at 60s. to 65s., other grades are practically unsaleable at the moment. Prices for rain-damaged qualities have further declined in sympathy with lower values from abroad. Business was done in rain-damaged at 21s. 6d. to 22s. 6d. c.i.f. Latest prices are 19s. 6d. to 21s. 6d. c.i.f., but no business reported. The latest estimates of the damage vary from 25,000 to 33,000 tons, and the total destroyed is given as 10,000 tons. Notwithstanding the insignificant quantities that have come to hand in comparison with arrivals of previous seasons, sales have been negligible, with the exception of any fruit of outstanding merit. The few parcels disposed of were good qualities 50s., fine 60s. to 64s., ordinary grades neglected.

Cretans.—Coloury fruit well competed for at 70s. to 90s., but other grades were difficult to sell.

Greek fruit met with a ready sale and was quickly disposed of—good qualities at 60s. to 68s., fine 70s. to 75s.

Figs.

The market has shown a persistently good undertone, and although a portion of the fruit has landed in tender condition it has met with an active demand at prices which have continued to advance, latest sales being the best of the year. Business concluded as follows:—Large boxes, 65s. to 90s.; small boxes, 80s. to 90s.; Locoums, 106s. to 125s.; fancy packing, 145s.; genuine bags, 40s. to 41s.; choicest bags, 44s. to 45s.

The Calcutta Electric Supply Corporation has decided to construct a tunnel under the River Hooghly for the accommodation of cables and electric mains supplying the east bank of the river.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended October 26 :—

Grain.—The continued depression on consuming grain markets prevented any fresh sales from being effected this week, and, as old sales for October shipment have all been fulfilled already, no movement worth mentioning was noticeable. Arrivals of barley were very restricted, owing to low prices ruling abroad, and also to the fact that the peasants are busily engaged on the fields with the maize; hence any efforts on the part of shippers to combine business on any improvement of short duration which may have occurred during the week was frustrated by the unreasonable demands by grain holders. A few parcels of new maize have been shipped, mainly for Rotterdam, on ships ready to sail, and it is understood that several further sales of that commodity have been made for the same destination, as also for U.K. ports, shipment November/December. Owing to the recent good rains a large number of lighters mostly containing wheat, and a few with maize, have been released, and their arrival at shipping ports should have a stimulating effect on the market. Stocks of barley are plentiful at all the shipping centres, but so long as the present state of affairs continues on markets abroad there is not much chance of any appreciable shipments being effected, excepting those in fulfilment of old sales for November. Owing to the general stagnation in grain markets, chartering for the Danube has come to a standstill, and charterers are now busy endeavouring to clear the tonnage for which they are already committed. Spot sales, however, have been maintained at about 15s. 6d. to 15s. 9d. for Continental destinations for any cargo that has come forward, and a few parcels have been booked for U.K. destinations at 17s. 6d. to 18s. At Constantza the position is equally unsatisfactory, as no cargo is coming forward for shipment and chartered tonnage is accumulating.

Timber.—Although a livelier tone has prevailed in general, in view of the approach of the time when the possible close of navigation may be looked for, no marked alteration in freights has yet occurred owing to arrivals of timber from the interior still being comparatively small. The main inquiry continues at present to be for Italy and Syrian ports, for which freights tends to become firmer, but for other Mediterranean destinations rates are on about the same level as those ruling last week. With regard to the Continent, tonnage is at present more easily obtainable on account of the falling off in activity in grain shipments, and it is understood that space has been offered for Rotterdam at £11 10s. per wagon without being accepted by shippers.

Weather and Crops.—Light intermittent rains fell during the early part of the week in the north and west, and subsequently in the southern districts, from some parts of which as much as 2 inches were reported on Thursday, so that there should now be sufficient moisture in nearly all parts to enable the delayed autumn field work to be carried on actively. Reports just to hand from a few districts in Bessarabia, however, still complain of lack of rain. In Galatz the first rain for a considerable time began on the morning of Thursday and continued with occasional interruptions for about 24 hours. The temperature has been very mild and without the considerable diurnal variations usual here, especially at this season. In the report of the Ministry of Agriculture of October 20 it is stated that "the last valuation in the course of September of the production of maize, made before the termination of the gathering, shows a total crop of 6,168,510 tons, an average yield of 12.9 quintals per hectare. The previous valuation was 6,384,040 tons, an average of 13.3 quintals." This appears to be a belated and non-committal protest against the rather pessimistic estimate of 4,810,000 tons, published at the end of September under the name of the General Director of the Union of Chambers of Agriculture and which is thought to be much too low, the Ministry's figure of just over 6,000,000 tons being considered more probable. As the home consumption is generally reckoned to be a maximum of 3,600,000 tons, the exportable surplus should be about 2,400,000 tons.

Sulina Bar.—The depth of 24 feet, passage 23 feet, has been maintained, and the general conditions continue to be normal. The water in the river is clear and the speed of the current slow, about one mile an hour. **River Depth.**—The last reports received by the pilot office here show a minimum depth of water in the navigable channel of 22 ft. 6 in. at the 89th milepost.

Constantza.—This week about 9,000 tons of grain arrived from the interior, and nearly 14,000 tons were exported, all going to Hamburg except a few hundred tons shipped to Mediterranean ports. Ten vessels loaded over 31,000 tons petroleum products, and four took oil fuel for bunkers.

Bulgarian Report.

Bourgas, October 10.—Business continued to be active, but owing to the accumulation of spot tonnage, shippers are offering only 10s. for Antwerp and Rotterdam, against the 11s. recently done, but so far without result. To Mediterranean destinations about 3,000/5,000 tons of beans and maize are being loaded. Boisterous weather and intermittent heavy falls of rain were experienced from last Saturday till Tuesday afternoon, but it has been fine and warm the last four days. The rains enabled ploughing and autumn sowing to be carried on satisfactorily.

The traffic receipts of the Suez Canal Company from October 5 to 11 amounted to 23,100,000 francs.

Motor cars in Roumania now number 24,000, or about double the number registered at the beginning of 1928.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 30 :—

Egyptian Futures.

Sakel Contract.—Active trading has characterised the majority of sessions since our last report, and evidence of broadening interest in both trade and speculative quarters has been noticeable. Unfortunately, the unsettling effect of conditions in outside markets has reacted on values, although not to the extent that one would have anticipated, the decline on the week amounting to 20 to 31 points and unchanged to 16 points for distant positions. Apart from to-day, when prices in Alexandria reacted about $\frac{1}{2}$ dollar from the earlier low level, the overseas market has sent consistently poor reports and the anxiety of holders to market part of their cotton is reflected in the very tempting basis at which shippers are making offers. Whilst there is nothing definitely "bullish" in the situation, it rather appears as if prices have been unduly depressed; locally the persistent decline has encouraged "the building up" of rather a weak short interest, and at the first sign of a turn round some active covering might readily be witnessed. In addition, a large potential demand appears to be waiting to be filled, Sakel prices at present prices are generally accepted as being reasonable, and, as customary in a falling market, the majority of consumers have been awaiting a lead; any upward swing would probably enlist a substantial following. The technical position of the market at the moment thus rather encourages the opinion that a sharp reaction may occur, and, with this in view, we are inclined to recommend conservative purchases.

Upper Contract.—Increased activity has been shown in this market during the past week, both trade and speculative interest showing more disposition to enter into commitments than for some time past. During the earlier days selling by spot houses further reduced our premium over the American contract, with the result that the January/January options in the respective markets at the time of writing are running at approximately 100 points. In view of the fact that the basis at the other side is inclined to harden and spinners are beginning to operate more freely, we consider the market has worked down to a level from which it would quickly react should outside conditions indicate returning confidence.

Egyptian Spot.

Sagging markets all round have not proved encouraging to would-be buyers of actual cotton. The decline has been altogether too rapid and the situation is still fraught with uncertainty. Nevertheless, a fair business has been transacted in spot cotton, on the whole, and

THE LIVERPOOL COTTON EXCHANGE.

Notes of the Week.

The Wafd's Election Manifesto.

Special interest attaches to the election manifesto of the Wafd, which is generally expected once more to secure an overwhelming majority at an Egyptian General Election. Until last year it was inevitable that there should be little love lost between the Wafd and Great Britain. In the eyes of the Egyptian party the British were the villains of the piece, and had to be fought tooth and nail in the cause of independence; to Great Britain the Wafd appeared unreasonable and unreasoning, as the question of independence was manifestly a matter for negotiation, with good will on both sides. During the last year circumstances have compelled the Wafd to look at things from a different angle, and an election manifesto should lend itself to give the first indication of any tendency on the part of the Wafd to adopt a new political orientation. From this point of view the Manifesto—to judge from a telegraphic summary—is by no means disappointing. It contains the inevitable attack on political opponents, and talks of the necessity of protecting the Constitution against violation, but it accords recognition to the principle laid down for the first time by Mahmoud Pasha's Government that projects of internal development and social schemes belong for Egypt to the forefront of all legislation. On the subject of the proposed treaty, to which it refers as a serious question to be placed before Parliament, which will leave a great mark on the country's future, the Manifesto declares that the Wafd has always sincerely desired a friendly agreement with Great Britain, and continues: "In view of the amiable and conciliatory spirit which prompted Mr. Henderson's proposals, the Wafd has firmly decided to seize this opportunity to attain a solid and honest *entente* between the countries. It is certain that the atmosphere of friendliness and confidence at present marking Anglo-Egyptian relations will help successfully to attain this end." The wording need not be examined too closely at this stage. It may foreshadow a determined attempt to haggle, which cannot enhance Egypt's prestige or promote her interests, or it may represent a tactful withdrawal from the former attitude that a treaty must embody what Egypt demanded, not what Great Britain was prepared to suggest. Under former Wafd régime in Egypt, as Mr. MacDonald discovered in his conversations with Zaghloul Pasha in

1924, was a country that could not be reasoned with. Subsequent events have shown that there is a considerable section of Egyptians as reasonable as they are patriotic. If the whole nation now places itself in line with that reasonable section, Great Britain will have no occasion to recognise party divisions among Egyptians, and will know only Egypt, bound to her by ties of alliance and friendship.

A Roumanian Landmark.

With the completion of the first year of office of Dr. Maniu's Government an occasion is provided in Roumania for stock-taking both on the part of the National-Peasant Party and of the country as a whole. Although the Liberal Opposition would not concur in the verdict, there seems no reason for the nation to be dissatisfied with the progress that it is making, having regard to the difficulties with which it has been confronted. It is all to the good to have a Cabinet in power strong enough to face uncomfortable facts, and inspiring sufficient confidence to encourage the people to bear heavy burdens in the belief that, by so doing, they can emerge from their troubles and count on the era of prosperity to which the resources of the country entitle them. Not the least difficulty to be overcome is the national impatience that a long period of crisis must engender. Roumania has been heartened by a rich harvest, and there is naturally a tendency to expect immediate relief from financial strain as a result. Unfortunately, however, the full effects of this year's satisfactory crops cannot be felt until next year. Only a quarter of the cereals available for export is likely to be exported this year, and the peasants will have to be content, that they are able to pay their rates and taxes and have all they need to live upon for the time being. It was only when the Maniu Government came into power prepared to lay bare the real position in Roumania that the actual extent of the lost ground to be made up was realised. For a Cabinet of less grit or of more adjustable honesty there would have been a strong temptation to gloss over some aspects of the situation; but, as far as is known, Dr. Maniu and his advisers have grappled courageously and successfully with all their economic problems; and, if they are able to retain office, they

should soon begin to see the fruits of their labours. It is satisfactory to note that an attempt is to be made to consolidate the alliance between the two sections of the National-Peasant coalition, on a more definite basis than has been possible hitherto.

The Turkish National Assembly.

A business-like tone characterised the speech of President Mustapha Kemal Pasha at the opening of the session of the Grand National Assembly on November 1—the third session of the third Parliament of the Republic. There was a noticeable absence of any note of challenge to suggest that Turkey still regarded herself as standing with her back to the wall against a hostile or unsympathetic world. The ideal of the Turks, the Ghazi declared, is to work to make the Republic a centre of wide progress within the national framework and that of civilisation: their policy is most essentially based on the idea of peace, and by seeking to settle by peaceful means all their problems of an international character they are adopting the procedure best suited to their mentality and interests. If there was a note of challenge at all in the speech, it was in connexion with a domestic matter. The Ghazi declared “with pleasure,” he said, that the services and sacrifices of the gendarmerie and police were worthy of the Assembly’s appreciation. As there has been some criticism—rather outspoken for Turkey—of police methods during the past year as a result of certain trials, it must be inferred that the President holds that excess of zeal on the part of the police is to be preferred to excess of caution. The administrative organisation of the country still had its gaps, and the Assembly was bidden to increase the number of communes having complete local administration. Certain vilayets had had budgetary irregularities disclosed; they were warned to establish their budgets on real and not imaginary figures or calculations. The Republic itself, on the other hand, had been able to face successfully a difficult year, thanks to the solidity of its finances and to the reality of a Budget scrupulously drawn up; the regulation of the foreign debt and the payment of railway bonds had been effected normally.

Turkey’s Economic Problem.

It was on economic matters that the Ghazi laid most stress; they occupied “all” the Government’s attention and were the special object of its activities. During the year, in spite of important losses in certain regions and unfavourable climatic conditions, the agricultural situation, compared with the dearth in previous seasons, was, generally speaking, approaching the normal. Agricultural institutes were to be created within a short space of time; agricultural co-operatives had been formed, and it was hoped to extend them all over the country. The President referred also to the Government’s policy of giving the peasant all the land that he could exploit with a view to increasing the national production. In the commercial world it was noted with satisfaction that commercial studies were now in public favour and afforded evidence of a new awakening in this sphere. Turkish companies founded during the year represented a total capital of fifteen million Turkish pounds, or one and a half million sterling. Among the economic laws to be submitted to the Assembly would be a Labour Law, a new Mining Law and a Forestry Law. Various financial measures would also come up for discussion, and the Assembly would have before it a Law for the organisation of a State Bank. This question has occupied the attention of the Government for more than two years, but recent developments are held to have brought the project nearer to realisation. During the past twelve months 445 kilometres of railway lines have been constructed, and next year’s programme provides for the construction of an additional five hundred. In spite, however, of the emphasis laid by the President on the need for economic development, Turkey continues to devote more than a third of her Budget to National Defence and Public Security. The Services, the Gen-

darmerie and the Police Force together account for £T83,000,000 out of a total expenditure of £E222,634,430. To the Public Debt the Exchequer allots £T33,000,000 and £T34,000,000 to Public Works. Education, on the other hand, has to be content with £T18,000,000, and Public Health with little more than half that amount. No country stands to benefit more than Turkey from general confidence in the reality of a world peace movement. At this critical period of her economic development she could with advantage devote to education and productive works many millions of pounds that are now spent on preparation for a war that is not likely to come.

Iraq and the League.

On November 6, 7, and 8 the British Government’s Report on Iraq was considered by the Permanent Mandates Commission at Geneva. Official intimation had previously been given to the Secretary-General of the League that Great Britain intended to recommend Iraq for League membership in 1932, and interesting economic and political reasons were supplied to the Mandates Commission by Mr. Bourdillon, formerly Counsellor to the Residency at Baghdad and the newly-appointed Colonial Secretary to Ceylon, in justification of such a recommendation. It was pointed out that in 1928 and 1929 there had been a notable increase in revenue, and that during the last year the sum spent on health, education, agriculture, irrigation, and public works was 151 lakhs—an increase of about fifty per cent. on the sum spent in 1922-23. Trade prospects, particularly relating to cotton, were good, and the desert between Iraq and the West had been so pacified as to have become a rapidly developing highway for passengers and commerce. In the political sphere also, Mr. Bourdillon stated, great progress had been made. In the second Parliament Iraqis had shown a much better understanding of their electoral duties and rights than in the first; political parties were developing naturally, on non-sectarian lines; during the past few years, in fact, Iraqis had shown themselves increasingly capable of governing without British advice. The Mandates Commission must have been impressed by all this show of progress, and though it is reported to have expressed surprise that the oil wealth of Iraq had been so little exploited, quite obviously this fact has nothing to do with the British Government’s case in recommending Iraq for League membership. The Mandatory Power has no control over the actions of a private Company such as the Iraq Petroleum Company, which will, one imagines, conduct its operations in and from Iraq solely on commercial lines. It is not to be expected, in short, that any objections will be taken at this juncture by the League to Great Britain’s proposed step in 1932 on behalf of Iraq.

The Independence in Syria.

It is even probable, indeed, that so far from obstructing the proposals in regard to Iraq for 1932, France, which, as Mandatory Power for Syria, had been thought in some quarters likely to offer objections to Iraq’s complete independence, has been stirred by this British resolve to attempt a more rapid and urgent solution of her admittedly more difficult Syrian problem. The future in Syria is still dark, nevertheless; there is still talk of appointing a King, but no move is made to such an appointment; and the indefinitely prorogued National Assembly at Damascus have little idea when they may be permitted to hear again their own voices in such auspicious surroundings. One thing is quite certain, however: that the policy of Great Britain towards Egypt and towards Iraq must inevitably have a quickening effect upon Syrian Nationalist opinion—more, on French opinion itself. Report has it that the highest French authorities in Syria itself are in favour of a solution on something like the lines laid down in Iraq. Syria has been, outwardly at any rate, very quiet since M. Henri Ponsot, High Commissioner, prorogued the National Assembly in August, 1928. This interval of quiet

progress may prove to have been exactly the preliminary which Syria (and France) required before tackling the problem afresh. One country cannot solve another country's problems, and wise Syrians will reflect on the immense differences between their own country and Iraq, which has been far easier to treat as an administrative whole. In other words, Syrians must not be content with merely saying that their case is a better one than that of Iraq, which has virtually been granted its desires, but so shape events as to make a solution by France a practical, as opposed to merely a desirable, step.

The British School of Archaeology in Iraq.

We confess to the most pleasurable surprise over the success of the meeting in London on November 8 to support the proposed British School of Archaeology in Iraq. A report of the meeting is contained elsewhere in this issue. Quite obviously the memory of Gertrude Bell, the discoveries made in recent years, and—perhaps above all—the enthusiastic work of the promoters of the scheme, have touched the public at a sensitive point. It was highly encouraging that the cultured tradition of Great Britain could be thus exemplified. The support of such men as the Archbishop of Canterbury and the Prime Minister (it is, incidentally, no secret that the ex-Prime Minister, Mr. Baldwin, whom we have heard quote Layard, was also enthusiastic in support of this British School) is not gained for merely sensational or pretty ends. No: the organisers of this School rightly feel that they are out upon a great and worthy task, one the accomplishment of which will not only keep fragrant the memory of Gertrude Bell, but will also enable Great Britain to secure and to retain a cultural authority in her gifted ward, namely, Iraq. The scheme is one which appeals alike to the imagination and to common sense, and we would remind readers to whom such an appeal will not be in vain that Sir Edgar Bonham-Carter, Hon. Secretary of this School, lives at 17, Radnor Place, W.2.

INDIAN NOTES.

A Fateful Week.

If we were in any doubt as to the correctness of the attitude which we have tried consistently to adopt towards Indian constitutional problems, and recent developments in particular, the events of the past week must have dispelled any such uncertainty. Inevitably, perhaps, the comments upon, and conclusions drawn from, a somewhat depressing chapter in British political history vary very greatly, both in substance and in tone, but upon two points all commentators and the public in general are, we think, agreed. Even if its difficulties have been for the time being increased by the events leading up to last week's debates the Statutory Commission itself has emerged from a trying ordeal with its prestige undimmed, its independence unchallenged and its moral authority, so far from diminished, actually enhanced. It is now able to proceed with renewed confidence and strength to the completion of a task, the real nature of which has hitherto been only dimly perceived by those without actual experience of the problems at first hand. The second, and perhaps even more welcome, advantage which has accrued from the events of the past ten days is that, as Sir John Simon rightly averred, one outcome is "to make everybody realise that the future constitutional progress of India is one of the most complicated as well as one of the most important questions in the whole world." We can only reiterate our hope and belief that the action of the Viceroy and the Government will achieve their sole end which, as we endeavoured to make clear last week, is neither to alter existing policy nor to anticipate the Commission's findings, but "to revive and foster that spirit of trust, co-operation and mutual understanding which is the essential condition to the attainment of the acknowledged goal." While it is as easy to overrate the significance of the immediate reaction in India to the Viceroy's declaration as to minimise the weight of the

undoubted support that Lord Irwin has already received the attitude of the Indian Princes, as indicated in several recent speeches by leading members of their Order, is clear and unequivocal and cannot lightly be set aside. Above all, for the first time, as a morning contemporary has pointedly remarked, "it may be predicted with confidence—and the thought should bring confidence to the Statutory Commission—that their Report has a real chance of being pondered and discussed in the country which it most concerns." How signal an advance that represents upon the position even a month ago only those who have followed Indian politics with sympathetic insight and knowledge of the inside working of the Nationalist movement can hope to appreciate.

Prosperous Hyderabad.

Both Hyderabad and its able and far-sighted Finance Member continue to have cause to be increasingly grateful for the contract system of budgeting introduced by Sir Akbar Hydari himself just over four years ago. The Budget Note for the current year may not be as spectacular as the previous statement, on account of the fact that it covers a period between the triennial contract term, but it must for all that, be the envy of any Finance Minister, and especially of Sir George Schuster, now on a brief visit to this country in connexion with the financial side of the Simon Commission's work. Perhaps the most gratifying feature of Sir Akbar's very clear exposition of the financial position of H.E.H. the Nizam's Government is that it is patent that the State's increasing prosperity is not due to any increase in the existing, or the imposition of fresh, demands on the people. Improved administration and the ever-rising yield from the State's investments—the reserve fund at the end of the current triennium will have risen to over Rs.15.13 crores—constitute the only, and a very satisfactory, explanation. The fact that large sums are saved from year to year by each department, and made available to meet expenditure in the ensuing period, shows, as Sir Akbar rightly remarks, "What a wide and sure field the system of departmental finance affords for expansion and development during the term of the contract." Nor is that all, for the unexpended surpluses, instead of being hoarded, are given back to the people in the form of large scale public utility works. And the last but not the least gratifying feature to the layman of the present Budget Note is the further evidence that it affords of the same close co-operation with the Government of India in the economic as well as in the social and political spheres, which has always distinguished the external policy of The Faithful Ally of the British Empire.

A LULL IN EGYPT.

The lull that is occurring in Egypt's political life is greatly to be welcomed, even if it has, almost inevitably, to be followed by an electioneering storm before December 21. Thanks to the prestige and sobering influence of Adly Pasha's Cabinet, an opportunity has been afforded to all sections of the Egyptian people for reflexion, from which the country stands to benefit. As far as the fate of the proposed Anglo-Egyptian Treaty is concerned, it is difficult to believe that Parliament can convincingly urge against the proffered terms defects which, if they had existed, must have called for immediate denunciation by any real patriot when the terms were first made known. That the Wafd should have vetoed for its followers all discussion of the proposed Treaty entailed the tacit acknowledgment that it had no serious fault to find with the document. For British observers, therefore, the main interest in Egyptian affairs during the next few weeks will attach to the manœuvring of the different parties, as affording evidence of their political capacity and grasp of the potentialities of the parliamentary system. The ban of silence regarding the proposed terms that the Wafd has sought to impose until Parliament meets is a clever device—essentially undemocratic in character, it will be noted—to counter any possible undermining of its former domination over the Egyptian electorate. As a move in the party game, the attempt to prevent public discussion of the Treaty is legitimate; but it remains to be seen whether the other parties will agree to play into the Wafd's hands by conforming to a rule laid down in the interest of political opponents. The situation would seem to be complicated by centrifugal tendencies in the non-Wafdist parties. There can be little doubt that the late Government would have been in a strong position, if it could have appealed to the electorate as a united coalition, claiming support on actual achievements during its tenure of office. It suffered, however, from lack of cohesion, one result of which, it may be inferred, is to be seen in the decision of the Liberal Constitutionalists not to take part as a party organisation in the general election. The decision is to be regretted; organised abstention from elections or from Parliament has been adopted in the East as a form of political protest, but its practical advantage to the party practising it remains problematical, and it must always be prejudicial to the interests of the country. Liberal Constitutionalists, however, may still be expected to stand as individual candidates, and to base their bid for the electorate's support on the proposed Treaty. If the idea prevailed in any quarter in Egypt that Mahmoud Pasha, when negotiating the Treaty, had been too malleable in British hands, it stands to be dispelled by *Al Ahram's* "revelations" regarding the negotiations between the Egyptian Prime Minister and the British Government. Far from omitting to press Egypt's point of view, the course of the conversations in London show conclusively that Mahmoud Pasha carried his insistence up to the limits of prudence, diplomatic usage, and common sense. The more, therefore, is it to be regretted that no party will go to the poll boldly

and confidently basing its appeal on the advantages that Egypt stands to gain from the Treaty.

It might be well, indeed, if all the candidates at the coming elections could stand as independents rather than as units in a party machine. Until definite programmes have been evolved, there is no real meaning in party labels, when once the demand for independence has been met by the Treaty; and Egypt has the right to require of her politicians that they should adjust themselves to the new circumstances. The future, there can be little doubt, lies with the party that grapples successfully with the great problem of economic development. Hostility to Great Britain cannot remain for all time the hall-mark of an Egyptian patriot, nor serve in the future as the end-all and be-all of a party programme. If the Wafd is unable to frame in time for the general election a comprehensive scheme for the future government of Egypt, it is to be hoped that individual candidates will come forward with clear statements of their own views, so as to facilitate an early re-grouping of parties in the new Parliament. No Wafdist may consider himself strong enough to dispense with the official backing of the party organisation, but it should be possible to satisfy the electors that he has ideas of his own without breaking any of the tenets that he has accepted as a member of the Wafd. No great powers of discrimination are to be looked for from the Egyptian electorate on the first occasion when an appeal is made solely to its intelligence; but no one will dispute the necessity of breaking away from the former habit of regarding the Egyptian people as incapable of responding to any appeal other than to their lowest passions. By common consent the *fallahin* are possessed of a brighter intellect than many European peasants, although they may be lower down, if possible, in the educational scale. With the spread of education, therefore, it is probable that the Egyptian people will be able in time to hold its own in the matter of political instinct with any of the nations in a relatively early stage of constitutionalism, and those of their compatriots who show a disposition to anticipate this stage in the national development will deserve well of the country.

Fortunately, there seems to be a growing sense in Egypt of the importance of concentrating upon the economic development of the country. The movement can count upon the keen support of King Fuad, and it will be a disappointment to many, if the fullest advantage is not taken of the present opportunity to bring together the wisest heads among the politicians of all shades in an attempt to formulate a programme calculated to meet the more pressing needs of the country. As an essentially agricultural community the Egyptians can hardly hope to escape the fate of similarly constituted countries, unless they are resolved to benefit by the experience of others and approach the agrarian question betimes with care and knowledge. It should prove of no small advantage to them that, before the question becomes acute, the country should possess an adequate supply of cheap power, which will facilitate the establishment of industries as a necessary safety-valve for the over-crowding of the land. The outlook in this direction, however, is not so unclouded that those who aspire to direct the destinies of the country can afford to postpone the serious consideration of the subject. There is certainly no time to waste in the way in which the past few years have been wasted in barren political disputes. A tentative start has been made by Mahmoud Pasha's Government; it requires to be expanded into a comprehensive agrarian policy which will seek to forestall needs that will become pressing in a few years' time. Egypt, it has to be remembered, differs from most countries in one important particular: her domestic quarrels, if they are allowed to become too intensified, are not exclusively her own affair. Owing to her geographical position, which she cannot change, disturbances which in any other country would have only local significance can in her case assume an aspect which makes them the immediate concern of foreign Powers.

'The Near and Middle East'

From Our Own Correspondents.

EGYPT.

Cairo, November 2.

Victoria College.

The High Commissioner and Lady Loraine paid a visit to Victoria College this week, the first since their arrival in Egypt. They were received by the Chairman of the Council, Sir Henry Barker, and Lady Barker, the Consul-General and Mrs. Heathcote-Smith, and the acting Headmaster, Mr. Scovil, and, after making a tour of inspection, were entertained to tea in the Library, where they met the members of the Council and the School Staff. Victoria College is going from success to success. Last year, for the first time in its history, it reached the three hundred-pupil mark, and this school-year that number has been exceeded by forty-eight. Among the pupils are not only English but also boys of seventeen other nationalities, including Abyssinians and Iraqis, a tribute to the good work the School is doing and to the wide area over which its reputation has now spread.

Mohamed Mahmoud Pasha.

The granting of the G.C.M.G. to the late Prime Minister, Mohamed Mahmoud Pasha, is no surprise. He fully deserves such recognition from the British Government, for the work he had done in promoting good relations between Great Britain and Egypt exceeded that done by Zivar Pasha and the late Sarwat Pasha, both of whom have been honoured with the same British decoration. Owing to the political controversy raging round his retirement the real value of the services rendered to the Anglo-Egyptian cause and the qualities displayed by him have not yet been properly appreciated. As with Lord Lloyd, it may be some years before the great part which he played will be seen in its proper light.

The Turkish Legation.

General Maheddine Pasha, the Turkish Minister, gave a very successful reception on the occasion of the anniversary of the foundation of the Turkish Republic. In spite of the fact that many have not returned from leave yet and the Government is still at Alexandria, it was very well attended. Among those present were many ex-Ministers, the Diplomatic Corps, and the leading Egyptian and European residents. In the morning the Minister received officially the congratulations of the European Governments and the foreign communities, and in the evening there was a fête in the Ezbekia Gardens, which attracted a very large crowd of all classes.

The Mixed Tribunals.

The Mixed Tribunals, both in Alexandria and Cairo, resumed work this last week, and one of their first acts

was to elect Presidents and Vice-Presidents for the ensuing judicial year. Mr. Hansson and Mr. Gator were confirmed as President and Vice-President respectively of the Court of Appeal; Mr. Peter, Vice-President, was elected President of the Cairo Court of First Instance in the place of Mr. Houriet, promoted to the new Counsellorship created in the Appellate Division, and Mr. Molestvoff was elected Vice-President. It is interesting to note that both Mr. Houriet and Mr. Peter are Swiss, and that M. Molestvoff is a Russian. None of these sits as representatives of his country but as a foreign judge, for, while Switzerland has never had any capitulatory treaties with Turkey or Egypt, Russia has lost the right she had before the War.

It is now confirmed that Mr. Hansson, who, incidentally, paid a most charming tribute at the inaugural sitting to the memory of Judge Herreros, who died this summer, will not be leaving, for the present at any rate, so that the vexed question of a successor will not come to add itself to the other complicated matters with which the British and Egyptian judicial authorities are having to deal. It appears that M. Hansson has been offered a position on The Hague International Courts which does not entail any regular attendance. In fact the members are summoned at long intervals, when, indeed, they are summoned at all. Consequently the acceptance of the post, since it does not entail the immediate execution of duties at another jurisdiction, does not clash with the regulations of the Mixed Tribunals which forbid its members to cumulate two judicial appointments. In effect, Mr. Hansson is being allowed to treat this appointment in the same manner as M. Nyholm, the Danish Counsellor, who was offered a similar post and resigned only when, some considerable time afterwards, he received his first summons to sit. It has been with considerable relief that the news has been received that Mr. Hansson will not be leaving as yet, for he has admirably filled the post of President, and it would be difficult to find anyone combining the same administrative and judicial capacity to take his place.

Lord Lloyd.

The British Chamber of Commerce, at the first meeting after the return of its members from their summer leave, passed a unanimous resolution expressing their sincere regret at the retirement of Lord Lloyd, who, they consider, during his tenure of office upheld in an exceptional manner and in extremely difficult circumstances the dignity and prestige of the British Empire, and, in addition to furthering the maintenance of good order and general prosperity of the country, unsparingly devoted himself to the advancement of British interests in Egypt in the domains of commerce and education. In particular, they placed on record their very real appreciation of Lord Lloyd's great and never failing interest in the work of the Chamber and the fact that, while he held the post of High Commissioner, very considerable expansion both in membership and useful activity was achieved—owing in great measure to his constant encouragement and untiring enthusiasm. The inspiration of his example, they

added, had far-reaching effects and would long be remembered by the members of the British community in Egypt. With this opinion the whole British community in Egypt will cordially agree.

The Elections.

The way is now clear for the elections and for the assembly of Parliament. The last legislation necessary was promulgated on Thursday and to-day, viz., the Royal Rescript putting into force once again the four provisions of the Constitution, referring to the liberty of the Press, the convocation of electors and the conditions under which the Constitution could be suspended, the operation of which was suspended in July last year, and the decree fixing the date for the elections. The general elections will be held on December 21, with balloting on the 29th for those constituencies where no candidate has obtained an absolute majority, and Parliament has been convoked for January 11. The Ittehadists, and, it is expected, the Nationalists, will take part in the elections, but there is not likely to be much of a contest, and the Wafd is assured of its majority. Following past precedent, therefore, in the New Year there will be a Wafdist Cabinet in office.

IRAQ.

Baghdad, October 24.

The High Commissioner.

Until the arrival of Sir Francis Humphrys, the duties of High Commissioner are being carried out by Major Hubert Young, Counsellor, who was recently appointed to that post on the transfer of Mr. Bourdillon to Colombo. Sir Francis Humphrys is expected to arrive in Baghdad early in December.

Government Plans.

The new Government under the Premiership of Sir Abdul

Muhsin Beg as Saadun announces its intention of drastically reducing the number of foreign officials, both British and Indian, now holding posts in Iraq. Contracts of such officials now nearing their termination are not to be renewed, and no fresh contracts are to be given. The Government is reported also to aim at the protection of Iraqi products by means of tariffs, and proposes to bring into force a heavy luxury tax, while reducing some existing taxes, such as judicial and land registration fees. The institution of a National Bank, and the immediate construction of two important reservoirs near Baghdad, are other aims of the new financial policy.

Baghdad Municipality.

The Baghdad Water Board has been enabled this year by its improved financial position to begin the building of new works which will provide pure filtered water for Karkh, the northern quarter of the city on the right bank of the Tigris, and for Kadhimain. This is an important development, for Kadhimain, with its perpetual influx of pilgrims from all over the Muslim world, has always been a danger point, and in times of epidemic a serious menace to the public health of the city. The provision of pure drinking water in these two congested areas should greatly benefit the general well-being and sanitation of Baghdad. It is hoped later in the year to extend the supply to Rissafa, the southern suburb on the right bank. The Water Board has made every effort to rely as much as possible on local products and workmanship, only sending outside Iraq for machinery, tanks, and special fittings.

Gertrude Bell Memorial.

The materials for the Gertrude Bell Memorial have now reached Baghdad, and its installation in the Museum has been begun under the supervision of the Government architect and the Director of Antiquities. All the thirty-four cases of bronze and stone work have been transported to Baghdad from London free of charge by the kindness of the firms and departments concerned.

Archæology.

The Eighth Joint Expedition of the British Museum and the Museum of the University of Pennsylvania has just passed through Baghdad on its way to Ur of the Chaldees, under the direction, as before, of Mr. Leonard Woolley. The expedition this year is on a larger scale, and is setting out full of hope of discovering traces of pre-deluge civilisation in the city of Abraham.

Air Transport.

The new Air Mail service between Holland and the Dutch East Indies was inaugurated on October 17. The flight from Amsterdam to Baghdad is scheduled to take three days.

Imperial Airways made a remarkably fast passage last week, when the air liner was delayed two days and left Baghdad, not as usual on Tuesday, but on Thursday morning. In spite of this, the mails it carried were delivered in London as usual on the Monday morning following.

ROUMANIA.

Bucharest, November 6.

Political Situation.

During this last fortnight before the reopening of Parliament, the Government is busy preparing the Budget for 1930. M. Madgearu, interim-Minister of Finance (owing to the resignation of M. Mihail Popovici), who is working hard in this connexion, appears to be very well satisfied with the general economic development. As a result of the stabilisation of the currency and the establishment of the country's finances on a sound basis, and also of the new economic legislation introduced by the present Government, the Budget will be genuinely balanced for the first time since the War. This statement is justified by the fact that there has been registered an increase of several million lei, in the course of the last three months, over the revenues of the last few years at the same period. There has been less difficulty in raising the revenues, thanks to the better harvest and also to the Minister of Finance's careful study of the possibilities of payment. Moreover, very energetic measures have been adopted to oblige the ratepayers of all classes (including business and industrial concerns) to pay their taxes, and also to prevent the evasions hitherto practised.

Civil Servants.

One of the greatest problems facing the Government at the present time is the restriction of the number of clerks in the Civil Service (so-called public functionaries) in accordance with the party programme, and with the new "Administration Law" passed during the last session of the present Parliament. This measure is considered imperative, in order that the Budget may be balanced, as the enormous number of people now employed in Government offices is far too heavy a burden on the Treasury. As there exists a statute which protects the rights of civil servants, the Government has decided to begin by pensioning all those who are over 57 years of age, or who have had 30 years of service. In this way it is expected that a considerable saving will be achieved. As was to be expected, the application of this measure has caused con-

siderable dissatisfaction and great perturbation in the ranks of the Civil Service, especially in view of the high cost of living at the present time.

The Government have put off the evil hour as long as they could, however, and are at last faced with the imperative necessity of taking this step to reduce expenditure. The employees and officials (unfortunately many of them the higher officials, who are authorities in their various departments) are being gradually dismissed, and it is intended to complete the reform by the end of the year.

From the political point of view the National-Peasant Government has another problem to solve, which is no less important than it is difficult. This is the application of the new Administration Law, for which a tremendous effort will be required, for this Law completely alters the old administrative organisation. It is, therefore, a very delicate and complicated matter, and it is costing the Ministries much hard work and thinking.

There are constant rumours of radical changes in the Cabinet, but it seems fairly certain that nothing of this kind will take place before the beginning of next year, at which date the new Administration Law comes into force, and the members of the present Cabinet representing the various provinces (Moldavia, Bessarabia, Transylvania, and Bukovina) will leave the Cabinet to take up their duties in their respective provinces. Then the places in the Cabinet will be divided equally between the two groups making up the Government—the Nationalist party and the Peasant Party. The President of the Council, M. Maniu, made a formal statement yesterday to the Parliamentary delegation to the effect that M. Mihalache, leader of the Peasant Party, and he were working together in complete and loyal agreement. Rumours have also been rife of a disagreement between the Queen and the Government owing to the manner in which the succession to the late M. Buzdugan in the Regency was handled. In proof of the complete agreement existing between her Majesty and the representatives of the Government two facts may be mentioned: (1) On October 27, the Queen's birthday, two of the most influential members of the Cabinet visited her Majesty at her autumn residence in Balchic on the Black Sea to offer her the good wishes of the Government on this occasion. (2) On the occasion of her Majesty's return to Bucharest yesterday all the members of the Cabinet and all the Under-Secretaries of State and higher officials and members of Parliament went to receive her at the station and to welcome her back to the capital.

The Earthquake.

On the morning of November 4, about 9 o'clock, there occurred the most violent earthquake that has been felt in Roumania for many years. It was accompanied by a loud rumbling noise and, according to report, its violence was but one degree below that registered as catastrophic. Huge pieces of masonry fell from the roof of the Roman Catholic Cathedral, killing a woman who was just leaving church, and some old houses fell, but on the whole there was little damage done, although in offices files and books were thrown to the floor and the noise and alarming swaying of the buildings caused panic in many cases. The earthquake lasted for about half a minute.

The weather has been unseasonably mild for the last fortnight, with occasional rain, but to-day there is a wintry chill in the air and the grey sky seems to promise snow before long.

The Pirot Convention regarding the regulation of frontier questions between Yugoslavia and Bulgaria came into force on November 5.

Jamal Hussein Effendi, representing the Supreme Muslim Council of Palestine, has arrived in London to present the Arab view of the recent disturbances to the British Government.

The Roumanian National-Peasant (Tsaranist) Party celebrated on November 10 the first anniversary of its accession to power under Dr. Maniu, the Prime Minister. The celebration in Bucharest took the form of a demonstration of partisans of the National-Peasant Party from the Vlasca and Ilfov districts.

CALCUTTA LETTER.*(From Our Own Correspondent.)**Calcutta, October 24.***Uneducated India.**

This week, following the publication of the Report of the Auxiliary Committee of the Indian Statutory Commission, the Hartog Committee, to give it its familiar name, we have naturally spent in thinking and talking about education in India. A London cablegram stated that the Report had been extensively reproduced by the morning newspapers, and a *Times* editorial was quoted, in which the opinion was expressed that it was an admirable document, but that it would have been still more effective, if the wings of the enthusiasm of its authors had been "ever so slightly clipped." I share that opinion. Sir Philip Hartog—I had half an hour's talk with him, one day early last month—was for a term Vice-Chancellor of Dacca University. That, of course, was a good preparation for one who was to guide the labours of the Auxiliary Committee, and to write its report; but to some extent it stopped his mouth. To speak the whole, bare truth about the universities in India, among other things, was to speak the truth about Dacca University, among other universities; about the young men who were undergraduates at Dacca in Sir Philip's own time, about their professors. That was a word easier to be said by one with no previous personal connexion with India and the Indians; easier also to be said by one with a harder heart than Sir Philip's.

Uneducable India.

Those familiar with the cast of mind of Professor Saintbury, a man with long and deep experience of the matter, will remember that his view is that some persons are educable and others not. What to my mind most impaired the work of the Hartog Committee, and subtracts most from the value of its report, is that no attempt was made, in the course of the inquiry, to ascertain if the educability of India is of high degree or of low degree; and, no attempt having been made to ascertain that, nothing is said of it in the report inevitably. The implication of the report, in every line, is that the peoples of India are as educable as any other people. That is not likely to be so, or they would have educated themselves, and have had, before the advent of the British, the same reputation for education that the Scots, say, made for themselves. The Scots, the evidence would seem to show, were a more educable people than the English, possibly only from having "tumbled" earlier to its value, and from having taken it more seriously. They had their opinion of what education is, and set to work to educate themselves. The peoples of Asia, the Arabs and Persians for instance, the men of Baghdad and Iraq generally in Harun ur-Rashid's time, in Nizam ul-Mulk's, had their idea of what education is; and the old scholastic books show how sound it was. The story of their numberless educational endowments testifies to their high opinion of the value of education.

The Asian Decline.

A change appears to have come, however. The day appears to have dawned when Asia's idea of educating itself was to get a few texts by heart. As no one could see any very great value in that—the man who is learning a long text by heart is not living a life that is being stirred and quickened by what he is doing—no one saw any harm in the effort to educate themselves being the effort of but a few. What should a peasant cultivator be doing, getting a text by heart? Would it not be enough for him, if his mother or his wife knew parts of it, and could recite the poem to his children? I believe it is the fact that, at the time of the British advent in India, most of the education that there was outside the temples was possessed by the women of the family. It may not have been much, but it was what it was; it was not merely a thing that could only pretend to be. The education of

my educated Indian acquaintances appears to be largely a pretence; to have been built up upon the aptitude to get texts by heart, and only to extend as far as such an aptitude can reach. What I should have wished is that the Lord Balfour of five or ten years ago should have been chairman of the Auxiliary Committee, and that he should have written its report. That document would then have been a very searching analysis.

A Searching Analysis.

A searching analysis by some one capable of it is wanted. It is wanted, not merely for the satisfaction of such a human interest as my own, but that the lines should be laid down upon which our effort to foster education in India should be made. If the educableness of India is of an unusually low degree, and that may be the case, then ambitious schemes of education are useless; then the assumption that the Indians are as educable as any other people is pernicious. That has been the assumption in the past; that appears to have been the assumption of Sir Philip Hartog and his colleagues. They will rightly make the point that "the Indian universities are not giving adequate attention to the proper adjustment of admission to graduation standards, but, on the contrary, are burdening themselves . . . with a very large number of students who have no chance of completing a university course successfully, and on whom expenditure of money intended for university education is wasted. There appears . . . to be no sign of any consistent and sustained resolve to grapple with this evil." They have rightly made that point; but the thing of real importance to do was to give an estimate of the number of this year's undergraduates who, in the Committee's opinion, were in their right place at college, and how many were not. Suppose there are 95,000 young men and women in the colleges to-day, if the fact is that 90,000 were rightly at college and 5,000 not rightly, it may be enough to say only a thing as general as the opinion quoted above; but if the fact is that only 5,000 were in their right place in college and 90,000 in a wrong place, there is no use in saying anything, unless you say something definite as that. The impression I have gathered myself is that hardly any of the students at a college in India are in their right place there; that the rest are there because it was assumed that the Indians generally are educable, which they are not. The country gave itself through too many centuries to learning things by heart, so that now all there is for anyone to work on is the getting-things-by-heart mind. A thing you can do very little with.

Facing the Facts.

The condition of betterment in India is, more even than elsewhere, that the facts should be faced. It is no use our everlastingly letting our wishes be father to our thoughts. In yesterday's newspaper Lady Simon is reported to have said at Caxton Hall: "I think India is going to see that she takes her place in the advance of civilisation, but I do not think it is the men who are going to do it, but the women." It is as easy to say a thing like that as to fry a herring, but what if it is not really a thought? What if the civilisation that Lady Simon had in her mind is a thing that India ought not to concern herself with? Think of the waste in all ill-directed effort. I have spent thirty years in India, watching Englishmen who could teach, trying to teach Indians who could not be taught, and Indians who could not teach trying to teach Indians who could not learn. All the time what India wanted was to be taught things she could learn, as to burn cheap coal or wood and not cow-dung cakes, but to manure the fields with the cow-dung; not to throw away the most nutritious part of her food; not to be superstitious and "suggest" day and night the conditions of disease; to keep to the old simple, inexpensive ways of living, and so on. But blundering people had talked big about universities, colleges, the advance of civilisation, and so on, and there is still no end to it.

General News.

There has been an unusual dearth of news this week. India, for a week at least, has been happy as those countries are said to be that have no history. Mr. Gandhi has gone to Mussoorie for a week's rest, and the other political leaders have all been silent. The Finance Member has been summoned to London, but that you will have heard as soon as we did here.

DOMINION STATUS AND THE INDIAN STATES.

The Maharaja of Alwar, addressing a meeting of members of all parties in a Committee Room of the House of Commons on November 6, said he cordially welcomed the announcement made by the publication of the exchange of letters between the Prime Minister and Sir John Simon that a conference or conferences were to be convened where British Indians would be invited to place their views before the Government of the day and similarly Indian Princes to put their points of view forward also.

Referring to the use of the words "Dominion status," which the Viceroy had explained to be the ultimate goal to be reached by British India through progressive, responsible self-government, the Maharaja said the Viceroy's pronouncement seemed to him a perfectly clear and genuine declaration. Responsible government, as declared by Mr. Montagu in 1917, was to be the method; surely Dominion status was the logical conclusion. Although it might require to be worked out possibly on a different footing, nevertheless it would place India in a position of equality with her sister Dominions.

"The question does not seem to me," he continued, "in doubt as to the goal, but the difficulties appear when the question is considered as regards time, as to when this Dominion status goal might be reached. My simple answer to that proposition is: "When, by mutual consent between the Government of British India and ourselves, our future relations are so adjusted that we can all unitedly work towards the achievement of this ideal. The conference that has been suggested will be a fundamental factor, I most devoutly hope, in the achievement of this method."

"As for the Indian States, if there is a will towards co-operation and the spontaneous recognition of our individual positions, matters can be adjusted in such a way that our future interests, without being jeopardised, can become not only a source of happiness and contentment to our country, but, I earnestly believe, a source of strength to our Empire, in which we are proud to be partners."

In conclusion, the Maharaja observed: "I emphatically state that a status which would place India on a similar footing of equality to that of her sister Dominions is a noble aspiration for our country, and an equally noble goal to be aimed at by those in whose hands lie the future progress and advancement of our country at the present moment. If the object of this storm which has been raging here recently in certain quarters is to clear the air, let me say with all humility that the manner in which it has been done in some places is not likely to remove misunderstandings but to cause disturbance in minds which will take a long time to settle down again. To me it has seemed as though it were a storm in a teacup, and I sincerely hope that it will clear away with no ill-effects and that we shall all advance forward—for stagnation is death—towards a goal where the British Government, British India, and the Indian States will work out in harmony and co-operation a destiny that will lead to a loyal and greater India that may be the strongest link in the strength of the future Empire."

In consequence of a change in the Imperial Airways time-table the homeward Indian air mail will in future leave Karachi on Tuesdays instead of on Sundays, and will be due in London on the following Tuesday afternoon. Correspondence should be delivered in Central London on Tuesday evening, and elsewhere on Wednesday morning.

THE STATUTORY COMMISSION AND THE PROVINCIAL ADMINISTRATIONS.

Bengal Government's Memorandum.

The reformed system of Government which was introduced in 1921 by the Government of India Act of 1919 has worked less satisfactorily in Bengal perhaps than in any one of the other provinces. The Bengal memorandum cannot, therefore, fail to be of exceptional interest. It takes the shape of a report on the working of the reformed constitution in the province from 1921 to 1927. It explains what the new system of government is, and how it has worked in practice. The Government of India Act prescribed certain tests and subjects of inquiry as being likely material for a decision on the success of the new constitution, and of the degree of progress made towards self-government. These tests and subjects of inquiry are: (a) the co-operation received from those on whom new opportunities of service have been conferred; (b) the extent to which it is found that confidence can be reposed in their sense of responsibility; (c) the working of the system of government; (d) the growth of education; and (e) the development of representative institutions. Applying these tests, the Government of Bengal find little to encourage them in their experience of the Reforms in the Province. They acknowledge the value of the co-operation which has been received from the members of different Ministries. But they point out that there has been more obstruction than co-operation, both within the Legislature and outside it. The Legislative Council has shown some sense of responsibility in relation to "transferred" subjects. It has, however, acted irresponsibly on many occasions in dealing with "reserved" subjects. Education has made but little progress. The electorate is largely illiterate and incompetent. Local self-governing institutions have not advanced except for the rapid development of Union Boards, mainly under official control and despite opposition by the Swarajists.

This is a gloomy picture and, as the Government recognise, if the inquiry were to stop at this point there would be only one possible answer to the question of whether Bengal has satisfied the tests of progress. But there is more to be said. The apparent failure and stagnation are but the symptoms or reflection of more vital factors which cut deeply into the political life of the province. The obstruction is but a tactical move in the furtherance of a policy which has a wider and larger objective than the mere operation of the constitution. It is also reasonable to argue that the form of the constitution itself foment a spirit of irresponsibility with regard to "reserved" subjects. Financial difficulties, both provincial and local, have made progress impossible; and education, which is one of the test subjects, has suffered from the general stringency. It may be concluded also, the Government of Bengal go on to say, that although the electorate has many defects, these are not such as can be pressed to the point of condemnation. The general conclusion at which the Government have arrived is that there is no positive ground for asserting that the province has definitely made progress towards self-government. "The most that can be said is that with less inadequate financial resources, and with a constitution which met with more general approval better results might have been obtained." But the proceedings in the Legislature and in the Corporation of Calcutta—where the Swarajists rule—indicate an absence of constructive and administrative ability among the popular representatives. It may also be reasonably urged that the misuse of talent to obstruct the working of the constitution is itself a proof of unfitness for responsibility.

The Government of Bengal have no illusions as to the serious character of the obstruction which has been practised. They regard the existence of the Swaraj party as a vital factor in the situation. It is, they say, a strong and well-organised party which declines to operate any constitution framed outside India, or by any one other

than Indians, unless it concedes complete self-determination in both provincial and central affairs. The party is strong enough to enable it successfully to obstruct the working of the Council; and it has a majority in the non-Muhammadan electorate from which it derives continuous support and encouragement. There is no ground for supposing that its policy will be other than one of permanent hostility to the Government so long as any trace of foreign control remains in the constitution. This hostility will find expression in general attacks on the constitution itself to the detriment of good government. Of recent years the Muhammadans have left the Swaraj party, but they have failed to organise a strong political party of their own. They will be, however, united in the demand for the maintenance of communal electorates and the recognition of communal claims in all branches of the administration. This fact cannot be ignored and the Government of Bengal (with two dissentients) take the view, therefore, that communal electorates must be retained for the present.

Such being the situation in the province, the Government of Bengal recommend, in the first place, that the new Government should be unitary and not dyarchical in form. They take the view that dyarchy has not been successful, and that it should be abandoned. They would establish a unitary Government with a Ministry controlling all subjects. To secure good government certain safeguards will be, in their opinion, necessary. Experience has shown that the Legislative Council has at times acted irresponsibly. And if the official block is reduced, and the distinction between "reserved" and "transferred" subjects abolished, then the constitution must provide a powerful brake to check rash and precipitate action by the Legislative Council. And if the Executive Government is to consist of a Ministry responsible to the Legislature, then it is desirable that the brake should be provided within the Legislature rather than that it should be solely in the hands of the Governor. The Government of Bengal consequently favour the creation of a Second Chamber, composed of the more prudent and conservative elements in the people.

If it be accepted that dyarchy must go, then there would appear to be, the Government of Bengal point out, the following main alternatives: (1) a return to autocracy or the system of government in vogue before 1921; (2) an advance to complete responsible government such as that outlined in the All-Parties Report; (3) a system of complete provincial autonomy such as that recommended by the Associated Chambers of Commerce; or (4) some kind of intermediate stage between the present dyarchical system and complete provincial autonomy. The Government of Bengal rule out the first alternative as being out of the question. Not only is it impracticable, but it would involve a breach of faith with India, seeing that it would be in contravention of the declared policy of Parliament. The second alternative is, they hold, entirely out of touch with reality. "In the existing state of communal feeling, and of education, the proposal to constitute a provincial Council solely on the basis of universal adult suffrage with one member for one hundred thousand of the population is one which must be considered to be outside practical politics at the present time." The Muhammadans would not trust to a single electorate; and the proposal ignores the enormous interests in the province of communities which are numerically very unimportant. The third alternative—complete provincial autonomy—is not, the Government of Bengal hold, suitable for Bengal in present conditions. A legislature with no nominated official members would be impossible; and safeguards are required in connexion with the administration of the police, the judiciary and jails. It is noted that the Associated Chambers recognise that special safeguards will be required to prevent wrongful and unfair treatment of magistrates and police officers; and that the posting and transfer of District and Subordinate Judges should be supervised by the High Court. These recommendations suggest to the Government that behind the optimism of the Associated

Chambers there is an uneasy feeling that all will not be well. The Chambers have also attached to their proposal to grant responsible government the condition that the position of the Government of India *vis-à-vis* the Legislative Assembly is strengthened. "Progress in the provinces is to be accompanied by reaction at the centre," is the comment which the Government of Bengal make on this condition.

The conclusion at which the Government of Bengal finally arrive is that in present circumstances there cannot be a strictly logical constitution with full responsible government. There must be a period of transition, and in due course, sooner or later, the province will qualify for full provincial autonomy in the matter of all the subjects which are reserved for provincial disposal. Recognising that their proposals are not strictly logical, the Government of Bengal suggest that the next stage should be a unitary government consisting of a Prime Minister and four Ministers responsible to the Legislature, and two official Ministers. The latter would be in charge of appointments, Law and Order including Political, Police, Judicial, Jails and, at present, of Finance and European education. The Prime Minister, and the other non-official Ministers, would be, as now, elected members of the Legislature. The Prime Minister would be chosen by the Governor; and the other Ministers would be appointed by the Governor on the recommendation of the Prime Minister. The salaries of all the Ministers would be fixed by statute. The Prime Minister would preside over the meetings of the Cabinet, and all questions coming before the Cabinet would be decided by a majority.

The foregoing is an attempt to summarise the principal points that are dealt with by the Government of Bengal in their very able memorandum. Unfortunately, considerations of space make it impossible to refer to numerous other matters, which are also discussed in the paper, as, for example, the emergency powers to be conferred on the Governor, the functions of the Upper Chamber and its relation to the Lower Chamber, the control of the Services, the grave problem of finance, and so on.

THE FUTURE OF INDIA.

It is announced officially that the following letters have passed between Mr. Baldwin and the Prime Minister as a result of the Indian debate in the House of Commons on November 7:—

"My dear Prime Minister,—It will be within your recollection that the debate on Thursday last in the House of Commons was concluded without any answer being given by the Secretary of State for India to my second question—namely, 'whether this statement (i.e., the Viceroy's declaration) implies any change in the policy hitherto declared, or in the time when this status may be attained.'"

"It is true that this question was answered in the House of Lords, but I feel that the answer should equally be given by the Prime Minister in his capacity as Leader of the House of Commons.—I am, very sincerely yours, STANLEY BALDWIN."

The Prime Minister's reply, of the same date—November 11—reads:—

"My dear Mr. Baldwin,—I am grateful to you for your letter. The answer to both parts of the question 'whether the Viceroy's declaration implies any change in the policy hitherto declared or in the time when this status may be attained' is 'No.'"

"The policy, as you will remember, is set out in the Preamble of the Government of India Act, 1919, and it stands unchanged unless and until Parliament decides to amend that Act.—I am, very sincerely yours, J. RAMSAY MACDONALD."

Sir Frederick Sykes, Governor of Bombay, presided over a literary session of Goanese in Bombay on November 9 to commemorate the centenary of the birth of Francisco Luis Gomes, the historian patriot of Goa.

THE BRITISH SCHOOL OF ARCHÆOLOGY IN IRAQ.

Great Success of Inaugural Meeting.

The Memory of Gertrude Bell.

It was extremely gratifying, and a tremendous tribute to the organisers—particularly to the Hon. Secretary, Sir Edgar Bonham-Carter—of the proposed British School of Archæology in Iraq, to which reference has been made from time to time in *THE NEAR EAST AND INDIA*, to find that the meeting which had been arranged on November 8 in the Central Hall, Westminster, was not only well attended but actually overcrowded. Every seat was filled, and people were standing in every nook and cranny, so to speak, to hear unfolded a scheme which has evidently aroused a very lively public interest.

Major-General Sir Percy Cox, who presided over the meeting, described the steps that had already been taken to found the School in memory of Gertrude Bell. He read the following letter from the Prime Minister, who had been prevented by public engagements from supporting the scheme at this meeting:—"I am very sorry indeed to find I shall not be able to come to the meeting in aid of the British School of Archæology in Iraq on Friday. Before I went away I had hoped it might be possible, but you will, I am sure, understand to what an accumulation of work, in addition to my ordinary duties, I have now returned. You have my very best wishes for success in your efforts, and I sincerely hope that a School of Archæology will be built up that will be worthy of the memory of Gertrude Bell and the wonderful archæological treasures in Iraq." The Chairman, referring to the great work accomplished by Gertrude Bell in Arabia, mentioned the gratification felt by everybody at the presence at the meeting of Sir Hugh Bell, who, despite a recent illness, had come to honour the memory of his daughter. Sir Percy mentioned, in connexion with the Appeal Fund, that the total amounts received and definitely promised doubled the legacy of £6,000 bequeathed by Gertrude Bell. About £20,000 was needed before a start could be made. The total aimed at was £50,000. Donations might, if donors so wished, be made payable in instalments over a period of years, and it was requested that cheques should be drawn to the order of the British School of Archæology in Iraq (Gertrude Bell Memorial) Appeal Fund, crossed and sent to the Hon. Secretary, at 17, Radnor Place, W.2.

The Archbishop of Canterbury paid a brilliant tribute to the memory of Gertrude Bell. He said that it was in the museum which she had helped to establish at Baghdad that Gertrude Bell found her most constant recreation and joy. She had the true instinct of the archæologist. Every item discovered in the excavations appealed to her imagination, and she saw it in its place in the whole unfolding history of the country. She gave her lifeblood to the cause of rescuing and preserving the wonderful antiquities of her adopted country. The best memorial of her radiant ardour, her brilliant imagination, her scholarship and sympathy with human life would be to preserve for all time more of the memorials of the splendour and greatness which had set their stamp upon the country she loved and served. Then, speaking of the appeal of ancient history to the imagination, he quoted a striking remark which he said was made to him when he was a prison chaplain by a gaol-bird, who as a punishment was only allowed to read the Bible—a study to which he brought a singularly unprejudiced mind. "When I turn in of nights I say over to myself some of the queer names. When I speak them names I seem to see great shapes rising before me and passing through the dark like a procession." The Great Empires that succeeded one another in Mesopotamia, Chaldea, Assyria, Babylon, truly rose in our imagination like clouds in a desert, passing before us in their barbaric splendour and out of sight. It was truly the romance of death. Other countries were eager to take their place in discovering the treasures of Iraq, and it would be strange

indeed if this country, which had so special an interest in the country, were to fail to contribute its share. He could not believe that British scholarship would not rally round the scheme.

Mr. L. S. Amery, speaking of the vast possibilities of research in Iraq, said that the discoveries at Ur had opened a great new window back to the world of antiquity. Iraq was perhaps the most interesting field of archæology in the world, for unlike Egypt it was the highway between the civilisations of the East. All the great early discoveries, those of Rawlinson, Layard, and others were made on the sites of Assyria and Babylonia, and the most wonderful recent discoveries made by the expedition under Mr. Woolley had been in the same region. For some reason, he added, British Governments had always been afraid to contribute to archæology the sums—a very mite in our national expenditure—which would yet produce immense results. He thought that our national standing in the world depended as much upon what we do in this field of culture and the spirit as upon what we do in the diplomatic or any other field. He hoped the time would come when the Government of this country would not think it beneath them to give even a Ministry to these matters. Turning to the personality of Gertrude Bell, he said that in his associations with her he had always been impressed by the comprehensiveness of her intellect. In one of her letters published in *The Times* that day, defining the qualifications of the Director of Archæology, she wrote that he must above all be an historian—"Nothing to him must be common; a monument of Sultan Murad, a Safavid inscription, have their place in the history of the country, different in degree of honour but not in essential character from a palace of Hammurabi." That comprehensiveness showed in her devoted love of her own country. It was out of the overflowing abundance of that love that she gave herself to the Arab nation. Few knew how much her love for the Iraqi meant in the setting up of that country or how much it contributed to the co-operation between British and Iraqi which in a few years had raised a derelict country and the remnants of a divided race into a young nation entering on its career among the nations of the world. When that task was nearing completion and the final decision of the British Government to stand behind Iraq in 1925 made her feel that part of her work was done she turned back to her first love of archæology and the work of creating the Museum and this School. She had left behind in this country and in Iraq an enduring memory and affection. Those who had been able to appreciate her wonderful spirit could do nothing finer or more fitting as a tribute to her, nothing more honouring to our own country, than to make good her last wish and create a really worthy School of Archæology.

Lady Astor remarked of Gertrude Bell that "she was great in a country where only the great survived. Men go East and their reputations go west. Gertrude Bell went East and the East came to Gertrude Bell." She said that she had been consulting Colonel Lawrence on what she should say about Gertrude Bell, and she only wished he could have been there to tell the meeting the things he told her about Gertrude Bell's great work for the people of Iraq. She thought that one of the most striking proofs of the bigness of Gertrude Bell was her decision when she thought it necessary to give up her political work in Iraq and to devote herself to archæology. She would have liked

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

to have gone on, "but it was her woman's maternal instinct which made her pull herself out and let her child go on." She (Lady Astor) was there to pay tribute as a woman to a woman. She could not honestly say she was interested in archæology—her problems were of the living, not of the dead—but she felt that if Gertrude Bell thought it necessary to have a School of Archæology in Iraq, those who admired and believed in her should do their part to help to build it.

Sir Frederick Kenyon, Director of the British Museum, spoke of the need for the School and the scarcity of trained archæologists. Trustees and officers of the Museum cordially supported the establishment of the proposed School. The first finds at Ur and Kish and other places in Palestine, Trans-Jordan, and Iraq showed how great a field had been opened for research since the War. It might well be that there were other cities just as important as Ur still waiting to be excavated. They were short of persons of sufficient energy and experience to take charge of such work, and Schools for their training were needed. There were Schools at Athens and Rome; there was a School at Jerusalem, struggling on under great difficulties, and there was ample room for a School of that kind in Iraq.

Sir Francis Humphrys, who is going out to his post as High Commissioner of Iraq at the end of this month, expressed pleasure at having the opportunity before leaving London to take up his appointment in Baghdad to associate himself whole-heartedly with this excellent scheme. It would surely be wrong that England should lag behind America, France, and Germany in the encouragement of scientific exploration in a country which was so closely bound to us by ties of peculiar friendship. He assured the promoters of the scheme that he would do everything in his power when he went out to Iraq to further the interests of the proposed School. "I propose," he concluded, "with all the diplomacy at my command, to appeal to that stony-hearted British Treasury to make a contribution itself towards the scheme."

Sir Edgar Bonham-Carter, Hon. Secretary of the School, gave some details of the contributions already received. The lowest amount received was 2s. 6d. Mrs. Wm. H. Moore, of New York, had given 10,000 dollars, Sir Charles Hyde a thousand pounds, and Dr. William Ruston Parker had generously promised to add ten per cent. to any sum up to £4,000 contributed by British donors before the end of next December. It was hoped to raise, altogether, £44,000, which with the £6,000 left by Gertrude Bell would supply the required £50,000.

After the speeches, Dr. H. R. Hall, of the British Museum, gave an interesting lantern lecture illustrative of the recent discoveries in Iraq, especially at Ur, Al Obaid, and Kish.

LECTURES ON EGYPT.

The Committee of the Egypt Exploration Society is again arranging a series of winter lectures for the benefit of members of the Society and their friends. The first of this series will be given by Dr. John Johnson, Printer to the University of Oxford, on November 27 at 8.30 p.m., in the Meeting Room of the Royal Society, Burlington House (by kind permission of the Council). The lecture, entitled "The Search for Lost Literature in the Rubbish Heaps of Egypt," will be illustrated with lantern slides.

A few tickets are available to the public free, if application is made to the Secretary of the Egypt Exploration Society, 13, Tavistock Square, W.C.1.

A history of ancient Persia, designed particularly for pupils in the elementary and secondary stages, has been specially written, at the request of the Minister of Public Instruction, by Mirza Hassan Pirnia (Moshir-ed-Dowleh). The book is being sold in all the libraries in Persia at ten krans.

Since the compulsory introduction of Latin characters in Turkey 400 publications have been issued by Constantinople printing establishments. Of these, ten have given the text of new Laws, ten have been literary works, 37 novels and histories, 44 various books and 26 magazines. More than 200 were educational books and one was a dictionary.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE INHABITANTS OF PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Mr. Grane's letter, contained in your issue of October 17, was much needed in view of the mistakes often made in writing of the people of Palestine. The fallahin, who form the majority of the inhabitants, are heartily despised by the Arabs, both by the Badawin and the settled Arabs; and the fallahin in turn hate and fear the Arabs. There are some Badawin tribes on the outskirts, but they seldom take much part in local politics, unless—as in the late riots—there is loot to be obtained. The fallahin are, no doubt, mainly descended from the old Canaanites, who were here before the Israelite invasion under Joshua, though the Christian natives may be descended from the "Pullanis" or Eurasians described by Fulcher de Chartres. Until the Arab invasion in the 7th century the natives all spoke Aramaic, and still use many Aramaic words. Neither they nor the Arab rulers (for a Turk was seldom seen here till the War) gave us the smallest help during our Palestine campaign. They sat on the fence and cheered the winner. The fallahin, however, are well pleased with the English rule, and do not dislike the Jews wherever they are neighbours. Those who do are the Effendi class, who are of Arab descent, and are rich enough to control a large following, especially when the ignorant fallahin are misled by false reports as they were lately, and on the other hand threatened if they do not join. A very large number of fallahin villages, however, refused to take part in the pogrom, and realise that they are better off than they ever were before the British occupation.—I am, etc.,

Jerusalem. October 29.

C. HUSSEY.

ARABS AND JEWS IN PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the letter by the Grand Mufti of Jerusalem published in your issue of October 31 he says: "It is not the fact that the feeling of the Islamic population of Palestine is anti-Semitic." Is it not well for everyone to remember two things: first, that the Arabs themselves are Semites, and, secondly, that an important body of Jewish opinion is itself anti-Zionist?

In your leading article of the same date you say that the real problem of Palestine is "reconciliation between the Arabs and the Zionists." But are there not two problems? First, the reconciliation of two religions, Judaism and Islam; secondly, the reconciliation of two policies. The policy of the Arabs is the unity of the Arab peoples, and the policy of the Zionists is the settlement of Zionists in Palestine. I am convinced that religious peace can be obtained, but the political question is, I fear, likely to be a source of danger for some time. It may even prove that the two policies are incompatible. If this should be so, would it not be well to recognise this incompatibility? And when we weigh the two policies, should we not remember that while the whole of the Arab race looks forward earnestly to political unity, the policy of the Zionists is that of only a section of the great Jewish people?—I am, etc.,

November 7.

"INTERESTED."

BYRON RELICS FOR GREECE.

The Historical and Ethnological Society of Greece has recently received a valuable collection of Byron relics from the son of the late Sir John Murray. It consists of eight items: (1) Several pages, written by Byron at Missolonghi in 1824 under the title of "Notes about Greece"; (2) letters of Byron from Ravenna and Missolonghi to his editor and friend, Douglas Kinnaird; (3) several pages by the poet about contemporary Greek literature; (4) various letters addressed to Byron by different persons during his residence at Missolonghi; (5) two locks of his hair, one of them cut off on the day of his death; (6) a cheque for £700 from the house of Murray, endorsed by Byron; (7) a cast of Byron's bust by Thorwaldsen; (8) a copy of the poet's book-plate. By the express desire of the donor these relics will be placed in a special glass case of the Society's Museum with the inscription "In memory of John Murray." The Museum already contains several mementos of Byron, besides a valuable collection of the costumes and portraits of the heroes of the War of Independence and of the chief persons connected with Greek history since then.

PALESTINE IN WATER COLOUR.

Mrs. P. A. F. Stephenson is holding an exhibition of water-colours, called "Flowers and Stones in the Holy Land," at the Alpine Club Gallery, Mill Street, Conduit Street, W.1., from November 19 to December 3.

PERSONAL AND GENERAL

TO-DAY

November 14, 1929 (New Style).

November 1, 1929 (Old Style).

Jumada 11, 1348 A.H., of the Muslim Calendar.

Chesvan 11, 5690, of the Jewish Calendar.

Earl Peel left Marseilles on November 8 in the Rajputana for Bombay.

Sir Leslie and Lady Wilson will return to London about November 24 from Vienna.

Lord and Lady Hawke will leave London for India about the end of December.

The Earl of Inchcape returned to London on November 4 from Freiburg and Paris.

Sir Arthur and Lady Froom left London on November 8 on their return to Bombay.

Lord and Lady Lloyd have returned to London from the Continent.

Sir George and Lady Godfrey left London on November 7 to join the s.s. Rajputana at Marseilles for India.

Sir George Schuster arrived in London on November 9 on a short visit from India.

Sir Dhunjibhoy and Lady Bomanji last week left The Willows, Windsor, for Paris, en route for Bombay.

Lord and Lady Dunsany will leave England on November 21 for India. They will be away until the beginning of March.

The Right Hon. William Wedgwood Benn, M.P. (Secretary of State for India), had an audience of the King at Buckingham Palace on November 9.

Colonel and Mrs. Perowne left London last week for India in the Viceroy of India, and expect to be away until April.

Sir Stanley and Lady Reed have arranged to join the P. and O. s.s. Viceroy of India at Marseilles to-morrow (Friday), on their way to Bombay.

Viscount Goschen, Governor of Madras, arrived in London on November 9, from India, accompanied by Viscountess Goschen and Captain and the Hon. Mrs. Melville Portal.

The Aga Khan has consented to accept the Presidency of the British Red Crescent Society, which was left vacant by the death of its first president and founder, Syed Ameer Ali.

Sir Henry Payne, Second Secretary of the Board of Trade, who has been engaged to reorganise the Department of Commerce and Industry of Egypt, arrived in Cairo on November 6, and has taken up his duties.

Dr. and Mrs. Cavadias gave a reception on November 7 at 52, Wimpole Street, for the members of the Anglo-Hellenic League. Mme. Nicolopoulou sang a selection of Greek songs, and Mlle. Banchaouer played the piano. The large attendance included the following: The Greek Minister, M. Ambatielos, Commander C. Bellairs, Madame Benachi, Mr. Tatton Bower, Mr. Cassavetti, Dr and Mrs. Cathcart, Mr. Colls, The Consul-General for Greece, Mr. Costomeni, Mrs. Dsyche, Sir James Dundas-Grant, Mr. N. and Miss Eumorfopoulos, Miss Kephala, Dr. and Mrs. Lane, Professor and Mrs. Marshall, Mrs. Metaxas, Lady Meiklejohn, Miss Pallis, Dr. Herbert Spencer, Sir John and Lady Stavridi and Miss Stavridi, and the Hon. Katharine Thring.

Viscount Gage left England on November 7 for India, and is not expected to return until the end of March.

Sir Hugh and Lady Cocks left London on November 7 to join the Rajputana at Marseilles on the way to Bombay.

Nawab Sir Zulfiqar Ali Khan, member of the Indian Central Committee, and Lady Ali Khan will embark at Marseilles tomorrow in the Viceroy of India for Bombay.

Sir John Campbell, late of the India Civil Service, and recently in charge of the settlement of Greek refugees in Macedonia has been appointed Economic and Financial Adviser in the Colonial office. This post was vacated on Sir George Schuster's departure to India to take up the appointment of Finance Member of the Governor-General's Executive Council. Sir John Campbell, who is 55, was educated at Glasgow University and Christ Church, Oxford, and entered the Indian Civil Service in 1897. He has served as Under-Secretary to the Government of the United Provinces and to the Government of India, as Chairman of the Cawnpore Municipality, Deputy-Commissioner of Kheri, and Director of Civil Supplies for the United Provinces. In 1922 he retired, but acted for four years as Vice-Chairman of the Greek Refugee Settlement Commission in Macedonia, and last October he went out to Baghdad as Financial Adviser to the Iraq Government.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

Armistice Day.

Another Armistice Day has come and gone, and who shall say that the Silence, that incomparable mode of a nation's remembering, has lost its hold on us? To many, indeed, that interval between the first maroon and the Last Post—for millions, I suppose, can hear no more than that of services which are held all over the country—is the supreme spiritual moment of this year.

The Silence this year will perhaps be particularly memorable, because, in London, at any rate, just before it, rain-drops—so gentle that the wind almost blew them hither and thither—began to fall. Nature thus seemed to mourn with Man, who was already communing with the past.

Much is said on this occasion, often by those least fitted to say it. One feels somehow that all this pious talk of improving the world, admirable as it is, is a little out of focus. For Armistice Day is, supremely and solely, the Day of Remembrance. It takes us back to those we knew, and but too briefly, to those whose sacrificed personalities we cannot but recall and honour at this hallowed time. Hope and resolve, I think, scarcely come into our consciousness: the heart is too full of far-off things, but, during the Silence, almost stabbingly near.

Armistice Day is, in short, the nation at its most reverent and best, and will always be so until the War and those lost in it are forgotten. Self is submerged, and the mind—the soul, rather—reaches out to greater horizons.

Parliament.

It is generally recognised that the reputation of the present Government stands or falls in accordance with what it does for the domestic situation, by which is meant, primarily, the problem of unemployment. So far it must be confessed that the main strength of the Government lies in the weakness of its political opponents, most and the more honest of whom know well that the cure of unemployment does not lie with Governments. But the Labour Party is in the unhappy position of having promised to do something fundamental for unemployment, and now that it is called upon, in the person of Mr. Thomas, to "produce the goods," the answer is feeble.

Quite patently, Mr. Thomas's two hour speech last

week in the House was a general disappointment. Those in particular who expected vast changes or schemes went empty away. The truth is, as the Minister of Employment knows as well as any man, that Government action can but touch the surface of this national problem.

Yet though the Government is in indisputable difficulties—its conference on Coal, for instance, has been marked or marred by the absence of the coal owners and by the withdrawal of no less a person than the redoubtable Mr. Herbert Smith—its immediate or even distant downfall is not implied. To say that no Government could do better in these vital questions of Unemployment and Coal is probably true, but it means very little indeed. The course of events promises to be that the Conservatives, having failed radically to improve the country's situation, the Labour Party also must now taste the bitterness of failure. At present, at any rate, there is no sign of its having any trump card up its sleeve for these two most urgent problems.

Tolls.

How many tolls survive in Great Britain? Most of us know of a few, but it would, I think, surprise almost everybody to learn that, since the good old days of the turnpike (when over a thousand tolls existed), no fewer than eighty-eight bridges in England and Wales, and fifty-five roads have survived, on which the traveller has to pay toll.

The Sassenach will not express amazement that in Wales the iniquitous system reigns most freely, for there can be scarcely a motorist who has toured the Principality who does not admire the tenacity with which Welshmen cling to ancient tradition and privilege. In free Scotland, on the other hand, no actual toll roads exist, but the wily Caledonian has so arranged matters that you cannot get from Oban to Fort William and the north-west except via the short railway bridge at Connel Ferry, at which memorable spot the motorist is required to part with ten shillings. All this jolly state of affairs may soon be altered. For a private Bill (favoured by the Ministry of Transport) has just been introduced in the House of Commons to free all the highways and bridges of this country from tolls. Tolls really are an anachronism, like level-crossings, which presumably will have to go too.

Pylons and Beauty.

The argument raging over the proposed erection over the countryside of steel standards to bear cheap electricity to remote villages and power to factories is still hotly engaged. I have referred to it before.

The protagonist of the pylon generally uses the utilitarian argument, and does not worry to go beyond it. Whatever is useful is good; and there's an end on't. But recently he has, strangely enough, found support among artists, who are concerned to show the real beauty which can be found in engineering.

Are not the aqueducts of the Roman Campagna, such artists ask, eminently beautiful? And why cannot a magnificent line of pylons be made in England to rival these noble aqueducts? To which others reply that the question of beauty or ugliness is not really involved, but that it is one of suitability and association. The ingenious suggestion is made that links such as have been elsewhere designed between widely separated communities are entirely out of place in overworked England, and that, whereas in other countries such links gratefully remind one town of the existence of another, here in this island we go into the country to forget the existence of the towns!

It is a difficult subject on which to generalise. There are places—such as the barren moors of Cornwall—where the pylons do not offend; but one cannot see how they could be other than a hideous excrescence on, say, the softer downs of Sussex.

Book Review

NATIONALISM IN THE EAST.

"A History of Nationalism in the East." By Hans Kohn. Translated by Margaret M. Green. (London: George Routledge. 25s.).

The time was ripe for a survey of the work accomplished during this century under the name of Nationalism in the East, for the explosive force of this conception, which spread over from Europe into Asia, has bewildered or excited many observers. Of these, the majority appear to leap to two general conclusions: that the East as a whole is in revolt against the West, and that the Westernisation of the East is an inevitable step in the progress of human affairs.

Now, Dr. Hans Kohn, who has seen at first hand many of the countries of which he writes, is not guiltless of taking refuge in such generalisations. Facts are stubborn things, but so great is his conviction in the correctness of his generalisations that their obstinacy sometimes succumbs on a Procrustean bed. It is, one would like to suggest, unscholarly to suggest that the whole of the so-called East, from Morocco to China, has a "common destiny," or, indeed, that there are to-day "three great fellowships of common destiny," viz., the European Continent, excluding Russia, that of the Anglo-Saxon peoples, and an Asiatic fellowship which is struggling against the two other Powers. Such over-simplification is plausible, even readable; but it belongs to the domain rather of journalism than of history.

Dr. Kohn's main concern is to interpret the march of events in the countries between Egypt and India. He naturally begins with a study of the reformation in Islam—the progress of such movements as Wahhabism and Babism, the Ahmadiya movement, and so on. It is a capable summary, though containing little that is new beyond the remark that the Wahhabis, in their first emergence over a hundred years ago, "had been the first to rebuild a great Arab State which embraced, besides Central Arabia, the Hijaz, Yemen, Oman, El Hassa, and the Bahrein Islands."

Explanations of the Pan-Islamic movement and the religious renaissance in India, during last century, are followed by what is perhaps the most important aspect of this work: the author's account of Great Britain's and of Bolshevik Russia's relations with the Orient. For he sees and expresses very clearly that two forces above all others have informed the history of Oriental Nationalism—England, and since 1917, Russia. The intervention of England in the East led inevitably to cultural and economic revolutions, upon which condition Bolshevik Russia superimposed the additional stimulus of national consciousness. This section of the book attains fairly well to the standard of "objectivity" which Dr. Kohn fain would reach. But "objectivity" is a *rara avis*, which, in more detailed chapters, occasionally takes wing and escapes from the author's clutches. This fact is evident in the sources, often of anti-British character, which he refers to or cites: it is instanced in such a sentence as this from the chapter on Egypt:—

Whenever the Eastern peoples have set about reforming their constitutional and social life by their own resolution and energy and so guarding the East from European interference, the European Powers (especially England) have prevented them and intervened in the name of law and order and the protection of the *status quo*.

It is perhaps obvious from the kind of mental attitude here indicated that its possessor would not shrink from generalisation on the future as on the past. But prophecy on the East is a rash pastime, as the closest observers well know. Is it so certain that the following, for example, is true:—

At the present time Arabia is an example of nationalism still partially in the primitive phase, but destined to advance to full self-realisation and to become completely permeated with the spirit of

modern, capitalist industry. Very similar is the state of the nationalist movement in Persia and Afghanistan.

The semi-Westernised Oriental might possibly agree, but the less excitable observer may reflect that that part of Arabia which is capable of material development is almost wholly agricultural, and that even such progress as is possible within this fact is largely dependent upon the lives of a few men. How many men, for instance, are prepared to trust the onward march of the Hijaz and Najd after Ibn Saoud is passed away? And why should Persia, whose selection of Western things is discreetly made and whose tendency is to stress the greatness of her pre-Islamic national past, inevitably "become completely permeated with the spirit of modern, capitalist industry?"

The mask of objectivity is, as has been already suggested, worn uneasily, and perhaps the guise is most quickly penetrated when Dr. Kohn uses somewhat glowing terms of the Jews in Palestine, although his whole sympathy elsewhere in the book lies with the native peoples of any particular country. His view of Palestine, by the way, is that the land will become "a community in which two peoples will live side by side, enjoying absolutely equal rights," which at least has the merit of being independent respectively of the official British and Zionist ideals.

In fine, it may be said that, though the work is undeniably a useful one and should lead readers to further research into the subject, it is not wholly reliable. Quite apart from the ordinary Continental's tendency to see logic in British policy in the East where, often enough, there was a sad lack of it, the author quite plainly has prejudices and has formed pre-judgments which leave some facts panting breathless in the rear of his occasionally dogmatic statements and others out of the race altogether. To the discerning reader, however, this caveat will be unnecessary; and to him, therefore, the book may be recommended.

THE SCHOOL OF ORIENTAL STUDIES.

We have received from the Director of the School of Oriental Studies in London the annual Report of the Governing Body and Statement of Accounts for the Year ending July 31, 1929.

In the Report it is stated that, in place of Sir Muhammad Rafique, who died on February 8, Dr. Raghunath Purushottam Paranjpye has become a member of the Governing Body; and in place of Sir Gregory Foster, who, as Vice-Chancellor of the University of London, became *ex-officio* a Governor, the University has appointed Mr. Sabonadière.

The number of students during the Session was 504, as compared with 611 in 1927-28. The latter figure, however, included 80 Probationers sent by the Colonial Office for a special vacation course.

Other interesting items refer to the fact that, through the initiative of Dr. Moli, funds for a lectureship in Iranian Studies have been provided for a period of five years by the Parsee community in Bombay—and it is worth noting that provision for this important branch of Oriental Studies is made nowhere else in Great Britain; to the work of the Director, Sir Denison Ross, in furthering the prestige of the School in his recent journeys in the Middle East; and to the fact that, apart from those attending the terminal Phonetic courses, the largest numbers of students of languages were, as usual, in the departments of Arabic, the Bantu languages, and Chinese—though there was a marked increase in those attending courses in History, Sanskrit, Hindustani, Indian Law, and Malay.

Quite obviously this institution in London is fulfilling a difficult work with increasing success, but it may be well to bear in mind the concluding words of the Report:—

"The financial result of the past year's working is not unsatisfactory, and it is gratifying to note a steady improvement in the matter of revenue from students' fees. On the other hand, without a further increased grant of £5,000 per annum from Government, it will be impossible to place the Teaching Staff on quite the same lines in the matter of remuneration as prevails in other Universities or Schools of the same standard in this country."

Albania has issued yet another commemorative stamp, this time in celebration of the 35th birthday of King Ahmed Zogu in the form of 5,000 sets of the stamps bearing his likeness originally issued in 1926, distinguished by the overprint, "Rroft Mbreti" (Long Live the King!), followed by the date, "8.x.1929." The imprint is in black on all values from 1 qindar to 2 franken, excepting the 50 q., which has it in red.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Egyptian Season.

That the coming season in Egypt will again be good goes almost without saying, for the attraction of Egypt for the tourist is supreme, and whatever the fate of other resorts, the Nile Valley is sure to draw its full quota of tourists. As a matter of fact, the development of the tourist traffic in recent years has been such as to strain the existing accommodation, and plans are now being carried out to cater for larger numbers of visitors. It is probable that this season, owing to financial developments in America, the number of tourists from that country may fall below expectations, but if the invasion of Americans is not of its usual magnitude, the other centres from which Egypt draws her clientele may go some way to making up any falling off in this direction.

Cotton Developments in the Sudan.

As the trade statistics show, cotton is assuming an ever greater importance in the economic life of the Sudan. In view of the great success which has attended the enterprise of the Sudan Plantations Syndicate, it is only natural that the authorities should desire to further the work of cotton production, and at the meeting of the Syndicate the Chairman, Mr. MacIntyre, gave details of a new extension to the north of the Syndicate's existing concession which has been made possible by the decision of the Sudan Government to enlarge the Gezira main channel. The extension, which is to be managed by the Syndicate in return for a share of the crop based on a sliding scale, comprises an area of about 80,000 to 90,000 feddans, one-third of which will be under cotton. It is anticipated that 40,000 feddans will be prepared for cultivation in time for the next season, which will mean an extension of the area under cotton of about 13,000 feddans. Besides this extension the Syndicate has arranged to irrigate an area of about 1,500 feddans to the south, and has further acquired a freehold extension to its Zeidab property of 4,031 feddans. As regards the present season, the Syndicate has under cotton in the Gezira 158,585 feddans, and as the prospects are stated to be promising, this means that in all probability there will be a further substantial increase in production next year. A most encouraging factor to which Mr. MacIntyre referred is the keen appreciation by spinners, not only in the United Kingdom but also in other countries, of the quality and classification of Sudan cotton.

An Opening in Egypt.

In commenting on Mr. Turner's report last week I referred to the comparative neglect of the Egyptian market by our manufacturers. There are, as I have pointed out, numerous openings in the Egyptian market, just as there are in other Near Eastern outlets. One such is instanced in the current issue of the Monthly Journal of the British Chamber of Commerce of Egypt. The value of Egypt's imports of wallpaper in 1928 was £E16,778, as against £E14,130 for 1927, and of these totals the British share was respectively £E989 and £E940. Of course, the trade is small, and as a matter of fact it is surprising, considering the prevailing customs in Egypt, that it is as large as it is. As the market is there, however, is there any reason why our manufacturers, who are unsurpassed in their production of wallpapers, should not obtain a larger proportion of it than they have? Our contemporary

suggests that they are satisfied with the home market, which is tantamount to saying that we are losing our old initiative. I believe the truth is that our manufacturers overlook these openings, and would be only too willing to take advantage of them if they thought it would be worth while.

Roumania and Grain Exports.

The outstanding importance of a good harvest in the Near Eastern countries may be vividly illustrated in the case of Roumania. Last year the harvest in that country was a failure, and there was an adverse trade balance throughout the year and up to and including last July. Then in August there was a favourable trade balance for the first time for many months, the value of the exports being 2,710 million lei, as against 2,524 million lei for imports. For the first eight months the adverse trade balance is 4,220 million lei, but this is certain now in view of the good harvest to be substantially reduced before the end of the year, and it might indeed be changed into a favourable balance if only grain prices took an upward turn.

Syria as a Tourist Resort.

One of the most striking features since the War has been the number of countries that have appeared as competitors for the annual tourist stream. Before the War Egypt, Greece, the Holy Land, and the Riviera largely monopolised the traffic, and while these regions, especially the first and last, hold their own, and, it may be added, so far as can be seen are certain to continue to do so, there are now many other Near Eastern centres which are taking a part of the stream which seems ever to tend to increase. As this new-born zest for the tourist is directly due to the adverse economic conditions resulting from the War, it is surprising that the number of tourists should be steadily increasing. Syria is among the latest countries to cater seriously for the tourist traffic, and plans are under way for the construction of new up-to-date hotels in the leading centres such as Damascus, Beyrout, Tripoli, and Aleppo. Syria possesses many centres of historical interest, and being next door to Palestine, is in a position to attract some of the increasing numbers of tourists who now include the Holy Land in their visit to Egypt.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 12.

The announcement by the Treasury of the new 5 per Cent. Conversion Loan took the gilt-edged market of the Stock Exchange completely by surprise, and produced a decline in most long-dated Government securities of one or two points. There was a slight recovery later in the week, but 5 per Cent. War Loan remains below par. The resumption of heavy liquidation in New York and heavy selling from Paris and Amsterdam had their effect on the industrial and speculative markets, but apart from the international stocks, which fell still further, the result was heaviness rather than depression. Indeed, the manner in which the London Stock Exchange continues to absorb the stocks thrown on the market from other sources is a matter for congratulation. Whether bottom has yet been touched in Wall Street remains to be seen, but the rally shown at the end of this week would seem to indicate that the worst is over. No violent recovery is, however, to be expected nor desired.

Five per Cent. Conversion Loan.

More mature consideration has not in the slightest degree affected the coldness of the welcome accorded to the new Conversion offer in the City. Moreover, the Treasury is considered guilty of very bad tactics in its arrangements for ensuring the success of the issue. The allotment firm of £30 million to certain banks and brokers at 99½ is explained as being necessitated by the political uncertainties of the moment. This explanation is, however, regarded as no excuse. Since in some cases sales were at once effected at a profit of a quarter, the Loan actually stood at a quarter per cent. discount before it was publicly issued. The attractiveness of the offer would in any case have assured its success. More serious, however, is the fact that the Government has thought it necessary to offer investors a 5 per cent. security which is not redeemable for at least fifteen years. The unwieldy bulk of the 5 per cent. War Loan has been a considerable difficulty in the way of moving British credit from the 5 per cent. basis to which, owing to the exigencies of War finance, it had fallen. Any effort to deal with this Loan, it was hoped, would be in the direction of a 4½ per cent. basis. As it is, the effect of the new offer will be to retard the recovery which had been seen in British Government stocks and to maintain the 5 per cent. basis for an indefinite period.

Japanese Securities.

From the Report on Economic and Financial Conditions in Japan, issued by the Department of Overseas Trade this week, it is to be gathered that the year up to June, 1929, was one of recovery after the crisis of 1927. Since the War, stability has been a rare state of affairs in Japan, and to-day a return to what might be called normal conditions is slowly but surely taking place. Hindrances such as restrictions on credit can be easily removed, but not so the lack of confidence natural after a series of disasters in the various branches of national life. Nevertheless, progress is definitely being made. Statistics quoted by the *Economist's* Japanese correspondent show that the net profits of 1,200 industrial companies for the first half of 1929 were 14 million yen more than in the first half of 1928 and 28.5 million yen more than in the second half of last year. The largest increases are to be seen in electricity and gas, 7 million yen; textiles, 3 million yen; chemical and drugs, 3 million yen. All the major industries show steady improvements both in the volume and quality and the goods produced. It is thought by some authorities, in fact, that industrial progress has been remarkable and well sustained. Foreign trade, like industry, continues to improve, increases in imports being very largely of raw materials, which make up over 50 per cent. of the total imports at the present time. In

finance great strides towards readjustment have also been made, although after the number of failures in 1927, the convalescent period must in consequence be long. The backwardness of the financial organisation has naturally been a check on all economic life, but by far the worst effects in industry are felt by the smaller concerns. The general progress in all branches of the economic life of the nation may therefore be said to be steady, giving rise to bright hopes for the future. In view of the degree of insecurity, owing to the recurrence of earthquakes, Japanese securities give fairly high returns and have attractions for those who can afford to run these risks. The Government 4 per cent. stock, finally redeemable 1970, yields £6 3s. per cent. Yokohama 5 per cent. sterling loan, redeemable by 1945, returns £6 18s. per cent.

Commercial Motor Companies.

The Commercial Motor Vehicle Show now being held in London displays the products of one of Britain's most efficient industries. While much may be said against British private cars, compared with those of other countries, the British commercial vehicles offer a better comparison. Sales in this country are good. For the first seven months of this year 10,000 more commercial motor vehicles were registered than during the corresponding period last year, and the number of such vehicles owned is expected to be 330,000 by the end of the year. Both imports and exports have also increased. Imports come from America and Canada, with France a bad third. Exports have improved mainly as a result of sales "at our door," namely in the European market. In Europe conditions are similar to Great Britain, so British cars are very suitable, whereas in the Colonies and Dominions conditions are more like the U.S.A., and in those markets American cars are more popular. The industry has had its troubles in the past, but the future of the leading companies now seems to be fairly well assured. Morris Motors 7½ per cent. cumulative preference shares can be bought to yield £7 10s. per cent. Among producers of heavier cars Dennis Brothers ordinary shares yield £6 6s. per cent.

The traffic receipts of the Suez Canal Company from October 25 to November 3 amounted to 24,720,000 francs.

Mustapha Kemal Pasha, President of Turkey, on November 8 received in Angora Count Volpi, formerly Italian Minister of Finance.

General Kerim Agha Khan Buzardjomehri has been appointed Minister of Public Works in Persia.

Roumanian workmen, specialised in the metallurgical and motor and aviation industries, are to be sent to work in France for one year.

In the course of a long speech at the end of last week before the Grand National Assembly at Angora, General Ismet Pasha, the Prime Minister, stated that a law providing for the creation of a State bank would shortly be submitted to the Assembly.

In reference to the Roumanian Four and a-Half per Cent. Gold Loan of 1913, Messrs. J. Henry Schroder and Co. announce that, in accordance with instructions received from the Roumanian Government, amendments have been made to the list of numbers comprising the schedules to the agreement of July 4, 1928.

The new Olympia building on Hammersmith Road, London, which is to be used for the first time for the British Industries Fair next February, is to be called the Empire Hall. It is believed that the Empire Hall will be easily the biggest building in the Empire. It is to have four storeys and its dimensions will be: Length (Hammersmith Road frontage), 330 ft.; breadth, 220 ft.; height, 73 ft. Two floors and the whole of the front of the building will be ready for the coming Fair. The architect is Mr. Joseph Emberton, A.R.I.B.A.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

and FURNESS, WITBY & CO., Ltd., Royal Liver Building, Liverpool

CYPRUS TRADE PROGRESS.

The report on Cyprus trade for September shows substantial increases in imports and exports. The former at £191,781 were £43,600 and the latter at £168,880 £37,800 over the five years' average. The totals for the nine months January to September, 1929 and 1928, were as follows:—

1929	...	£1,496,740	...	£1,251,797
1928	...	£1,306,218	...	£1,046,442
Increase	...	£190,522	...	£205,355

The rise in the value of imports was mainly due to cotton yarn, machinery, chemical manures and woollen goods. There were decreases in imports of the following: motor cars, edible oils, petrol and flour.

Among exports the chief increases were almonds (£2,545); barley (£11,283); wheat (£14,494); mules and oxen (£2,222); silk cocoons (£10,592); asbestos (£5,861); and pyrites (£5,294). The only appreciable decrease was in carobs (£5,840).

Shipping statistics are as follows: 27 steamers called at Larnaca, 30 at Limasol and 20 at Famagusta, against an average of 27, 28 and 20, respectively.

CYPRUS MARKET AND CROPS REPORT.

The report on Cyprus crops for October states:—

Prices of wheat are falling owing possibly to large purchases of seed wheat by dealers from Greece and Asia Minor.

Sowing of barley on dry lands has begun. A small quantity has been exported to the United Kingdom, Egypt, Syria, and Greece, but on the whole there is little trade, demand being poor, though offers are very good. Prices are 2s. to 2s. 3d. per bushel—falling.

The new crop of potatoes is now safe from *lila solanella* attacks, and is very promising. Offers are weak against a fair demand. Prices are £9 per ton.

The new cotton crop is satisfactory, and early planted cotton has been harvested. The late sown fields suffered slightly from the early rains this month.

A good orange crop is now in sight. A slight attack of Mediterranean fruit fly is reported from Famagusta. Damaged fruits are sold at £1 per 1,000.

The export of green lemons continues, the principal destinations being the United Kingdom and Turkey. The price is 10s. per 1,000.

There are good offers of tobacco, but a poor demand, and the stocks are heavy. The price is 1s. 9d. per oke for cigarette leaf, while 10d. per oke is quoted for Latakia smoked leaf.

The harvest of olives is in full progress. A heavy crop is certain, but various pests have attacked the fruit and the quality has to some extent deteriorated.

The sale of onion sets continues. Prices are 3d. to 4d. per oke. Offers are good.

There is a fair demand for onions and offers are heavy. Prices are 3d. to 1d. per oke.

The export of grapes to Egypt continues satisfactorily. The price is 2d. per oke. Raisin-making is over. The crop suffered heavily from the ravages of *eudemis botrana*.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

INDIA.

Copper Conductors.—The Indian Stores Department invites tenders for the supply of hard drawn, high conductivity, bare solid copper conductors for overhead power transmission, for the period January 15, 1930, to January 14, 1931. November 21. (D.O.T.)

GREECE.

Cargo Vessel.—The Acting British Consul-General at Salonika reports that a local concern desires to be put in touch with British shipbuilding firms likely to be interested in quoting for the construction of a cargo boat of 300 tons net. The firm would also consider the purchase of a suitable second-hand vessel. (D.O.T.)

EGYPT.

Pumping Plant.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of a complete plant for the supply of filtered and unfiltered water, including centrifugal or turbine type pumps, electric motors, filters, etc. January 6. (D.O.T.)

Electric Generating and Pumping Sets.—The Ministry of Public Works, Egypt, invites tenders for the supply and delivery of electric generating and pumping sets for the Mankabad Barracks, Egypt. December 28. (D.O.T.)

Overhead Transmission Lines.—The Director-General, Mechanical and Electrical Department, Public Works Ministry, Cairo, invites tenders for the supply and erection of high tension 3-phase overhead transmission lines in Northern Delta, consisting of a main line of about 165 kms. and branch lines of about 150 kms., including all necessary materials for the lines and all accessories. February 27.

Incinerators.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of incinerators for disposition of garbage, refuse, waste dressings, etc., required for the year 1929-1930. December 9.

Diesel Engines.—The Ministry of Public Works, Mechanical and Electrical Department, invites tenders for the supply and erection of two Diesel engines and accessories. January 4. (D.O.T.)

THE SUDAN.

Stores.—The Inspector, Headquarters, Egyptian Irrigation Department in the Sudan, Khartoum, invites tenders for the supply of running stores for steamers and launches, chiefly oil, grease, ropes, iron bars, bolts and nuts, electric equipment, files, etc. December 14.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Glasgow, November 15); Manchester, November 19; Birkenhead, November 23). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, November 18); s.s. Malancha for Calcutta (Glasgow, November 18; Birkenhead, November 29).

Bibby Line.—S.s. Leicestershire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, November 27).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, November 16); s.s. Mundra for Bombay (London, November 23).

Cunard Line.—S.s. Bantria for Gibraltar, Malta, Patras, Piræus, Smyrna, Mitylene, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if inducement (Glasgow, November 12; Swansea, November 14; Liverpool, November 16); s.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Algiers, Oran, Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, November 23; Swansea, November 26).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 7).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, November 22); s.s. Perim for Calcutta (London, November 22).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 19); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 30).

Ellerman and Papayanni Lines.—S.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 21); s.s. Roumelian for Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 23; Swansea*, November 23); s.s. Maronian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Swansea, November 28); s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Syra*, Smyrna, and Constantinople (Liverpool, December 7); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Shushak (Liverpool, December 7; Swansea, December 12). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports in Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

Motors and Motoring.

(By Our Motoring Correspondent)

Improvements.

Discussing the recent Motor Show with a number of prospective buyers of new models, the point was raised as to the limited scope which exists for manufacturers who seek to add improvements and incorporate new features in their production. The general idea seemed to be that everything that could be done in that direction had already been done, and that all there was left to do was to copy other people's ideas. It was admitted, however, that from the point of view of novelties, the Show this year was an improvement upon that for 1928, and some went so far as to suggest that a desire to introduce novelties into design had outweighed altogether the consideration as to whether those novelties were or were not of any real value.

The introduction of four wheel brakes was a revolution, the effect of which was entirely to the good. So was the effect of the almost equally sweeping revolution of balloon tyres; the front wheel drive introduced was a good thing, although it has, perhaps, too many disadvantages to come into general use. But can the same praise be given to the new idea of putting the gear-box on the back axle? M. Bugatti is, of course, a clever man and an expert designer of cars, but the question does arise in the mind as to whether he actually does think there is or can be any advantage derived from putting the gear-box of his new "straight eight" in that position. Anyway, I don't suppose any of the leading British designers will follow the Bugatti lead.

Central Lubrication.

Of all the novelties, if one can class this as a novelty, at the Show, perhaps the most useful and altogether commendable, was the centralised lubrication. Of course, the Mercedes people had this system at work on their cars as far back as 1910—they showed a 6-cylinder model in that year which had central chassis lubrication, but the idea was ahead of its time—and so the fairly general use of the system this year may be said to have been anticipated.

The idea is so good that in all probability we shall have it on even the smallest cars before the next Olympia Show. The general lines that will be followed for small cars will probably be those already introduced on the Nash car. The outfit, which is an American idea, is a small drum of oil carried on the dashboard, inside which there is a small plunger pump operated by the vibration of the car. The oil is pumped to every part of the chassis where lubrication is desired, and the idea is that if the car is running on a smooth road, the minimum amount of oil that is necessary is used, but if the road gets rougher the pump works more energetically, and an extra quantity of oil, proportionate to the extra vibration, is sent along the ducts. The plunger fits a bore of very small diameter, and so the weight of the vibrator which operates it is sufficient to give a substantial pressure to the oil. There is no doubt that the system works perfectly, but one cannot help wondering what happens should the oiling system develop anything akin to the phlebitis which troubles some of us poor mortals at times. A clot in an automatic central oiling system might have serious results.

A New Austin.

The 1930 model Austin "sixteen" is, in my opinion, very much superior to its predecessors. The model has always been popular amongst discriminating car users, as the power of the engine, the springing, and all the adjuncts which go to make up driving comfort were all that the average driver needed. The new model is, in my opinion, fitted with a more flexible engine; at any rate, the power seems increased in some way. We also have chromium plating, Triplex glass, a decently sized cubby hole, and an intelligent arrangement of the instruments immediately in front of the driver. Whilst running at all speeds, from dead slow to maximum revs., the engine is singularly free from vibration and it pulls well under all conditions. It is capable of a high road speed—60 m.p.h. can be easily attained—and the car is so well sprung and balanced that it holds the road perfectly at that high speed and does not vibrate.

Curiosity, induced by this lack of vibration, led me to inspect the springing, and I found that each leaf was interleaved with a zinc insertion. Zinc is a metal which has certain lubricating and also certain deadening properties, and it is due to these inserts that the spring action is so steady and gentle. Austin springs do not need gaiters, and in use require very little attention. I tried the car in question over a piece of really badly surfaced road, with ruts and deep pot holes, but found that the car floated over them in an ideal manner.

British Light Cars in India.

A correspondent writes from Quetta regarding the importation of British light cars, and says:—In India one never travels without a bearer and one's bedding roll; these twain, together with a suit-case, fill the dickey seat of a British light car and fill it admirably. A friend and his kit will complete the load. The larger and heavier four-seater car provides extra space for the family man, and he dwells somewhat heavily on the amount of luggage and other impedimenta which have to be carried (dogs under the front seats with tails in the pedals, parrot in the boot, bedding on the running boards, wife and children, with maid, packed somewhere or other). Altogether, he seems to consider that a car should have a fairly large body. As to whether that body should be open or closed, he says: Except in the winter, and sometimes even then the hood is always erected to protect the occupants of the car from the sun. Provided that a saloon car is not left out in the full sun with windows closed, it is cooler to ride in than an open car. But the journey is likely to be

long (which means that with cars for country as distinct from town work) he says the open car with fabric hood wins every time. A white top to a saloon will help matters, but even then, after a halt a car so fitted will resemble an oven. For cantonment work, he continues, a saloon car such as the Morris Minor or the Austin Seven should prove ideal; if there is a lack of shade, the standard open models are excellent. "Very definitely, these little cars are capable of tackling tracks and situations undreamt of in England; but they have not the capacity required of a car to be used further afield." He adds that in India the large cars are most American, for many reasons. It appears that one of these is that it is heart-breaking to take a really good British car over terrible roads. It will stand up to it for years longer than the American car, but it costs considerably more to knock about and damage it than it does the American product. Prices are still a consideration in India.

The Commercial Motor Exhibition.

In the two years since the last Commercial Motors Exhibition was held at Olympia, much has been accomplished in the way of improvements and innovations, and the results are to be seen at the Exhibition at Olympia, which from every point of view is quite the most interesting that has yet been held. I noted with interest the predominance of the six-wheeler; numerous firms were showing the chassis of these vehicles, and in some cases they were so large that one could not help wondering how they would fare in a town or going round a corner anywhere. Motor buses are, of course, very much to the fore, and it is to be hoped that the display of them is an indication that the foreign markets for these vehicles will receive due attention. An announcement at the stand of a firm that catalogues are printed in Roumanian, Bulgarian, Yugoslavian, Greek and other languages conveys a very pointed moral to other manufacturers, which, it may be hoped, they will appreciate. It is that if you contemplate entering a foreign market it is essential that the task should be thoroughly undertaken. Many failures hitherto have been largely due to the haphazard, casual methods which have so often been adopted.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British Bulgarian Chamber of Commerce of Sofia, dated October 31.]

General Situation.

The situation of the market has not improved during October. On the contrary, statistics are showing a considerable increase of bankruptcies especially in the leather, textile, and hardware trades. Curtailment of credits has been pursued in a drastic manner on the part of most local and foreign banks. Owing to difficult sales, both wholesale and retail dealers in imported goods are becoming more and more tied up and their payments are effected with increasing difficulty. The credit position may be described as serious, and there is much probability of further suspension of payments.

Foreign trade continues to show a large deficiency. According to preliminary data, the debit balance amounted in round figures to 2,000,000,000 leva at the end of September, which is practically a record figure since the

War. This situation is accounted for by a heavy increase of imports, in spite of semi-official measures intended to reduce the ordering of goods abroad. Exports have also been more active than last year, and are likely to increase up to the end of the year, but there is little chance of their substantially reducing the gap.

The difficulties of the existing legislation with respect to bankruptcy, moratorium procedure, and suspensions of payments have become particularly apparent during the present crisis. According to information from official sources, important legislative reforms are to be voted in Parliament in this connexion. It is generally admitted that better protection of foreign and local creditors will be practically secured in this way.

Aviation.

With a view to arousing interest in aviation and its future possibilities, especially amongst the students and schools, the Bulgarian Aero Club has arranged a series of lectures, and is forming branches of the club in different parts of the country. The first series of lectures have been a decided success and keen interest has been taken by the population. Propaganda work has been carried on by flights and the dropping of aviation literature over the towns. The movement has the support of the Ministry of Public Instruction who circulated all the schools in the Kingdom, with the result that the senior students of the boys' schools are taking a very keen interest in this new branch of science.

Miscellaneous.

Receipts of the State Treasury for September show a decrease as compared with the figures for August, due mainly to the non-payment of municipal contributions towards teachers' emoluments. In September ordinary receipts amounted to 497,003,426 leva and in August to 549,730,774 leva, while in July they were 596,134,000 leva.

The wholesale commodity index number (on the basis of 1914 equals 100) for September was 3,111, as compared with 3,141 for August, and 3,200 for July, and 3,051 for September, 1928. The general level of wholesale prices has thus decreased by 1 per cent. as against August, while an increase of 2 per cent. is shown as compared with September, 1928.

The trade balance during the month of September is again down by 219,954,431 leva, while during August it amounted to 310,864,985 leva. Imports during September totalled 50,204 tons for 685,116,399 leva and exports amounted to 29,001 tons for 465,161,968 leva, while in August imports amounted to 45,012 tons for 364,971,001 leva, and exports totalled 18,049 tons for 364,971,026 leva.

The Ministry of Commerce, Industry, and Labour has published a further list of raw and half-finished materials which are allowed to enter free of duty for industrialists enjoying the privileges provided for by the Law for Encouragement of Local Industry.

The quantity of notes in circulation from September 23 to October 23 again shows a steady level. On September 23 the notes in circulation amounted to 4,129,942,000 leva, on September 30 to 4,222,422,000 leva, on October 7 to 4,319,655,000 leva, on October 15 to 4,396,697,000 leva and on October 23 to 4,370,533,000 leva.

According to official data furnished by the Labour Section of the Ministry of Commerce, Industry and Labour the number of employees in industrial undertakings during October was 85,731 against 86,743 in September and 77,103 in October 1928.

A novel test was recently carried out by a bicycle firm, when they "borrowed" two elephants, each weighing 2½ tons, from a neighbouring circus, and gave them a cycle to play with. The animals seized it, pulled it in opposite directions, and one of them even planted a heavy foot on the Dunlop saddle, but despite their efforts the bicycle suffered no damage at all, and a mechanic rode away on it after the test.

Company Meetings.

SUDAN PLANTATIONS SYNDICATE.

Substantial Increase in Profits.

New Areas Under Irrigation.

Cultivation Programme.

Current Season's Favourable Prospects.

Speeches by Mr. Alexander MacIntyre and Sir F. Eckstein.

The twenty-second ordinary general meeting of The Sudan Plantations Syndicate, Limited, was held on November 6 at Winchester House, Old Broad Street, London, E.C.

Mr. Alexander MacIntyre (the chairman and managing director of the company) presided.

The Secretary having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—The directors' report and the statement of accounts have been in your hands for some time. I propose, therefore, with your permission to take them as read.

You will have heard with regret of the death of Mr. D. M. Hannay, which occurred on November 24, 1928. He was a director of this syndicate for over 20 years, and his absence from among us is deeply felt by my colleagues and myself. I am sure that I am expressing the feelings of all present in tendering our sincere sympathy to his widow and family in their bereavement. (Hear, hear.)

You will all be glad to see Lord Lovat amongst us once again. (Hear, hear.) I feel sure that you will all share the great pleasure that we, his colleagues, feel in welcoming him back as a member of our board. Lord Lovat has always been a great believer in our future in the Sudan, and his help at all times has been invaluable.

I take this opportunity of congratulating Sir Frederick Eckstein on the great honour conferred on him by his being created a baronet—(cheers)—in recognition of his services to the Sudan and to the Empire. I know that I only express all your sentiments when I say that the honour conferred upon him was well deserved by his great achievements, and that we wish him health and a long life to enjoy the distinction. (Cheers.)

The Additional Areas: Terms Explained.

We have promised in the report to give you particulars of the extension of our area.

The decision by Government to enlarge the Gezira main canal made it possible to consider the immediate development of areas alongside the Sudan Government Railway to the north of our existing concession area. The proposed extension will consist of an area of about 80,000 to 90,000 feddans. In our opinion, this land is not as good as the average quality of our existing concession area, but it may have some compensating features owing to its being situated further north and in a drier zone.

I am pleased to tell you that after lengthy negotiations the Sudan Government have entrusted us with this extension on terms which we believe will compensate us should the cotton yield turn out to be below the average of that obtained on our existing concession.

On this Northern extension our share of the cotton crop is to be

on a sliding scale, the tenant receiving his usual 40 per cent., the Government 37½ per cent., and the syndicate 22½ per cent. of the net proceeds of the cotton crop. But if in any year the average net proceeds per feddan of cotton grown in the Northern extension fall to £E12 or less, then the syndicate is to receive 25 per cent. thereof, and if such average net proceeds are more than £E12 the syndicate is to receive a sum equivalent to 25 per cent. of £E12 per feddan of cotton, or 22½ per cent. of the actual net proceeds, whichever is the greater. If such average net proceeds rise to £E20 or more, then the syndicate is to receive a sum equivalent to 22½ per cent. of £E20 per feddan of cotton, or 20 per cent. of the actual net proceeds, whichever is the greater.

Any increase in the syndicate's share pursuant to these provisions is to be deducted from the Government's share, and any decrease in the syndicate's share is to be added to the Government's share.

"An Equitable Arrangement."

Briefly, what this means is that if we get a bumper crop our share will be 20 per cent., and if we get a medium crop our share will be 22½ per cent., and if we get a poor crop our share will be 25 per cent.

We consider that, taking all the circumstances into consideration, this is an equitable arrangement.

At Zeidab we have acquired from Government as freehold an extension of our Zeidab property, comprising the whole of the Timerab area, amounting to 4,031 feddans. This area was formerly irrigated by us, but it was not our own property.

In addition to this, in agreement with Government, we have arranged to irrigate a new area of about 1,500 feddans of land to the south of our own property. This land is on a higher level than our own, and we have erected a small pumping station for the purpose of irrigating it. In future years it should give us an area of about 500 feddans of cotton each year. As a matter of fact, we have at this moment a crop of 400 feddans of cotton planted on this area, which is looking well.

The Accounts.

I will now deal with the accounts. The form in which these have been presented to you in past years has been such that only slight alterations have been necessary in order to present them, as we do now, strictly in accordance with the provisions of the new Companies Act, which came into force on November 1, 1919. It is my duty to direct your attention to several changes which have taken place during the past year.

We have added £25,000 to the Gezira reserve account, bringing it up to a total of £225,000.

The various sinking funds now amount to £141,000, which is £41,000 more than last year.

London creditors are £100,000 less than last year, while Sudan creditors are £1,521,000, against £1,034,000 the previous year. This figure has been reduced considerably by payments since made.

On the credit side you will find our Zeidab property at about the same figure as last year. This property continues to be a very good investment.

The Gezira areas, in consequence of our extended programme, show considerable increases all round, and figure at £1,856,700, compared with £1,625,800 in the previous year.

Stock of cotton this year is £2,512,000, against £1,712,000. In arriving at the former amount, we have taken into account, as we do every year, the full sale price of cotton disposed of since July 1 up to about a month ago. As usual the unsold balance has been valued by the Board at what we consider a conservative figure.

GELLATLY, HANKEY & Co. (Sudan) Ltd.

LIVERPOOL

MANCHESTER

62 Pall Mall, London, S.W.1
GLASGOW

Our holdings in other companies are unchanged, except that we have taken an interest in Sudan Salt, Ltd., a newly formed concern which we think should have a profitable future.

The Kassala Cotton Company has on its new area in the Gezira 15,548 feddans under cotton, and consequently will produce its first crop during the coming season.

The Brazil Plantations Syndicate has been taken over on a share for share basis by Parana Plantations, Ltd. The construction of a railway from Cambara to the Tibagy River, which is in close proximity to the boundary of its land, is proceeding satisfactorily. I have no hesitation in saying that we value this investment very highly, although a little patience must be exercised.

We hold £1,346,000 of British Government securities, or £150,000 less than last year, and in cash we have £750,000, against £1,142,000 in the previous year.

Increase in Profit.

Turning to the profit and loss account, our gross profit is £933,000, exactly £100,000 more than last year. From this we have to deduct general expenses, bonus to staff, sums put to reserve, and the usual writing off, leaving a net profit of £656,000, which is £69,000 more than last year.

Out of this amount we paid you our usual interim dividend of 10 per cent. in July, and we now propose to declare a final dividend of 15 per cent., making in all 25 per cent. for the year.

The payment of this latter instalment we propose to postpone until January 5. We have so far done quite well in disposing of our cotton, but we were anxious to reduce our stocks still further before making this payment. Also a good deal of money outstanding on account of cotton sales will mature before that date.

The dividend will absorb £562,500, which enables us to add a considerable sum to our carry forward, which now amounts to £497,490.

Field Work.

Reviewing our field work for the past year, we had at Zeidab a good crop, having picked 19,015 kantars, which are all sold.

Cotton was planted on about 5,100 feddans, and we shipped 3,855 bales, against 3,330 bales last year.

In the Gezira we had under cotton 131,351 feddans, against 105,587 feddans the previous year; under dura 65,651 feddans, against 52,901; and under lubia 54,580 feddans, against 55,331. These crops, with the exception of lubia, show considerable and satisfactory increases.

The cotton crop amounted to 466,169 kantars, compared with 347,402 kantars.

The average per feddan was 3.54 kantars, against an average of 3.29 kantars for the previous year.

As usual the whole of this crop was shipped to England, and the quality and classification of our cotton is highly approved of not only by the spinners in Lancashire, but likewise by spinners in France, Switzerland, and the United States.

It is again my privilege to acknowledge the Board's gratitude to the British Cotton Growing Association, and especially to its managing director, Sir William Himbury, for the great help and assistance given to us in the disposal of our cotton.

New Season's Crops.

Coming now to the present, or rather the coming season's crop, we have at Zeidab about 5,400 feddans under cotton, and the crop promises to be a satisfactory one. We have picked nearly 15,000 kantars, and what we must now hope for is that the prices for long staple American cotton, which we grow at this station, will remain at a steady level.

In the Gezira we have:—

Under cotton	...	...	...	158,585 feddans.
Under dura	...	...	...	68,471 "
Under lubia	...	...	...	88,000 "

The extraordinarily heavy rains, which lasted right into October, have made this season's planting a very difficult one, as much resowing had to be done repeatedly. This means a late crop, but the latest reports received from headquarters indicate that, granted normal winter weather, prospects are quite promising.

With regard to the new northern extension referred to at the beginning of my speech, we have already commenced the development and canalisation, and orders have been placed for ploughing machinery, irrigation pipes and the necessary building material, so that no time shall be lost in getting on with the work.

We hope to complete before July, 1931, the development of about

40,000 feddans, which will add during the 1930-31 season a further 13,000 feddans to our present area under cotton, and in anticipation of this we have ordered the machinery and material necessary for a further ginning factory containing 80 gins, at Hassa Heissa, together with the additional workshops and houses required in connexion with this installation.

Work has already commenced on the foundations for the ginning factory.

Warm Tribute to Staff.

I should like at this point to express to our entire staff in the Sudan and in London our great appreciation of the loyal and efficient manner in which they have carried out their duties, and our recognition of the good work which has been done in the Sudan against many obstacles and in a trying climate. That they should have succeeded in producing such good crops from the old areas, and at the same time have completed well ahead of programme the whole of our western extension, amounting to 150,000 feddans, is no mean achievement, and one which I think you will agree reflects the greatest credit on all concerned. (Applause.)

From our profit and loss account you will have seen that we have set aside a sum of £16,000 as a bonus to the staff, which I feel sure you will cordially approve.

Great credit is also due to the Sudan Government irrigation service for their having completed the main canal system on this area in good time.

I also wish to thank our shippers, Messrs. Contomichalos Darke and Co. and Gellatly Hankey and Co., for the efficient manner in which they have handled our export and shipping business, and also the Sudan Government Railways for the prompt manner in which they have handled the crop from our ginning factories to Port Sudan.

Nile Water Agreement.

I will call upon Sir Frederick Eckstein to second the motion.

Sir Frederick Eckstein, Bt. (deputy-chairman), who was enthusiastically received, said: Ladies and gentlemen,—After the Chairman's full and lucid account of the syndicate's progress during the past financial year, there is little that I can add in seconding the resolution just moved by him.

I must, however, thank him for his kind reference to the honour conferred on me during the early part of this year, and I must thank you ladies and gentlemen for your cordial reception of his remarks.

The outstanding event in the history of our syndicate this year has been the agreement arrived at by the British Government and the Egyptian Government regarding the use and the distribution of the waters of the Nile. This agreement provides for the amount of water to be allocated to the Sudan until 1936, when no doubt further arrangements will be made, as by that time the Egyptian Government expects to have completed the large works they are contemplating for increased preservation of the flood water of the Nile.

Meanwhile, as the Chairman has told you, this arrangement enables that well-governed and well-administered country—the Sudan—to bring under irrigation further areas of which we have been asked to undertake the development and management.

The full extent of these areas cannot be ascertained at this moment, but one thing is tolerably certain, that the quality of the soil is not quite up to the average of our present concession area. Our Chairman has strong views on this subject, with which I fully concur, and I do so from personal knowledge, having travelled over these areas repeatedly.

For this reason the Sudan Government has given us on this new northern extension a slightly higher percentage of the proceeds of the crop than we receive on our old concession area. We tried hard to get better terms, but we were unsuccessful, so we must do the best we can to make the cultivation of this area profitable.

We have, however, some advantages.

Our agricultural risks are spread over a larger area, also we can undertake this work with our present resources, and are, therefore, not compelled to ask you to furnish us with additional working capital. This is unquestionably a gain to the syndicate.

In addition to this we have a further advantage—I would call it a great asset—and this is, that we have in our Chairman and Managing Director, Mr. MacIntyre, and in our manager, Mr. Poyntz-Wright, and his assistant manager, Mr. Archdale, and the whole headquarters staff at Barakat men who understand their work from A to Z, and

who are able and competent to deal successfully with any difficulties that may arise. (Applause.)

This asset does not figure in our balance-sheet, but it is nevertheless of immense value. (Hear, hear.)

I want to associate myself with the tribute paid by our Chairman to the staff here and in the Sudan. The striking proof of the excellent work they are doing is the regular and steady dividends we have been able to pay you year after year.

Our immediate prospects are bright, and I look forward without apprehension to the future. (Applause.)

Shareholders' questions having been replied to, the motion was put to the meeting and carried unanimously.

The Chairman next moved: "That a final dividend of 3s. per share (equal to 15 per cent.), less Sudan business profits tax at the rate of 1s. 5½d. in the £, and British income-tax at the rate of 2s. 6½d. in the £, be declared for the year ended June 30, 1929, payable on January 15, 1930, to shareholders registered at the close of business on December 31, 1929."

Capt. Bernard Eckstein seconded the resolution, which was unanimously adopted.

The retiring directors were re-elected, and, the auditors having been reappointed, a vote of thanks to the Chairman concluded the proceedings.

BENGAL DOOARS RAILWAY.

Another Good Year.

The thirty-ninth ordinary general meeting of the Bengal Dooars Railway Company, Ltd., was held on November 12 at the offices of the company, Gresham House, Old Broad Street, Mr. Robert Miller (the Chairman) presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the auditors' report to the stockholders,

The Chairman, in moving the adoption of the report and accounts, said:—The gross earnings from the railway aggregate Rs.25.32 lakhs, as compared with Rs.25.12 lakhs for the previous year, an increase of Rs. 20,489. This is not a large improvement, but I must remind you that the previous year established a record in the history of the company. The working expenses were Rs.12.62 lakhs (or 49.85 per cent. of gross earnings), a decrease of Rs.36,048, resulting in a balance of net earnings of Rs.12.70 lakhs, an increase of Rs.56,537 as compared with the year ended March, 1928.

I think it hardly necessary to go into details of the fluctuations in receipts and expenditure generally beyond mentioning that "coaching traffic" showed an improvement, and that the decrease in "goods traffic" was entirely attributable to the falling off in coal carried for the public, due to smaller imports by the tea gardens, which decrease more than off-set the improvement in other articles of general merchandise carried. In regard to working expenses, the substantial decrease shown under "renewals and replacements" is principally for the reason that in the previous year's accounts with which this compares, heavier expenditure was incurred on the chord line and a diversion at Barnes Junction, necessitated by flood damage.

Our capital expenditure for the year under review aggregated in sterling £22,658, and, as mentioned in my remarks at the last general meeting, we have proceeded with the supply of further passenger carriages and two new engines have been sent out. This increase in our rolling stock, as I then explained, had become necessary in order efficiently to cope with the heavy increase in traffics.

I am pleased to be able to report that the steps which have been taken to protect the railway from floods and flood damage have been fully justified by results. Very heavy rains were experienced during the monsoon, and in July last the Teesta River was reported as being in high flood, the full force of the river then attacking the protective spur recently constructed at Barnes Junction. This position caused us considerable anxiety, but, thanks to the very excellent judgment and engineering work of our manager and engineer-in-chief, Mr. J. A. Polwhele, and his staff, the protective work successfully withstood the strain, and I am glad to say that we have this year been practically immune from flood damage.

A great deal of thought has been given to the problem of coping with this periodical menace, and we, your Directors, are convinced that everything possible, within our power, towards the protection of our property is being done by Mr. Polwhele. I must, however, impress upon you that although we have, over a period of many years, been to a large extent successful in controlling the immense flow of water by diverting it into other and safer channels, the danger

of a break through is always before us, and for that reason it is imperative we should set aside each year substantial reserves to meet such an emergency should it arise.

Now with regard to the net revenues. Account No. 9 shows that the net earnings for the year amounted to Rs.12.70 lakhs (a small increase of Rs.56,000 over the previous year), of which, after deduction of Indian income tax, there remains Rs.11.49 lakhs, which at the rate of exchange of 1s. 6d. equals £86,216. This, with interest earned and the balance brought into the account from the previous year, gives a total of £137,958. Of this sum the payment of the dividend on the Preference stock absorbed £14,000, reserve for payment of income tax £3,000, and loss on exchange on remittances £119, leaving £120,439. The Directors deemed it advisable, and so informed the stockholders in their interim report dated March 25, to transfer at that date £20,000 to reserve, which reduced the figure I have just quoted to £100,439. From this an interim dividend of 4 per cent. was paid on the Ordinary stock on April 24, absorbing £16,000, and a further £10,000 has been carried to reserve, leaving a balance of £74,439 to be dealt with.

Before I proceed with the question of the final dividend on the Ordinary stock, I would like to say a few words about the current year's business. It is satisfactory to note that our traffic returns still show improvement. For the period April 1 to October 19 the aggregate receipts for goods and coaching traffic have increased by Rs.33,857. Reports received from India are optimistic, and it is thought that these improvements in traffic will be maintained, so that the prospects for the remainder of the current year are considered to be good.

Now, gentlemen, with regard to the payment of dividend on the Ordinary stock, we have, in the light of our financial position, of works on hand and contemplated, and the ever-present possibility of heavy expenditure through flood damage, given this subject most careful consideration from all points of view and have in all the circumstances decided to recommend the payment of a final dividend of 4 per cent. and a bonus of 3 per cent., making, with the interim dividend of 4 per cent. paid on April 24, a total distribution of 11 per cent. for the year, thus maintaining the increase of 1 per cent. in the bonus distribution paid for the previous year. This will leave a balance of £46,439 12s. to be carried forward into the new year, as compared with £49,342 11s. 10d. brought in from the previous year.

Sir A. K. Muir, Bart., seconded the resolution, which was carried unanimously.

NEW MESSAGERIES MARITIMES MOTOR SHIP.

The Messageries Maritimes new liner Jean Laborde has just been launched at the La Giotat works. She is a motor ship of 14,450 tons displacement, and will be capable of a speed of 15½ knots. The vessel is destined for service on the Indian line, and she will accommodate 132 passengers in the first class, 90 in the second class, and 72 in the third class, as well as having de luxe cabins for nine persons. Each de luxe and demi-luxe cabin will possess a private bathroom, and a dressing-room will also be attached to the double rooms. These special arrangements have been designed to permit families to live as in private suites, and it has been possible to achieve this by the construction of communicating doors inside the suites, so permitting intercourse between the cabins.

JAFFA ORANGE CROP PROSPECTS.

The Empire Marketing Board's correspondent at Jaffa reports under date October 25 that the orange crop promises well and that shipments to the United Kingdom are likely to be larger than last year, in spite of an increasing Continental demand. Owing to the fall of early fruit in June of last year, there was a high percentage of large fruit, but the weather during the summer this year was favourable and sizes should be much more normal.

The death occurred on November 9 of Sir Henry Kirk, who played a great part in developing telephonic communication between Great Britain and India, and in India itself. He was appointed Director of Telegraphs in 1900, and in 1920 became Director-in-Chief of Indo-European Telegraphs—a post he held for ten years. A particularly notable piece of work accomplished by him was the opening up of a land-line connexion, in 1907, between Teheran and Karachi, by way of Kerman, Central Persia, and Baluchistan. Direct working was established between London and Calcutta in 1909.

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives. The Bank transacts every description of banking operations.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended November 2:—

Grain.—There is no change to report in the situation, shippers concentrating their activities on fulfilling old sales. As these, however, are fairly large, a corresponding movement is noticeable on the local market. Maize continues to arrive in small quantities, but larger arrivals are expected shortly. The main buyer so far has been Rotterdam, but negotiations are being carried on for U.K. destinations and appreciable quantities have already been sold in that direction. Although the daily arrivals have been reduced somewhat owing to the recent military manoeuvres, stocks are still ample, and in view of the approach of the possible closing of navigation and the inconvenience and expense of keeping grain in lighters over the winter, it is to be expected that grainholders will be compelled to realise their stocks irrespective of the state of consuming markets. Owing to the rise in the water level at the upriver stations, due to the general rainfalls experienced, practically all the lighters which were held up above the Iron Gates have been released. The lull in chartering continues, and, owing to the depressed state of markets abroad and the considerable volume of tonnage still due to arrive during the present month, it is hardly likely that any further chartering will be done before the close of navigation. Freight rates have been maintained at 15s. 6d. to 15s. 9d. for Continental destinations, although some parcels have been closed at below these rates in order to complete ships. At Constantza the supply of tonnage has proved far beyond the demand, with the result that besides the delay suffered by the ships, lower rates have had to be accepted.

Timber.—Business for Greece and the Near East is still very slack for the advanced time of the season, but continued transactions are being effected for Italy and Syria, for which destinations freights are firm. A small ship of about 130 waggons was reported as having been fixed for Syrian ports at £1 per waggon, and this rate is being quoted by others for the same destination. For Italy rates are about £10 10s./£11. For Alexandria three vessels of about 360 to 380 waggons has been taken for Basrah at £17 per waggon. The fixture is also reported of a 3,700 tonner on deadweight basis for two ports South France at 16s. 6d. per ton. The rate for Greece is nominally £8 5s.

Weather and Crops.—Light rains again fell intermittently during the week and the weather has been generally overcast, moist, and mild. There has been bright sunshine here from midday to-day and the temperature was 70 deg. Fahr. in the shade. An official report dated October 30 confirms that the rains between October 22 and 26 were sufficient to enable autumn cultivation to be carried on intensively nearly everywhere. In many parts the young seedlings are already well above ground and are establishing themselves vigorously, under favourable conditions. Notwithstanding the efforts of the Government, who are supplying a certain amount of machinery at 75 per cent. of cost and on easy terms, and are urging the peasants to sow as much winter wheat, etc., as possible, it is still feared that the area of autumn sowings may not reach last year's figure. The new Radio Lighthouse recently completed at Cape Caliacra was struck by lightning during a storm on October 29, the installation and building being damaged. An earthquake shock of considerable duration and severity was experienced here yesterday at 9 a.m. and is reported to have been felt throughout Roumania. Damage to buildings, though widespread, appears to have been slight; only one fatality has so far been reported.

Sulina.—Bar, 24 feet, unchanged. River depth has been improved to 23 feet.

Constantza.—This week about 8,500 tons of grain arrived from the interior and about 9,000 tons were exported, 8,000 tons going to the Weser and Hamburg, and 1,000 to London, whilst 100 tons oilcake were shipped to Liverpool. Six vessels are waiting for berth at time of writing and six others are expected shortly to load grain. Twelve ships loaded nearly 42,000 tons petroleum products, and six took oil fuel for bunkers.

Bulgarian Report.

Bourgas, October 26.—Owing to the weak grain prices abroad grainholders are doing only hand-to-mouth business, hoping for an improvement, and consequently arrivals have been reduced the last few days. Nevertheless, the rate of 11s. per unit has been maintained for Antwerp/Rotterdam/Hamburg, and about 2,000 tons have been booked at this rate for prompt shipment to these ports. There are about 3,000 tons under shipment by liners for Mediterranean destinations. It was fine and warm until October 24, when light warm rains were reported in most parts of the country.

FUR PRICES LOWER.

The official report of the London Fur Trade Association (inc.) on the October raw fur skin sales states that the auctions were well attended, although there were not as many foreign buyers present as usual. Owing to the general slowing up of business during the summer months, and to credit stringency in Continental centres, there was a general weakening in prices, which was more pronounced in regard to staple lines than in the case of the finer furs. It is satisfactory to note that supplies of Russian skins, prices of which had been artificially maintained, were obtainable with good competition at values that accord more nearly with the laws of supply and demand. It is anticipated that the adjustment in values will stimulate trade, and it is probable that, so far as the better class furs are concerned, values will be maintained.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 6:—

Egyptian Futures.

Sakel Contract.—In contrast to the strong reactionary tendency just prior to our last report this market has shown an easy undertone during the majority of sessions under review and values have been marked down 14 to 21 points for near and 12 to 27 for distant positions on the week. Trading in contracts continues to be on a fairly active scale, but with outside conditions still of an unsettling character, and a tendency on the part of consumers to restrict commitments as much as possible, liquidation of cotton bought higher up and periodical selling against "actual" have jointly forced values down to their present level. For some little time there have been rumours of Government intervention, and earlier in the week an official announcement to the effect that they would accept tenders on the basis of 27 dollars was not unexpected. Details of the scheme to stabilise values at the above figures have not yet been received; in any case the stated basis is some little way below current prices, but there is no doubt that its initial effect has been to check "bearish" activities and to relieve the market from sustained hedge pressure for the time being. We have now reached a period when fairly accurate ideas of the yield can be formulated, and it appears probable that the crop will approximate 2,750,000 kantars; this, plus the carry-over and prospective supplies from the Sudan, should give a wide margin over requirements. Turning to the consumption side, indications of an increase are hardly apparent at the moment, conditions on the Continent are not very satisfactory, and the after-effects of the recent financial crisis in the U.S.A. have yet to be determined. One point that may lead to an increased offtake is the fact that Sakel differences have closed in to the extent that the use of stapled outsiders for mixing or substitution purposes will probably now be discontinued.

Upper contract.—Quiet markets with little trade or speculative interest in evidence have been the general rule during the past week. Values have been held in check somewhat by the Egyptian Government's declaration that they were prepared to take up tenders should the near position fall to 19 dollars; thus values have widened somewhat with the American contract, but show a decline on the week of 8 to 15 points for near and 9 to 11 points for distant months. The Alexandria Produce Association estimate the Egyptian crop at 8,000,000 kantars, of which the Upper varieties will probably total about 4,400,000 kantars.

Egyptian Spot.

Except in one particular section the spot demand has been further restricted by the constant sagging in values, and buyers for the time being appear to have lost heart. As we have maintained for some time now, cotton is cheap enough, and what is required is some assurance that it will not become any cheaper in the immediate future. Sakel has been very much neglected except for the lower qualities at approximately from 9½d. to 10½d.

Uppers.—These have provided the main interest, as usual, but this week an additional attraction has appeared in the shape of a quantity of "distress" cotton, which in some cases was disposed of at tempting rates. The pick of this cotton was eagerly snapped up, and the daily sales have been augmented considerably in consequence of this unusual turnover. For the rest, the usual steady inquiry at from 10 to 25 on has been in evidence, and a fair amount of interest has been shown in the better cotton at from 60 to 90 on (November contracts).

Pilon has been in fair request for the "Best."

Nahda.—There has been more inquiry, but in the majority of cases sellers have been unable to meet buyers as regards price.

Notes of the Week.

Yugoslavia and Bulgaria.

With the opening this week of a further conference between Yugoslavia and Bulgaria to settle the vexed question of properties owned by their respective nationals on the opposite side of the frontier there would seem to be at last some chance of a final settlement's being reached of the frontier problem. Bulgaria, it will be recalled, at first met the Yugoslav suggestion of compulsory expropriation with an emphatic refusal, mainly on the ground that the number of properties involved made the proposal impracticable. Yet as far as is known the Yugoslav Government has not withdrawn this suggestion, but maintains that it offers the only satisfactory solution. That Bulgaria should now be willing to discuss the proposal may imply that the number of property-holders involved is not as great as was imagined, or—more happily—it may mean that the proposal takes on a different complexion, given good will on each side. One result of the existence of the present régime in Yugoslavia is to inspire confidence in the good intentions of the Belgrade authorities. It would seem as if there had now been time for these good intentions to take effect on the Yugoslav side of the Bulgarian frontier, where "regrettable incidents" have been in abeyance for many weeks, if not for some months. A great opportunity presents itself to the Belgrade Government to clinch the matter by rounding up the band of brigands under the Bulgarian Ouzounoff, who have recently committed a series of dastardly outrages in Bulgaria, if it be true that they have returned to Yugoslav territory, from which they are said to have set out. Co-operation between the two Governments should soon result in the capture or extermination of this band, and nothing would be better calculated to inaugurate correct relations between the two countries and to disarm suspicion of the sincerity of Yugoslav policy.

Bulgarian Reparations.

The refusal of the Bulgarian Government to agree to the amount fixed by the Paris Committee on Non-German Reparations for Bulgaria's new scale of reparations is bound to evoke considerable indignation among her neighbours and will be cited by them as further evidence of original sin on the part of the "Black Sheep of the

Balkans." There is no reason, however, why the matter should be utilised for creating fresh bitterness among these States. Every country in a similar situation can be relied upon to protest its inability to pay, and in the last resort the decision of impartial adjudicators must be final, and the recalcitrant debtor will have to make a virtue of necessity by agreeing to pay the penalty imposed upon it. The trouble in Bulgaria's case is for the disinterested onlooker to decide whether any given sum fixed for reparations has been determined on sound economic principles, or whether political considerations, including a desire to cripple a defeated adversary, have been allowed to play their part. Probably no one outside the Reparations Commission can decide this point. It will be noted that the amount fixed for Bulgarian reparations has already been reduced once, at the instance of Great Britain. This circumstance suggests that other than strictly economic principles have been at work in Paris. As an instance of confused thought, which, it is to be hoped, has not penetrated into the Commission, may be cited the argument of a semi-official organ of the Greek Press which seeks to point the moral between a Greece that devotes a third of her annual Budget to the service of her Public Debt and a Bulgaria that is for ever seeking to obtain reductions in the amount that she has to pay. The comparison is, of course, vitiated by the fact that one country is merely paying interest on money received, while the other is protesting against the imposition of a burden which, it is claimed, must necessarily prevent, or delay, the economic reconstruction that is in the interest of the Continent as a whole. It would be well if the question of Bulgarian reparations could be settled definitely without further loss of time, as the maintenance of this open sore helps to keep alive a bitterness between the Balkan States which is prejudicial to all alike.

Turkey at Work.

In spite of the comprehensive nature of the address delivered by the President of the Turkish Republic at the opening of the Gand National Assembly, the Prime Minister, Ismet Pasha, found plenty of material for his own speech, in which he was able to enter into greater detail than was suitable for the Ghazi's remarks. The

Angora Government continues to stress the importance of agriculture for Turkey, and much of its attention is devoted to this subject. A start has been made with agrarian reform, and already over twenty-five thousand acres of land have been distributed among landless peasants in the eastern vilayets. The terms on which these grants have been made were not stated, but Ismet Pasha was careful to point out that there was no intention of creating competition between peasants and the owners of larger properties. An effort is being made to improve the quality of seed grain and to distribute better seed in districts where the existing quality is poor. Official encouragement has been given to the establishment of co-operative societies, and within three months the formation of a hundred of these was reported. Very wisely a voice of warning was raised in expert quarters against this rate of procedure. The Agricultural Bank had started a few co-operative societies and was apparently prepared to keep an eye on these and to nurse them into a healthy independence. It was obvious, however, that the promiscuous formation of co-operative societies without knowledge of the scientific principles on which they ought to be based would be only prejudicial to the movement. The Prime Minister delivered a spirited defence of the new Turkish tariff, which he declared, did not exceed the limits of a "simple minor Customs measure." One object had been to protect home-grown wheat, and this end he was confident would be attained, with corresponding advantage to the country. Turkey was obliged to think of her cultivators, who formed seventy-five per cent. of her population, but did not intend to do prejudice to other sections of the people.

A Tragedy in Iraq.

The tragic circumstances attending the death of Sir Abdul Muhsin Beg as Saadun, Prime Minister of Iraq, will have smitten with sorrow all, Iraqis and British alike, who knew him. This is not the place, nor have we the inclination, to appraise his position in the history of Iraq, but it is as certain as anything can be that his will be a most honoured niche when the history of the young Arab State comes to be written. There are certain obscurities in the poignant letter which he wrote, just before his death, to his son Ali, that make an immediate commentary upon his passing difficult, if not impossible. This much, however, at least may be said: that both Iraqis and British have lost in Sir Abdul Muhsin Beg an upright gentleman, a disinterested patriot, and a loyal friend. That he had political enemies is true: nor was opposition to his administration necessarily an unhealthy sign in Iraq. The occupa-

tion of a Cabinet post in Iraq is no sinecure. Whether he could have been more staunchly supported by the British Government in his policy of co-operation with Iraq's Ally, Great Britain, is a matter on which much could be said, but to suppose that he was, as was sometimes said of him, a tool of the British, was grotesquely untrue. He had his own ideals for his country, which he served long and well; and it is certain that, now that he lies buried in the Gailani Mosque, those ideals will not be forgotten, least of all by those hundred and fifty thousand Iraqis who watched the funeral procession. If this infinitely sad and rare event may have opened official eyes to the human forces at play beneath the stern business of governance, if it helps to emphasise the fact that the fate of Iraq represents not merely a policy but also the destinies of human beings, then, as King Faisal said, though in another sense, "we may find consolation in this tragedy."

The King's Speech at the Majliss.

This tragedy will have thrown a heavy cloud over the Iraq Parliament, which opened on November 2, but its onerous tasks will have to be carried out. How great a task the Administration of the late Prime Minister had set itself is to be seen from the King's Speech from the Throne, in which, after references had been made to the generally satisfactory condition of Iraq's foreign relations, to the scheme for the liquidation of the Ottoman Public Debt, and to the new Treaty which is to signalise Iraq's complete independence, a forecast of various Bills was made. King Faisal said that his Government was preparing draft laws for the regulation of the rights and duties of cultivators and for the protection and encouragement of local products, and he added that a National Defence draft law would be submitted—"so that the Government may be in a position to cope with the responsibility they have undertaken to defend the country against foreign aggression and maintain internal order." Other draft laws related to the Civil Service, Civil Pensions, and the Penal Code; and among the schemes which were engaging the Government's attention were the building of the Habbaniyah Dam, the establishment of an Agricultural Bank and a National Bank, the creation of an Iraqi coinage, the reduction of certain duties, and the increase of education and of health establishments. The Governmental programme lacks nothing, therefore, in ambition.

INDIA.

An Unconvincing Reply.

The somewhat belated rejoinder by the Federation of Indian Chambers of Commerce to the circular issued last summer by the Associated Chambers of Commerce, concerning the menace of discriminatory legislation is not a very convincing document. The literature on the subject is already voluminous, although the issues involved are simple enough. And those who are still unconvinced of the equity or of the expediency of the case as put forward by his many predecessors in that rôle are not likely to be any more impressed by the more direct and forceful advocacy of Mr. G. D. Birla. On the contrary we are inclined to share the opinion of an Anglo-Indian weekly contemporary, by no means inimical to Indian aspirations, either economic or political, that the result may be very different from that contemplated by the Federation, for the point of the whole argument certainly amounts to little more than "that the British commercial community in India should offer themselves, and all their goods and chattels, as a voluntary sacrifice at the altar of Indian Nationalism." In the first instance it should be pointed out that there is not, and never has been, so far as we know, any intention on the part of the Associated Chambers or any other spokesmen of European commercial interests in India, "to influence public opinion in England against India's right to adapt her economic policy to her own

(Continued on page 565.)

THE PROBLEM OF CYPRUS.

Elsewhere in this issue we publish a Memorandum forwarded by the Cyprus Delegation, which has come to London to lay before His Majesty's Government the claims of the Greek-speaking population of the Island. This Memorandum is not the document that has been presented to the Secretary of State for the Colonies, but reproduces in abbreviated form the Memorial that was drawn up by the Greek-speaking members of the Legislative Council for submission to the Government by the Delegation. In the interval that has elapsed since the preparation of the Memorial and the compilation of the Memorandum the Cyprus Delegation has been received by the Secretary of State for the Colonies, and has been told that the British Government can hold out no hope of meeting its request for the union of Cyprus with Greece. It may be inferred, therefore, that the Memorandum lays much less stress than the original Memorial on the subject of union. Very wisely the Delegation, which, when it left Cyprus, was concerned mainly, if not solely, with the cause of union, has realised that the rejection of its claim by Mr. Ramsay MacDonald's Government in language as emphatic as that used by any of its predecessors renders the possibility of union with Greece out of the question in the near future. In order, therefore, not to return empty-handed to the Island, it has supplemented the demand for union by the more reasonable request that present conditions in Cyprus should form the subject of an inquiry by a Commission. In support of this request the Memorandum refers to a number of factors that render the situation, in the opinion of the Greek-speaking population, "far from satisfactory." The proposals regarding constitutional changes and administrative reforms are now being considered by His Majesty's Government, and an answer given to a question in the House of Commons last week stated that no final decision had at that time been taken on the subject. The purpose of the Memorandum now issued is to direct "sympathetic attention" to the case of Cyprus and to insure that as wide a body as possible of public opinion in Great Britain is acquainted with conditions on the Island.

No one with first-hand knowledge of Cypriot affairs can contend that British administration has done all that it might have been expected to do for Cyprus. At the same time it has to be recognised that the obstacles in the way of the Island's progress have not been due solely to the shortcomings of successive Governments. Cyprus is a poor country, and much of the inaction of which Administrations in the past can be accused has been imposed upon them by the need of rigid economy. The history of the Tribute carries with it, if not its own condemnation, at least a strong argument for a more generous attitude towards the Island in the first instance. On the other hand the Cypriots themselves have a large measure of responsibility for their own lack of progress. Not only have the innate conservatism and the inertia of the inhabitants prevented them from making the most of their opportunities, but they have also imposed upon the Government the necessity of a cautious policy. In this way the Island has condemned itself to a vicious circle. The people have been too prone to look to Government for help, instead of helping themselves, and the Government has been deterred from launching ambitious schemes

by the backwardness of the people and their hesitation to abandon primitive ideas and methods. Until recently the Greeks in Greece itself, however ready to form political organisations and to discuss politics among themselves, have shown a strong individualistic tendency in matters of commerce and industry. The same lack of co-operation for economic ends has manifested itself among Greek-speaking Cypriots. Since the War, when Great Britain has come to appreciate the fact that more might have been done for Cyprus, the situation has been complicated by the insistence of the leaders of the Greek-speaking community that the demand for union with Greece should override all other considerations. It is not correct to say that Cyprus has stood still under British administration; progress there has been in many directions, and of recent years much leeway has been made up; but it goes without saying that with closer co-operation between the people of the Island and the Government the rate of advance might have been greatly accelerated.

A new era will have been inaugurated in the history of Cyprus, if, as a result of the visit of the Delegation now in London, the Greek-speaking population accepts, albeit with disappointment, the decision of the British Government that no hope can be held out for the cause of union with Greece, and sets to work loyally with the Administration in the interests of the Island as a whole. The constitutional change for which the Memorial asks bespeaks more responsibility for the Greek-speaking community and a more direct share in the administration. It will be evident to every man of intelligence that there can be little inducement to any British Government to meet such a demand, unless it can be assured that effect will be given to the new régime by the Cypriots themselves in complete loyalty and sincerity. Rightly or wrongly, the British Government has decided, in its capacity of trustee of Imperial interests, that Cyprus cannot at this time be ceded to Greece. Can the same Government reasonably be asked to run the risk, by handing over control of the Island's legislature to the Greek-speaking community, of having the whole administrative machinery brought to a standstill because the demand for union with Greece which has been refused is still to be pressed in season and out of season? All uncertainty on this point could be removed, if the Greek-speaking Cypriots pledged themselves to abandon the union-movement for a period of, say, twenty years, during which a whole-hearted attempt to promote the material development of the Island on agreed lines would be made in co-operation with the authorities. Never in the history of Cyprus has a more favourable opportunity presented itself for a straightforward effort on the part of elements hitherto mainly at variance to understand one another and to work together in the real interests of the Island. There is a general desire to remove from Cyprus the reproach of having been the Cinderella of the Empire; no Government in Great Britain is likely to lend a more sympathetic ear than the present one to the requests of Greek-speaking Cypriots, and in the present Governor the latter have an administrator of broad views, of ready sympathy, with a shrewd and practical mind. The attitude of the Delegation in London gives rise to the supposition that the other leaders of the union-movement also realise that they have done their duty to their compatriots by pressing home their request as long as there was the least hope of success, and that now statesmanship and common sense alike require that personal considerations should be subordinated to the interests of the Island. Every point that the Memorandum makes calls for specific action on the part of the Cyprus or the British Government; it is against the dictates of reason that concessions should be granted to people who may be liable to stultify them by an attitude of non-co-operation. When once this danger has been eliminated by a self-denying ordinance of the Greek-speaking community, the case for a constitutional change and administrative reforms in Cyprus becomes overwhelming.

*The Near and Middle East

From Our Own Correspondents.

EGYPT.

Cairo, November 9.

The Residency at Cairo.

The High Commissioner to-day officially took up his residence in Cairo, and as it was his first official arrival here there was a reception at the station. Prior to their departure from Alexandria, Sir Percy and Lady Loraine were the guests of Mr. and Mrs. Ralph Carver at their residence at Ramleh, "The Oasis," where they were introduced to the British community, practically all the members of which had been invited to meet them. The High Commissioner came up by the usual special train, and was greeted on arrival here by Midhat Yeghen Pasha, Minister for Foreign Affairs, the Governor of Cairo, and Sir Peter and Lady Strickland. The Guard of Honour was furnished by the Gloucestershire Regiment, and, after inspecting it, Sir Percy Loraine passed down the platform and was introduced to, and shook hands with, some of those present.

There would undoubtedly have been a bigger muster of British residents had it not been a Saturday, which is the business community's half-holiday, and had the arrival not been unfortunately timed to coincide with the first race meeting of the season at Gezira. Altogether one cannot congratulate those who were responsible for the arrangements, which in the matter of smooth and orderly working contrasted strikingly with what took place when the previous High Commissioner arrived in Cairo. The innovation of introductions on the platform was not altogether happy, since in the process it necessarily gave preference to the official element and overlooked a number of the leading members of the community.

The Cotton Question.

The Government has again intervened on the cotton contract market in order to stop the "bear" manœuvres which, according to the cotton-growers, are unduly depressing the prices. So far the market has maintained itself above the Government's limits, in spite of the fall in the American market, but there is little doubt that it is a mistake to interfere with the play of supply and demand like this, even if speculators are playing with the market. After all, before the War, there was never any question of Government's intervening on the cotton market; yet "bear" manœuvres operated then just as

they do now. Far wiser has been the Government's decision to raise the limits within which it is prepared to advance on the crop so as to assist the producer to meet his obligations while waiting for a better market.

Gebel Aulia.

For the fifth time since 1913 work has again been suspended on Gebel Aulia. Every time with the exception of the first, which was due to the outbreak of War, the real cause, in spite of what has been officially said, has been political, and it looks as if once more politics were going to interfere with the completion of a work which is a vital link in the chain of works Egypt must carry out from the Mediterranean to the Lakes to ensure her future summer water supply. The question will have to come before Parliament, on account of the need for money to carry on the work, and recollecting the controversy that went on before, one wonders when, indeed, it will be possible to go full steam ahead. As it is, valuable time has been lost through the interference of politicians, encouraged by irrigation engineers, who have pitted themselves against the opinion of the world-wide experts who have reported on the scheme, and it is estimated that the loss to the country runs already into several millions.

Sir Valentine Chirol.

Nowhere outside England has the death of Sir Valentine Chirol been more regretted than in Egypt, where, together with Mr. Alfred Spender, he was probably the best-known British journalist of the past half century. His connexion with the country dated back to the days of Ismail Pasha, and, as was indicated in his book, "The Egyptian Problem," written in 1920 after the visit of the Milner Mission, whose recommendations owed much to Sir Valentine's inspiration, he had been associated with practically every phase of the Egyptian situation from the beginning of the Occupation.

Albeit by no means a Defeatist, by which is meant out here one who in every instance advocates a policy of ceding to Egyptian requests whether reasonable or not, he had gained the complete confidence of the Egyptians, and his opinion on the situation was always eagerly canvassed and listened to. It was, perhaps, his great gift of human understanding and sympathy with his fellow-men which gave him this hold on the people of this country. A contributory factor in the affection and respect in which he was held, was the habit he had of mixing freely with all and sundry. He loved to wander about the place, stopping Egyptian passers-by to inquire, and carrying on conversations, which, leading up to questions of the hour, gave him a good insight into what the public thought or felt. Many Egyptians recall with admiration the courage he displayed even during the 1919-1920 events when, already an old man, he went out into the streets unattended as of old, indifferent to what trouble might be abroad, and investigated for himself what was going on and how it was affecting the people in general.

TURKEY.

Stamboul, November 6.

Reopening of the National Schools.

As the utilisation of bells would constitute an infraction of the tenets of Muslim Canon Law, drums usually take their place, although ships' bells are now used in both the Turkish Navy and the mercantile marine. To the sound of drumming in every quarter of Constantinople, the gentlemen who in England, usually garbed in red frock-coats, utilise a hand bell and preface their remarks with "Oyez, Oyez," announced to the populace that the "popular schools" would reopen on November 1, and that anyone who had failed to pass the test for a certificate at the close of last term must re-enter and take up the courses *ab initio*. As the curriculum as at present framed covers a period of no more than four months' duration, the obligation in itself can scarcely be said to constitute a great hardship. Non-attendance and failure to obtain the prescribed certificate of proficiency by May 1 next are punishable offences, however, in addition to debarring delinquents from obtaining employment under Government, *esto perpetua*.

The "popular schools" established throughout the country exceed 8,000 in number, of which about 700 in Constantinople are attended by 30,000 persons. There are no mixed classes, women attending on certain days and men on others, whilst evening classes are open to those who are tied down to office, shop or factory during the day. Attendance is compulsory for all persons of both sexes between the ages of 16 and 45, instruction being given by primary school-teachers.

Pupils fall into two divisions, denominated A and B. The A's are the illiterates, those who are ignorant of both Arabic and neo-Turkish characters; the B's, at least those among them who obtained a certificate of proficiency last term, can now proceed to the three R's and simple object-lessons. It is hoped that, by building on this foundation and with this educational make-up, graduates will be sufficiently equipped to continue their studies by themselves when the instructional period has been completed in the classes.

That the threatened imposition of pecuniary penalties is being taken seriously is apparent from the signs of application which one may observe in the streets, shops, coffee-houses and public vehicles, where simple primers are brought out of cummerband, pocket or satchel and pencils begin to travel across copy-books. It is no uncommon sight to see the more advanced helping along the backward, like lame dogs over stiles, with precept and example.

The Eternal Hat Problem.

Some few days ago, worshippers in one of the larger mosques at Smyrna were astonished to hear a voice loudly proclaiming, amidst general silence, that the modern hat was a contrivance of the cloven-footed one and that it was high time that the nuisance was done away with, once and for all. "I myself," went on the speaker, "am about to offer myself up as a sacrifice on the altar of patriotism." Suiting his action to his words, the individual threw away his hat and donned a fez which he took from his pocket.

The matter having been taken up by the police, the offender, who turned out to be a postal and telegraph clerk of the name of Nadir Effendi, was declared to be *non compos mentis*. Nadir Effendi has since his little escapade been placed under restraint in an establishment where he will, no doubt, enjoy ample opportunities of meditating upon the serious drawbacks which attend the doffing of hats and donning of fezzes in places of public worship.

Turkish Women's Union.

One cannot but applaud the persistence and valour with which the Turkish Women's Union have stood by their guns, until at last victory now appears to smile on them. The acting-Governor of the city has informed the ladies, at all events, that the Government have accepted the principle of women's votes at all municipal elections and that, moreover, the Ministry is in entire sympathy with the projected creation of a force of women police. A Madame Ade, reputed to be an expert in such matters, has been invited by the Union to visit Constantinople with a view to explaining the organisation of similar bodies in other countries.

That Turkish women police will have their hands full is certain, if the skeleton programme of duties drawn up by the Union is ever put into force. They are to inspect and control picture-theatres, dancing halls, night clubs, bars, restaurants, public parks, every habitat, in fact, where the *genus* "flapper" is accustomed to disport itself and take its pleasures.

In addition to the foregoing, however, the lady police are to take every opportunity of placing a check on a certain class of traffic which has recently formed the subject of very painstaking investigations by a body appointed by the League of Nations. Without wishing to say that the moral atmosphere of modern Constantinople is any worse than that of most large Continental cities, and without desiring to cast a slur on the standard of

IRAQ RAILWAYS.

morals of the younger members of the distaff side of the population as a whole, one must admit that there is much leeway to be made up and much room for improvement in many respects.

Public Holidays.

As it has been found in practice that the reviews, receptions and other ceremonies which take place on public holidays in Constantinople are generally scratch affairs lacking organisation, a Commission has been going into the matter for the past week and the opportunity has been taken of drawing up the official list of such holidays, which in future will be the following:—

January 17, Commemoration of flying personnel killed in the course of their duties; April 23, Children's Day; July 23, Anniversary of the Proclamation of the Constitution; August (date variable) Pilgrimage to War Graves at the Dardanelles; August 30, Victory Day and Aviation Day; October 6, Reoccupation of Stamboul; October 29, Feast of the Republic; November 1, Anniversary of the Opening of National Popular Schools; December 12, National Sovereignty.

Visit of Count Volpi.

Count Volpi, a former Italian Minister of Finance, has just passed through Constantinople on his way to Angora, where he will spend a few days as the guest of the Minister of Finance. The Turkish papers publish an interesting biography of the former statesman, who is now engaged in industrial enterprises, but the comments of the news-sheets as to the object of his visit are somewhat conflicting. The *Milliet* inclines to the view that the presence of Count Volpi at Angora is connected with the Trade Agreement which is shortly to be concluded between the Turkish and Italian Governments. The *Djumhouriet* and the *Vakit*, on the other hand, are disposed to explain the visit as being related to a vast scheme of economic and financial enterprises to be undertaken by Count Volpi's group in Anatolia.

As the one cannot go without the other and as Italian shipyards lately carried off a fairly important order for war vessels destined for the Turkish Navy on very accommodating financial terms, one is inclined to believe that the remarks of the *Djumhouriet* and *Vakit* are nearer the mark than those of the *Milliet*.

CYPRUS.

Nicosia, November 6.

Armistice Day.

In accordance with a notification by Sir Ronald Storrs, the Governor, in the official *Gazette*, Armistice Day is to be duly observed on November 11. A special service will be held in St. Paul's Church, Nicosia, at 10.30 a.m., and a gun fired at 11 o'clock, at the Police Headquarters, as a signal for a two minutes' Silence.

The Greek Deputation to London.

On October 25 the Colonial Secretary communicated to the Press a telegram which had been received that day by Sir Ronald Storrs from the Secretary of State for the Colonies. In this it was stated that the Minister had

received the Cypriot Deputation, and had heard their representations. In reply he had informed them that he could not hold out any hope that the Government of His Majesty could give a favourable hearing to their petition for the union of Cyprus with Greece. In regard to other questions which were raised in the memorial of the elected Greek members of the Legislative Council submitted by the delegates, he had informed them that a considered reply would be sent as soon as possible.

On October 26 the Greek Archbishop received a telegram from the deputation in London giving the same information. The delegates in their interview with the Secretary of State, in accordance with their instructions, confined themselves almost exclusively to the petition for union; but they referred incidentally to the internal state of the Island, which they describe as anomalous and unsatisfactory.

Comments in the local Press indicate that in the view of those concerned there should be no despondency. The reply, it is said, expresses the individual opinion of the Minister. A more favourable view may be taken by the Prime Minister and by Parliament. But, in any case, the hopes of ultimate success should not be damped. There should be no flagging in the effort in Cyprus, where the struggle must be maintained, and where there is full confidence that the legitimate aspirations of five-sixths of the people will be ultimately satisfied.

The Agricultural College.

Among the institutions which have been established in Cyprus, that of the Agricultural College, at Nicosia, has attained great popularity during the nineteen years of its existence. This is shown by the keen competition that now takes place for admission. At the entrance examination for the present year there were 75 Greek candidates for seven vacancies, and 25 Turkish for two vacancies.

Water Supply of Nicosia.

The capital of Cyprus, although it has been much improved in various respects, especially in its general setting, still falls far short of what should be accomplished during fifty years. A contemplated loan of £20,000 by the Municipality, sanctioned by the Governments, should go a good way towards carrying out some of the more pressing needs for improvement. There seems to be quite rightly a general desire that an increase of the water supply, which is inadequate, and badly felt during a dry summer, should take precedence of all other projects, and should then be under the administration of a new and strengthened Board.

The Legislative Council.

The Legislative Council will not meet until December, unless anything unforeseen should occur to render convocation desirable.

BRITISH SCHOOL OF ARCHÆOLOGY IN IRAQ.

The amount so far received on behalf of the British School of Archaeology in Iraq (Gertrude Bell Memorial) by the Hon. Secretary, Sir Edgar Bonham-Carter, is, in cash and promises, about £6,700. Some of the promised donations are payable by instalments over a period of years, and more money is coming in.

The Shah of Persia inaugurated on November 5 the new railway from Bandarshah, on the Caspian Sea, to Sari, in the province of Mazanderan.

It is reported that an American group has submitted an offer at Belgrade to construct a series of up-to-date hotels in a number of Yugoslav towns such as Split, Dubrovnik, Kotor, and Sarajevo.

The Hon. Mrs. (Diana) Newton, of Portchester Road, Bourne-mouth, who died on July 22, daughter of the sixth Lord Vernon, and widow of C. E. Newton, left estate of the value of £31,107, with net personalty £30,092. Among other bequests she left £3,000 to the Church Missionary Society for the English Hospital at Jaffa.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 31.

A Declaration of Policy.

Before this letter is read it will be known whether the British Government intends to make a declaration of policy regarding India now, to supplement that of 1917; the declaration, if there is to be one, will have been made, and small will be the interest left in our present state of mind, expectant or apprehensive. Our minds are naturally full of the matter. The newspapers, day after day, have had such headings as "Britain's Policy in India; Lord Irwin to make important statement," "India waiting for a statement," "Viceroy interviews Indian leaders," "Will Lord Irwin speak this week?" Then there has been Lord Birkenhead, with his "indisputable evidence" and his letter to the Press, and our speculation whether that will influence the Government, and there may be after all no declaration. Then there has been the release for publication by Mr. Jinnah of his letter to the Prime Minister and the Viceroy of four months ago. In that letter he urged the British Government to make a declaration, and to follow it up with invitations to representatives of India to confer with them before the Government formulated definite proposals and placed them before Parliament.

The Better Course.

Declarations are always a mistake. They are a preliminary to a change. It is better to make that change betimes, and just let people wait until you are ready and your plans mature. No declaration is really necessary: it suffices that it should be known that you are preparing a change. Further, you cannot frame words except to fit the circumstances of the moment, or those lying close ahead; close enough to be foreseen. It follows from that that even the most carefully worded declaration, when those who made it have left office, will be one that any two persons could read in a different sense. So it becomes a bone of contention—the mere declaration does, as if it was not enough to have the policy following the declaration as a bone of contention. There was the declaration of 1917; then Sir Malcolm Hailey's statement as to what it meant, and how much arguing since about it? In this very letter of Mr. Jinnah's there was more argument about Sir Malcolm Hailey and his statement. There probably will be something now, but one may hope that it will be a statement of the Government's intentions in the immediate future, as, for instance, that there will be a Round Table Conference before Parliament is called upon to consider what constitutional changes should be made in India. Such a statement cannot be made too soon. A declaration regarding Dominion status—what it is, and whether it will be conferred on India, and if it will be, when it will be—any time that could be chosen for such a declaration must be, in your correspondent's opinion, too soon.

The Maharaja of Bikanir.

In his address to the administrative Conference, which formed part of his recent birthday celebrations, the Maharaja of Bikanir may have said nothing that had not been said before; but it will make for the strengthening of the stabler elements of India that it should have been stated again, with such authority, that the Princes make it a condition of their welcoming the attainment by India of Dominion status that "India remains an integral part of the British Commonwealth under the ægis of our beloved King-Emperor." What was probably least expected of the Maharaja, when he rose to address the Conference, was that he should speak in no measured terms of the baser parts of British Indian journalism, or the baser kind of

British Indian journalist. He spoke of "a certain type of local correspondents and a certain section of the Press, which have brought the name of the public Press into the mire and which have strayed far away indeed from all that was honourable, best and noblest in the traditions of journalism and journalists." If you are far from all that was honourable, where are you? But that is just where those the Maharaja had in mind are.

Discipline.

There are stable elements in India and there is that crying lack of discipline everywhere, side by side with what is ordered and stable. I had a paragraph or two in one letter about the lack in the character of Indians of what makes for discipline. I was not without a doubt, when I left off, whether I had not a little over-charged the picture. My readers may have had a little more doubt. So I may quote this from the article of an Indian writer: "Mr. Gandhi stated with his usual clearness and directness that an utter lack of discipline pervaded the atmosphere in the country; that it was one form of violence; that the land was not ready to put itself under discipline; and as he must be *aut Cæsar aut nullus* in the Congress, he was retiring."

India's Economic Freedom.

An exceedingly difficult question is argued at some length in a statement by Mr. G. D. Birla, made on behalf of the Federation of Indian Chambers of Commerce, in reply to a circular letter issued in July by the Associated Chambers of Commerce of India and Ceylon, a body that is predominantly European. Part of Mr. Birla's statement is as follows: "There can be no self-government in India, if she is to be denied the power to devise and follow a national economic policy, including the right, if her interests require it, of making discrimination against non-national interests." It may be said, of course, that there would be very great scope for devising and following an economic policy, even if such discrimination as Mr. Birla had in his mind was against the law of the land. Such non-national interests (to call them such) as existed, or might come into existence, could in the nature of things cover but a small part of the whole field. Movement in the rest of the field would be free to the legislatures. But these Indians will over-charge everything they say. Another thing that may be said is that the word "interest" has more senses than one, and that what in one sense is a non-Indian interest, may in another sense be an Indian interest. Another thing that must be said is that, if India is to be part of the British Commonwealth, Englishmen living in India must be considered as Indian subjects, and have all the trading rights of such subjects.

India's Interests.

If a steamship company, trading in Indian waters, is owned chiefly by non-Indian shareholders, it is so far a non-Indian interest that the profits leave India; but if it is an efficiently managed concern, and is not overcharging its customers, it may be much to India's interest to keep it going. If it was replaced by another company, the shares of which could only legally be held by Indians, it would certainly be an Indian interest; but if it was so badly run that it never paid a dividend, India would not be disposed to think very rosily of it; if it served its customers badly, they would not bless it either. One wishes these Indians, when they are considering India's economic future, would look harder at the facts. If instead of promoting doubtfully sound legislation (you cannot make a nation sober by Act of Parliament, and it is just as difficult to make it rich), they would promote companies which should buy out the non-Indian shareholders of any concern that they think should pay its dividends to Indians, one would be much more ready to back them up. Not a few national units have sought to do such things as build up a national mercantile marine, and have found it did not pay. What national interest was served then?

THE STATUTORY COMMISSION AND THE PROVINCIAL ADMINISTRATIONS.

Bombay Government's Memorandum.

In the Bombay Presidency the reformed system of government, which was introduced eight years ago, has worked more satisfactorily than in Bengal. Indeed, the Government of Bombay, in their memorandum to the Simon Commission, expressed the opinion that the system has not been unsuccessful in either the "reserved" or the "transferred" departments. Nevertheless, the defects of dyarchy are considered to be obvious; and the Government accordingly recommend that it should be completely abolished, if possible. Another important recommendation which they make is that the Provincial Legislative Council should consist of elected members only; and that all departments of the Government should be subject to its control. At present—under dyarchy—the "reserved" departments are in the charge of four members of the Executive Council; and the "transferred" departments are in the charge of three Ministers. In place of this system a unitary Government would be established. There would be no distinction between the "reserved" and "transferred" departments. All alike would be under the control of a Cabinet consisting of five members chosen from, and responsible to, the elected Legislative Council. There would be a Chief Minister, who would be chosen by the Governor, and he would submit for the approval of the Governor the names of the four other Ministers. The members of the Cabinet would be appointed for the life-time of the Legislative Council; and they would be removable only by the Governor, or by a vote of no-confidence, carried against the Government in the Council, after due notice. The salaries of the Ministers, and the salary of the President of the Council would be fixed by an Act of the Provincial Legislature.

It is frankly recognised that safeguards will be required if all the departments of the Government are to be transferred to the control of the Legislative Council, and three alternative methods, by which these safeguards might be provided, are suggested. One of these would be to vest the Governor with such powers of certification and veto as might be necessary. But it would be inadvisable, the Government of Bombay think, to place such large powers in the hands of one individual. They are accordingly opposed to the adoption of this method. The second alternative—which is supported by some members of the Government—is the creation of a Governor's Council. This might consist of two Indian and two European members; and it would be presided over by the Governor. It would act as a Second Chamber, or Upper House, with full powers of revision. It would not have the power of veto, but it would have the right to refer Bills back to the Legislative Council. An interesting suggestion which the Government make, with reference to the Governor's Council, is that possibly it might be vested with the right of direct control over the subjects of law and order and land revenue. For there is considerable difference of opinion, among the members of the Bombay Government, on the question of the advisability of immediately transferring these subjects to the control of an elected Council. It is also suggested that the Governor's Council should be made responsible for safeguarding the rights of the existing members of the All-India Services.

The third alternative is the establishment of a Second Chamber. It is anticipated that there may be difficulty in finding a sufficient number of persons of the necessary standing, education, and experience to constitute a useful and effective Second Chamber. But the Government suggest that the Chamber might consist of not more than thirty or forty non-official members, two-thirds of whom would be elected, and one-third nominated by the Governor. The franchise would be similar to that in operation for the existing Council of State. The members

would be, that is to say, men with high property qualifications, large commercial interests, or high academic qualifications. The assent of both houses would be necessary for the passing of any legislation; and the Upper House would have the same powers in matters of legislation as the Lower. The difficult subject of law and order comes in again here, as some members of the Bombay Government would favour the granting to the Upper House of certain special powers as regards this subject. Other members of the Government would extend these powers to the subject of Land Revenue also. In all questions, whether legislative or financial, dealing with these two subjects they would provide that the decision of the Upper House should prevail in all cases of difference of opinion between it and the Lower House. The Budget would be placed before the Lower House in which would be vested the right to assent, or to refuse assent, to any demands other than those relating to Law and Order and Land Revenue. The term of office for members of the Lower House would be four years, and for members of the Upper House five years.

During the period since the introduction of the Reforms there has been no such change in the educational and economic condition of the people as to make it, in the opinion of the Bombay Government, desirable or necessary that the franchise for the Legislative Council should be lowered. Another important consideration which has led the Government to oppose any lowering of the franchise is the undesirability of permitting the franchise for the Council to be below that for district and local boards, and for the Bombay City Municipality. One member of the Government, and one Minister, dissent from the view that the franchise should not be lowered. Dealing with the vexed question of communal electorates the Government of Bombay observe that communal dissensions are worse now than they were when the Reforms were introduced. There is a difference of opinion among the members of the Government as to how separate electorates for Muhammadans have worked; but the majority are of the opinion that these electorates have accentuated ill-feeling between the two communities. So long as such electorates exist candidates on either side make no effort, and have no inducement to understand and to meet the views of the other side. At the same time the fear, entertained by the Muhammadans, that they would not be elected at all on joint electorates is, the Government think, very genuine. Reservation would, to a considerable extent, meet this difficulty. But any change must be based on agreement between the two communities, and cannot be forced on the Muhammadans against their will.

In the opinion of the majority of the members of the Bombay Government the proposal for the separation of Sind from the Presidency, is at present both impracticable and undesirable. Sind is considered to be too small geographically to be formed into a separate province; it has not a sufficiently numerous population; and it would not provide enough work for a Governor and three Ministers.

As regards the Services the Government of Bombay express the opinion that the suspicions and fears, which were entertained in 1920, about the treatment of the existing members of the Imperial Services have largely disappeared. Nevertheless they deem it to be desirable that proper safeguards for the fair treatment, security, and support of the Services should be provided. It is agreed also that the recruitment of Europeans will still be necessary even after the transfer of all the present "Reserved" subjects. Recruitment, whether of Europeans or Indians, should be by the Public Services Commission so far as regards the higher Services. A Provincial Public Services Commission should be created to deal with recruitment for the Provincial Services; and it would also hear appeals from the members of such Services regarding orders of dismissal, removal, etc.

It is recognised that, if an Upper Chamber is established, the necessity for the special powers of veto, certification,

etc., which are at present vested in the Governor will largely disappear. But the Government nevertheless consider that it will still be necessary to retain certain emergency powers with the Governor. These would have reference to the authorisation by him, in an emergency, of such expenditure as might be, in his opinion, necessary for the safety or tranquillity of the Province. And in connexion with legislation also it is considered to be necessary that the Governor should be empowered to veto, in case of emergency, any Bill affecting the safety and tranquillity of the Province.

It must be understood that the foregoing is by no means an exhaustive summary of the comprehensive Memorandum which the Government of Bombay have submitted. It merely gives an outline of the more important of the constructive proposals which the document contains. And it takes no account of the interesting and instructive general review of the political situation in the Presidency which is also included. In this the effects of communalism on educational, social and political progress are set forth; the working of existing representative institutions is discussed at length; the financial difficulties against which the Government have to struggle are considered in detail; and informed criticism is offered on the progress of education, and on other interesting aspects of the political and social life of the Presidency.

THE INDIAN CINEMA INDUSTRY.

A number of interesting facts concerning the development of the film industry in India were disclosed in an instructive Paper read by Mr. A. M. Green, I.C.S., Acting Indian Trade Commissioner, at a meeting of the India section of the Royal Society of Arts on November 8. Dr. T. Drummond Shiels, M.P., Parliamentary Under-Secretary of State for India, presided.

The lecturer, who was one of the two official members of the Indian Cinematograph Committee of 1927-28, said that up to that time the prevailing opinion in both official and non-official circles was that the production of Indian films was negligible. But the Committee soon discovered that Indian films were being produced in astonishing numbers, and that despite their great technical inferiority they were infinitely more popular with Indian audiences than imported films. In the year ended March 31, 1927, no fewer than 155 indigenous feature films were produced in India, as compared with only 48 in the United Kingdom in 1927 and 26 in 1928. The Indian footage in 1927-28 represented 21.2 per cent. of the total examined by the boards of censors. This percentage did not represent the true position, however, for Indian films often had longer runs and were screened more times a day than imported films. Yet Indian producers were crib'd, cabin'd, and confin'd by many difficulties unknown to producers in this country, such as general illiteracy and poverty, the multiplicity of languages, and the strength of communal differences.

There was great scope, Mr. Green concluded, for co-operation between East and West for the production of Indian films of sufficient merit to obtain a market in the more critical countries of the West. Such co-operation was given in the production of "The Light of Asia," and more recently of "Shiraz" and "Throw of Dice." The cinema was an influence for good in India, for it caused a mild and desirable intellectual awakening among the masses.

Sir Atul Chatterjee, High Commissioner for India, in the course of the subsequent discussion, said it was most desirable that the Indian film industry should develop both as a means of education in India and to provide the cinemas of the world with vivid presentations of Indian life and Indian scenes. A reason for the great length of Indian films was that there was very little in the way of ordinary entertainment to enliven the extremely dull, drab life of the Indian industrial worker or peasant.

Many educated Indians were now looking to the film industry as an avenue of employment, and the actors and actresses in some of the films were highly cultured. He believed that Indians would utilize the films as a medium of cultural expression, as they had utilized, from ancient times, the drama.

RACIAL DISCRIMINATION IN INDIAN TRADE.

Characterising the circular as "the desperate attempt of the British commercial interests in India to maintain their unnatural position at the sacrifice of the most vital interests of the country," a statement was issued in India in mail week on behalf of the Federation of Indian Chambers of Commerce and Industry, in reply to the memorandum circulated by the Associated Chambers of Commerce of India and Ceylon in August last on the dangers of racial discrimination in Indian trade and industry. The Associated Chambers' Memorandum, which was addressed to all Members of Parliament, the leading Chambers of Commerce and a number of important public bodies in this country, was summarised in the issue of THE NEAR EAST AND INDIA of September 12.

The present statement is signed by Mr. G. D. Birla, M.L.A., President of the Federation, and lays down in unequivocal and emphatic terms the Federation's conception of the broad principles of the economic policy adapted to India's own needs which national opinion, it is contended, is unanimous in demanding, and against the adoption of which, the Federation assert, the Associated Chambers are endeavouring to influence opinion in this country. In the course of his argument, Mr. Birla states:

"There can be no self-government in India if India is to be denied the power to devise and follow a national economic policy including the right, if her interests require it, of making economic discrimination against non-National interests.

"The Indian public are convinced that the economic policy of the Government of India has been to favour British commercial interests.

"There is always a great deal of talk of sympathy, co-operation and the like, but whenever any action is attempted to be taken, there is always the most bitter opposition by the British interests."

After an exhaustive analysis of the history and purpose of the Coastal Traffic Reservation Bill, Mr. Birla maintains that:—

(1) The Bill contains no principle of racial discrimination; (2) The Coastal trade of a country is its own domestic preserve to which non-nationals have no right and may be admitted only as a matter of grace; and (3) The Bill only seeks to do what England and the Dominions have done.

Further reference to the Federation's statement is made in this week's letter from our Calcutta Correspondent.

NOTES OF THE WEEK.

(Continued from page 558.)

needs." The sole ground of contention is that the right should be exercised in the interests of the whole body politic, and not of any one particular section, and that its exercise should not involve the dispossession of the existing institutions and, in fact, the gradual extinction of every form of British enterprise in India. So long as the two countries stand, and must for a long time remain, on different planes of industrial development it is inevitable that India's right to adapt its economic policy to its own needs should be subject to widely different interpretations, but the way of accommodation and reconciliation should not prove impassable unless Indian leaders, by their own action, are determined to make it so.

CYPRUS AND GREAT BRITAIN.

The Memorandum of the Cyprus Deputation.

We have received from the Cyprus Delegation now in London the following letter accompanying a copy of a Memorandum which summarises the Memorial presented to the Secretary of State to the Colonies:—

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The Greek elected Members of the Legislative Council of Cyprus, representing more than four-fifths of the population of the island, have entrusted us with the task of making known to the British Government and to the people of Great Britain the strong national aspirations of that population for union with Greece.

We are convinced that, if a plebiscite were taken on that issue in the island to-day, the result would clearly demonstrate the strength of this natural sentiment of the historical section of the Cyprus population for their political union with their Mother Country.

This desire is not prompted by any unfriendly feelings towards Great Britain, to whom the whole Hellenic world bears a lasting gratitude, coupled with that admiration and respect which are due to the most liberal among the civilised nations of to-day. It is purely the outcome of the national aspiration of a civilised people to be united to, and form politically part of, that free nation with which, through strong ties of race, of blood, of language, of religion and of tradition, they in fact share one common national conscience.

As a subsidiary to our main purpose and in order that the British people may not presume that Cyprus is, apart from this political grievance, prosperous, we have deemed it advisable to give some other information bearing on the unsatisfactory position of the island in general.

We have, therefore, the honour to enclose for publication a Memorandum on the Island. We feel sure the case of Cyprus merits sympathetic attention. At all events it is our duty and privilege, on behalf of our native island, to see that the public opinion of Great Britain is adequately informed.—We are, etc.,

THE CYPRUS DEPUTATION.

✠NICODEMUS, METROPOLITAN OF KITIUM.

ST. G. STAVRINAKIS.

ZENON ROSSIDES, *Secretary.*

November 18, 1929.

Brown's Hotel, London, W.1.

MEMORANDUM.

1. The Greek elected Members of the Legislative Council of Cyprus, representing well over the four-fifths of its population, have submitted in a Memorandum to His Britannic Majesty's Government their requests which may be summarised as follows.

It is asked, on behalf of the Greek inhabitants of the island, that Great Britain may consent to satisfy a legitimate and just desire by sanctioning their political union with their motherland, Greece, to which they are bound by sacred ties of religion, language, long historical tradition and national conscience.

The argument whereby the satisfaction of the above claim is opposed—viz., the existence in the island of a small Turkish minority—the remnant of the conquering invaders of 300 years ago—is untenable. The island's political annexation to Greece would involve no danger whatever for the Turkish minority, whose rights might be safeguarded by special conventions.

Equally indefensible may be considered the argument that the island is of any military or naval use to Great Britain. Fifty consecutive years of British occupation have testified to the contrary.

2. The above constitutes the paramount and fundamental request of the Cyprus people. In order, however, that it might not be wrongly assumed that the island is in other respects prosperous, its representatives deemed it advisable to acquaint the Imperial Government with the fact that Cyprus has been neglected, and that its present position is far from satisfactory.

3. The main factors in this state of affairs are:—

(A) The very form of the Constitution, which, though emanating from the Letters Patent and Instructions of March 1, 1925, and the Legislative Council Order of February 6, 1925, is in fact almost identical with the one granted to the island at the time of the British occupation fifty years ago; on the few points where it differs it is more restrictive.

According to this Constitution the people have no share in the administration, nor can they exercise any effective control upon the conduct of affairs in their own country. It is true that it provides for an elected majority in the Legislative Council, but the powers of this majority are so restricted that it cannot actually control legislation. Furthermore, the composition of the Legislative Council is so devised that it allows the normal majority, which the Greek people are legitimately representing, to be turned into a minority (without even the privileges of a minority) by a strange co-operation of the British *ex officio* Members with the Turkish Members and the casting vote of the chairman. As a consequence there has been created an ever-increasing friction between the Government and the people in general and the large Greek majority in particular.

It is a matter of no little concern that the Greek inhabitants of Cyprus, who belong to an historical race with a great tradition and who are to-day on a standard of civilisation equal to that of the rest of the free Hellenic world, should be still administered in the same autocratic way as was prevalent fifty years ago, while other British Colonies, whose degree of civilisation cannot at any rate be higher than that of the Greek people of Cyprus, have, in the meantime, obtained complete control of their administration.

The period that has elapsed under this form of Government has seen very little development in this island, whose actual backwardness may be gauged from an analysis of present-day conditions. Agriculture is entirely in a primitive state and no agricultural bank has ever been established with sufficient funds for granting long-term loans at a low rate of interest to assist the rural population.

Education has been very little encouraged and but scantily assisted.

Communications, both internal and external, are most inadequate.

And yet, in spite of all this lack of amenities, taxation which, being 17 per cent. in the first years of the British occupation, was referred to by Mr. Fairfield (see Parl. Papers c. 3661, 1883) as onerous, has now reached the figure of 20 to 25 per cent. of the gross income, thus leaving no margin for capitalisation.

The cause of this heavy taxation has been a wasteful and unproductive system of appropriation of the revenues. This method of appropriation may be illustrated by the following facts:—

(i.) In the Budget of 1929 the expenditure (exclusive of the share of Cyprus of the Turkish Debt Charge) amounted to £735,000, a high figure, considering that Cyprus has no war debts nor military expenses. Out of this sum 57 per cent. is absorbed by the cost of administration, 16 per cent. is spent on miscellaneous services and the upkeep of State property, leaving only 27 per cent. to be applied towards the welfare and general development of the island.

(ii.) Nearly half the amount of the Budget (over 47 per cent.) goes to personal emoluments. This is due to a bureaucratic system with supernumerary personnel and exorbitant salaries. It may be noted that between the years of 1914 and 1929 the personnel has increased by

30 per cent. without a proportional increase in the work of the respective Departments. Personal emoluments have increased by 200 per cent. (taking 100 as a basis) although the cost of living, having increased by 130 per cent. during the War, and afterwards decreased, now shows an increase of only 30 to 40 per cent.

(B) A second factor in the lack of prosperity has been the fact that during the fifty years of British occupation the sum of £2,600,000 has been taken away from the island for obligations and interests foreign to it. The reason was the so-called "Turkish Tribute" created by the Convention of 1878 between England and Turkey, by which the former undertook to pay to the latter the average of the annual excess of the revenue over the expenditure in Cyprus, calculated to be £92,800. The calculation was evidently wrong, considering that the annual revenues of the island did not then exceed £130,000. England, however, charged Cyprus with the payment of that sum; but as it was absolutely impossible to raise it from Cyprus, a grant-in-aid was usually made by the British Treasury to meet the deficiency; this grant-in-aid was, in 1907, fixed at £50,000 a year. It should be made clear that the sum of £92,800, although payable to Turkey, was really applied, to the extent of £81,000 annually, to the British guaranteed loan of 1855; the balance of £11,000 approximately was deposited with the Bank of England on a separate account and, having since accumulated, amounted on November 5, 1914, to the sum of over £452,000.

By the declaration of war between England and Turkey in 1914 the Convention of 1878 came to an abrupt end and the island was annexed to Great Britain on November 5, 1914. Yet Cyprus continued, against all equitable right, to be charged with the same sums of the Tribute in the form of "share of Cyprus of the Turkish Debt Charge" until 1927, when the injustice of such payment became so manifest that the Imperial Government put an end to it by increasing its grant-in-aid, to the extent of out-balancing the whole amount of the Tribute, on condition, however, that a law should be enacted by the Cyprus Legislative Council providing for an annual contribution of £10,000 towards Imperial Defence. The law was passed by the Legislative Council with due reservation made by the elected Members of any rights of the island in respect of the sums already paid.

These reservations were that there should be a refund to Cyprus of the sum of £2,600,000, taken from it without any obligation on its part, or at least of the sum of £1,008,000, made up as follows:—

(i.) Of the sum of £452,000, representing the accumulation of the annual surplus of £11,000, now kept in a separate account with the Bank of England, and

(ii.) Of the sum of £556,000 paid by Cyprus between 1914 and 1927 (i.e., after the abolition of the Convention of 1878) by way of "share of Cyprus of the Turkish Debt Charge," made arbitrarily and without any legal obligation on Cyprus, because:—

(a) Neither the Treaty of Lausanne nor any other Treaty made Cyprus liable to such a share.

(b) No connexion (by Convention or otherwise) ever existed between the revenue of Cyprus and the Turkish Loan of 1855.

(c) The Loan of 1855 ceased to form part of the Turkish Debt Charge as from 1881 and is not mentioned in the Treaty of Lausanne.

(d) In the Treaty of Lausanne Turkey recognised the annexation of Cyprus as from November 1, 1914.

4. The representatives of Cyprus have herein endeavoured to bring to the notice of the British Government the position of their island, in the earnest belief that the present state cannot be allowed to continue, and that the Imperial Government will deem it necessary and advisable to appoint a Commission of Inquiry for Cyprus.

[The Leading Article, on page 559, deals with the subject of this Memorandum.—Ed.]

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE ARABS AND PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The Grand Mufti of Jerusalem, in the course of a letter appearing in your number of October 31, writes as follows: "Those who know what the Arabs in general, and the Arabs of this country in particular, did and suffered for the Allied cause in the World War . . ." I am one of those who know nothing of what "the Arabs of this country in particular did and suffered for the Allied cause in the World War." On the contrary, until I am better informed, I shall continue to believe that they did nothing whatever, and whatever they suffered they did not suffer for the Allied cause.

Let me add that this statement is not meant as a reflexion on whatever merits the Arabs' case may have. They were not and had never been Allied subjects, but they were Turkish citizens and they owed nothing to the Allies. The Allies could not reasonably expect the Arabs of Palestine to do or suffer anything on their behalf. They cannot now hold against the Arabs of Palestine that they did or suffered nothing for the Allies, but on the other hand the Arabs of Palestine should not try to speculate on the general public's nebulous recollection of war events in the East by putting up a claim which has no shred of foundation in fact.

That Faisal's "Revolt in the Desert" had never anything to do with the Arabs in Palestine need surely not be pointed out to readers of THE NEAR EAST AND INDIA. The Grand Mufti's statement is phrased in such a way as to create the impression that the Arabs of Palestine did even more than Faisal's Badawin.—I am, etc.,

Jaffa, November 7.

"SPECTATOR."

A new stadium, capable of holding 25,000 people, was officially opened at Alexandria on November 17 by King Fuad of Egypt.

The Turkish Government is to ask Parliament to vote on the question of adopting Sunday instead of Friday as the weekly day of rest.

Major-General O. H. Delane-Osborne, C.B., C.M.G., has been appointed Commander of a District in India, with effect from January 16, 1930.

Sirdah Mohamed Asiz Khan, brother of King Nadir, has been appointed Afghan Ambassador in Moscow. M. Stark, Soviet Minister in Kabul, is returning there shortly.

Changes in the Roumanian Cabinet are announced. M. Madgearu, Minister of Commerce, takes the portfolio of Finance, and M. Aurel Vlad, Minister of Fine Arts, that of Commerce. M. Pan Halippa will be Minister of Public Works and Communications *ad interim*.

The Bulgarian Patriotic Union of the *Rodna Zachtita* (Defence of the Fatherland and the Race) has announced its adhesion to Fascism, and decided to adopt the Black Shirt and the fighting organisation of Fascism, pending complete assimilation of its politico-social doctrines. It is stated that the membership is about 700,000.

PAINTINGS OF CYPRUS.

Mr. Keith Henderson, whose work as a painter is well known in the Near East, has brought back from Cyprus, in which delightful island he stayed several months, some most attractive pictures, which he is exhibiting at the Beaux Art Gallery, Bruton Place, Bruton Street, Bond Street, W., until November 30. He not only has considerable fluency in execution, but he also shows a remarkable mastery over several kinds of picture, with the very pleasing result that this show is no less than a representative selection of the peculiar charms of Cyprus—figures, landscapes, architecture, birds, and so forth.

Possibly the most refreshing virtue of Mr. Henderson's brush is his firmness. There is no vagueness, no blurring, which inferior artists, whether painters or pianists, sometimes affect to cover up deficiencies in technique. Look, for instance, at the utterly different subjects of "Boy with Camel in view of Papoutsas," "Nicosia from a Minaret," "The Armenian Archbishop of Cyprus," "The Camel Khan by St. Sophia," or "Famagusta from the Reef," and you will find in them all a precision of line, a management of tone-colour, and, above all, a symmetrical rhythm which carry immediate conviction.

The technical merits of Mr. Henderson's work, however, are well enough known, and it will probably be by choice of subjects that most visitors to the Exhibition will be able to express preference. It will be surprising, however, if there is not general consent on the merits of "The Governor's Kavas," "Nicosia with Camels Passing" (which has been lent by the Government of Cyprus), "The Last of the Whirling Dervishes," "Forest Guard," and "Traffic Control."

Mr. Henderson, it may be added, did not "rough it in the best hotels" of Cyprus; he went everywhere that a donkey could take him, camping first here, then there in the mountains. In this way he came to be possessed of the inner beauties of the island, often hidden from the ordinary tourist. His Exhibition is really one both for artists in general and for lovers of Cyprus in particular to visit.

THE ETHIOPIAN LEGATION IN LONDON.

The Ethiopian Minister in London, H.E. Nagadras Makonnen, whose appointment as Minister Plenipotentiary and Envoy Extraordinary we chronicled some weeks ago, has arrived, and is staying at the Savoy Hotel. He presented his Letters of Credence on November 19. Together with him are Ato Bakkala, First Secretary of the Legation, and Ato Tadla, Principal Interpreter of the Legation.

A band of marauding Arabs raided Mizrah, a small Jewish colony in the valley of Esdraelon on November 8.

Zekiai Bey, Director of the Turkish Alcohol monopoly, has been appointed Turkish member of the Ottoman Public Debt Council.

The new Session of the Roumanian Parliament was opened on November 15. In the Message from the Throne the hope was expressed that the next Budget would not show a deficit.

A Bucharest message reports the engagement of Dr. J. Maniu, Roumanian Prime Minister, to Princess Cantacuzene, widow of Mihail Cantacuzene, a former Mayor of Bucharest.

NEWS IN BRIEF.

A new series of postage stamps, on which all the markings are in Latin characters, is being issued by the Turkish Government.

M. Saghatol-Molk has been appointed Governor of Kurdistan, in succession to M. Mofakhamol-Molk. The latter, who was recently recalled, arrived in Teheran at the end of last month.

M. Ali Akbar Khan Mofakham, Persian Consul-General at Constantinople, who has been in Europe for some time, returned to Teheran at the end of October.

The formation of a Greek Air Ministry has been definitely decided upon. M. Venizelos, the Premier, will be Air Minister and have the assistance of an Under-Secretary.

The formal opening of Viceregal House in New Delhi, which was originally fixed for December, has been postponed until the cold weather next year.

The former Zupans of Yugoslavia on November 11 surrendered their offices to the governors of the *bans*, the new administrative divisions of the country.

M. Madoloslovitch, the Yugoslav merchant who was condemned to 30 days' imprisonment for his share in the brawl in Belgrade in which the Italian Air Attaché was injured, last week went on hunger-strike.

Sir George Stanley, Governor Designate of Madras, who has been detained in Bombay since October 25 by an attack of phlebitis, is now convalescent and left for Madras on November 10.

The Mixed Commission appointed by the Yugoslav and Bulgarian Governments for the liquidation of properties on both sides of the Yugoslav-Bulgarian frontier and for the delimitation of that frontier met at Sofia on November 15.

The Turkish Director of Posts has given orders that all postal packets from abroad addressed to "Constantinople," instead of "Stamboul," the Turkish name for the city, shall be returned to the senders.

Nominations of candidates for the Egyptian General Election closed on November 15. One hundred and five Wafdist Deputies are unopposed. There are 303 candidates, many of them independents, for the 127 seats which are being contested.

The Foreign Secretary, Mr. Henderson, on behalf of the Government and the Governments of India, the Dominions, and the Irish Free State, has sent a telegram to the Foreign Office at Kabul, recognising Nadir Khan as King of Afghanistan.

The Turkish Government has decided to lay before the Grand National Assembly a Bill providing for a change in the holding of elections to the Assembly, substituting the direct for the indirect system.

Sir Murdoch Macdonald left Cairo at the beginning of this month for Athens, at the invitation of the Greek Government, to give his opinion about irrigation projects in that country. He and Lady Macdonald expect to return to Egypt on November 24.

The death is announced of the Hon. Richard Bethell, only son and heir of Lord Westbury. Captain Bethell was a keen Egyptologist, and had worked with Mr. Howard Carter and the Earl of Carnarvon when King Tutankhamen's tomb in the Valley of Kings was opened.

M. Venizelos has informed the athletic societies of Greece that he takes a great interest in physical education, and has promised to encourage it by granting a Government subsidy of £26,600 annually, sending gymnastic instructors abroad for training, and compelling municipalities to provide playing fields.

The Acting High Commissioner for Iraq has been instructed to inform the Iraq Government of the sincere regret with which the British Government has learned of the untimely death of Sir Abdul Muhsin and of its sympathy with the Iraq Government "in the loss of one who had rendered such signal service to the kingdom, and whose loss will be so keenly felt throughout the whole of Iraq."

Dame Louise Selina Maxwell, of Queen's Gate Place, Kensington, S.W., widow of General the Rt. Hon. Sir John Grenfell Maxwell, G.C.B., K.C.M.G., died on October 18, leaving estate of the value of £32,645, with net personality £31,354. Among other bequests she left Sir John's collection of Egyptian antiquities to the British Museum and the portrait of her late husband by Melton Fisher to the National Portrait Gallery.

Mr. Lunn, Under-Secretary, in the House of Commons on November 13, stated that the Colonial Secretary had recently received a deputation of Cypriot Greeks who asked for the union of Cyprus with Greece. The answer given was that His Majesty's Government could hold out no hope of meeting this request. They also put forward certain proposals for constitutional change, in regard to which no final decision had yet been taken.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

PERSONAL AND GENERAL

TO-DAY

November 21, 1929 (New Style).

November 8, 1929 (Old Style).

Jumada II. 18, 1348 A.H., of the Muslim Calendar.

Chesvan 18, 5690, of the Jewish Calendar.

Lady Cable will leave London for India to-morrow.

Sir Stanley and Lady Reed have left London on their return to India.

Lord and Lady Dunsany are leaving to-day for India. They will be away until the beginning of March.

Princess Antoine Bibesco left London last week to join Prince Antoine Bibesco at 45, Quai Bourbons, Paris.

Sir Maurice and Lady de Bunsen will return to London next week from Syria.

Field-Marshal Viscount and Viscountess Allenby will leave London for India about December 12.

Princess Marie of Greece visited their Majesties at Buckingham Palace on November 14.

Sir Leslie and Lady Wilson returned from Vienna on November 13 to Glebelands, Wokingham.

The Maharanee of Alwar sailed from Tilbury on November 15 in the s.s. Mooltan for Bombay.

The Duke and Duchess of Sutherland will leave for Bombay about the second week of December.

Sir Norcot and Lady Warren left Marseilles on November 15 in the Viceroy of India for Bombay.

M. and Mme. Ivan Stancioff will leave London on their return to Sofia about December 1.

Sir Austin and Lady Low left London on November 14 to join the Viceroy of India at Marseilles on their way to Bombay.

Lord and Lady Lloyd returned last week from the Continent, and have taken Gloucester House, 14, Gloucester Gate, which will be their address for the next three months.

Lady Stevenson-Moore has arranged to sail in the P. and O. s.s. Kaiser-i-Hind, from Tilbury, to-morrow (Friday), on her return to India.

Sir Francis and Lady Humphrys will leave Southampton to-morrow (November 22) in the Kaiser-i-Hind for Port Said, en route for Iraq.

Sir Dhunjibhoy and Lady Bomanji, Sir Dorabji and Lady Tata, and Sir Philip Sheridan left London on November 14 to join the Viceroy of India for Bombay.

The annual re-union Dinner of the British Serbian Units Branch of the British Legion and of all friends of Serbia will be held on November 30 at 7.15 p.m., at the Grafton Hotel, Tottenham Court Road, W.1. The President, Mr. Philip Mitchiner, F.R.C.S., will take the Chair. Tickets, 6s. each, from Miss C. M. Marx, 24, Melcombe Court, Dorset Square, London, N.W.1.

PALESTINE IN WATERCOLOURS.

An Exhibition entitled: "Flowers and Stones of the Holy Land," by Mrs. P. A. F. Stephenson, in the Alpine Club Gallery, Mill Street, Conduit Street, W.1., from November 19, to December 3.

Sir Ernest Petter left London on November 14 to join the Viceroy of India for Bombay, and will be away about three months.

Sir Archibald and Lady Birkmyre will leave 67, Queen's Gate, S.W., on December 12 for India. They will join the P. and O. s.s. Ranpura at Marseilles on the following day, and will be away until April next.

SIR ABDUL MUHSIN BEG AS SAADUN.

We much regret to have to record the death of the Prime Minister of Iraq, Sir Abdul Muhsin Beg as Saadun, who shot himself in his home on November 13. Two hours before taking his life he wrote a letter to his eldest son, who is studying engineering in Birmingham. In this poignant document he explained his reasons for the step he was taking, and ended with these words:—

"My dear son, my first request to you is to show kindness to your young brother, to serve your mother, and be loyal to your country. My second request is that you should remain absolutely loyal to King Faisal, his heirs and successors."

This great Iraqi was born fifty years ago. He belonged to the eminent Saadun family of the Muntafiq, that historic conglomeration of tribes who inhabit Southern Iraq. He was member for Basrah in both the Constantinople Parliament before the War and in the Baghdad Majliss after it. Three times he had been Prime Minister of Iraq—first in 1922, after the Naqib of Baghdad had resigned, then in June, 1925, after Yasin Pasha al Hashimi, and again last September, when he succeeded, on the condition that Great Britain would recommend Iraq for membership of the League of Nations in 1932, Taufiq Beg Suwaidi. He had also, in 1924, been President of the Chamber of Deputies.

Why he should have felt the always heavy burdens of office in Baghdad insupportable at this particular moment is not clear, for so far as is known there were no actual negotiations in progress between London and Baghdad. It is sufficient at this moment to say that he died in the service of his country, and to echo here the words of his King: "We may find consolation in this tragedy, because it proves that Iraq will never die, and that the soil of Iraq is capable of producing great men, prepared to serve their country sincerely and well."

An agreement regulating the relations between the Government and the Orthodox Church in Yugoslavia was signed in Belgrade on November 8, thus ending a long controversy between the present Government and the Church.

of Cyprus products.

THE WEEK AT HOME

London, Tuesday Morning.

Government and the Opposition.

Though the amicability existing between the Prime Minister and the ex-Prime Minister happily shows no signs of diminishing, it is evident that the Opposition is increasingly anxious to fulfil its supposed duties of an Opposition. During the last few days considerable alarm has been expressed over the Government's intention to incur heavier expenditure. For it is proposed in the new Unemployment Insurance Bill to raise the rates of benefit for all categories under twenty-one by two shillings or more a week, and the rate for adult dependents also by two shillings a week.

The question being asked (and it is alleged seriously to be perturbing the minds of Cabinet Ministers who are supposed, by the Opposition, to have only reluctantly consented to this raising of the "dole") is: Where is the money to come from? Only Mr. Snowden can supply the answer, and it is perhaps significant that within the last few weeks he has been attacked, as a financier, in a quarter hitherto very favourable to him, that is, the City. The City appears to be quite upset over the terms of the new five per cent. Conversion Loan.

Amending Hansard.

A little incident happened last week which shows how jealously the English citizen intends to preserve the integrity of Hansard, that infallible record from which it is often regretted by politicians that not a line of their speeches can be omitted, or altered. But Mr. Ammon answered a question in the House wrongly—he had misunderstood it—and afterwards, instead of correcting matters in the House, had it corrected in Hansard.

This violation of the rule that nothing, except grammatical questions, must be altered in the official record of the House was at once noted. The public is resolved, and rightly, that what has been said in the House has been said and should for ever be recorded. If unwise or incorrect statements are made, the man who makes them is to blame—and he can always mend matters in the House itself. To tamper with Hansard is quite unforgivable, even if it is, as it was in this case, well-meant and no harm is done by it. Certain politicians would give pounds now if they could but "cancel half a line."

Civil Service Candidates.

It was of course, known that the type of man attracted to the Civil Service was changing, but from the evidence of statistics the change is less gradual than one would have thought. For instance, whereas between 1906 and 1910 the proportion of successful candidates who had been educated at public schools and Universities was 74 per cent., even now it is 64 per cent.

This change is due mainly to two reasons, the emergence of the secondary school in national affairs, and the orientation of the public school man's ambitions. An increasing number of public school men are going into business, which offers more lucrative hopes. Not only that, but security in the Civil Service is not what it was—as is evidenced by India. A few years back a determined attempt was made to attract public school men into the Civil Service, particularly the I.C.S., but one has not heard that it was very successful.

Evidence was heard last week by the Royal Commission on the Civil Service, from which it was comforting to learn that though "there had been a slight falling off in the quality of candidates since the time before the War," it was merely a question of academic distinction, not of personality. Over this difference nobody will worry very much.

The "Observer."

It is always good to hear praise of the craftsman by the craftsman, and the celebration last Thursday of the twenty-first year of Mr. J. L. Garvin's editorship of the

Observer supplied convincing refutation of the common lament that journalism is now an ignoble trade. Nobody can always agree with Mr. Garvin's opinions, but nobody can deny that the *Observer's* great success is due to his quite remarkable personality. He has consistently stood against the "popularising" tendencies of modern journalism, that is, the tendency to present news for the benefit of the semi-educated. That tendency dates, I suppose, from the foundation of *Tit-Bits* and tit-bits, or tabloid matters, are still the unsatisfying fare of *hoi polloi*.

What one feels about the *Observer*, and what one misses in so many weekly papers, is its personality, its unity. There are many who, while never reading Mr. Garvin's leader-page articles render weekly homage to his influence by reading the rest of the paper. Other papers—rivals of the *Observer*—rely on "big names" each week: they bang the big drum to induce people to buy their goods. As the *Manchester Guardian*, which published a eulogy of Mr. Garvin's achievement that is worth study, finely said of the *Observer*: "It enters the reader's house each week like a familiar presence instead of luring the purchaser outward by the dazzle of lights in its shop window." That is a testimony beside which dividends and circulation are as nothing.

Winter's Arrival.

Winter has really come on England now, and in the last few days there have been gales, fogs, snow and rains. November has, in fact, been even truer than usual to type. On Saturday the drenching rains were so bad that many football matches had to be abandoned.

In most places, however, the weather caused merely inconvenience. But to one section of the community—the men of the Scottish herring fleet—the gales have meant ruin. Last week the fishermen, then off Yarmouth and Lowestoft, lost almost all their nets in the sudden squalls: and now their livelihood is gone. I have seen these men year after year at close quarters, and know what stout fellows they are, and what a precarious calling they follow. It is only just that the Secretary of State for Scotland is interesting himself in their most unfortunate case.

Seals and English Fish.

There are still a number of people who confess surprise at the mention of seals off our English coasts. Yet these stealers of fish exist plentifully round our shores, and often, in fact, become a serious menace to our fishermen.

In the Wash fisheries, for instance, fishermen get a cash payment for each seal's nose, and during the last two years have killed about 600 of them. This slaughter has had little effect, as even the amateur sailor must know, who sees them in scores lying in the sun on sand banks off the East Coast. The Eastern Sea Fisheries Board have just asked the Board of Agriculture and Fisheries for an extra £250 for the destruction of seals during the coming year, for it is believed that there are now more fish in the Wash than ever before.

To the visitor, of course, the presence of seals is an attraction, especially when one is lucky enough to shoot one (and men sometimes get about £4 for the skin and oil of the seal), but to the fisherman it is another matter.

Garages at Stations.

A decided step in the right direction is just proposed by the L.N.E.R. It is recognised that many motorists do not like taking a long drive through town, and it is thought that, if only garages could be provided at suburban stations, motorists would finish their journey by rail. In other words, the railways are looking again to see how they can compete with the road.

Their scheme seems sound. Provide a non-stop train to town from the suburban station, and also a decent garage on the suburban station, and many motorists would gladly avoid the long approach to a big town. Incidentally, what with garage fees, railway fares, petrol sales, and repairs, the railways ought to improve their finances.

ALTER EGO.

Book Review

THE PORTUGUESE IN ABYSSINIA.

"THE ROMANCE OF THE PORTUGUESE IN ABYSSINIA." By C. F. Rey. (London: H. F. and G. Witherby. 18s. net.)

In reading the epic of the attempts of the Portuguese to establish temporal and spiritual sway over Abyssinia one is left in doubt whether the palm for pertinacity should be awarded to those hardy adventurers who braved trials and perils that would surely deter the stoutest hearts to-day, or to a very backward people who clung ferociously not merely to their faith, but also to points of dogma. Three motives played their varying parts in impelling the Portuguese to get into touch with Abyssinia towards the end of the fifteenth century—the storied wealth of "Prester John," the need for new openings for trade, and a desire to obtain, if possible, another ally against the growing power of Islam. The first attempt was made in 1487 by Pedro da Covilham, who, after three years of wandering, reached Abyssinia and was hospitably received by the Emperor. Although he remained a person of consequence in the country, Covilham was never allowed to leave it, and was still at the Emperor's Court in 1520, when a mission under Dom Rodrigo da Lima arrived after amazing experiences in the course of their six months' journey through Abyssinia, at the capital. Da Lima's party had been sent as the King of Portugal's response to a request from the Empress Helena for assistance against her Muslim neighbours in Somaliland, but by the time they arrived the Abyssinians had been successful against their enemies, and the young King was by no means eager to conclude an alliance with Portugal. At the same time he could not bring himself to return a blunt negative to the Portuguese mission, and so fell back on the traditional methods of the East, delay and prevarication. In the end Da Lima remained five years in the country and accomplished nothing, although he carried away with him letters from the Emperor according permission to the Portuguese "to make a church and a castle in Massawa and in Delagua, and to put priests in the churches and strong men to guard the castles, from fear of the Moors."

The next fifteen years form a black chapter in the history of Abyssinia. The country was overrun by the Muslims under a Somali leader, who pillaged and ravaged it from end to end, until the Emperor, "hunted like a wild beast from one refuge to another, had hardly a mountain top in his country where he could call himself safe." To this period, it may be mentioned in passing, is attributed the Abyssinian practice of eating raw meat, as the people feared even to light a fire lest they should attract the attention of a marauding party. A Portuguese left behind by the Da Lima mission was dispatched in 1535 to Portugal to ask for help, and eventually in 1541 a Portuguese force of some four hundred men under Dom Christovão da Gama, fourth son of the great explorer, marched inland from Massawa to help Abyssinia against her foes,

A mere handful of men pitting themselves against the untold thousands of their enemies, but ready in their own words "to die for the faith of Christ and the salvation of that Kingdom." And these were no idle words. For the leader himself and the majority of his followers were to meet with a frightful death within little over a year, while the pitiful remnants, joining forces with the Abyssinians, were to be successful in avenging their chief's death and in driving the invaders out of the land for ever, though hardly a dozen men amongst the Portuguese were to see their own country again.

With the defeat of the Muslims Portuguese relations with Abyssinia enter upon a more distinctly ecclesiastical stage. There were some 170 Portuguese left in the country; but they fell upon troublous times and what little influence they were able to exert upon the Abyssinians seems to have been directed towards obtaining their allegiance to the Church of Rome. The Portuguese who thenceforth came to the country were missionaries.

For over eighty years the Portuguese and the Roman Church persisted in their efforts to convert the stubborn people of Ethiopia to accept the doctrines of Roman Catholicism, and, whatever may be said of the methods adopted, it would be impossible to deny the remarkable courage shown by the missionaries in circumstances of danger, trials, suffering and death. They almost succeeded in their task; after sixty years of work they obtained a dominating position in the country owing to their success in securing the conversion of King Susenyos in 1622, and their sway lasted for six years. But in 1628 it reached its maximum point and, from then onwards, began to decline until five years later the Jesuits were expelled from the country, bag and baggage, and the whole of their work fell to the ground.

The story is well worth telling and reading. Mr. Rey has compiled a most interesting account from Portuguese works of the sixteenth and seventeenth centuries. In spite of what still remains of Portuguese architecture in the country, the author is perhaps not too severe in saying that the efforts of the Portuguese "in no way tended ultimately to benefit or advance Abyssinia or its people from either the moral or material point of view; they in fact resulted in throwing back the country into deeper isolation and prolonging the period of its aloofness from the world—besides implanting in the minds of the people seeds of suspicion of all foreign enterprise, religious and other, seeds which bear fruit even to-day. Even to-day the 'gates of Abyssinia' cannot be said to be very widely open."

The Portuguese must have the credit of discovering the sources of the Blue Nile at Lake Tana. Not the least interesting part of Mr. Rey's narrative is the light it throws on the conservative nature of the Abyssinians, for many of the old chroniclers' descriptions, whether of men or of things in the country, apply with equal accuracy to-day.

The New 'BP' from Crude to Car

Here is the Chemist

An imaginative fellow this artist of ours! But perhaps the happiest man in the team responsible for the new "BP" is the Chemist who works with scientific instruments—and a scientific brain. It was his years of research which enabled the new and exclusive process of refining to be evolved which has resulted in the wonderful qualities of the new "BP."

His labour has made the happy motorist. It has made old cars run like new and new cars run with added power. It has made pinking a thing of the past. It has given motorists the better petrol. Get the new "BP" to-day and become one of the happy motorists.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Openings in Yugoslavia.

In an article which appears elsewhere in this issue a correspondent in Yugoslavia discusses the development of foreign enterprise in that country, and draws special attention to the success which Germany is making to re-establish her position there. As he justly remarks, there are openings for British enterprise, but as a matter of fact Great Britain is already to the fore there in a number of important directions. One need only instance the recent formation of Chemical and Wood Industries, Ltd., and participation in the development of various mining enterprises. But to remain satisfied with what we are doing would be foolish. At the present time the trend of Yugoslav trade is towards Central Europe, and while enterprises successfully conducted under British auspices must develop conditions favouring the growth of economic relations between the two countries, the desired expansion of mutual trade can only come about if our manufacturers and exporters do their part. The correspondent in question concludes his article with a most timely warning regarding the German trade menace, and if anyone doubts the extent of Germany's energy and ambition, the export figures for the first six months of this year provide the writing on the wall for all to see. For that period Germany's exports were larger than the British figures for the same period, which was not the case even in the last year before the War. Of course Germany has to develop her trade to meet her various obligations, but the significance of the figures is nevertheless unmistakable, and it is only natural that the full force of German competition should be felt in the Near East.

Sudan Trade Conditions.

The trade figures for the Sudan continue to be satisfactory, the value of the total trade via the Red Sea and Wadi Halfa for the first eight months of this year being £E10,641,777, an increase of £E1,104,001 on the figures for the corresponding period of 1928. With the exception of Government imports all items showed an increase. Exports totalled £E6,020,377, an increase of £E924,556, this being principally due to the large increase in the exports of cotton. The exports of gum showed a considerable falling off, but the value was greater owing to the sharp rise in prices. Imports at £E2,848,581 were £E144,354 up, but this increase inadequately reflects the growing purchasing capacity of the country, as in the case of almost every one of the commodities which were in greater demand there was a marked fall in values. As already recorded, the outlook for the current season's cotton crop is distinctly favourable, and with a further increase in the acreage under this crop there is every prospect, provided cotton prices remain at a reasonable level, that next year's exports will show a further substantial advance. An important feature of the increase in cotton growing in the Gezira is that it is accompanied by an increase in the area under food crops, so that the Sudan is benefiting in two ways from the great scheme. On the one hand the prosperity which has accrued to that region though cotton is slowly but surely making its influence felt in other parts of the country; on the other, important additions are being made to the food supplies of the country.

Bengal-Nagpur Railway.

At the meeting of the Bengal-Nagpur Railway a year ago the Chairman suggested that the results of 1928-29 might be a little better than those of the year then under review. His tempered optimism has been more than borne out by the results, the gross earnings for the past year showing an increase of Rs. 2,33,000, due to a large increase in the gross receipts from goods traffic. The improved position of the Indian railways as a whole has been very marked in the past few years, and there will be not a few who will wonder whether it would not be sounder policy for the Government of India to leave the railways under private management instead of taking them over. In many countries where vastly different conditions exist State control of railways works admirably, but it is at least arguable that the needs of India in the immediate future would be better served if the railways were run by private enterprise instead of by the State. Where large schemes of development are called for as is the case in India, a measure of initiative is required which is not invariably forthcoming under Government control. The policy of the Government must in its nature be experimental, and it might be well to call a halt for a little time instead of taking over any more of the railways, in order to see how the new system works in regard to the lines already acquired.

Speed Boats for Egypt.

It is perhaps difficult to associate a desire for speed with that haven of rest and enjoyment that tourists find in the Nile Valley, for one naturally thinks of leisurely cruises in a picturesque dahabeah or voyages up the Nile in a launch which will enable one to drink in all the romance that lies along the banks. But it is impossible in the modern world to stand apart from progress for long, and I noted a reference recently in an Egyptian contemporary to a suggestion that speed boat services may shortly be placed on Egyptian waterways. If, as I understand is the case, the wash of speed boats is not very great, there would seem to be no valid reason against the experiment, which might prove a most valuable method of improving the communications of the country. It is at any rate worth trying, and as British manufacturers have shown themselves so capable in the production of this type of craft, it may be hoped that it will be British speed boats that will lead the way on the Nile.

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathens."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Correspondents all over the World.

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases drafts, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfers on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches. The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Russia's Search for Trade.

Russia's attempt to obtain an opening in the coal markets of the Mediterranean is only one example of the efforts that country is making to obtain outlets in more or less adjacent countries. The latest development is particularly interesting, for Russia's match organisation is now endeavouring to measure its strength with the Swedish Match Company, the expansion of whose operations has left a very small field for rivalry. The Balkan markets now provide no opening, and the agreement made by the Swedish Match Company with Germany has closed that market to Russian matches, but the one outlet in which Russia has always shown special interest—Persia—is still available, and there the two groups are now contesting for a match monopoly. Local conditions probably favour Russia, and the inviting conditions which the Soviet Match Trust are said to be offering must give them a decided prospect of obtaining this concession.

COMMENTATOR.

THE ECONOMIC RECOVERY OF YUGOSLAVIA.*(From a Correspondent.)*

Like every other State which experienced a period of inflation, Yugoslavia was afterwards faced by a difficult economic crisis. Yugoslav post-War inflation was caused in the main by two factors. One was the Austrian War-time inflation and the other Serbia's War debts. Then the conversion of Austrian currency into the new Serbo-Yugoslav currency caused further complications which were in many cases more than even powerful banks or soundly financed industrial groups could weather.

Yugoslavia is above all an agricultural country, and her wealth all springs from the soil. Her industry, though in a fair way towards development, is still more or less insignificant in importance compared with her agrarian productivity. At the same time, it must be borne in mind that it is precisely because of its present immaturity, coupled with the country's wealth in raw material, that Yugoslav industry has every chance of prosperous development. Yugoslavia is not rich in country produce only. The country has minerals, timber, wool, and water power. In South Serbia silk is made, and throughout the State there is so much livestock that the leather industry does very well; so does the chemical industry.

Most of the financial groups which at present exploit the wealth of Yugoslavia are either foreign or at least have the support of foreign capital. That foreign capital has gained so much ground in Yugoslavia is largely the fault of Yugoslav financial circles, especially of the Yugoslav banks. Only the stern realisation that every effort must be made to promote production, particularly agricultural production, made a solution of the serious currency crisis possible. Of course the blow to Yugoslav

currency practically paralysed foreign trade in certain goods for a time. Yugoslav production has now almost recovered from the deadlock period, and the results are beginning to make themselves felt.

Yugoslavia's home trade is based in the main on credit. Obviously credit was shaken by inflation, especially the credit of the producer who was not covered by ready money. To this came the conversion of the Austrian post-War krone at the rate of 25 paras (10 paras equals 1 dinar), which was exceedingly good value in view of the position on the money market at the time, but very hard on the credit of all banks and industrial groups whose finances were based on the krone, not to mention the peasant proprietors, many of whom were ruined by the conversion. Yet I, for one, am of opinion that the Yugoslav authorities were justified in taking this step. It caused money to circulate once more, and thus gradually to recover its value. Even those inactive reserves which happened to be in the hands of private persons after the operation came into circulation, and so helped to arrest the fall of the dinar on the world's exchanges.

The Agrarian Bank.

Of course agriculture had now to be provided with fresh support, with assistance towards the building up of new credit and the replenishing of its capital. Hence the idea of the Agrarian Bank. As a rule, the Yugoslav peasant or landed proprietor has not got large sums of money at his disposal. His ready money is required for renewal of stock and for repairs. A suitably run loan and deposit bank was urgently needed, and if this bank was to be endowed with the necessary financial soundness, it would have to be worked hand in hand with the National Bank. By the establishment of the Privileged Agrarian Bank the State definitely and energetically tackled the problem of placing Yugoslav agricultural interests once more on a sound basis. The bank was inaugurated during the course of the summer, and is now in working order.

Meantime there has been a falling off in agricultural production; there is a certain amount of unemployment, and in parts of the country a too-radical carrying out of agrarian reform has contributed to agricultural depression. It is to be hoped that with its system of loans at low interest the Agrarian Bank will help to reconstitute the great estates broken up by agrarian reform as land units owned by peasant co-operatives (*zadruga*) which will be in a position to till the ground far more efficiently and remuneratively than a number of independent smallholders. Co-operatives on these lines have already been formed in the provinces which were faced by special difficulties as an immediate consequence of agrarian reform, viz., the Banat, Bachka, and Slavonia, a good model being provided by the peasant co-operatives in sundry parts of Slovenia, Croatia, and the Serbian Sumadija.

Trade in Yugoslavia, is not complicated. Money passes in the main from the retailer to the producer, and goods from the producer to the retailer-tradesman. Any tran-

sactions beyond this scope are based for the most part on foreign capital. Great industrial concerns are almost all owned by foreigners. France in particular is the lessee of several great concerns whose status is specially legalised. During the period of inflation and still more during that of deflation—which was all the more sharply felt in Yugoslavia as the latter, unlike certain other European States, refrained from issuing a new currency after the inflation—trade on long-term contracts languished. Even to-day, immediate payments are practically the rule. It was then that German industry took advantage of conditions and made headway with its products in Yugoslavia, whereas French and Italian goods correspondingly lost ground considerably.

Yugoslavia exports a good deal of her agricultural produce, cereals, beans, lentils, peas, mushrooms, fruit dried prunes), preserved fruit, tobacco, hops. Of her mineral products she exports coal (brown), metals (lead, copper), and carbide. Other exports are chemical products, silk, leather and wool. Yugoslavia's principal searoutes for imports and exports are via Salonika, Fiume and Shushak, Trieste, and—showing the strong influence exercised by Germany on Yugoslav trade—through Hamburg and Antwerp. In the northern provinces of the kingdom the samples fairs of Zagreb and Liubliana have proved a great incentive to trade, and of course the great Leipzig and Vienna fairs are not without influence either.

Openings for British Capital.

Undoubtedly Yugoslavia is moving towards economic and financial consolidation, and British capital stands a good chance of profitable employment, all the more so as the country's export is mostly overseas. As showing the interest of foreign capital in Yugoslavia it may be pointed out that a powerful French company exploits the water power in Bosnia; that certain German and Swiss circles are interested in a possible lease of the Yugoslav State railways; and that the Swedish Match Trust holds a lease of the match industry in Yugoslavia. There is still plenty of room for the investment of foreign capital out here, and the risk would not be great. Just now the Yugoslav Press is writing of work to be put in hand for the reclaiming of arable land in Dalmatia and the afforestation of that province on a large scale. Something similar is bound to be done for the exceptionally rich and hitherto all but unexploited province of Yugoslav Macedonia. Available capital so far has been either insufficient or not sufficiently guaranteed; but I am convinced that sound enterprise in that province is bound to reap financial and economic success. In the struggle for Yugoslav markets the victory rests for the time being with Germany. Unless the western and northern states of Europe take a more active interest in the country it is probable that Germany's vigorous post-War industry will acquire a monopoly of imports into Yugoslavia and thereby be the predominating financial influence.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

ROUMANIA.

Bronze and Copper Wire, etc.—The Direction Générale des Postes des Télégraphes et des Téléphones invites tenders for the supply of bronze wire, hard and soft copper wire, and copper sleeves. December 10. (D.O.T.)

EGYPT.

Direction Indicators.—The British Commercial Secretary at Cairo (Mr. R. M. A. Turner, O.B.E.) has reported a possible opening for the sale of direction indicators for motor buses and taxicabs in Egypt. (D.O.T.)

Transmission Lines.—The Director-General, Mechanical and Electrical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of high tension 3-phase overhead transmission lines in Northern Delta, consisting of a main line of about 165 kms. and branch lines of about 150 kms., including all necessary materials for the lines and all accessories. February 27.

Electric Generating and Pumping Sets.—The Ministry of Public Works, Egypt, invites tenders for the supply and delivery of electric generating and pumping sets for the Mankabad Barracks. December 28. (D.O.T.)

Pumping Plant.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of a complete plant for the supply of filtered and unfiltered water, including centrifugal or turbine type pumps, electric motors, filters, etc. January 6. (D.O.T.)

Incinerators.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of incinerators for disposition of garbage, refuse, waste dressings, etc., required for the year 1929-1930. December 9.

GREECE.

Cargo Vessel.—The Acting British Consul-General at Salonika reports that a local concern desires to be put in touch with British shipbuilding firms likely to be interested in quoting for the construction of a cargo boat of 300 tons net. The firm would also consider the purchase of a suitable second-hand vessel. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, November 23); s.s. Castalia for Bombay (Glasgow, November 29; Manchester, December 3; Birkenhead, December 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Birkenhead, November 29); s.s. Markhor for Calcutta (Birkenhead, December 7).

Bibby Line.—S.s. Leicestershire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, November 27).

British India Line.—S.s. Mundra for Bombay (London, November 23); s.s. Merkara for Colombo, Madras, and Calcutta (Middlesbrough, November 23; London, November 30).

Cunard Line.—S.s. Bactria for Casablanca, Gibraltar, Spezia, Genoa, Leghorn, Naples, Corfu, Bari, Venice, Trieste, and Fiume; also at Algiers, Oran, Palermo, Messina, Catania, Gruz, and Ancona if sufficient inducement (Liverpool, November 23; Swansea, November 26); s.s. Bothnia for Gibraltar, Malta, Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if inducement (Glasgow, December 12; Liverpool and Swansea, December 14).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 7); s.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 21).

P. and O. Line.—S.s. Kaiser-i-Hind for Bombay (London, November 22); s.s. Perim for Calcutta (London, November 22).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 30); s.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, December 10).

Ellerman and Papayanni Lines.—S.s. Roumelian for Algiers, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 23; Swansea*, November 23); s.s. Maronian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 5; Swansea, November 28); s.s. Manchurian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, December 7; Swansea, December 12); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 30). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 19.

The powers of the London Stock Exchange to absorb the enormous volume of securities liquidated on the New York and Continental Stock Exchanges, which have hitherto proved remarkable, have shown signs of weakening this week, and until Thursday, when there was a rally in Wall Street, prices fell steadily, the only exception being the gilt-edged market, on reports that subscriptions, to the new five per cent. Conversion Loan were coming in satisfactorily. The weakness extended to many domestic shares in the industrial list which have hitherto not suffered very much from the Wall Street collapse and the settlement next week will show some very heavy declines. There is, however, a general feeling in the House that the worst of the slump has been seen and that, although there may still be a certain amount of spasmodic selling which may prove sufficiently disturbing from time to time, the events of the past two weeks are hardly likely to be repeated with the same severity. On the other hand a rapid recovery in values is also highly improbable.

The Fall in Industrials.

This week's break in the industrial sections has brought many good class stocks, domestic as well as international, down to levels at which they are distinctly attractive in comparison with the prices of only a few weeks ago. Their earning power, which is after all what concerns the investor, has naturally not been affected; it is only that enforced selling has, as usual, most affected the leaders. They have attractions, however, for the genuine investor rather than the speculator, for the man who is prepared to hold them, as there are few prepared to assert with confidence that the bottom has been reached. Those who have courage to hold should see a substantial capital appreciation in time. Imperial Chemical ordinary shares may now be bought to yield just over £5 10s. per cent., on the basis of the 8 per cent. dividend paid in the two years of the company's existence. So far the group has made very satisfactory progress, and the full fruits

of the economies rationalisation was established to effect have probably yet to be achieved. Courtaulds have also been severely marked down. On the basis of last year's dividends a return of £6 5s. per cent. is obtained. It is true that results are expected to be less satisfactory this year, but progress in the artificial silk trade has not yet finished and this great combine will again reach prosperity. The growing profits and the conservative financial policy of the Imperial Tobacco Company are well known and the taste for cigarettes has exhibited no signs of diminution. Yet this prosperous concern's ordinary shares can be bought to yield about £5 18s. per cent.

Rubber Outlook.

Just about a year has passed since the termination of restriction in the rubber market, and dealers are faced with prices little above 8d., the lowest level for 18 months. Side by side with the fall in the commodity price the shares of the leading rubber companies have declined, but the *Economist* suggests that this decline is not unjustified on the basis of recent earnings. It is shown that net earnings reported have steadily fallen since 1926, and that reports published in the first three quarters of this year have, on the average, shown earnings of only 9 per cent. compared with nearly 30 per cent. in the same period of 1926. It is, however, the current position of supply and demand, and obscurities of the outlook which are affecting the commodity prices. Production in Malaya has proved much heavier than anticipated, exports being approximately 12½ per cent. higher than last year. The consumption of rubber in the U.S.A. has risen by some 15 per cent. this year and imports of other countries have advanced even more rapidly. Visible stocks are nevertheless higher and it is feared that the anticipated check to motor car sales resulting from the Wall Street break will seriously check the demand for rubber. On the other hand, hopes have been expressed that as the effects of "resting" British trees during the restriction period are now passing, production may show some falling off, while some competent authorities state that motor cars are so much of a necessity in the United States now that the effects of the collapse will be less than expected.

Australasian Bank Shares.

The general depression in the Stock Markets has combined with particular adverse factors to cause a decline in the shares of banking companies operating in Australia, many of which now stand at unusually low prices. The particular factors referred to are the advent of a Labour Government and the difficult times through which Australia is passing. Restricted Government borrowing, together with the discouragement of capital owing to the high costs of production and the prevalence of industrial strife, have resulted in a slowing down in industry and general trade, which has been accentuated by the partial failure of the seasons and the fall in the world prices of Australia's principal primary products of wool and wheat. The wool position has, however, somewhat improved of late, but while confidence on the part of buyers has been more in evidence the prospect of an early marked improvement in value is not good, and the menace of a strike of textile workers in Yorkshire is an adverse factor. Both the political factors and the economic are of a temporary nature. Confidence in the Australian Government, has, indeed, already been restored, and as Mr. Andrew Williamson said at the meeting this week of the English, Scottish and Australian Bank, when the lessons of the present trouble had been learnt, Australia's natural resources and the calibre of her people should carry her towards prosperity. When the tide turns her banks will, of course, be among the first to benefit and meanwhile, thanks to the strong financial positions they have built up, their difficulties are not likely tangibly to affect shareholders. The ordinary shares of the English, Scottish and Australian Bank return £6 6s. per cent., and those of the Bank of Australasia £6 12s. per cent.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

RANGOON, CALCUTTA, and COLOMBO

To BEIRA, DELAGOA BAY, DURBAN, EAST LONDON
PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.

Excellent Passenger Accommodation.

Wireless Telegraphy.

ORIENTAL AFRICAN SERVICE

Passenger and Freight Service from

HONG KONG, BANGKOK, SINGAPORE & MAURITIUS
To SOUTH AFRICAN PORTS.

Excellent Passenger Accommodation.

Wireless Telegraphy.

Information for Freight and Passage may be obtained

TURKEY IN RECONSTRUCTION.

[A recent issue of the United States "Commerce Reports" contains an interesting survey of the present position in Turkey, from which the following is taken.]

The reconstruction of Turkey advances slowly, with progress retarded by adverse agricultural returns. The failure of the cereal crops in 1928, for the second consecutive year, necessitated heavy imports of wheat and flour for food purposes, and had a depressing effect on commerce in general. The tobacco crop was also smaller, but this was not entirely unfavourable, as it permitted the movement of accumulated stocks. The lower purchasing power of the peasants was reflected in the continued difficulties of many importers, while the more stringent credit conditions also contributed to this situation. Budget estimates show a further expansion, despite the generally unsatisfactory economic conditions, and large revenues are anticipated under the new tariff regulations.

Despite an extended drought, crop returns in 1928, with the exception of wheat, tobacco, and cotton, compared favourably with those of the previous year. The drought most seriously affected the wheat crop, which, for the second consecutive year, fell below the average recent reports place it at 611,000 metric tons, as against 1,333,000 tons in 1927, and about 4,700,000 tons in 1926. Turkey normally raises sufficient wheat to supply about three-fourths of its domestic requirements, and the failure in 1928 resulted in a food shortage which necessitated emergency imports of large quantities of wheat and flour. Semi-official estimates place such imports for the last six months of 1928 at 72,000 long tons, as compared with 6,480 tons in 1927 and 10,500 tons in 1926. Tobacco, the leading export item, suffered also from disease; unofficial estimates place the crop at 79,365,600 lb., as compared with 148,384,400 lb. in 1927. This decrease, which was partly due to the smaller area sown, was not entirely unfavourable, inasmuch as it permitted the movement of accumulated stocks from the previous year. The wool crop was estimated at 11,000,000 lb. (11,900,000 in 1927); mohair, 4,500 metric tons (3,700); raisins, 45,000 metric tons (48,000); figs, 29,000 metric tons (28,500); cotton, 85,000 bales (105,000); valonea, 45,000 metric tons (42,000); barley, 900,000 metric tons (629,280); rice, 20,640 (10,080) metric tons; potatoes, 59,480 (20,740) metric tons. The new filbert crop, according to recent (September, 1929) reports, is apparently a failure, owing to damage sustained from disease. It is expected that the harvest, will be one of the smallest ever recorded.

Slow Industrial Development.

The manufacturing industries in Turkey are of relatively little importance. Some progress has been made in the textile industry, owing to the local demand, but the lack of modern equipment has made it difficult to compete with imported products. The carpet industry, as indicated by exports, had a fairly satisfactory year in 1928, although the value of total shipments declined slightly to £E4,433,200, as compared with £T5,346,890 in 1927. These figures do not indicate whether or not re-exports from Persia are included. This industry, centred in the Smyrna district, is favoured by the excellent quality of the domestic wool. Other plants include sugar factories, fig and rasin packing establishments, cotton ginneries, and woodworking plants.

The exploitation of the mineral resources of the country has been handicapped by inadequate transport facilities. According to the General Direction of Mines, production of the leading minerals in 1926, the latest year for which figures are available, was as follows: Coal, 1,222,390 metric tons (703,440 in 1925); lignite, 12,200 (6,060); boracite, 18,360 (12,350); argentiferous lead, 17,670 (1,440); copper, 7,530 (197); chrome, 6,450 (6,670); emery, 6,060 (6,480).

An increase in commercial activity by purely Turkish enterprises has been noted recently in Turkey. This expansion has been particularly evident in the field of

banking. The Turkish Ish Bankassi (Banque d'Affaires de Turquie) has gradually increased its branches, which, with recent additions, now number 22. This expansion is interesting, in view of the general economic depression and the recent closing of branches in Constantinople by three foreign banking institutions. With a view to training Turkish citizens in commerce and industry, their employment by both foreign and domestic concerns is being urged.

The Smyrna Fair, which was scheduled for September 9, has been postponed until 1931, at the suggestion of the Minister of National Economy, in view of the unfavourable economic conditions. In the future, it is proposed to hold this fair every three years instead of annually, because of the heavy expense involved in special construction work.

Railways and Roads.

Railway construction has proceeded steadily. Estimates in May, 1929, placed the total of railway lines in operation at 5,215 kilometres, as compared with 4,640 kilometres at the end of 1927. In addition, 1,280 kilometres of line were under construction, most of the work being done by foreign companies. A continuation of the programme of railway expansion is indicated by the passage of a law by the National Assembly in the second quarter of 1929, providing for the opening of a credit of £T240,000,000 for construction and irrigation work over a period of 12 years. Of this amount £T140,000,000 is designated for railway construction.

Development of highway traffic has been handicapped by the poor condition of the roads, many of which are impassable in the winter months. As a result, most of the inland road traffic is still hauled by animals. Motor traffic, nevertheless, is increasing steadily, as growing automobile imports indicate. In 1928 motor car imports were unofficially estimated at 3,100 units, as compared with 2,220 units in 1927. Estimates at the close of 1928 place the total number of passenger cars in use at 6,700, and of lorries and busses at 2,300.

GREEK ASSIGNED REVENUES.

The Greek assigned revenues for the nine months January to September, 1929, amounted to:

	Drachmæ.	Increase or decrease.
Old revenues	2,441,792,406	+152,881,477
New revenues	664,173,413	— 4,384,191
Total	3,105,965,819	+148,497,376

Upon the basis of the above receipts and the relative security rights of the various loans the following figures show the approximate security available for the Refugee Stabilisation and Public Works Loans for the nine months January-September, 1929:—

	Security available.*	Service of loan requires.	No. of times covered.
Seven per Cent. Refugee, 1924 ...	£ 6,070,391	£ 691,875	8.77
Six per Cent. Stabilisation, 1928 ...	4,924,133	513,490	9.59
Six per Cent. Public Works, 1928†	4,240,326	199,290	21.27

* Exchange is calculated at Dr.375 per £1 (the stabilised rate) and all possible contingent future charges deducted.

† £4,000,000 at present issued. A further £18,000,000 can be issued ranking *pari passu*.

Hughes and Lancaster, Ltd., Wrexham, have obtained a contract for the Damanhour ejectors of the Cairo main drainage scheme.

The traffic receipts of the South Indian Railway Company for the week ended October 19 amounted to Rs.13,16,669, making the total since April 1 Rs.3,75,64,426, as compared with Rs.3,40,17,716 for the corresponding period of the previous twelve months.

The Directors of the Egyptian Markets, Ltd., announce an interim dividend (No. 50) of 5 per cent. (less income tax at 4s. in the £) in respect of the year ending December 31, 1929, on the ordinary shares of the company, payable on and after November 18, 1929, at Barclays Bank (Dominion, Colonial and Overseas), 29, Gracechurch Street, London, E.C.3.
